wara, so famous in later times for the number of poets, statesmen, and empresses which it furnished, was a branch. The Nakatomi held the chief offices of the Jingikwan, and exercised a control over the local priesthood, if we may call them so. The *Imbe* were another hereditary corporation. Their chief business was to prepare the offerings for the State ceremonies. The name *Imi-be*, or 'religious purity department,' has reference to the care with which they avoided all ritual impurity in doing so. The *urabe*, or diviners, correspond to the Roman college of augurs. Their business was to divine, by means of the marks on a scorched tortoise-shell or deer's shoulder-blade, all matters which might be referred to them by the higher religious officials. The priests of local shrines were called *Kannushi*, that is, *Kami-nushi* or 'God-master.' Their duty was to recite the usual prayers, and to attend to the repairs of the shrine. The *Kannushi* are not a caste, though some of the most important posts are usually held by Nakatomi. They are not celibates, and wear their distinctive dress only when engaged in worship. Even this is not a sacerdotal costume, but only an old official garb of the Mikado's court.

There were several kinds of priestesses. The highest in rank was the *saiwō*, a princess of the Imperial blood, who was consecrated at the beginning of every reign to the service of the sun-goddess at Ise. A similar appointment was made to the shrine of Kamo near Kioto, where the Mikado's *ujigami* ('surname-god') was worshipped. Both these offices have long been extinct. At all the principal shrines young girls called *Kamu no Ko* ('God-child') or *miko* are consecrated to the service of the gods. They dance the *kagura*, cook the food for offerings, and occasionally become the medium of inspired communications. The greater shrines had also *Kami-be* attached to them. These were peasants who tilled the glebe-lands. Recent statistics give the number of Shinto priests as 14,766. Their duties are light and their emoluments scanty. Many of them have other sources of income.

9. Worship.—In Shinto, as in other religions, the forms of divine worship are, with scarcely an exception, adaptations of the forms of respect to living men. The most common of these is obeisance. The Shinto worshipper bows twice before and after he makes his offering. Kneeling is also known. Clapping hands, primarily a sign of joy, became first a general form of respect to sovereigns and others. More recently it has been confined to divine worship. The number of hand-clappings is minutely prescribed in the rituals. Offerings 'in token of respect,' as one of the rituals has it, by way of bargain for future blessings, or as a ransom for ceremonial shortcomings, consisted of food or drink, as rice, salt, *sake*, flesh, fish, fruit, vegetables, etc.; offerings of clothing, whether in the shape of woven fabrics, of yarn, or of garments, of hemp, and mulberry-bark fibre or silk, held a very important place. They were represented in later times by the *ohonusa* or 'great offerings,' which consisted of two wands placed side by side with hempen fibre depending from the one and strips of paper from the other. The latter are made of mulberry-bark fibre, and represent the cloth which was formerly made of that material. The well-known *gohei*, which consist of one wand with paper strips attached to it, are a simplification of the *ohonusa*. The assertion so often made, that the white colour of the paper is symbolical of purity, has no foundation. The *gohei* are in modern times the objects of much superstition. The god on ceremonial occasions is supposed to descend into the *gohei*; they are flourished in order

to avert evil influences, and even placed in the domestic shrine and worshipped. *Gohei-katsugi* ('*gohei*-bearer') is the Japanese phrase for a superstitious man. Swords, jewels, and mirrors are offerings of a more permanent character. The *shintai*, which in so many cases consist of these objects, were doubtless originally simply offerings. *Human sacrifice* formed no part of the Shinto State religion as described in the ancient records. But there is evidence that such offerings were not unknown, especially to the river-gods. In the *Yengishiki* lists of offerings we also find mention of agricultural implements, slaves, horses, and carriages, or rather palanquins.

10. Shrines.—The Shinto shrine is by no means a costly edifice. Many of the smaller ones are quite portable. In 771 a 'greater shrine' had only 18 feet frontage. The more important shrines have usually a number of smaller edifices attached to them, such as a gallery of votive pictures, a small oratory where the envoy of the Mikado performs his devotions, a stage for the *kagura* or sacred pantomimes, and *massha* or shrines for dependent or associated deities. The *Yengishiki* enumerates 3132 official shrines. At the present day there are nearly 200,000 Shinto shrines in Japan, of which but a small proportion have priests or revenues. The well-known *torii* or honorary gateway seen before them is no doubt an imitation of the Chinese *pailoo* and the Indian *turan*. It is not mentioned in the *Kojiki* or the *Nihongi*.

11. Prayer.¹—Of private individual prayer there is little mention in the old records. But a considerable collection of the religious formulæ called *norito*, read at festivals and other occasions by officials on behalf of the Mikado, have come down to us from a great but unknown antiquity. They are addressed sometimes to individual deities, sometimes to special categories of deities, and sometimes to the gods generally. They comprise petitions for rain, for good harvests, for preservation from earthquake and conflagration, for children, for health and long life to the sovereign, and peace and prosperity to the empire. Moral and spiritual blessings, or happiness in a future state, are undreamt of. There are also announcements of the appointment of a priestess, or of the beginning of a new reign. At the present day the Shinto gods are prayed to when a new piece of ground is reclaimed, on building a house or sowing a rice-field. There are prayers for prosperity in trade and for domestic happiness, making under Buddhist influence vows to give up drink, gambling or profligacy, thanking for escape from shipwreck or other danger.

12. Rank of deities.—In the 7th century a system of official ranks was introduced into Japan from China, and applied to gods as well as men. A curious result was that many gods stood lower in the hierarchy than the higher grades of officials. There is a case of a volcano-god being propitiated with the equivalent of a D.S.O. In the 11th and 12th cents. there were wholesale promotions of deities. A few of the greater deities, as the sun-goddess and food-goddess, did not share in these honours.

13. *Kagura* is a pantomimic dance commemorating some incident of the mythical narrative. Important shrines have stages and corps of girl dancers for this purpose.

14. Pilgrimages² are common to Ise, where are the shrines of the sun-goddess and food-goddess, Idzumo (Oho-na-mochi and Susa no wo), and to various mountains, as Fujiyama, Nantai, Kompira, etc.

¹ See art. PRAYER (Japanese).

² See art. PILGRIMAGE (Japanese).

15. Purity and morals.¹—It cannot be doubted that the ancient Japanese had some ideas of morality. There is evidence that theft, lying, and adultery were condemned by them. But there is scarcely anything in Shinto by way of a moral code. There is no direct moral teaching in its sacred books. A schedule of offences against the gods, to absolve which the ceremony of 'Great Purification' was performed twice a year, enumerates: incest (within narrow limits of relationship), bestiality, wounding, witchcraft, and certain interferences with agricultural operations. The other offences mentioned are of a purely ceremonial character. Shinto therefore would appear to be an exception to the rule stated by Pfeiderer (*Philosophy of Religion*), that 'the beginnings of all social customs and legal ordinances are directly derived from religion.' The ceremonial purity of Shinto greatly resembles that of the Mosaic dispensation. Actual personal dirt was considered disrespectful to the deities, and hence bathing and putting on fresh garments are constantly prescribed among the preliminaries of worship. The consummation of a marriage precluded defilement, and a separate hut was built for this purpose so that the dwelling might not be rendered unclean. Shinto has no marriage ceremony. There is a modern custom of sousing with buckets of water on New Year's day men who have been married during the previous year. Virgins were selected as priestesses. There is a case of a princess's appointment as such being cancelled for unchastity. Menstruation and childbirth caused uncleanness. The death of a relative, pronouncing or executing a capital sentence, touching a dead body, eating food prepared in a house of mourning, disease, wounds, leprosy, or sores involved various degrees of ritual impurity. These ideas were inconsistent with religious rites at funerals. The Shinto burial service, much heard of during the Russo-Japanese war, is a modern innovation, dating after the Restoration of 1868. Eating flesh was in ancient times not regarded as causing uncleanness, but later, under Buddhist influence, it became so. Impure food communicated its uncleanness to the fire with which it had been cooked. To avoid chances of such impurity, fire was made afresh with a fire-drill for use in the more important sacrifices. Certain calamities, such as snake-bite and the stroke of lightning, were regarded as indicating the displeasure of the gods, and therefore as unfitting the victim for their service. At one time when a man's house was destroyed by fire he became temporarily unclean. There was a special avoidance (*imi*) of impure things for a specified term in preparation for the festivals.

Lustration, the most natural and universal means of restoring purity, is well known in Japan. The use of salt is another. Spitting (there was a god of spittle) is a symbolical expulsion of impurity. Breathing on an object, such as a garment or a human figure, which is then cast into the sea, has the same result. The idea of ransom is also implied in the last ceremony.

16. Ceremonies.²—These are combinations of the elements of worship described above. The greatest Shinto ceremony is the *Ohonihe* or *Daijove*, which corresponds to our coronation. It is the solemn religious sanction of the Mikado's sovereignty. The kernel of this rite was the offering by the Mikado in person to the gods, represented by a cushion, of rice and *sake*, which were then partaken of by himself and subsequently by the court. The rice came from two provinces selected by divination. Everything in the *Ohonihe* ceremony was

in duplicate, so that, if one part was vitiated by some accidental impurity, the other might escape. *Urabe* or diviners from the capital superintended the ingathering of the rice, which was done with great ceremony by a staff of local officials. It was then brought to the capital, where special buildings had been erected for its reception and for the accommodation of the very numerous officials concerned. Here, too, everything was done in duplicate. The ceremony included frequent purifications, prayers to the eight gods, which included amongst others the harvest-gods, the god of growth, and the food-goddess, and the recital of 'ancient words' and *norito* of blessing.

The *Nihi-name* or 'new tasting,' when the rice of the new season was first partaken of, was the same as the *Ohonihe*, except that it was performed annually and with much less pomp. Something of the same kind was performed by the local officials and also by the people. Conscientious persons would not eat the new rice until after this celebration. The *Ahimbe* and *Kanname* were different forms of the same ceremony. The festival of *Hirano* is believed to have been in honour of *Image no Kami* ('the goddess of new food') and of the gods of the kitchen boiler and cooking-pan. In later times the sun-goddess, the hero Yamato-dake, and the Mikados Chiuai and Nintoku were recognized as the deities of *Hirano*.

The *Toshigohi* ('praying for harvest') was a very important festival. It was in honour practically of all the gods, and was celebrated in the chapel of the Imperial palace by a Nakatomi as representing the Mikado.

The *Tsukinami* is described as a 'thanksgiving service for the protecting care of the gods.' The name means 'monthly,' but it was really performed only twice a year. It resembles the *Toshigohi*.

The *Kiû* ('praying for rain') was addressed to the gods of 85 shrines, and included the usual offerings of cloth-stuffs. To a few a black horse was offered in addition, no doubt symbolical of the black clouds which usher in rain.

Other ceremonies were for 'the offering of clothing' to the sun-goddess at Ise, on the occasion of the rebuilding of the Ise shrines; for 'blessing the great palace'; in honour of the sacred mirror preserved in the palace; and for 'calming the august spirit,' in other words, for long life to the Mikado.

The *Ohoharahi* or 'Great Purification' ceremony, by which the nation was solemnly absolved twice a year from its ceremonial sins, was one of the most important and ancient of the Shinto rites. It is mentioned in the *Nihongi* under the date A.D. 200, which, although legendary, implies a great antiquity. The *Ohoharahi* consisted in the recital by a Nakatomi on behalf of the Mikado of a *norito*, which recounts the divine origin of the dynasty and the authority given to the sovereign to absolve his people from all offences to be committed by them. These offences are enumerated and their absolution is declared:

'As the many-piled clouds of Heaven are scattered by the breath of the Wind-Gods: as the morning breezes and the evening breezes dissipate the dense morning vapours and the dense evening vapours: as a huge ship, moored in a great harbour, casting off its stern-moorings, casting off its bow-moorings, drives forth into the great sea-plain: as yonder thick brushwood is smitten and cleared away by the sharp sickle forged in the fire,—so shall all offences be utterly annulled.'

The reading of this formula was accompanied by the offering of ransom-objects, which after the ceremony were taken away and thrown into a river, where certain gods took delivery of them and dispatched them to the sea. Thence they were ultimately transferred to the land of Yomi. In the case of the purification of the offences of individuals, the culprit was obliged to supply the needful offerings, which thus became the equivalent of a fine.

¹ Cf. artt. PURIFICATION (Japanese), ETHICS AND MORALITY (Japanese).

² Cf. art. MAOIO (Japanese).

The *Michiahe* ceremony was in honour of the phallic Sahe no Kami (preventive or prophylactic deities). The *norito* of this rite called upon them to prevent evil spirits (diseases personified) from entering the capital from the Nether country, i.e. the land of Yomi. Offerings of cloth-stuffs and food are made to them for this purpose.

The *Mikado no Matsuri*, or festival of the august gate, was addressed to the guardian deities of the palace gates, adjuring them to prevent the entrance of noxious things.

The *Hoshidzume* ('fire-quieting') ceremony was performed on the last day of the sixth and twelfth months. The *Urabe* kindled a fire by means of a fire-drill, and read a *norito* in which the fire-god was reminded of the divine authority of the Mikado, and of the means provided for his coercion and control by his mother Izanami. This intimidation is followed by bribery: 'To the end that thou mayest control thy transports against the Palace of the Sovran grandchild, I offer thee bright cloth,' etc.

The above by no means exhausts the list of Shinto ceremonies. In modern times there are many local celebrations much resembling in character the carnivals of Southern Europe. Fun and jollity are more prominent here than religion.

17. Magic.—There are two kinds of magic in Japan, the religious and the non-religious. The latter is probably the first in order of time. It is closely associated with medicine. Sometimes a magical procedure, non-religious in itself, acquires a religious character by being represented as taught or practised by a god. The novelist Bakin, writing early in the 19th century, applies the term *majinai* ('magic') indiscriminately to exposing books in the sun to keep away book-worms, to curing a toothache by turning over a pebble on the road, and to swallowing the ashes of an old almanac as an antidote to poisonous fish. 'If,' he says, 'the master of a house before going to bed goes round calling out, "Beware of fire," the spirit of the words will fill the house, and it will be preserved against fire and robbery.' The principle of 'sympathetic magic,' described in Frazer's *Golden Bough*, is illustrated by the case of a round stone (supposed to be the *shintai* of a rainfall-god) which causes rain to fall when water is poured on it. Whistling to raise the wind is another example. If a married woman is childless, the old women of the neighbourhood assemble and go through the form of delivering her of a child, represented by a doll. Relief from local ailments is obtained by rubbing the corresponding part of a god's image. The well-known witchcraft of ill-treating a figure of the intended victim with the intention of making him suffer accordingly is common in Japan, and may be practised either with or without the assistance of a deity. There are no pacts with demons or coercion of spirits in the older Shinto literature.

The magical power of the symbol, as if it possessed some of the actual powers of the thing it represents, is also exemplified. Roof-tiles are impressed with a pattern of bubbles—suggestive of water—as a preventative against fire. The talismans used for various purposes may have been originally symbols, though we cannot now trace their origin. The sea-god gave Hohodemi a tide-flowing and a tide-ebbing jewel, by which he could make the tide flow and ebb at pleasure. The waving of a magic scarf had the effect of keeping off snakes and centipedes. The modern witch twangs a small bow in her magical summoning of spirits. The *shime-nawa*, a cord made of rice-straw which has been pulled up by the roots, is well known as

1 Cf. art. MAGIC (Japanese).

a preventative of evil spirits. It is suspended before shrines, round sacred trees, and at the New Year in front of every dwelling-house. Some superstitious people wear one on their persons. The magic use of set forms of speech independent of their meaning is illustrated by the recital of the numerals from one to ten as a safeguard against disease. A Japanese in a thunderstorm calls out, *Kuhabara!* ('Mulberry grove!'). Here, however, the idea is to suggest to the thunder-god that the place is a mulberry grove—which is never struck by lightning. Some magic is condemned by Shinto, not for its want of efficacy, but for the evil purposes to which it was put.

*Divination*¹ is magic which has the special purpose of revealing the unknown. It may be either religious, or, like our palmistry, non-religious. The modern Japanese writer Hirata defines it as 'respectfully inquiring the heart of the gods.' The 'Greater Divination,' practised in the olden times, consisted in drawing conclusions according to certain rules from the lines which appear in a deer's shoulder-blade when scorched by fire—a practice known to the Chinese, Kalmuks, the ancient Greeks and Germans, and even in Scotland, where it is called 'reading the speal.' In later times a tortoise-shell was substituted for the deer's shoulder-blade. The religious element of this divination consisted in a prayer to Koyane, the diviner's god, to grant a true result of the procedure. *Tsuji-ura* ('cross-roads divination') was performed by going out to the highway, planting a stick to represent Kunado, the phallic deity of roads, and then interpreting the casual utterances of the passers-by as an answer. The *mikayu-ura* ('august-gruel-divination') consisted in plunging reeds into a gruel made of rice and red beans, and divining from the way in which the rice grains entered the reeds the crops which it would be best to sow. *Caldron-divination* predicts good or ill fortune from the sound made by a boiling caldron. *Omens* are frequently mentioned in the old histories. Earthquakes, floods, and storms were supposed to portend war. White animals and three-legged birds were lucky. The *ordeal* of boiling water is frequently mentioned. *Dreams* reveal the future; but, like Pharaoh's, they usually require interpretation.

18. Inspiration.—We have no record of the circumstances under which such grains of divine truth as Shinto contains became known to the Japanese. Most Shinto oracles, however well intended, bear the plain stamp of imposture. Inspiration is called in Japanese *kangakari* ('God-attach'). This term implies that the god takes possession of the prophet, or oftener prophetess, and uses him or her as a mouth-piece. The oracles were very often used for political purposes. The empress Jingō was inspired by a god to advise her husband to invade Korea. By another ancient oracle, the sun-goddess directed that a shrine should be erected to her in Ise. In A.D. 672 warning was given by certain gods of the approach of a hostile army. The deities concerned were rewarded by an increase of rank. In A.D. 1031 certain abuses in the management of the Ise shrines were condemned by a virgin priestess when in an inspired condition. The Buddhist priests who converted Shinto to their own purposes made large use of oracles. The circumstances as noted leave no doubt that by *kangakari* or inspiration the hypnotic trance is meant. It is still practised in Japan. The *miko*, or young virgins attached to the shrines, give inspired utterances; and there are strolling mediums of indifferent character who will fall into a hypnotic state, real or assumed, and for a trifle communicate

1 Cf. art. DIVINATION (Japanese).

messages to their clients from any gods or spirits of deceased men that may be desired.

19. **Later history.**—Shinto and Buddhism at first held aloof from one another, or showed a mutual antagonism. But in the 8th cent. the Mikado Shomu, when about to found the Buddhist temple of Tōdaiji at Nara, sent a Buddhist priest named Gyōgi to the shrine of the sun-goddess at Ise with a present of a Buddhist relic. Gyōgi brought back an oracle, which was interpreted to mean that the sun-goddess identified herself with the Buddha Vairochana—described as the personification of essential *bodhi* and absolute purity. This was the first case in Japan (the same principle had already been applied in China to Lao-tse and Confucius) of the recognition of the *Kami* as Buddhist *avatars* or incarnations. Systematized, it formed the basis of the teaching of a new sect called *Ryōbu* Shintō. Its chief founder was the famous Kōbō Daishi (died A.D. 835), a Buddhist saint to whom is ascribed the invention of the Hiragana Syllabary, and writings and paintings innumerable. The *Ryōbu* had great vogue down to the end of the 18th century. It is really much more Buddhist than Shinto. The only Shinto deity it gives importance to is Kuni-toko-tachi, a very colourless personage, to whom the *Nihongi* gives the first position in point of time. The *Yuiitsu* Shinto was a branch of the *Ryōbu*. It was established about the end of the 15th cent. Other sects were the *Deguchi* and *Suwiga* Shinto, both of which arose in the 17th century. The former introduces into Shinto the principles of the *I-king*, a Chinese book of divination, while the latter is penetrated with principles derived from the Chinese Sung dynasty philosophy.

The encroachments of Buddhism were not confined to doctrine. Buddhist priests took charge of all the Shinto shrines except a few of the most important, such as those of Ise and Idzumo. Many elements of Buddhist ceremony were combined with the native rites. The architecture and ornaments of the shrines were given a Buddhist character. For many centuries most of the Mikados, the high priests of Shinto, assumed the Buddhist tonsure. In the 17th cent. there was a great revival of Chinese learning in Japan, much to the neglect of Buddhism, by the educated classes. It reached a climax towards the end of the 18th cent., when a reaction set in, which Mabuchi, Motoōri, and Hirata took advantage of to recall the attention of the nation to the old pure Shinto of the *Kojiki* and the *Nihongi*. They succeeded to some extent, especially in discrediting the *Ryōbu* and other Buddhist forms of Shinto. But this was in reality a reactionary movement. The older faith was wholly inadequate to meet the spiritual wants of a nation long familiar with the religious thought of India and China—both far richer in spiritual and ethical purport than Shinto. Their propaganda, however, did much to reanimate the old belief in the Mikado's divine descent and authority, and undoubtedly contributed to bring about his restoration in 1868 to his position as a *de facto* sovereign.

In the last century two popular forms of Shinto—so-called—sprang up. One of these is called the *Remmonkyō* ('lotus-gate-doctrine'), because, like the lotus growing in the mud, it remains pure in a wicked world. The other is the *Tenrikyō* ('teaching of the Heavenly Reason'). It has high moral aims. Both these sects have made rapid progress, and claim great numbers of adherents. They are not really Shinto, but owe whatever vitality they possess to elements borrowed from India and China. At the present day, Shinto as a religion is practically extinct. It cannot compete with Buddhism, which has of recent years awakened to

new life. And now there is a new and still more formidable rival in the field—Christianity—which has already about 130,000 followers, and is spreading every day. Shinto is kept alive mainly by the popular festivals and pilgrimages, of which religion forms but a small part. To Shinto also belongs the religious element in the cult of the Mikado, and the sensibility to the divine in Nature, which is characteristic of the Japanese nation.

LITERATURE.—The student may safely disregard everything written on Shinto in European languages before Sir E. Satow's articles in *TASSJ*, 1874 to 1881. The older authorities, especially Kaempfer, are grossly inaccurate and misleading. **GENERAL:** W. E. Griffis, *The Religions of Japan*, London, 1895; W. G. Aston, *Shinto*, do. 1905; F. Brinkley, *Japan and China: their History, Arts, and Lit.*, London, 1903-04, v.; M. Revon, *Le Shintoïsme*, Paris, 1905. **MYTHS:** *Kojiki*, tr. B. H. Chamberlain in *TASSJ* vol. x. Supplement, 1883-1906; *Nihongi*, tr. W. G. Aston, 2 vols., London, 1896 (*Trans. Jap. Soc. of London*, Suppl. i.); Karl Florenz, 'Japanische Mythologie' in *Mittheilungen der deutschen Gesellschaft für Natur- und Völkerkunde Ostasiens*, Tokyo, 1901. **GEREMONIAL:** 'Ancient Japanese Rituals,' by Satow in *TASSJ* vols. vii. and ix., continued by Florenz, vol. xxvii. pt. i. **INSPIRATION:** P. Lowell, *Occult Japan*, Boston, U.S.A., 1895. **LATER HISTORY:** 'Revival of Pure Shinto,' by Satow in *TASSJ* vol. iii. Appendix; papers on the Remmonkyō and Tenrikyō sects in *TASSJ* vols. xxiii. and xxix. 1. B. H. Chamberlain and W. B. Mason, *Japan's*, London, 1907 ('Murray's Hand-books for Travellers'), contains a valuable account of religious belief and practice. See also N. Hozumi in *Japan by the Japanese*, ed. A. Stead, London, 1904, p. 232 ff.; G. A. Cobbold, *Religion in Japan*, London, 1894; and F. von Wenckstern, *Bibliography of the Japanese Empire*, Leiden and Tokyo, 1895-1907, pp. 52-59.

W. G. ASTON.

SHIPS AND BOATS.—The art of navigation often has a religious or magical aspect. The building and launching of vessels may be accompanied by definite rites at various stages of their progress, and ships and boats are often used in ceremonies connected with social events, especially in connexion with death. Boats also come occasionally into rites of divination and medicine. In some places certain ships or boats are sacred or parts of a vessel may have special sanctity. Religious and magical motives often influence the decoration of vessels and may be the cause of features of their construction.

1. **Rites of building and launching.**—These take place in many parts of the world, varying from such relatively simple ceremonies as accompany the launching of a large vessel among ourselves to prolonged rites accompanying every important stage in the building and preparation of a vessel for use.

In the island of Ambrim in the New Hebrides, ceremonies take place at the felling of the tree from which the canoe is to be made, at the beginning of the hollowing of its trunk, when the outrigger is affixed, and on other occasions. Ceremonial feasts are held every five days during the process of construction, and, when the canoe is ready, it is taken in stages spread over several days to the clearing in the forest where all the important religious rites of the people are held. Both here and on other occasions the maker of the canoe calls upon the ghosts of canoe-makers of former times, asking them to take the canoe under their protection, and certain of the pigs killed during the rites are believed to serve as food for these ghosts.

When the canoe is launched, rites are performed, in one of which a procession marches five times round the canoe, and the contents of coco-nuts are poured over various parts of it. The canoe is taken on ceremonial visits to neighbouring villages, where pigs are killed and ceremonies take place. When the canoe returns after being launched, fruits are thrown at its occupants. This seems to be the degenerate remnant of ceremonial combats which in the neighbouring Banks Islands form an important feature of ceremonial voyages of the canoe round the island where it is made.¹

In New Caledonia ceremonies take place during the building of a large canoe and also when it is launched, and those who take part in the rites have to be continent.² During the construction of a canoe in Eddystone Island, in the Solomons, various rites are performed to give speed and durability. In one of these leaves are hung over the canoe and creepers tied to it, and insects are placed in the caulking, both leaves and insects being used in groups of four. Prayers are uttered similar to those of other religious rites of the island, in which

¹ W. H. R. Rivers, *Hist. of Melanesian Society*, Cambridge, 1914, i. 171.

² R. P. Lambert, *Les Missions catholiques*, xii. [1880] 215.

the appeal is probably to the ghosts of former canoe-makers.¹ In several of the Solomon Islands slaves are killed or the heads of enemies are taken in connexion with the building or launching of a new canoe. In Fiji human victims were killed and eaten when a canoe was launched.²

In some parts of the Papuan Gulf of New Guinea a beheaded corpse is held over the bow of a new canoe so that it is covered with blood, while elsewhere man-killing raids take place when a new canoe is made, and in some cases the blood of the victim is used to 'paint' the canoe. In the Namara district they kill a pig and a cassowary before killing the human victim. In the north of Papua no human victim is killed, but the canoe is painted red before it is launched. A formula is sung continuously as a canoe is being made and a feast is held on its completion. Conchs are blown at the launching, after which the owner is paddled about sitting on the platform of the canoe. When the Binandele fell a tree from which to make a new canoe for a raid, they address it in the name of a dead man, saying that they are cutting it down to be able to visit his slayers.³

In Polynesia the whole process of making a canoe had a ceremonial character. Songs were chanted as it was adzed, and in Tahiti any slip, such as an inaccurate stroke or the use of an implement on the wrong side, would not merely be enough to stop the work temporarily, but might lead to the permanent abandonment of a canoe when almost finished. A fault, even a hesitation, on the part of the canoe-maker in the utterance of his formulas would have the same result.⁴ Feasts to gain the favour of the *aitu* were held before cutting down the tree from which the canoe was to be made, and at the beginning and at every important stage in its construction. A special canoe was made as an offering to the *aitu* and a human victim sacrificed.⁵ In the Austral Islands the god Poere, who filled the springs with water, was invoked with offerings of fish when a canoe was launched,⁶ and the Maoris performed rites at the launching of a canoe by means of which it was placed under the protection of the gods.⁷ In the Hawaiian Islands the choice of a suitable tree was determined by the dream of a priest (*kahunā*) while sleeping before the shrine. Before the tree was cut down, pigs, coco-nuts, fish, and kava were offered to the gods with prayer, and the whole process of building was accompanied by rites.⁸

Among the Kayans of Borneo the operation of boat-building is preceded by the taking of omens, and is liable to be stopped if these are inauspicious.⁹

Similar rites have been recorded from various parts of Africa. Thus among the Baganda an oracle is consulted before the tree to be used in the making of a canoe is felled, and rites take place during this process, one feature of which is the necessity for continence on the part of the makers. The owner together with the builders eats the meat of the sacrificed animal on the shore near the canoe. When it is launched, a hut is built as a shrine for the spirit of the canoe. Goats or fowls are killed so that their blood may run along the keel, and this blood mixed with beer is placed by the side of the hut which serves as a shrine for the canoe-spirit. The first journey of the canoe is to the shrine of a god.¹⁰ Among the Banyoro a man or an ox is eaten before the tree, while the body of a human victim is left by the tree-roots. When the canoe is ready to be launched, a sheep or fowl is killed so that the blood runs into the vessel.¹¹ Among the Baronga of S. Africa sacrifices must be made to the ghosts of ancestors buried in the forest before a tree therefrom is cut down to serve as material for a canoe.¹²

Both in Oceania and in Africa the rites of building and launching are definitely connected with spiritual beings. In Melanesia these are certainly the spirits or ghosts of dead ancestors, who form the basis of the religious cult of this part of the world. Both in the New Hebrides and in the Solomons there is evidence that the ghosts are those of former canoe-builders, probably starting with that of the original introducer of the art. In Africa the spirit to which offerings are made during the processes of building and launching is clearly connected with the tree from which the vessel is made. The spirit of a large canoe is thought to be the spirit of the tree, which clings to the timber,

and especially the keel.¹ Among the Baronga, another Bantu people, the necessity of offerings is connected with the dead who have been buried in the forest from which the tree used for the canoe is taken. This suggests that the tree- and canoe-spirits of other Bantu peoples may have been derived from the spirit or ghost of the dead.

A similar connexion between a canoe and the spirit of the tree from which it is made occurs in Polynesia. In the Hervey Islands the songs chanted while a canoe is being made are said to have been addressed originally to the tree-spirit;² and the necessity for the propitiation of the tree-spirit in Samoa is seen in the case of a tree which had been cut down as suitable for the keel of a canoe not being used through fear of the *aitu* of the grove in which the tree was growing.³ It may be that this was the original belief of the canoe-makers of Melanesia, and that it has since been replaced by the propitiation of ancestors which is characteristic of the religion of that region.

The ship or boat is often the object of religious or magical ritual after it has been built and launched, but it is usually difficult to tell how far such rites pertain to the vessel itself and how far they form part of the ritual of warfare, fishing, or other purpose for which the vessel is to be used. In Eddystone Island rites are performed during the making of a canoe which are designed to promote success in the fishing for bonito, which is one of the favourite pursuits of the islanders; and in many places the nature of rites in which a boat is concerned shows that they are designed to promote the success of fishing or warfare rather than the safety of the vessel. Among the Baganda, however, fish are definitely offered to the canoe; they are killed in the vessel with the words 'This fish we offer to you,' and, if the fishing fails after the omission of this offering, a propitiatory ceremony is held in which fish are offered with a confession of wrong-doing.⁴

2. Death-rites.—In the rites so far considered the vessel itself is the main purpose. Ships and boats also frequently enter into rites the purpose of which is wholly different. Thus the use of boats is very frequent and prominent in death-rites.⁵

In Melanesia the bodies of the dead are often placed in canoes at some stage of the funeral-rites or the dead are interred in their canoes. In the New Hebrides a canoe is loaded with objects which may be of use to the dead and is then sent adrift during the course of the death ceremonies; and a similar proceeding takes place as part of the highly complex and prolonged ceremonial in which initiates gradually rise in rank as members of a fraternity connected with a cult of the dead.

In New Britain the corpse of an important man is laid in a boat which, with its contents, is sunk far out at sea. The dead were also sent out to sea in canoes in several islands of Polynesia, such as Samoa and Niue. In other cases the corpse, while undergoing desiccation, was left in a canoe or placed on the platform of a double canoe. In other islands of Polynesia a body was interred in a canoe or in a hollowed log of wood representing a canoe.⁶ In the Lau region of the Fijian archipelago the bodies of chiefs were placed in great canoes and dragged to almost inaccessible caves.⁷

The Malanau, a Klemantan people of Borneo, put the property of a dead man and sometimes the corpse also in a canoe and send it out to sea.⁸

The use of a canoe is frequent in the death-rites of America, especially in the southern continent, the bodies of the dead being frequently interred in canoes.⁹

In Asia there are only a few traces of the use of boats in death-rites. In the Nicobar Islands the dead are sometimes

buried in the hull of a canoe.¹ Pieces of reed in the walls of Indian tombs are said to serve as boats;² and the Ainu of Japan say that an object which looks like a spear, placed over a grave is really a boat-oar.³ A double canoe was used in the death-rite of a king of Kandy, but only as the means of taking a horse or an elephant on a river in order that its rider should deposit the ashes of the king in the stream.⁴

In Africa the use of boats in funeral-rites is less frequent than in Oceania or America. The Egyptians from the Vth to the XIIIth dynasty included models of ships among the furniture of a tomb. The Bakongo use an old canoe as material for a coffin;⁵ and a priest of the Ibo in the Asaba district on the Niger is buried in a canoe or a model of a canoe is put into his coffin, the practice being accompanied by a prohibition against the use of a canoe by a priest while he is alive.⁶

The use of ships in funeral rites was very prominent in ancient Scandinavia. The vikings used a ship as a funeral pyre. They put the body of a dead leader in his ship and sent it out burning to sea. The ship was also used for interment. Funeral-mounds have been found to contain large sea-going vessels on which the bodies of the dead had been placed, together with numerous animals and other objects for the use of the dead. One such vessel found at Oseberg contained the bodies of two women, one probably of high rank and the other her attendant. Around the Baltic old stone burial-places occur in the form of boats. Models of boats, sometimes in gold and often in large numbers, are found in the ancient interments in this region.⁷

3. Boat-processions.—Ships or boats sometimes took an important place in ceremonies.

In Greece, at the general Panathenaic festival, held every fourth year, a ship on wheels was taken in procession with a robe fastened to its mast to be presented to Athens. At Smyrna, during the feast of Dionysus in the spring, a sacred ship steered by a priest of the god was carried aloft round the market-place.⁸

There is no direct evidence of similar processions in ancient Egypt, but a ship was prominent in the rites of Isis, and representations of boat-shrines on sledges in ancient tombs and a golden model of a boat on wheels from the XVIIth dynasty point to the occurrence of processions similar to those of Greece.⁹ Such processions still take place in modern Egypt. Three take place every year in Luxor, the chief of which is in honour of Abul Heggag, a *shaitik* who is said to have journeyed from Kenah to Cairo in a stone boat about 700 years ago. A procession in which a boat is used occurs in a Sinhalese ceremony performed by the Muhammadan Moormen of Ceylon.¹⁰ Ship-drawing cavalcades occurred in Europe in the Middle Ages and were forbidden by a proclamation at Ulm as late as 1530.¹¹ Relics of such processions survived in Suabia until the middle of last century.¹² Boats burned in China to carry away evil influences are previously carried through the streets in procession.¹³

4. Boat-races.—In several parts of the world boat-races seem to have or to have had a religious significance.

In Siam regattas are held from the results of which prognostics are drawn,¹⁴ and in China races of dragon-boats are believed to produce rain.¹⁵ In Hermione in Attica boat-races were held in honour of Dionysus of the Black Goat-skin, and races were held at Sunium. Races rowed in sacred boats round the promontory of Piræus formed part of the training of the Athenian youth.¹⁶ Boat-racing took place also at the Isthmian and Panathenaic festivals.¹⁷

5. Divination by means of boats.—In several islands of the Solomons the swaying of a canoe forms a means by which the people determine whether their ancestors favour an enterprise that they are about to undertake, the movement doubtless depending on automatic movements of the occupant of the canoe similar to that of table-turning. In one part of Eddystone Island the movements are believed to be produced by a

crocodile, and in others by a shark or by a mythical octopus-like creature.

6. Boats and medicine.—In some parts of Indonesia rites are performed to cure disease, especially epidemic disease, in which small vessels, often elaborately constructed, are sent out to sea and are believed thus to carry away the disease.

In Sarawak such a boat is made of sago-pith, and an image in human form is placed therein. A 'sorcerer' is then called upon to discover the abode of the evil spirit who is causing the disease and the place propitious for sending the boat adrift. The sorcerer takes the image from the boat and instructs it what to say to the spirit. After spitting betel juice on the image, he replaces it in the boat, which is allowed to float away.¹ A similar practice occurs in Eddystone Island, where a leaf resembling a canoe, in which ashes, some thatch, and shells are placed, is sent out to sea to carry away an epidemic disease.

Thanksgiving offerings may also be floated out to sea.² In China the boats which are burned on the sea-shore in order to take away evil influences³ have the form of dragons.

It is noteworthy that the custom of banishing disease by sending it to sea in a boat occurs in Indonesia and Melanesia. In both those regions the dead or their property are sent out to sea in boats. The relation between the two practices raised by their common distribution is reinforced by the custom of Sarawak in which an image placed in the disease-boat is instructed to speak to the spirit. It suggests that the spirit or ghost to whom the occurrence of epidemic disease is ascribed is that of a dead ancestor or hero who lives across the water, to whom a message is sent by means similar to those by which he himself is believed to have travelled after death.

7. Sacred ships and boats.—In several of the rites which have been described special sacred vessels are used.

In Melanesia only certain canoes are tabu to women, thus showing some degree of sacred character, and canoes are often also tabu to women in Polynesia. In the Duke of York Island in the Bismarck Archipelago sacred canoes called *pidik* were formerly made with much ceremony, and leaders of the *Dukduk* or ghost-boat of that region were carried in it to all the surrounding islands. In the *Dukduk* canoes form a definite feature of many of the *pidik* certain canoes, apparently made for the purpose, are dedicated to the *atua*. They were called *marae*, the word otherwise used for 'temple'; a human victim was sacrificed when they were launched, and they were not allowed to touch any soil but that of the *marae* to which they were carried from the sea. They had a platform, also called *marae*, on which were laid the bodies of those slain in warfare.⁴

In ancient Greece a sacred vessel went every year from Athens to Delos. During its absence Athens was in a state of purification and no criminal could be killed; this occasion was the means of delaying the death of Socrates. When the vessel started on its voyage, its bows were crowned with flowers by the priests of Apollo.

The doge of Venice had a sacred galley, the *Bucentaur*, from which was performed at the feast of the Ascension the ceremony of marriage with the sea, into which a ring was thrown.

In two widely separated parts of the earth, Scandinavia and China, vessels were used, more or less sacred in character, which took the form of dragons, and similar vessels are represented in the sculpture of ancient India.⁵ It is a question whether the *dreki*, or dragon-ship, of the vikings had a special build or differed from other vessels only in having a dragon-head at the bow and a 'tail-fin' at the stern. Vessels of this kind were especially associated with the chiefs, and it was in them that dead chiefs were buried or cremated. The Veneti of Brittany appear to have had similar vessels.⁶ The dragon-boats of the Chinese also had a sacred character and were apparently believed to be associated with rain-making.

Tradition in several places tells of stone boats.

The *shaiikh* in whose honour boat-processions still take place in Egypt¹ is reported to have travelled in a stone boat, of which relics are still shown. Stone boats are prominent in the stories of Irish and British saints.² Petrified boats occur in the legends of Indonesia;³ and one of the legendary heroes of Ruviana, in the Solomon Islands, is said to have turned his war-canoe into stone.

8. Sacred parts of vessels.—In several places the hinder end of a vessel has a sacred character.

In the Maori canoe the stern-thwart might be occupied by the priests, and this part was also believed to be occupied by the spirit under whose protection the vessel had been placed. In the Marquesas the image of a god was placed in the hinder part of the canoe.⁴ In the boat-burials of the vikings the dead were placed in houses erected behind the mast, and the Roman war-galley had a portion of the stern set apart as a temple.

In other cases sacred objects of various kinds are placed in the bows, suggesting a more or less sacred character of this part of the vessel.

In the island of Dobu in the D'Entrecasteaux group (S.E. New Guinea) the bow of a canoe is dedicated to war and the stern to peace. If a canoe of any size were brought to a place bow first, it would mean war.⁵

Among the Baganda sanctity appears to attach to the keel. The spirit of the tree from which the canoe is made is believed to cling especially to the keel, and the blood of the goat killed at the launching is allowed to run along this part of the vessel.⁶

The decoration of ships and boats often has, or has had, a religious significance.

Sometimes, as in Samoa, the figure-head in the form of an animal may indicate the village or district to which the canoe belongs, but more often (and perhaps also in Polynesia) the human being or animal represented is believed to protect or guide the vessel. The natives of the north-west coast of N. America adorned the bow and stern of their canoes with elaborate totemic patterns in painting or carving.⁷

The presence of an eye upon the bows, which in ancient Egypt portrayed the eye of Osiris, seems elsewhere in the Mediterranean, India, China, and N. America to have become a mere decoration, but it is possible that it still possesses a religious significance. Objects placed in the bows, such as the head of an albatross, sharks' tails, horse-shoes, etc., may in some cases be only trophies, but more frequently they are amulets designed to ensure a fair wind or other benefit.

The intense conservatism of sailors, which has done much to perpetuate special types of vessels and details of their structure, is probably connected with the belief in the religious or magical significance of the objects that they have preserved. On the other hand, the strength of the religious sentiments connected with boats has in some cases led to the disappearance of all means of navigation. There is little doubt that the complete absence of sea-going vessels, even in certain islands where they would seem to be indispensable, is due to the sacred character of the art of boat-building. When those who knew the appropriate formulas and rites have died, the people have forgone the highly useful art of navigation rather than make vessels destined to misfortune owing to the absence of the due religious rites.⁸

SHOES AND SANDALS.—Most savage peoples wear no covering on the feet, except where the climate is excessively cold—e.g., among the Eskimo, Samoyed, and Gilyaks (but not the Fuegians). How soon the custom of covering the feet arose in pre-historic times is uncertain, as the perishable nature of the material used would not tend to its preservation. Increasing civiliza-

tion led to the use of some form of sandals, but even among the early Greeks these were not always worn, and among cultured Hindus a foot-covering, especially of leather, is disliked. Clement of Alexandria wrote that bare feet are in keeping for a man, except when on military service, and he quotes the Greek proverb, ὑποδεῖσθαι τῷ δέδω-
θαι.¹ We have to consider here the use of sandals and shoes in religious ritual.

1. Ritual putting off of shoes.—On two occasions in the OT a command is given, 'Put off thy shoes from off thy feet, for the place whereon thou standest is holy ground'—first to Moses, second to Joshua, on both occasions in presence of a theophany, making the surrounding place holy or tabu.² The priests also probably officiated in the Temple with bare feet.³ Parallels from other religions may be cited before suggesting the rationale of the custom.

No one was permitted to enter the temple of Britomartis in Crete unless barefooted, and a similar prohibition forbade the carrying of shoes into the holy place of Allecto at Ialysos in Rhodes, and into the temple of the Tegean mother.⁴ Several other instances from Greek ritual might be cited, and the custom was a general one.⁵ Worshipers at Rome went barefoot in honour of Cybele, and also in the cult of Isis, as pictures at Herculaneum show.⁶ While nothing is said of the priests in Roman sacrificial ritual, the suppliant offering a sacrifice to obtain a favour required to have his feet bare and hair dishevelled.⁷ Ovid cites an instance of a place where formerly stood a sacred grove, still approached with naked feet—an instance of the tenacity of custom.⁸ In Egypt the priests, when officiating in the temples, frequently removed their sandals.⁹ A similar custom holds in India, where, e.g., at the temple of Dākora in Gujarāt a visitor must remove his shoes before ascending its steps.¹⁰ The practice is also found with the Muslims, who remove their shoes at the door of a mosque, carrying them in the left hand, sole to sole.¹¹ Similarly, on entering a house, Muslims leave their shoes on the *durk'āh*, or lower part of the floor, before stepping on the *teevān*, or upper part, and they also remove them before stepping on a carpet or mat.¹² In some instances the sacredness of the threshold demands that it be not touched with the foot when crossing it; hence among other rites that of taking off the shoes is sometimes found.¹³

The sandals or shoes which have been in contact with common ground must not be brought into contact with sacred ground, first, lest any dirt or the contagion of the outer secular world should be brought in, and probably, as a secondary reason, to avoid carrying away the sacredness of the holy place upon them. The latter would, of course, prevent their being used afterwards in ordinary life. For the former reason the feet are washed also where shoes are not ordinarily worn as well as where they are, before entering a sacred place.¹⁴ These customs are parallel to the precautions taken among savages to remove the outward contagion from a stranger before admitting him to the village or house.¹⁵ But the question of archaic

usage also must be considered. Before any foot-covering was worn or in the period of transition (e.g., in Homeric Greece) all religious rites must have been performed barefoot, after washing the feet. Hence it may have been thought wiser to continue the practice after sandals were in common use, and the cause just considered would also affect the practice. In the same way stone knives continued to be used ritually long after metal was used in ordinary life.

In some magical rites sandals had to be laid aside and the feet washed.

Ovid relates that they were removed by the man who threw beans as a ransom for himself and his friends from the ghosts at the Lemuria.¹ Horace describes how Canidia practised her rites of sorcery with bare feet and dishevelled hair, and Pliny says that *setago* was gathered in Gaul by one who went with newly-washed unshod feet, and who wore a white robe.²

This putting off of shoes, in conjunction with wearing the hair unbound and also a loose robe, points to the fear of hindering the magical action through any knot or constriction. In the same way all garments had to be loose in Greek sacrificial ritual.³

Another reason for putting off the shoes or sandals was that this was a sign of grief or mourning, and hence the right attitude in those who approached the gods and their sacred places in humility. The custom is found in religious ritual where grief or humility was to be shown.

The women in the procession through the town mourning with Demeter went unshod, and so did the Locrian virgins (who served as slaves) in approaching the *Βωαὶ* of Athens.⁴ In drought a procession and ritual called *nudipedalia* was intended to propitiate the gods by this token of humiliation and sorrow.⁵ Many other instances of this are known.⁶ In actual mourning rites going barefoot was used by both Greeks and Romans; e.g., Suetonius describes how the young nobles who removed the ashes of Augustus from the pyre were barefoot.⁷ Bion describes Aphrodite weeping for Adonis as *ἀνὰ βάτος*, and Antonos was unshod at the death of Actaeon.⁸ It was also a token of distraction, as when the Roman vestals fled from Rome with the sacred utensils.⁹ Among the Hebrews to go bare-footed was also a sign of mourning.¹⁰

2. Ritual wearing of special shoes.—Dress could be washed before visiting a sacred place, but this was impossible for sandals or shoes, unless these were merely of linen, as in a rite described by Herodian.¹¹ Hence they were removed, as we have just seen, or special shoes were worn in the sanctuary or sacred place. These as well as a special dress might be there provided for the worshipper, unless he was rich enough to supply them for himself.¹² This is found in savage as well as in ancient custom.

At the annual ceremony of the new fire among the Creek Indians the priest wore a pair of new buckskin moccasins instead of going barefoot. These were made by himself, and were stitched with the sinews of the animal from whose hide the material was procured. They were kept carefully in the sacred enclosure and used only at the festival.¹³ In Mexico the woman representing the goddess Ixcatecutli wore white sandals, and sandals fastened with buttons and cords were worn by the victims sacrificed to Huixtocihuatl, and so also in other instances.¹⁴ In old Chinese ritual a great officer, on leaving his state and crossing the boundary, had to prepare a place for an altar and there wore shoes of untanned leather and special garments.¹⁵ Persons consulting the oracle of Trophonius,

after being washed and anointed, put on a linen shirt and shoes of the country—*ὑποπόδημα ἐπιχωρίως πεποίηται*.¹ In the procession at the Andanian mysteries the sacred women had to wear no other shoes than those made of felt or of the skins of the sacrificial victims.² Similarly at a late Syrian rite in which boys were initiated they wore slippers made from the hide of a sacrificed animal.³ As a customary foot-gear the wife of the *flamen Dialis* wore shoes made of the skin of a sacrificial victim or of one killed, never of one dying a natural death.⁴ Herodotus says that the Egyptian priests were not allowed to wear any other shoes than those made from papyrus—*ὑποπόδημα βύβλυνα*. In other cases they were made of leaves of palm.⁵

The last examples have perhaps some connexion with rites in which at a sacrifice the worshipper stood or knelt on the victim's skin.⁶ In the Greek, Roman, and Egyptian instances the reason for wearing special shoes or sandals, not of leather, was connected with the idea that anything made of the hide of animals dying a natural death—i.e. not slain or sacrificed—would defile a sacred place. This is expressly stated by Ovid and Varro,⁷ and it also would be a reason for going unshod where the feet were not covered with some other material. The skin of sacrificed animals might be used, as some instances have shown.

In ancient India, where probably, as in modern India, it may have been the usual custom to go barefoot because of the supposed impurity of leather,⁸ the king who had performed the *rājasūya* rite must never stand on the earth with bare feet.

'From the throne-seat he slips into the shoes and on shoes (he stands), whatever his vehicle may be, whether a chariot or anything else. For verily he who performs the *Rājasūya* is high above everything here, and *crayathā* here is beneath him;—therefore this is for him a religious observance; as long as he lives he does not stand on earth (with bare feet).'⁹

Here the real reason probably was connected with sacredness as a result of the rite, which must not be contaminated by direct contact with the ground. Another rite in connexion with a king's consecration ordained him to wear shoes of boar's skin at the investing.

The reason assigned is that the gods once produced a boar from a pot of *ghī*. Hence 'cows readily take to a boar,' because 'it is their own essence (life-sap, blood)' to which they are taking. Thus the king 'firmly establishes himself in the essence of the cattle: therefore he puts on shoes of boar-skin.'¹⁰

The Parsi sacred books ordain that 'walking with one boot as far as four steps is a *Tanāpāhar* sin,' or forbid this lest grievous harm should happen to the soul. The true reading here appears to be 'without boots,' or 'with only a single covering on the feet'—i.e. inner boots of thin leather over which an outer pair were worn out-of-doors. Modern Parsis understand it as walking without boots.¹¹ In another passage the reason is clearly stated—one is not to walk without boots because, if one treads on dead matter while wearing them, he is not polluted.¹² Touching the ground—i.e. unconsecrated ground—with bare feet is most offensive to the Parsi and a sinful act:

'It is not desirable for those of the good religion . . . to put a bare foot upon the ground, because it is a sin, and injury occurs to Spendārmaḍ, the archangel.'¹³

3. Removing one shoe.—In some instances in Greek ritual we find that one shoe was removed.

Ovid describes Medea, before her invocation of the powers which will help her to obtain herbs for the renewal of youth, as having her feet—probably one foot—bare, hair and garments

floating loosely.¹ Vergil's account of Dido assisting at the rites ordained by the sorceress before her death is in the same terms — "unum exuta pedem vinculis, in veste reincta."²

The purpose here seems to be, as in parallel instances, to permit the free action of magical influences by loosening all knots (*q.v.*) and bonds which might be conceived to restrain it, though why one foot only should be unshod is not clear. Greek ritual of purification sometimes prescribed that the right foot should be bare and resting on the skin of the sacrificial victim, probably in order that there might be free communication between the suppliant and the sacrifice.³ A similar custom of having one foot bare existed among the warriors of the Aetolians and the Anagnini.⁴

The latter, as described by Vergil, fought entirely naked, but the right foot was shod in the raw hide of a bull.⁵ Thucydides also tells how 200 men of Plataea, having only one foot shod, surprised the Spartans and broke their line.⁶ Similarly Perseus, in attacking the Gorgon, wore only one shoe.⁷

Possibly the account given by Herodotus of the occasional appearance of Perseus among the Chemmities within his temple near Neapolis, when a sandal worn by him, two cubits in length, was sometimes found there, may have some connexion with this custom. After its discovery all Egypt flourished.⁸

Frazer considers this warrior custom to be a form of consecration or devotion observed by men in great danger, and cites also an instance of the pagan Arabs cursing with one foot bare.⁹

The story of Jason relates that, when he was crossing a swollen stream, one of his sandals stuck in the mire. He proceeded on his way to the house of the usurper Pelias, who recognized that he was the man with one foot shod by whom it was announced that he should die. This is probably a legend arising out of the ritual act in question.

The story of Rhodope, whose shoe, taken by an eagle, was dropped by it in the bosom of Psammetichos, who sought its owner through all Egypt,¹⁰ is a version of the myth of Aphrodite and Hermes, and an early variant of the well-known folk-tale of Cinderella or Aschenputtel, of which there are innumerable examples.¹¹

Hermes fell in love with Aphrodite, but to his grief she proved obdurate. Zeus, in pity for Hermes, sent an eagle which took her shoe while she was bathing and brought it to Hermes. Aphrodite sought it, and eventually Hermes won her.¹²

Gruppe connects this story, as well as those of Jason and Perseus, with such rites as have been referred to, and in particular with some mystery-legend and a mystery-ritual in which the sandal is a badge, as it is the token of recognition in the folk-tales. The rite or rites may also explain the numerous representations of Aphrodite or Hermes binding or loosing their sandals, or of Aphrodite chastising Eros with a sandal. Hermes himself might be considered as *μοροκρηπής* like Jason,¹³ and possibly in the story the eagle is the god himself, since Zeus transformed him to that shape, according to one version of the myth of Leda. The rite may also account for such place-names as Sandalion and the like.¹⁴ As a token of recognition sandals, armour, and weapons were placed under a stone by Aigeus where Aithra might show them to her son by him, Theseus, when he was of age.

Sandals were often consecrated both to Aphrodite and to Hermes.¹⁵ In art and myth the sandals of Hermes are winged and 'carry him over sea and the boundless earth, with the blasts of the wind.'¹⁶ Perseus and Pan also had winged sandals.

The shoes of swiftness, 'seven-leagued boots' of many folk-tales, transporting the wearer swiftly from one place to another, resemble Hermes' winged sandals. They are magic properties of the gods appropriated by men, or imaginative exaggerations of the primitive sandal protecting the foot of the swift runner. In a Norse tale they are made by Hermodr from the skin of the soles of her feet.¹

4. Magical rites with shoes.—The supposed dislike of spirits to leather,² as well as the magical virtues attributed to the shoe itself, accounts for its use in various magical rites.

It is placed heel upwards on the top of a house in India by the poor to ensure protection; and hailstones are beaten with a shoe by a wizard during a hail-storm to cause it to cease.³ Again, the origin of throwing a shoe at a wedding for luck may be traced to some idea of scaring off demons who might cause barrenness, or of enhancing fertility.⁴ According to a German superstition,⁵ shoes placed wrong-wise at the head of the bed prevent the *alp*, or nightmare, from pressing one during the night. The shoes, or one shoe, are often untied at a wedding, with the idea that the unbinding of the knot will counteract evil influences.⁶ Other superstitions are of a very varied kind. If the wife puts on her husband's slippers on the wedding-day, she will have easy labour, in Teutonic belief.⁷ In Sicily shoes made out of wolf-skin for a child render it lucky and courageous.⁸ An ancient Greek method of bringing back a faithless lover was to get a witch to fumigate his sandals with sulphur and to use incantations over them.⁹

The sandal of Perseus was a relic in Egypt and, when found, ensured the prosperity of the land.¹⁰ So the dervishes at Old Cairo preserve a huge shoe as that of their founder.¹¹ Sandals and shoes of Christian saints have also been revered as relics.

5. Symbolism of the shoe.—Among the Hebrews putting off the shoe was a confirmation and symbol of a renunciation or transference of rights. It was removed from a man by the widow of his brother when he refused to take her as wife, as an act of contempt, and his family was known as 'the house of the unsandalled one.'¹² On refusing to redeem land the shoe was removed by the man himself, and apparently the seller of land gave his shoe to the buyer as a symbol of the rights given up by him.¹³ In Arab usage a man divorcing his wife said, 'She was my slipper and I cast her off.'¹⁴ If the phrase, 'Over Edom will I cast my shoe,'¹⁵ signifies a symbol of taking possession of the land, this would also be a Hebrew custom, resembling one reported from Abyssinia, and parallel to putting the foot on the neck of a captive, or placing the figure of a captive on the lining of a sandal, as in ancient Egypt, signifying that he was trodden under foot.¹⁶ But the meaning of the phrase, by analogy with 'Moab is my wash-pot,'¹⁷ may rather be that of throwing a shoe to a slave to carry or clean.

6. Shoes of the dead.—As the dead were frequently supposed to take a long and rough journey to the other world, they were often provided with shoes. This is already found in later pre-historic times, and it continued as a general custom in various parts of Europe.¹⁸ It also occurs

sometimes among savage tribes, among whom generally no shoes are worn.

Some of the tribes of lower California put shoes on the feet of the dead, so that they may be ready for their long journey.¹ In Scandinavian and Teutonic regions such shoes were known as *hek-skó* (Old Norse) or *Todtenschuh*—the latter name surviving as a general one for the funeral-rites long after the custom itself had ceased.² In some cases, as in Yorkshire, it was thought that one who gave a pair of new shoes to a poor man during life would meet an old man after death who would present him with the same shoes at the edge of Whinnymuir, the region full of thorns and furze—'ower flinty steans, thruff monny a thorny brake,' which otherwise the spirit would have to traverse 'wi' shoonless feet.' This belief is illustrated by the 'Lyke-Wake Dirge,' various versions of which are sung in the north of England.³ Elsewhere—e.g., in Brittany—Death personified is supposed to grease the boots of the man whom he comes to fetch, like a good servant, so that he may travel along Death's high-road.⁴ Lucian's story of the ghost of the dead wife who appeared to her husband and complained that one of her slippers had not been burned on the funeral pyre is interesting in this connexion.⁵

7. Concealing the shod or unshod foot.—In China and among the Chuvashes (Turks of the Volga) it is considered indecent to show a foot unshod or without stockings. This idea is connected, in China, with the enforced smallness of the feet, which has probably an association with sexual attraction.⁶ Clement of Alexandria recommends the women of his time to wear shoes, as it is not fitting for their feet to be shown naked.⁷ In Spain, whence it passed into Italy, it was considered immodest for ladies to show their feet even when shod, and several 16th and 17th cent. writers refer to this—e.g., Brantôme, who maintains that a beautiful foot 'portoit une telle lasciveté en soy,' and Madame d'Aulnoy.⁸

SHROVE-TIDE, SHROVE TUESDAY.—

1. *SHROVE-TIDE*.—The name Shrove-tide is given to the week before the First Sunday in Lent. Shrove Tuesday is the day before Ash Wednesday, and it gathered up in itself in the later Middle Ages the customs and the practices which formerly characterized the whole week. Shrove-tide was the season of confession, absolution, and reconciliation before the solemnities of Lent and Passion-tide and Easter, a time of purification and of joy.

The name is derived from Anglo-Saxon *scrifan*, 'to shrive.' There is a passage in the *Capitula incerti authoris* printed by Spelman from a Corpus Christi College, Cambridge, MS which illustrates both the practice of Shrove-tide and the origin of the name. The *Capitula* follow upon the Canons of Ælfric, and may belong to the same period, i.e. the 10th century. The Anglo-Saxon text is only a paraphrase of the Latin. The Latin text reads:

'Haebdomeda prima ante initium Quadragesimae, confessiones sacerdotibus dandae sunt, poenitentia accipienda, discordantes reconciliandi, et omnia iurgia sedanda, et dimittere debent debita invicem de cordibus suis, ut liberius dicant, *Dimitte nobis debita nostra, sicut et nos dimittimus debitoribus nostris*: et sic ingredientes in beatae Quadragesimae tempus, mundis et purificatis mentibus ad sanctum Pascha procedant.'

⁷ Clem. *Prod.* ii. 12.

⁸ *Des dames galantes*, ed. H. Comtesse d'Aulnoy, *Relation*, Paris, 1715, p. 125 f.; Reinach, *loc. cit.*

The Anglo-Saxon paraphrase begins thus:

'On thaere nyhstan wucan ær halgan nyht scealge hwa to his scrifte gan, and his dædum ge andettan and his scrift him sceal swa scrifan swa he thonne on his dædum gehyreth.'¹

The Latin *capitulum* states clearly that confessions are to be made in the week before the *initium Quadragesimæ*. There is a liturgical difference between the *caput jejunii*, the title of Ash Wednesday, and the *initium Quadragesimæ*, the title of the First Sunday in Lent. The original fast of 36 days began on the Monday after the First Sunday in Lent. After the time of Gregory the Great Ash Wednesday became the first of the four supplementary fast-days with the title *caput jejunii*.

R. Cabrol explains the difference:

'Tommasi explique du reste cette apparente contradiction en disant que le carême antique avec ses trente-six jours de jeûne commençait en réalité le lundi de la première semaine; le premier dimanche était, en ce cas, le commencement du carême, d'où la secrète de ce dimanche: *sacrificium quadragesimalis initii solemniter immolamus*.'²

The First Sunday in Lent in the *Gelasian Sacramentary* is called 'Dominica in Quadragesima [V æ] Inchoantis initium.' This is preceded by the Shrove-tide prayers: 'Orationes et preces a Quinquagesima usque ad Quadragesimam.' Wednesday has the title, 'In Jejunio. Prima Statione. Feria iv.' and the prayer, 'Inchoata jejunia, quaesumus, Domine.' There is no reference to Thursday. Friday has the title 'Feria vi. in Quinquagesima,' and the prayer, 'Da, quaesumus, Domine, fidelibus tuis jejuniis paschalibus convenienter aptari.' Saturday has the title 'Feria vii. in Quinquagesima,' with the prayer, 'Observationis hujus annua celebritate laetantes, quaesumus, Domine, ut paschalibus actionibus inhaerentes, plenius ejus effectibus gaudeamus.'³

These prayers and titles illustrate the liturgical difficulty involved in the throwing back of the Lenten fast to Ash Wednesday and the breaking up of the week of Quinquagesima. The Shrove-tide customs are a witness to the earlier use, and the *gaudeamus* of the Saturday prayer preserves the note of joy even in the shadow of Lent.

The double tradition of the beginning of Lent is witnessed in the terms 'Carnisprivium Vetus' and 'Carnisprivium Novum,' which are found in documents illustrating the history of Dauphiné at the close of the 13th century.⁴

The terms 'Shrove-tide' and 'Shrove Tuesday' are still in common use. The following note in a curious Cambridge record, *Bedell (Matthew) Stokys' Book*, written about 1557, gives the name of Shrove Sunday to the First Sunday in Lent. It 'describes the Cambridge Ceremonies in Lent' and illustrates the older tradition when the Shrove-tide customs were not confined to Shrove Tuesday.

'Ashwenssdaye:—First, the Bedels erlye in the mornynge, every one in their severall Coursis, shall toll or cause to be tolled in every Colledge, Howse, Hall or Hostell, where eny determiners be, the bell to gather the Companie together, and so shall brynge them to St. Maries Church before viii. of the Clocke etc. etc. . . . Item, All the determiners dothe sytte in the New Chappell within the Schooles from i. of the Clocke untill five, upon the Mondaye, Twesdaye, Wensdaye, and Thursdaye in the weeke before Shrove Sondaye . . . and from three to 4 all they have a Potation of Fygges, Reasons, and Almons, Bonnes and Beer, at the charge of the said determiners.'⁵

The Monday before Ash Wednesday was called Collop Monday or Shrove Monday.⁶ And in a Latin and English Vocabulary printed from a

⁶ J. Brand, *Popular Antiquities*, ed. H. Ellis and J. O. Halliwell, i. 62.

Trinity College, Cambridge, MS of the 15th cent. there is the word 'Shrofday':

'Carnprivium . . . shrofday, quia a tunc privamur carnisbus.'¹

The name 'Carnprivium' is given to Quinquagesima Sunday.²

The Shrove-tide rhymes recorded by Brand from the neighbourhood of Salisbury show that 'shroving' was as popular a custom in the early part of the year as 'souling' was, and is still, in the Midlands in November.

'Shrove Tide is nigh at hand,
And I am come a shroving;
Pray, Dame, something,
An Apple or a Dumpling,
Or a piece of Truckle Cheese
Of your own making,
Or a piece of Pancake.'³

The observation of Shrove-tide has affinities with the Continental carnival.

II. **SHROVE-TIDE REVELS.**—Shrove-tide was a season of revelry and sport in court, college, and country-side.

I. **Court.**—Fungoso, a court aspirant in Ben Jonson's *Every Man out of his Humour*, refers to those revels in a letter to his father.

'I desire you likewise to be advertised, that this Shrove-tide, contrary to custom, we are always to have revels; which is indeed dancing, and makes an excellent shew in truth.'⁴

In the same play Carlo Buffone, speaking of Macilente, says:

'Ay, this is he; a good tough gentleman: he looks like a shield of brawn at Shrove-tide, out of date, and ready to take his leave.'⁴

This is evidence for the year 1599. There were costly revellings at Hatfield in 1556:

'In Shrovetide, 1556, sir Thomas Pope made for the lady Elizabeth, all at his own costs, a great and rich masking in the great hall at Hatfield, where the pageants were marvellously furnished.'⁵

For 28th Feb. 1587-88 we have the following information:

Francis Bacon 'assisted in getting up the masque which was presented to the Queen by the gentlemen of Gray's Inn.'⁶

These revels were well rooted in the observance of the court. In 1512 there is a notice in the *Percy Household Book*:

'The Clergy and Officers of Lord Percy's Chapel performed a play before his Lordship upon Shrowtewesday at night.'⁷

The ruder sports were also encouraged in still earlier times by the court and the nobles. Among the royal household accounts of Henry VII. there is this entry under date 2nd March, 1492:

'Item to Master Bray for rewards to them that brought Cockes at Shrovetide, at Westm. xxs.'⁸

And in a MS Life of Thomas Lord Berkeley (1352-1417), among his recreations, we are told:

'Hee also would to the threshing of the Cocke, pukke with Hens blindfolde and such like.'⁹

2. **College and school.**—In a British Museum MS entitled *Status Scholæ Etonensis* (1560) it appears that Shrove Tuesday was kept as a holiday. The cook brought in the pancake (*laganum*) and fastened it to a crow. The meaning is obscure.

'Die Martis Carnis-privii luditur ad horam octavam in totum diem: venit Coquus, affligit laganum Cornici, juxta illud pullis Corvorum invocantibus eum, ad ostium Scholæ.'¹⁰

There was also a Shrove Monday custom at Eton, called Bacchus. The upper form boys wrote poems 'either in praise or dispraise' of Bacchus. The

poems were fastened to the inner doors of the College.¹ The revels at Merton College, Oxford, are described by Anthony Wood under date 1647-48:

'Shrove-Tuesday, Feb. 15, the fire being made in the common hall before 5 of the clock at night, the fellows would go to supper before six, and making an end sooner than at other times, they left the hall to the liberties of the undergraduate, but with an admonition from one of the fellows (who was then principal of the undergraduates and postmasters) that all things should be carried in good order. While they were at supper in the hall, the cook (Will. Noble) was making the lesser of the brass pots full of cawdle at the freshmen's charge, which after the hall was free from the fellows was brought up and set before the fire in the said hall. Afterward every freshman, according to seniority, was to pluck off his gowne and band and if possible to make himself look like a scoundrell. This done, they were conducted each after the other to the high table, and there made to stand on a forme placed thereon: from thence they were to speak their speech with an audible voice to the company: which if well done, the person that spake it was to have a cup of cawdle, and no salted drinke: if indifferently some cawdle and some salted drinke; but if dull nothing was given him but salted drinke or salt put in college bere, with tucks to boot. Afterwards when they were to be admitted into the fraternity, the senior cook was to administer to them an oath over an old shoe, part of which runs thus: "Item te jurabis quod penitus non visitabis."'

A note adds: 'This was the way and customs that had been used in the college, time out of mind, to initiate the freshmen: but between that time and the restoration of Ch. 2 it was disused, and now such a thing is absolutely forgotten.'²

W. Huddesford³ refers to similar customs prevailing in the university about 1772. Thomas Hearne, in his *Reliquiæ*,⁴ mentions customs of this kind at Brasenose and Balliol.⁵

The grammar schools were not behind the colleges in their observance of Shrove-tide. The sports were rougher, and were similar to those of the country-side. Stowe, on the authority of W. Fitzstephen, refers to the ancient practice of cock-fighting and playing at the ball or bastion.⁶ Sir John Sinclair in his *Statistical Account* produces a witness for Scotland, the minister of the parish of Kirkmichael, Perthshire:

'Foot-Ball is a common amusement with the School-boys, who also preserve the custom of Cock-fighting on Shrove-Tuesday.'⁷

In Lancashire and Cumberland the 'Cock-penny' formed a part of the stipend of grammar school masters. At Lancaster Grammar School and at Burnley, Clitheroe, Whitehaven, and Millom this gratuity was paid by the scholars at Shrove-tide. The Yorkshire rhymes may refer to this custom:

'A nick and a nock,
A hen and a cock,
And a penny for my master.'

In Scotland the schoolmaster claimed the 'fugees,' or runaway cocks.⁸

Joseph Addison, in the year 1684 or 1685, took part in another Shrove-tide custom at Lichfield Grammar School. This was known as 'barring-out' the master. It was a custom practised at Christmas and Shrove-tide, and links the Bacchanalian customs of Shrove-tide with the Saturnalian licence of Christmas.⁹

3. **Country-side.**—(1) *The Holly-boy and Ivy-girl.*—This custom is one of the most important links in the chain of evidence for the origin of the Shrove-tide revels. It survived in Kent at the close of the 18th century. It is described in *The Gentleman's Magazine* for 1779:

'Being on a visit on Tuesday last [Shrove Tuesday] in a little obscure village in this county, I found an odd kind of sport

going forward: the Girls, from eighteen to five or six years old, were assembled in a crowd, and burning an uncouth effigy, which they called an *Holly-Boy*, and which it seems they had stolen from the Boys, who, in another part of the village, were assembled together, and burning what they called an *Inv-Girl*, which they had stolen from the Girls: all this ceremony was accompanied with loud huzzas, noise, and acclamations. What it all means I cannot tell, although I inquired of several of the oldest people in the place, who could only answer that it had always been a sport at this season of the year.¹

There is a reference to a similar custom in Barnaby Googe's translation of Naogeorgus's *Popish Kingdome* (1570):

'Some others make a man all stuff with straw or ragges within, Apparayled in dublet faire, and hosen passing trim.

They hurle him up into the ayre, nor suffring him to fall,
And this they doe at diuers tymes the citie over all.'²

(2) *Cock-fighting*.—This was one of the most widely prevalent sports on Shrove Tuesday. The Cumberland practice is described by W. Hutchinson:

'The party whose Cocks won the most battles was victorious in the Cock-pit; and the prize, a small silver bell, suspended to the button of the victor's hat, and worn for three successive Sundays. After the Cock-fight was ended, the Foot-Ball was thrown down in the Church-yard.'³

The monasteries did not favour these sports. Cock-fighting is forbidden in the *Customary of St. Augustine's, Canterbury*:

'Nec interesse luctis, pugnis, vel duellis hominum, animalium vel avium.'⁴

(3) *Throwing at cocks*.—The question is asked in *The British Apollo*: 'How old and from whence is the custom of throwing at Cocks on Shrove Tuesday?'⁵ An epigram by Sir Charles Sedley, 'On a Cock at Rochester,' in *The Gentleman's Journal* of Jan. 1692-93 suggests a sacrificial origin, veiled under later lore:

'May'st thou be punish'd for St. Peter's crime,
And on Shrove Tuesday perish in thy prime.'⁶

The custom was retained at Heston in Middlesex on Shrove Tuesday in 1791:

'The owner of the cock trains his bird for some time before Shrove Tuesday, and throws a stick at him himself, in order to prepare him for the fatal day, by accustoming him to watch the threatened danger, and by springing aside avoid the fatal blow. He holds the poor victim on the spot marked out by a cord fixed to his leg, and at the distance of nine or ten yards, so as to be out of the way of the stick himself. Another spot is marked, at the distance of twenty-two yards, for the person who throws to stand upon. He has three *shys*, or throws, for twopence, and wins the cock if he can knock him down and run up and catch him before the bird recovers his legs.'⁷

The word 'cock-shy' is a survival of this brutal sport. In the parish accounts of Pinner in 1622 is the entry: 'Received for Cocks at Shrove-tide, 12s. 0d.' The money collected was applied in aid of the poor rate.⁸

(4) *Thrashing the hen*.—In Robert Baron's *Cyprian Academy*⁹ this practice is referred to as a Shrove-tide sport:

'By the Maskins I would give the best Cow in my yard to find out this Raskall. And I would thrash him as I did the Henne last Shrove Tuesday.'

Thomas Tusser, in his *Five Hundreth Pointes of Good Husbandrie* (1573), says:

'At Shroftide to shroving, go thrash the fat Hen,
If blindfold can kill her, then give it thy men.'

Tusser *Redivivus* has a note explaining these lines:

'The Hen is hung at a fellow's back, who has also some horse-bells about him; the rest of the fellows are blinded, and have boughs in their hands, with which they chase this fellow and his Hen about some large court or small enclosure. The

fellow with his Hen and bells shifting as well as he can, they follow the sound, and sometimes hit him and his Hen.'¹

(5) *Stone-throwing*.—This was a custom in the Scilly Isles. When the cock-shying was ended, boys threw stones against the house-doors. Heath, the authority on whom this rests, says that it was practised also in Cornwall and in Spain.² This may be compared with the custom of 'Lent crocking' in Dorset and Wilts.³

(6) *Pancakes*.—This remains in most parts of England the only relic of the old Shrove-tide customs. In *Poor Robin's Almanack* (1731) it gave its name to the day:

'St. Taffy is no sooner gone
But Pancake day is coming on.'⁴

At Baldock, in Hertfordshire, it was called Doughnut day.⁵ *The Gentleman's Magazine* for 1790 refers to the 'pancake bell.'⁶ In a tract of 1690 it is said that at York 'all the apprentices, journeymen, and other servants . . . had the liberty to go into the Cathedral, and ring the Pancake-bell.' This bell had originally been rung to call the people to church for the confession of sin.⁷ In Scotland, according to Frederick M. Eden, crowdie used to take the place of pancakes.⁸ Brand and Ellis give several versions of the pancake rhymes.

(7) *Carting*.—In 1555 'an ill woman who kept the Greyhound in Westminster was carted about the city.' In 1556 'were carted two men and three women.' This seems to have been a recognized punishment for persons of ill-fame. In a comedy, *Tottenham Court*, written by Thomas Nabbes in 1638, we find:

'If I doe, I have lesse mercy than Prentices at Shrove-tide.'⁹

(8) *Football*.—The Derby football play is described in *The Penny Magazine* for 6th April, 1839. A similar Shrove-tide custom was practised in Perthshire:

'Every year on Shrove Tuesday the bachelors and married men drew themselves up at the Cross of Scone, on opposite sides. A ball was then thrown up, and they played from two o'clock till sunset' . . . One goal was the so-called 'dool' on the moor, the other was the river. The game in early times covered the whole town.¹⁰

(9) *Rope-pulling*.—In 1846 this was an old Shrove-tide custom at Ludlow. The tug-of-war was between the Corve Street Ward and the Broad Street Ward, and lasted from four o'clock till sunset.¹¹

III. *FOLK-LORE ANALOGIES*.—The Christmas customs are acknowledged to be survivals in part of the old Saturnalia. The 'servants' holiday' in N. Staffordshire has points of contact with the liberty and licence allowed by masters to their slaves in the midwinter revels. Dekker, in his *Seven Deadly Sins of London* (1606), refers to the same licence at Shrove-tide.

'They presently (like Prentices upon Shrove Tuesday) take the lawe into their owne handes and do what they list.'¹²

In the records of Norwich mention is made of the Shrove-tide revels as the closing of the revels of Christmas:

'John Gladman . . . on Tuesday in the last ende of Crestemesse [1440] vizt. *Fastyngonge Tuesday*, made a disport with hys neyghbours, havyng his hors trappyd with tynnoyle and other nyse disgisy things, corroned as Kyng of Crestemesse, in tokyen that seson should end with the twelve monethes of the yere.'¹³

This name 'Fastyngonge Tuesday' recalls the Scotch 'Fasten's Eve' and the German *Fastnacht*.

Trinity College, Cambridge, MS of the 15th cent. there is the word 'Shrofday':

'Carniprivium . . . shrofday, quia a tunc privamur carnis.'¹

The name 'Carniprivium' is given to Quinquagesima Sunday.²

The Shrove-tide rhymes recorded by Brand from the neighbourhood of Salisbury show that 'shroving' was as popular a custom in the early part of the year as 'souling' was, and is still, in the Midlands in November.

'Shrove Tide is nigh at hand,
And I am come a shroving;
Pray, Dame, something,
An Apple or a Dumpling,
Or a piece of Truckle Cheess
Of your own making,
Or a piece of Pancake.'³

The observation of Shrove-tide has affinities with the Continental carnival.

II. *SHROVE-TIDE REVELS*.—Shrove-tide was a season of revelry and sport in court, college, and country-side.

I. *Court*.—Fungoso, a court aspirant in Ben Jonson's *Every Man out of his Humour*, refers to those revels in a letter to his father.

'I desire you likewise to be advertised, that this Shrove-tide, contrary to custom, we are always to have revels; which is indeed dancing, and makes an excellent shew in truth.'⁴

In the same play Carlo Buffone, speaking of Macilente, says:

'Ay, this is he; a good tough gentleman: he looks like a shield of brawn at Shrove-tide, out of date, and ready to take his leave.'⁴

This is evidence for the year 1599. There were costly revellings at Hatfield in 1556:

'In Shrovetide, 1556, sir Thomas Pope made for the lady Elizabeth, all at his own costs, a great and rich masking in the great hall at Hatfield, where the pageants were marvellously furnished.'⁵

For 28th Feb. 1587-88 we have the following information:

Francis Bacon 'assisted in getting up the masque which was presented to the Queen by the gentlemen of Gray's Inn.'⁶

These revels were well rooted in the observance of the court. In 1512 there is a notice in the *Percy Household Book*:

'The Clergy and Officers of Lord Percy's Chapel performed a play before his Lordship upon Shrowtewesday at night.'⁷

The ruder sports were also encouraged in still earlier times by the court and the nobles. Among the royal household accounts of Henry VII. there is this entry under date 2nd March, 1492:

'Item to Master Bray for rewards to them that brought Cockes at Shrovetide, at Westm. xxx.'⁸

And in a MS Life of Thomas Lord Berkeley (1352-1417), among his recreations, we are told:

'Hee also would to the threshing of the Cocke, pukke with Hens blindfolde and such like.'⁹

2. *College and school*.—In a British Museum MS entitled *Status Scholæ Etonensis* (1560) it appears that Shrove Tuesday was kept as a holiday. The cook brought in the pancake (*laganum*) and fastened it to a crow. The meaning is obscure.

'Die Martis Carnis-privi luditur ad horam octavam in totum diem: venit Coquus, affigit laganum Cornici, juxta illud pullis Oorvorum invocantibus eum, ad ostium Scholæ.'¹⁰

There was also a Shrove Monday custom at Eton, called Bacchus. The upper form boys wrote poems 'either in praise or dispraise' of Bacchus. The

poems were fastened to the inner doors of the College.¹ The revels at Merton College, Oxford, are described by Anthony Wood under date 1647-48:

'Shrove-Tuesday, Feb. 15, the fire being made in the common hall before 5 of the clock at night, the fellows would go to supper before six, and making an end sooner than at other times, they left the hall to the liberties of the undergraduate, but with an admonition from one of the fellows (who was then principal of the undergraduates and postmasters) that all things should be carried in good order. While they were at supper in the hall, the cook (Will. Noble) was making the lesser of the brass pots full of cawdle at the freshmen's charge, which after the hall was free from the fellows was brought up and set before the fire in the said hall. Afterward every freshman, according to seniority, was to pluck off his gowne and band and if possible to make himself look like a scoundrell. This done, they were conducted each after the other to the high table, and there made to stand on a forme placed thereon: from thence they were to speak their speech with an audible voice to the company: which if well done, the person that spake it was to have a cup of cawdle, and no salted drinke: if indifferently some cawdle and some salted drinke; but if dull nothing was given him but salted drinke or salt put in college bere, with tucks to boot. Afterwards when they were to be admitted into the fraternity, the senior cook was to administer to them an oath over an old shoe, part of which runs thus: "Item te jurabis quod penniless bench non visitabis."

A note adds: 'This was the way and customs that had been used in the college, time out of mind, to initiate the freshmen: but between that time and the restoration of K. Ch. 2 it was disused, and now such a thing is absolutely forgotten.'²

W. Huddesford³ refers to similar customs prevailing in the university about 1772. Thomas Hearne, in his *Reliquiæ*,⁴ mentions customs of this kind at Brasenose and Balliol.⁵

The grammar schools were not behind the colleges in their observance of Shrove-tide. The sports were rougher, and were similar to those of the country-side. Stowe, on the authority of W. Fitzstephen, refers to the ancient practice of cock-fighting and playing at the ball or bastion.⁶ Sir John Sinclair in his *Statistical Account* produces a witness for Scotland, the minister of the parish of Kirkmichael, Perthshire:

'Foot-Ball is a common amusement with the School-boys, who also preserve the custom of Cock-fighting on Shrove-Tuesday.'⁷

In Lancashire and Cumberland the 'Cock-penny' formed a part of the stipend of grammar school masters. At Lancaster Grammar School and at Burnley, Clitheroe, Whitehaven, and Millom this gratuity was paid by the scholars at Shrove-tide. The Yorkshire rhymes may refer to this custom:

'A nick and a nock,
A hen and a cock,
And a penny for my master.'

In Scotland the schoolmaster claimed the 'fugees,' or runaway cocks.⁸

Joseph Addison, in the year 1684 or 1685, took part in another Shrove-tide custom at Lichfield Grammar School. This was known as 'barring-out' the master. It was a custom practised at Christmas and Shrove-tide, and links the Bacchanalian customs of Shrove-tide with the Saturnalian licence of Christmas.⁹

3. *Country-side*.—(1) *The Holly-boy and Ivy-girl*.—This custom is one of the most important links in the chain of evidence for the origin of the Shrove-tide revels. It survived in Kent at the close of the 18th century. It is described in *The Gentleman's Magazine* for 1779:

'Being on a visit on Tuesday last (Shrove Tuesday) in a little obscure village in this county, I found an odd kind of sport

going forward: the Girls, from eighteen to five or six years old, were assembled in a crowd, and burning an uncouth effigy, which they called an *Holly-Boy*, and which it seems they had stolen from the Boys, who, in another part of the village, were assembled together, and burning what they called an *Ivy-Girl*, which they had stolen from the Girls: all this ceremony was accompanied with loud huzzas, noise, and acclamations. What it all means I cannot tell, although I inquired of several of the oldest people in the place, who could only answer that it had always been a sport at this season of the year.¹

There is a reference to a similar custom in Barnaby Googe's translation of Naogeorgus's *Popish Kingdome* (1570):

'Some others make a man all stufte with straw or ragges within, Apparayled in dublet faire, and hosen passing trim.

They hurle him up into the ayre, nor suffring him to fall,
And this they doe at diuers tymes the citee over all.'²

(2) *Cock-fighting*.—This was one of the most widely prevalent sports on Shrove Tuesday. The Cumberland practice is described by W. Hutchinson:

'The party whose Cocks won the most battles was victorious in the Cock-pit; and the prize, a small silver bell, suspended to the button of the victor's hat, and worn for three successive Sundays. After the Cock-fight was ended, the Foot-Ball was thrown down in the Church-yard.'³

The monasteries did not favour these sports. Cock-fighting is forbidden in the *Customary of St. Augustine's, Canterbury*:

'Nec interesse luctis, pugnis, vel duellis hominum, animalium vel avium.'⁴

(3) *Throwing at cocks*.—The question is asked in *The British Apollo*: 'How old and from whence is the custom of throwing at Cocks on Shrove Tuesday?'⁵ An epigram by Sir Charles Sedley, 'On a Cock at Rochester,' in *The Gentleman's Journal* of Jan. 1692-93 suggests a sacrificial origin, veiled under later lore:

'May'st thou be punish'd for St. Peter's crime,
And on Shrove Tuesday perish in thy prime.'⁶

The custom was retained at Heston in Middlesex on Shrove Tuesday in 1791:

'The owner of the cock trains his bird for some time before Shrove Tuesday, and throws a stick at him himself, in order to prepare him for the fatal day, by accustoming him to watch the threatened danger, and by springing aside avoid the fatal blow. He holds the poor victim on the spot marked out by a cord fixed to his leg, and at the distance of nine or ten yards, so as to be out of the way of the stick himself. Another spot is marked, at the distance of twenty-two yards, for the person who throws to stand upon. He has three *shys*, or throws, for twopence, and wins the cock if he can knock him down and run up and catch him before the bird recovers his legs.'⁷

The word 'cock-shy' is a survival of this brutal sport. In the parish accounts of Pinner in 1622 is the entry: 'Received for Cocks at Shrove-tide, 12s. 0d.' The money collected was applied in aid of the poor rate.⁸

(4) *Thrashing the hen*.—In Robert Baron's *Cyprian Academy*⁹ this practice is referred to as a Shrove-tide sport:

'By the Maskins I would give the best Cow in my yard to find out this Raskall. And I would thrash him as I did the Henne last Shrove Tuesday.'

Thomas Tusser, in his *Five Hundreth Pointes of Good Husbandrie* (1573), says:

'At Shroffide to shroving, go thrash the fat Hen,
If blindfold can kill her, then give it thy men.'

Tusser *Redivivus* has a note explaining these lines:

'The Hen is hung at a fellow's back, who has also some horse-bells about him; the rest of the fellows are blinded, and have boughs in their hands, with which they chase this fellow and his Hen about some large court or small enclosure. The

fellow with his Hen and bells shifting as well as he can, they follow the sound, and sometimes hit him and his Hen.'¹

(5) *Stone-throwing*.—This was a custom in the Scilly Isles. When the cock-shying was ended, boys threw stones against the house-doors. Heath, the authority on whom this rests, says that it was practised also in Cornwall and in Spain.² This may be compared with the custom of 'Lent crocking' in Dorset and Wilts.³

(6) *Pancakes*.—This remains in most parts of England the only relic of the old Shrove-tide customs. In *Poor Robin's Almanack* (1731) it gave its name to the day:

'St. Taffy is no sooner gone
But Pancake day is coming on.'⁴

At Baldock, in Hertfordshire, it was called Doughnut day.⁵ *The Gentleman's Magazine* for 1790 refers to the 'pancake bell.'⁶ In a tract of 1690 it is said that at York 'all the apprentices, journeymen, and other servants . . . had the liberty to go into the Cathedral, and ring the Pancake-bell.' This bell had originally been rung to call the people to church for the confession of sin.⁷ In Scotland, according to Frederick M. Eden, crowdie used to take the place of pancakes.⁸ Brand and Ellis give several versions of the pancake rhymes.

(7) *Carting*.—In 1555 'an ill woman who kept the Greyhound in Westminster was carted about the city.' In 1556 'were carted two men and three women.' This seems to have been a recognized punishment for persons of ill-fame. In a comedy, *Tottenham Court*, written by Thomas Nabbes in 1638, we find:

'If I doe, I have lesse mercy than Prentices at Shrove-tide.'⁹

(8) *Football*.—The Derby football play is described in *The Penny Magazine* for 6th April, 1839. A similar Shrove-tide custom was practised in Perthshire:

'Every year on Shrove Tuesday the bachelors and married men drew themselves up at the Cross of Scone, on opposite sides. A ball was then thrown up, and they played from two o'clock till sunset' . . . One goal was the so-called 'dool' on the moor, the other was the river. The game in early times covered the whole town.¹⁰

(9) *Rope-pulling*.—In 1846 this was an old Shrove-tide custom at Ludlow. The tug-of-war was between the Corve Street Ward and the Broad Street Ward, and lasted from four o'clock till sunset.¹¹

III. *FOLK-LORE ANALOGIES*.—The Christmas customs are acknowledged to be survivals in part of the old Saturnalia. The 'servants' holiday' in N. Staffordshire has points of contact with the liberty and licence allowed by masters to their slaves in the midwinter revels. Dekker, in his *Seven Deadly Sins of London* (1606), refers to the same licence at Shrove-tide.

'They presently (like Prentices upon Shrove Tuesday) take the lawe into their owne handes and do what they list.'¹²

In the records of Norwich mention is made of the Shrove-tide revels as the closing of the revels of Christmas:

'John Gladman . . . on Tuesday in the last ende of Crestemesse [1440] viz: *Fastyngonge Tuesday*, made a disport with hys neyghbours, havyng his hors trappyd with tynnssoyle and other nyse disgisy things, coronned as Kyng of Crestemesse, in tokyen that seson should end with the twelve monethes of the yere.'¹³

This name 'Fastyngonge Tuesday' recalls the Scotch 'Fasten's Eve' and the German *Fastnacht*.

The German form dates only from the 18th cent., and is a corruption by assimilation of *Fasenacht*, *vasenacht*, *vaschane*, preserved in the form *Fasching* in Bavaria and Austria. It is derived from *fasen*, *faseln* = 'Possen treiben zu Grunde,' i.e. an end of all trifling and farcing.¹

In Germany the Monday in Shrove-tide is called *Rosenmontag* and *Hirsmontag*, the latter name derived from the revellers masquerading as deer.² The Sunday before is called the *Grosser Fastelabend* or *Rinnetag* or *Funkensonntag*. The writer adds:

'Die dort üblichen Lustbarkeiten, Maskeraden, Tänze, Schmausereien und dergl. wurden bald . . . ausgedehnt, schliesslich durch Verbindung mit den üblichen Frühlings-, Neujahrs- und Dezemberfasten noch weiter zurück auf die Zeit von 7 Januar ab oder (z. B. in Venedig) seit dem 26 Dezember, doch so, dass sich das Hauptleben in den letzten Wochen oder Tagen vor dem Aschermittwoch abspielt.'³

The Holly-boy and Ivy-girl of Kent are the most important links with the German *Fastnachtsmann*, or *Prinz Karneval*—itself a memory of the Saturnalian king who, after a reign of 30 days, was burnt as a sacrifice to Kronos (Saturn):

'Es wirken aber hier wie anderswo noch ältere Sitten nach; die Fastnachtsbräuche erinnern nicht selten an die an den römischen Saturnalien, den altitalischen noch lange in christlicher Zeit bestehenden Luperkalien und den germanischen Frühlingsfesten üblichen Lustbarkeiten. Wenn z. B. hier und da der Fastnachtsmann oder "Prinz Karneval"—eine Stroh-puppe—öffentlich verbrannt, geköpft, oder gesteinigt und am Aschermittwoch begraben wird, . . . so sieht man darin teils die Nachwirkung eines älteren gemein-germanischen Balder-Kultus, teils das Fortleben des Saturnalienkönigs, der 30 Tage lang als Spottkönig herrschte und dann dem Kronos als Opfer dargebracht wurde.'⁴

Zscharnack adds:

'No wonder that the Church protested as much against these revels as against those of the New Year.'

It is to be noted that in Italy Liber, the Latin Dionysus, has a female deity Libera as his associate. The Kentish Holly-boy was accompanied by the Ivy-girl. The Liberalia were held in Rome on 17th March;

'Old women, crowned with ivy, sold cheap cakes (*liba*) of meal, honey, and oil, and burnt them on little pans for the purchasers.'⁵

The English evidence from the Ivy-girl and the pancakes adds support to the suggestion of Zscharnack as to the affinity of the Shrove-tide revels with the earlier cults.

The association of cock-shying with some national event, the feud between the English and the Danes,⁶ or the long wars between the English and the French,⁷ will not stand the test of the wider study of folk-lore. N. W. Thomas, in his study of the folk-lore of animals, says:

'The cock is one of the most important sacrificial victims. . . . The cock figures in spring ceremonies in Europe. . . . The cock is sometimes used in the expulsion of evils. Modern Jews sacrifice a white cock on the eve of the Day of Atonement. We may probably interpret in the same sense the numerous European customs in which a cock or hen is hunted or beaten.'⁸

Thus the throwing at the cock, the thrashing at the hen, and the punishment of persons of ill-fame seem to be different aspects of the spring rites of purification. The cock was also associated with the Celtic god Sacellus and with the Gaulish Mercury. It was tabu to the ancient Britons. There may thus be a link with the ancient rites of Gaul and Britain.

The presence of conflation of primitive cults in the Shrove-tide revels—the traces of different strands of ritual tradition—does not weaken the argument for affinity. Every custom is important

to build up the evidence. It will then be found that folk-lore has the last word in our old English sports and revels.

THOMAS BARNES.

SIAM.—The kingdom of Siam (Mu'ang Thāi, Sāyām Pra: thet¹) occupies the centre and includes the greater part of the Indo-Chinese peninsula. It extends from 20° to 6° N. lat., and covers an area of 600,000 sq. kilometres, although it has hardly 7,500,000 inhabitants. It is bounded on the north by the Shan States (under English rule) and the kingdom of Laos (under French rule); on the east by the Mekong river, which is the frontier between it and French Cambodia; on the south by the Gulf of Siam; and on the west by British Malaysia and Burma. Mountainous on its northern and western confines, it is simply the valley of the beautiful Menam river, which waters and fertilizes it.

Politically and historically it is divided into three parts:

(1) Siamese Laos, including the upper valley of the Menam and the right bank of the middle Mekong with the entire basin of its tributary, the Sē-Mun, is a mountainous district through which flow rivers unsuitable for navigation owing to rapids, and which is very rich in timber and dye-wood, and sparsely peopled by about 2,000,000 inhabitants, almost all Laotians and closely related ethnographically and linguistically to the Siamese.

(2) The Siam-Malay peninsula (and islands) between British Burma and Malaysia, which has only 1,106,640 inhabitants, of whom some are Siamese, the majority Malay, and the rest the débris of aboriginal and semi-civilized populations (Semangs, etc.), is a mountainous country, cut up by rugged cliffs, poor in vegetation, but very rich in deposits of tin, argentiferous galena, wolfram, coal, and gold; its chief exports are swallows' nests, the feathers of rare birds, tortoise-shell, fish, elephants, and oxen.

(3) Siam proper, extending from 13° to 18° N. lat., is formed by the middle and lower valley of the Menam. It is in this vast plain, composed of limestone hills, furrowed by navigable rivers, and indented with ports and creeks, that the pure Siamese element is concentrated. Its population totals about 4,000,000. It is the open door for the kingdom of the Thais to the free seas of China and India, affording it communication with the Far East on the one side and Europe on the other. There also is found the capital of Siam, Bangkok, between the two branches of the Menam at its mouth in the Gulf of Siam, and 40 kilometres from the sea. In 1909 Bangkok had 628,675 inhabitants, of whom 200,000 were Chinese, Annamese, and Cham, and 1600 European. The Venice of the Far East, as it has been rather pretentiously called, is built on piles in numerous canals and arms of rivers from 200 to 300 metres broad and 10 to 12 deep, and is dotted with thousands of barges, steam-boats, junks, and sailing-boats—not to mention the cargo-boats and merchant vessels anchored in its port. The general appearance of its bamboo huts forms a contrast with the brilliance of its gilded pagodas and multi-coloured pyramids, but it is gradually being transformed into a modern town: it is entirely lit by electricity and already has 120 kilometres of coach-roads,

¹ In this art. Pallegoix's system of transcription for the native names has been followed (except that his *j* has always been rendered *y*); if it is not the best, it is at least the best known.

¹ RGG, s.v. 'Fastnacht.'

² Cf. the Abbot's-Bromley horn-dance in Staffordshire and a similar horn-dance at Mohacs on the Danube. They may be traceable to the cult of the Celtic god Cernunnos, of whom there are vestiges from the Danube to Brittany. The legend of Herne the hunter in Windsor Park may perhaps be akin to the same ancient cult.

some of which are very beautiful, and 40 kilometres of electric tramways.

1. **Origin.**—The Siamese are a branch of the ethnic family of the Thais, 'free men,' whose other branches are the Shans, the Laotians, the Lus, the Pou-Thais, and other Thai races in the north of Tongking. They all seem to have come down from the high plateaux of Tibet and Yunnan into the Indo-Chinese plain and towards the sea, following the valley of the rivers Menam, Mekong, and Song-Khoi. Gradually, but irresistibly, they drove the aboriginal races before them and forced towards the coast the other Indo-Chinese races—Annamese, Chams, Cambodians (Khmers), Peguans (Mons), and Burmese. The Siamese branch passed from the upper valley of the Mekong to the middle valley, which it disputed for centuries with the Laotians and the Khmers, then to the entire basin of the Menam, where it became permanently settled—not without mixing with numerous Chinese, Malay, Khmer, Mon, and Burmese elements.

2. **History.**—The early history of Siam is not very well known. According to the annals and chronicles of Siam, it may be divided into two periods. The first, rather legendary, extends from the beginning of the Christian era (c. 1350) to the 5th cent. A.D. and the second, more historical, from the 5th cent. A.D. to the present. A collection of fables and legends, which goes back to the 5th cent. A.D., give as the origin of the Siamese the Buddha's first disciples. In this period the names of dynasties and capitals are very variable, facts being constantly mingled with supernatural interventions. Even at this early period the Siamese princes who were vassals of the kingdom of Cambodia were trying to escape from its power, and at one time they were at war, at another in union, with China; their contests with the Laotians were even more lively.

With the foundation of Ayuthia, although the date given by the Siamese annals (A.D. 1350) is now disputed, we come upon more real history. In 1514 Ayuthia was reduced to ashes by a fire which lasted three days. In 1532 conquered Cambodia became tributary, and its capital Lovék was occupied; but a new and much more dangerous enemy, Pegu, appeared against Siam. In 1543 the king of Pegu laid waste the whole of Siam, besieging Ayuthia in vain. In 1555 he seized the whole of Siam and Ayuthia after nine months of siege, devastating it to such an extent that only 1000 inhabitants remained. But in 1558 the Siamese throne was occupied by a talented young Phra: Nārēt prince, who freed his country from the Peguan yoke, restored Ayuthia, conquered the whole of Laos and Cambodia, and in his turn took possession of Hangsavada, the capital of Pegu. He died in 1593.

His successors became embroiled in intrigues and bloody strife. In 1656 one of them, Phra: Narai, tried to restore the kingdom with the help of a European prime minister, a clever Greek adventurer, Constance Phaulkon (or Falcon). At his death, in 1686, the Portuguese, who had been at Siam since 1511, were expelled. An alliance based on mutual help which would enable him to modernize his subjects by force if not with their consent. A plot of Siamese mandarins, who were anxious about their privileges and jealous of the rights accorded to strangers, ended in the death of the king and the massacre of Constance Falcon.

Intrigue and civil war began once more. The king of Ava, taking advantage of the opportunity thus afforded, came with his Burmans, laid waste the whole of Siam, and took Ayuthia, which was burned down, while its vanquished ruler died of hunger and despair in the surrounding woods. A clever usurper, Phraya Tak, rallied the Siamese at Chantsabun, delivered Siam, and took his stand in the present capital Bangkok (or Thana-buri). He recaptured Laos and a part of the peninsula of Malacca, and overcame the Burmans on several occasions, but the mandarins became suspicious of his influence and had him assassinated. The ancient dynasty regained power; the king of Vieng Chang (Laos) was beaten and put into an iron cage at Bangkok; the Cochinese were conquered.

In 1851, when King Mongkut, who had been long confined in a monastery to save his life from the jealousy of a usurper, ascended the throne, he set himself to restore Siam by bold modernization. He learned the European languages, surrounded himself with European counsellors, and, after purifying and reforming his clergy, removed the most notorious abuses of his mandarins; he also tried to enrich his country by increasing its production of rice and by concluding friendly and commercial treaties with the great European Powers. This one-time monk was the real creator of modern Siam. His son, Chulalongkorn (1868-1910), educated like a European and having travelled extensively in Europe, continued his work. With the help of his younger brother, Prince Damrong, he multiplied schools, benevolent institutions, works of public utility, and modern processes of agriculture and industry. His son Vajiravudh, who succeeded him in 1910, and has been brought up with equally broad views, is continuing the work of his father and his grandfather in close friendship with the two European Powers established in Indo-China, viz. Britain and France.

3. **Physical features.**—In spite of frequent admixtures with neighbouring peoples, the Siamese race preserves a distinct type. The Siamese is of medium height, and has a supple body, vigorous and well-proportioned. Both sexes are olive-coloured, with narrow upper-foreheads, broad faces with thick lips, and black well-lacquered teeth. Their hands are well-shaped but rather large, and they have long red-coloured nails. Their hair is glossy black, but coarse and not very thick; the men have their heads shaved, except a big tuft on the top, and they

always shave their beards. The women also shave their heads except a big tuft which they wear on the top, not so high as that of the men, and which they comb, pomade, and perfume carefully. This method of wearing the hair is still seen, but the Siamese of both sexes now tend to copy the Cambodians and wear their hair cut short. Among the upper classes, in imitation of the Europeans, the men wear their hair quite short, or even have their heads shaved, while the women let their hair grow long and twist it up behind. The children of both sexes still have shaved heads, except for a pretty lock of hair on the top which their parents adorn with small garlands of flowers and large gold or silver pins. This lock of hair is shaved with great ceremony at puberty.

4. **Dress.**—Except in the case of very small children, the Siamese do not allow nakedness. Both men and women wear a *langüti*, or lower garment, arranged in the form of wide breeches, the material of which (cotton, silk, etc.) varies according to means; the breast is covered with a vest with sleeves, or among the women by a scarf worn crosswise over the shoulders. All go barefooted as a rule, except princes and mandarins, who wear embroidered slippers. The custom of wearing European shoes is gradually spreading. People in good circumstances shade themselves from the sun with a parasol; ordinary people content themselves with huge hats of palm-leaves. Both men and women have a passion for jewels.

5. **Character.**—The Siamese character has been variously judged. Pallegoix, who perhaps knew them best because of his long residence in Siam, credits them with a spirit of charity, humanity, and gentleness, not only towards men, but towards animals, and a happy, timid, thoughtless, irresolute, and rather childish disposition; they have a horror of shouting and quarrelling, and are fond of amusement; they are great beggars, but also willingly give to those who ask from them. They have great respect for authority and old age and deep reverence for their kings. As regards the accusations made against them that they are fonder of borrowing than of repaying, that they are humble with the powerful and harsh towards the weak, that they sometimes prove too clever in business, and that they are dishonest and glory in their dishonesty, as is exemplified by the Siamese proverb, 'Trade is the business of the Dutch, arts and industry that of the Chinese, war that of France, and cleverness that of the Siamese,' it is only fair to remark that similar accusations have been made, and not always justly, against many European races; lastly, the worst faults of the Siamese seem to be those of the despotic government under which they are bowed down rather than those of the race itself.

6. **Dwelling-places.**—As a rule the Siamese live in bamboo huts built on piles and covered with a roof of interlaced palm-leaves; they are poor and simple, but often very clean. They are raised about a metre from the ground, with access by a bamboo ladder. The hut itself is divided by bamboo partitions into two or three compartments; and under it are kept the supplies of rice, household utensils, and domestic animals. Merchants prefer to build their huts on a bamboo raft so that they can be removed at pleasure; many of the canal- and river-dwellers have house-boats. The rich build their houses in the Chinese style of wood or brick with pillars of iron-wood and floor and framework of teak; they require two or three houses in order to afford separate accommodation to their family, slaves, and cooks.

Before building a house, the Siamese must first consult the diviner to find out in what direction he must build. He must avoid a place with piles sunk in the earth—the debris of a former building; he must not use pillars of teak, and among the pillars of iron-wood he must avoid those with exudations of resinous oil. The rungs of the ladder, the doors, windows, rooms, partitions must all be of odd number. Every house that violates these rules is unlucky and should be demolished.

The furniture consists of benches, some boxes, and knives. The rich, who have a great number of servants for lying on, have carved beds, mattresses of floss silk, arm-chairs, tables, furniture inlaid with mother-of-pearl, tapestries, curtains, and carpets, costly weapons, as well as vases of valuable workmanship or material, cups of all shapes and materials, sometimes beautiful plate, a great many clocks, musical-boxes, pianos, gramophones, and other inventions of modern genius.

7. **Food.**—The Siamese are as a rule very temperate, like all the natives of the Far East: they live on rice, fresh or dried fish, and fruits; they season their dishes with a sauce or curry made with red allspice. They eat very little meat, but all kinds—poultry, water-birds, stags, buffalo- or ox-flesh dried in the sun, tortoises, frogs, crocodiles, bats, serpent-boss, rats, etc.—and drink pure water or tea, and sometimes arak or rice-brandy.

8. **Arts and trades.**—The Siamese are good cultivators and good sailors in smooth water, but disinclined to coasting either from headland to headland or close to the shore; they also fish and hunt. Intelligent, skilful, and manageable, they would make excellent workmen if their sense of initiative had not been killed by the custom of the court and the mandarins of monopolizing them at a ridiculous price as soon as they possess any manual skill. Some do artistic wood-carving and metal-working; others make barges and canoes; the women weave materials for clothing. During the reigns of the last three kings efforts have been made to develop national industry.

9. **Tobacco and opium.**—The Siamese smoke opium and are addicted to opium. This is still the case, although they do not always set an example of abstinence.

10. Religion: Buddhism.—The Siamese are one of the most religious races of the religious East. Their religion, like that of Cambodia, is Southern, or orthodox, Buddhism, with Pāli as its sacred language, and called Sinhalese Buddhism. Under this very deep-rooted Buddhism there still remain traces of Brāhmanism and innumerable animistic survivals. Buddhism seems to have been introduced into Cambodia and thence into Siam in A.D. 422 (965 of the Buddhist era). For many years the whole Buddhist theology of Siam was based on the *Trai Phūm*, 'The Three Places,' which is not an original Pāli work, but a compilation in Siamese of works and commentaries on the Buddhist Pāli canon, composed at the request of King Phaya Tāk (1767–80). The *Trai Phūm* is divided into three parts: (1) the first treats of the universe in general and the earth in particular; (2) the second of the heavens and their inhabitants; (3) the third of the hells and their various punishments. Since the theological reform carried out in the 19th cent. under the auspices of King Mongkut the *Trai Phūm* has had very little orthodox value.¹

The fervour of the Siamese is shown by the multiplicity and richness of their pagodas, the number of their monks, and the esteem in which they are held. The pagodas, especially those of Bangkok, are most impressive with their forests of bell-turrets, above which towers a central pyramid 60 to 80 metres high, their trunks of white elephants at the corners, their coverings of polished tiles, their gilding, and their coloured porcelains. But connoisseurs find in them a too evident intrusion of Chinese statuary and decorative art. They are high colonnaded buildings, with recurved roofs, the walls, painted in fresco on the inside, sheltering great statues of the Buddha as well as *stūpas* of various dimensions. As a rule the pagodas are veritable monastic towns built in the middle of beautiful gardens dotted with ponds; their principal ornament is one or more temples dedicated to the Buddha. The monastic enclosure also contains a funeral-pile for burning the dead, rooms for preaching and for the temporary accommodation of pilgrims and strangers, out-houses, and hundreds of little wooden and brick houses where the *bonzes* of the pagoda live.

The monks, usually called by the earliest European travellers *talapoins* (*tala: pāt*, the fan which they always carry) or *bonzes*, and by the Siamese *phra*., 'great,' *chāo thāi*, 'lords,' *phīkhu* (Pāli *bhikkhu*), *phīsu* (Skr. *bhikṣu*), 'mendicants,' are more than 100,000 in number, attached to about 20,000 monasteries throughout the whole of Siam. The rule to which they conform is, as in Cambodia, the 27 articles of the *Patimōk* (Pāli *Patimokkha*) and the commentaries of the *Phra: Vindī* (Skr. *Vinaya*). At their head is the *sāṅgkhārāt* (Skr. *saṅgharāja*), nominated by the king, who is the 'protector and preserver of Buddhism' in the kingdom. The *sāṅgharāja* has jurisdiction over all the monks in Siam, but interferes as little as possible in their affairs; it is he who decides, in agreement with the king, in all religious controversies and litigations; and he presides at the assembly of the chiefs of pagodas when the king convokes it to discuss theological reforms. Under the *sāṅgharāja*, but independent of him, are the abbots (*somdet chao*) of the royal monasteries, also nominated by the king. Each abbot governs his monastery assisted by a vicar (*chao khūn pātlat*) and a chief secretary (*chao khūn sāmū*). Under them are the *bonzes* who have been ordained, and under them, again, the *nen* or *sama: nēn* (Pāli

samanera), novices under twenty years of age, who wear the yellow robe, but are not yet obliged to observe more than the eight Buddhist commandments.¹

The pagoda in Siam is not only the sanctuary of prayer; it is also the centre of culture. This culture is essentially Indian, as, until the arrival of the first Portuguese navigators, Siam was completely within India's sphere of influence; it received its first civilization from the Brāhman of India, and then from merchants from Malabar and Coromandel, and, along with Cambodia and Laos, it remained permeated with this Indian civilization until the east coast of Indo-China accepted Chinese civilization. There are still extant noteworthy archaeological witnesses of this primitive Hinduization of Siam in the monuments of its former capitals, Savankhalōk, Sukhōkai, and Lopburi. The former and present religion of Siam (Brāhmanism and Buddhism), its sacred language (Pāli), its civil institutions, its writing, its arts, and its literature come from India. In the 13th cent. the Thai alphabet, the prototype of the present alphabet, was invented by the help of Brāhman *gurus* on the model of the Indian writing already in use in the country. All this civilization has been preserved and diffused up to the present day by the monks, who are as a rule the educators of the people, as the Christian monks were in Europe in the Middle Ages. The *vāt* (monastery) is still the only school in isolated villages, although in the large towns modern schools have been established, with special teachers to initiate the Siamese into Western culture. In spite of the welcome given to this culture, every boy, from the humblest subject to the king, still continues to go to the pagoda at the age of puberty to receive a Buddhist initiation, with religious and domestic ceremonies which recall the first Christian communion. The Buddhist monastery, on the whole, has always maintained in Siam, even during the most troubled times, the inclination for spiritual life and culture. It is naturally more concerned with the boys than with the girls, although in 1767 there were convents of *bhikkhuni* ('nuns') flourishing in Ayuthia, in which a great many women and girls received an elementary education; at the present day wealthy families, especially those of court officials, give a very good education to their daughters, some of whom are fairly elegant Siamese writers.

11. Reforms of Buddhism.—The establishment of Christian missions in Siam introduced Western culture, which was received, especially at court, with genuine enthusiasm, particularly the astronomy and mathematics taught by the Jesuits. So also the preaching of Christianity, as well as that of Islām, always received complete tolerance, except when it was believed to be a cloak for dangerous political designs. The embassy of Louis XIV. was so well received that for a moment that monarch thought that the whole of Siam would be converted to Christianity; young Siamese were sent to the Louis le Grand College, and one of them there sustained a thesis in Latin at the Sorbonne. In 1767 the destruction of Ayuthia and the dynasty reigning there aroused a violent reaction; Siam became a hater of foreigners. But with the establishment of the present dynasty in 1787, with Bangkok as its capital, the former Siamese civilization revived, and the kingdom was opened to the influence of Western civilization. The great author of this double evolution—at one and the same time traditional and modernist—was King Mongkut. But this former *bhikkhu* remained at the same time a proud nationalist and a fervent Buddhist, who longed for a revival of Buddhism

¹ For the facts concerning Siamese Buddhism cf. the artt. CEYLON BUDDHISM and CAMBODIA.

¹ See art. MONASTICISM (Buddhist).

in Siam. He reformed the monastic discipline in an orthodox sense, grounding himself on the original sources; and he organized the teaching of Pāli in the monasteries with examinations in sacred hermeneutics and theology. He attempted more—the modernization of Buddhism—in concert with his minister the Phra:Klan Chao Phaya Thipakon. In 1869 the latter published a work entitled *Kichanukit*, 'Book explaining Things clearly,' in which he posits four truths (pain, the origin of pain, destruction of this origin, and the way leading to this destruction), which are in germ all the teaching of the Buddha. He denies the authenticity of the *Jātakas* and the five stories of the *suttas* forming the *Suttapiṭaka*. For him there emanate from the Buddha only the Four Noble Truths (enumerated above) and the *Paramattha*, i.e. the substance of the *Abhidhammapitaka*, or superior doctrine.

This doctrine as well as a royal plan of reform based thereon caused uneasiness among the traditionalists of Siamese monasticism, but, though not in reality very workable, at least it had the excellent effect of forcing the Siamese theologians to learn Pāli scientifically, to get closer to the texts of the Buddhist canon, and to renew their theology.

King Chulālongkorn continued the work of his father by printing and editing at his own expense the whole of the Pāli *Tiṭṭaka*,¹ copies of which were lavishly distributed among the scholars and scientific establishments of Europe and America. Under the direction of his brother, Prince Damrong, the Vajirañāna National Library regularly publishes Pāli texts, works on Buddhism, and researches on the historical and religious past of Siam after the best European methods.

Thus Siam is taking possession of its glorious past at the very time when it is turning towards a brilliant future in conjunction with the great European nations, enlightened by their civilization, but anxious to keep politically independent of them.

12. Brāhmanism.—Although Brāhmanism has not played such an important part in the history of Siam as in that of Cambodia, it has had great influence. An inscription engraved on an ancient statue of Śiva tells of a curious attempt to restore this ancient religion in Siam: in 1510 the king of Kāmpheng-Phēt, Dharmāsoka, in spite of his ultra-Buddhist name, substituted the worship of Śiva for that of Buddha in his states. Probably this religious transformation in a vassal principality of Ayuthia was specially designed to make final a declaration of independence of the rebel vassal prince. But it is not to this factitious action that the important remains of Brāhmanism on Siamese soil are due, whose living witnesses are the *phrams*, or Brāhmanas of the king of Siam, similar to the *bakus* of the king of Cambodia. They are said to be descended from the persecuted Brāhmanas of India who fled first to Pegu and then to Siam during the course of the 5th and 6th centuries of our era. They are believed to preserve their primitive type; and there are only about 80 of them living near their special temple, the Vat Bôt Phram, or 'pagoda of the sanctuary of the Brāhmanas'—a collection of three miserable brick buildings in an enclosure. The main ornament of this temple consists of colossal statues of the Hindu *trimūrti*; their chief is called in Siamese Phra:Mahārāsākhrutthi (Skr. Mahārājaguru-viddhi). They marry, and wear their long hair tied behind; they worship the Brāhmanic deities, and once a year they ceremonially parade through the town with them amid the ignorant respect of the people. Their rôle in the royal palace is

¹ 39 vols., Bangkok, 1893.

exactly the same as in Cambodia, but not so influential. They compose in Sanskrit the official names of the princes, mandarins, towns, temples, palaces, and elephants. In the great ceremonies of the palace, clad in white robes, with long conical caps on their heads, and carrying their Brāhmanic statues in their hands, they occupy as honourable a position as the *bonzes*; they also preside at coronations; and they consecrate the water which is drunk every year as a sign of fidelity by the great mandarins and high officials. Certain of them, called *hôn*, *hōra* (Skr. *horā*; cf. Gr. *ōpa*), are the astrologers and diviners of the king, charged with astronomical and astrological computations, announcing rains or drought, and lucky or unlucky hours and days. Besides the *phrams* we must also mention the *ācār* (Skr. *āchārya*), the lay teachers of the pagodas.

13. Popular religion.—Although the Siamese are excellent Buddhists, they preserve a mass of survivals of ancient animism. To whatever class of society they belong, all believe in good and bad spirits (*phī*); and the spirits in whom the people are most interested are those which do not seem to have any connexion with Buddhist mythology. The malignant or formidable *phīs* are much more numerous and more venerated than the good spirits. Among the latter the best known are the *phī nang mǎi*, female tree-spirits who dwell in certain beautiful forest-trees. It is said that those good fairies often fill the alms-bowls of monks on pilgrimage when they lay them at the foot of the trees which the spirits inhabit.

Evil spirits are divided into three classes: (1) the 'autogenous' *phī*, those which are not derived from any human being, although some human beings, especially sorcerers, may succeed in keeping them in their power; (2) the *phīs* which are the spirits of the dead (spectres, ghosts, demons, etc.); (3) the *phīs* belonging to other worlds, which cannot be seen on earth, but which for many people exist as really as if they were seen and heard.

The most common and the most dangerous of all are the second class—the *phī lok*, or spirits of the dead. Having escaped from the body at death, they inhabit abandoned houses and ruins, always on the outlook for living beings to harm or frighten. They can make themselves visible or tangible. They nearly always take up their position at the foot of a person's bed, trying to pull him from it, seizing him by the big toes, etc. One of them, whom many people claim to have seen, is the *phī pret*, from 10 to 16 metres in height, who is the spirit of a malefactor. Having a mouth as small as the eye of a needle, he is constantly in a state of inanition, and looks like a skeleton. He appears at night and, instead of speaking, gives a low whistle. The *phī tai hōng* are the spirits of persons who died a sudden or violent death or of still-born children. They are often confused with the *phī tai ha*, who are rather the ghosts of people who have died from cholera or a sudden illness. They are all horrible and malignant, and yet the people do not always avoid the places where they are said to be, because the possession of a *phī phrāi* (the 'essence' of a *phī tai hōng*) is a formidable power. To get this a sorcerer goes by night to the place haunted by the *phī tai hōng*, conjures him up by incantations, and immediately puts a lighted torch under his chin, so that the heat may cause the grease to flow from his chin into a vessel. This grease, mixed with perfumed oils, forms a magic pomade, by means of which the sorcerer can make people go mad or become amorous, ruin them, or bring dangerous illness upon them. According to the Siamese, a man possessed with a *phī phrāi* suddenly becomes mad, shouts, gesticulates, and tries to break everything round about him; ordinary means being powerless to calm him, they send for the sorcerer to exorcize him; the sorcerer takes a nail and applies the point of it to the big toe of the victim, who begins to shout, although the point has only pressed against the skin; the sorcerer presses with the nail a little more to make the place untenable by the *phī phrāi*; then he drives his nail into a piece of wood, so that the *phī phrāi* feels itself pierced through or is forced to enter the nail; the patient begins to howl, then after a quarter of an hour he quiets down, and is normal and cured. The *phī kūman* (Skr. *kūmara*) is the spirit of a fetus or of a child dying at birth; the greatest precautions must be taken to bury this abortion to prevent the spirit from returning to haunt the body of the mother and cause her death. The little corpse is folded in two, enclosed in a large pot for cooking rice, covered with paper and leaves on which have been written charms (*mantras*) in Pāli, and buried in the wood; or it may,

after being enclosed in the vessel, be given to a sorcerer, who, armed with a sword, carries it to the bank of a river, loads it with imprecations, and then, after breaking it in two with a stroke of the sword, abandons it to the current. The *phī kra : sū* selects as its home the body of certain women (sorceresses), which it leaves at night to look for food, eating the very stones. According to some, it is inoffensive; according to others, it is very dangerous, devouring embryos in the womb. Some claim that these *phīs* are the spirits of women who have died in the jungle and come back to haunt the place. The *phī ka : hāng*, which appears in the form of a man with the wings and tail of a bird, is also an evil spirit. So also is the *phī pong khāng*, a kind of vampire like a black monkey, which dwells in the jungle and sucks the blood from the big toes of sleeping people. The *phī kaong koi* does the same; so that any one who wishes to sleep in the jungle is recommended to keep hold of his feet. These spirits may be forced to obey certain clever sorcerers, who send them to torment their enemies. The *phī pā*, special invisible demons of the jungle, cause fever or dysentery in those who rest there during the night. The *phī khāmōt*, a kind of will o' the wisp, in the form of a red star seen in desert places at night, causes mirages and makes people fall into a hole which they take for a house; it also loves to deceive boatmen with its false light and wreck them. The *phī ām*, the nightmare ghost, sits on the chests of sleepers, especially travellers in the *salas*,¹ and makes them utter inarticulate cries. There are also several wandering spirits, *chāo phī*, *thepharāk* (Skr. *devarakṣa*), for whom the people erect small brick and wooden buildings, called *san chāo*, 'house of the master.' People living near a *san chāo*, both men and women, are often possessed by the *phīs* who have chosen to dwell in them, and they deliver oracles, cure illnesses, etc.

The *kūn* (Skr. *gūṇa*) is a sort of possession compelling its victim to throw away outside a piece of meat or skin, which forces itself into the body of some person, and harms him if he is not freed from it by means of incantations. Both the bewitched person (*tuk kūn*) and the bewitcher, moreover, may find themselves in a very bad state if they do not paralyze the malignant effect by periodical and regular incantations.

A certain spirit, the *thān vət suvān*, is regarded as the chief of all; it resembles a *yāk* (Skr. *yakṣa*), or fierce giant, inhabits the sky, is armed with a heavy iron club, and is believed to send smallpox to children.

Among the 'autogenous' *phīs* we may mention the *phī ru'en*, the guardian angel or spirit of the house. There is one for each house, and it is sometimes heard whispering to itself; it may be seen in the shape of a man; a small building is dedicated to it in every house.

The water-spirits (*phī nām*) are also very much respected. Small rafts are frequently seen, bearing figurines representing a family with a man, woman, children, offerings of betel, rice, and flowers, dotted with little tapers, floating on the surface of the rivers; this is a tribute to the faithful to the water-spirits. During serious epidemics it is to the spirits of the cross-roads that offerings are dedicated. Of course in Siam, as in Cambodia, a whole series of spirits of a purely Buddhist character are worshipped—the *pisat* (Skr. *pisacha*), the *pret* (Skr. *preta*), the *yāk* (Skr. *yakṣa*), the *razi* (Skr. *rakṣasa*), the *khṛūt* (Skr. *garuḍa*), and the *nāk* (Skr. *naga*). It is evident also that, with some differences in names, the system of superstitious beliefs is identical in the two countries.

14. Amulets.—Rich and poor wear amulets: these are sometimes *phā pra : chiet*, or bands of cloth which they roll round the head and neck, sometimes necklaces made of seven amber or gold beads, sometimes *ka : krūt*, or small gold or silver plates engraved with diagrams or sacred formulas and worn on consecrated cords (this is in fact the only clothing of very young children), sometimes circles of thin artistically woven bamboo thongs. All these objects are intended to ward off illnesses and all kinds of witchcraft; and there are also *kayā sith* (Skr. *kāya + siddhi*?), amulets of invisibility, and *ka : phan*, talismans of invulnerability. The women also wear across their shoulders necklaces soaked in lustral water by the *bonzes*; among the poorer classes strings of consecrated cotton thread are substituted.

15. Sorcerers.—Sorcerers (*mōdu*), sorceresses (*thao*), and diviners (*mothai*) are consulted in all the important actions of life. They are believed to be able to command certain spirits, to send them into the bodies of human beings, or to chase them away. The spirit by their enchantments hides itself in a buffalo-skin reduced to the size of a pea, which the enemy is made to swallow; soon, under the effect of the spirit's power, the body of the bewitched man expands, swells, and bursts, unless another sorcerer counteracts the witchcraft.

The sorcerers practise spells by means of tiny

¹ Shelters at the entrances to villages for the use of strangers and travellers.

clay figurines (*pha : yon*) representing the person whom they wish to harm; they stick a pin or a nail through the heart or the head and then bury them. A person can thus either free the victim from an illness or give him an illness from which he will die in a very short time. These sorcerers are also skilled in making love-philtres (*sāne, ya phēt*). It is held that they often make alliance with thieves, facilitating burglaries by causing the whole family to sleep soundly by means of a spell. Most of the formulas used by the sorcerers are in distorted Pāli and are often incomprehensible even to the person who utters them.

16. Medicine.—Siamese medicine originated in India, and tradition says that it was introduced by Khomarabhacca, who lived in the time of Buddha. He wrote medical treatises which were regarded as sacred and to-day are translated into Siamese in the pagodas under the name of *Rōkha : nithan* (Skr. *Roghānidāna*). Being essentially Indian, this science is philosophical and theoretical. The human body is supposed to be composed of four elements (wind, water, fire, earth), and health depends upon the equilibrium or non-equilibrium of these elements in the body. Nowhere in these books do we find systematic descriptions of diseases; there is no real knowledge of anatomy, physiology, or surgery, which is in the hands of timid bone-setters, with dressings of coconut-oil and cotton. Midwifery is not quite so rudimentary; but the barbarous and unhygienic custom of keeping a fire burning near the lying-in woman persists in Siam, as in Burma, Cambodia, Annam, and the whole of Indo-China. Except in the case of women of high rank, with whom everything is done in the European fashion, every pregnant Siamese woman is laid on a small bed near a fire in a dark room with no outlet for the smoke; she remains there thirty days for the first child, twenty-five for the second, ten for the third, and five for the others. The women are keenest to maintain this cruel custom, thinking that it improves the beautiful pale yellow colour of their skin.

Knowing their superstitious disposition, we are not surprised that the Siamese attribute the non-equilibrium of the four elements and hence their illnesses to spirits, and consult the sorcerer rather than the doctor; besides, the sorcerer is often the ordinary doctor. They also believe that illnesses are the consequences of deeds, either in this life or in a previous one, and that the best of remedies is to do good works (*thām būn*, Skr. *puṇya*). In all serious illnesses two tapers are offered to the god of medicine.

The Siamese also practise Chinese medicine. The Chinese system consists in taking the pulse and using bundles of medicinal plants; the Siamese system makes drugs of powders and pills of flowers, roots, and medicinal woods dissolved in lukewarm water. The most extraordinary substances, like those to be found in ancient pharmacopœias, abound in Siamese medicine.

In a word, Siamese medicaments, whether of mineral, vegetable, or animal origin, aim at adding to or taking away from the constitutive elements what they lack or what they have in excess. In a single prescription, therefore, the Siamese doctor may use more than a hundred substances all mixed together.

The doctors (*mō*) are divided into *mō luang*, or royal physicians, and *mō rātsādon* (Skr. *rāja + dāna*?), or people's physicians. The royal doctors (physicians and surgeons), with a chief at their head, are divided into squads, who in turn remain in the palace and follow the king and court. They all receive a salary from the king, and their office passes to their children. Their knowledge must

have been very much enriched by the European scientific information which the Wang Lang Medical College (*wǎng lǎng* = 'palace') provided at Bangkok for students. The doctors of the people, who are numerous and specialized, and often take up their art without the slightest medical preparation, include the *mó nǜet*, or masseurs, and the *mó phǐ*, or exorcists.

17. Superstitious beliefs.—(a) *General*.—The superstitions of the Siamese are as numerous as those of the Cambodians (which they resemble in the most curious way).

One of their chief preoccupations is to make themselves invulnerable: they claim that a ball of solidified mercury—probably an amalgam of lead or tin—carried on the person protects against all weapon-wounds; princes and nobles always carry this in their girdles; eaglewood beads are also considered a good preservative.

Rice has a lucky character and plays an important part in all domestic and official ceremonies. It is the symbol of fecundity in the marriage rites, and of happiness in others. The Siamese bestow on the rice-goddess, a second Ceres, worship based on the belief that she presides at the sprouting of this cereal in the fields; the children are taught to reverence her before meals, and in many families they even murmur a prayer in her honour before eating.

Agriculture has always been an object of great reverence, and gives rise to the rite (as in China) of ceremonially tracing a furrow at the beginning of the agricultural year (*rèk na*). Formerly it was the king himself who performed this rite; to-day it is the minister of agriculture. It takes place at the beginning of May—the period fixed for the cultivation of rice throughout the whole kingdom. Harvest takes place without ceremony, but it is closed by a sacrifice in which as an offering to the deities very well-filled ears of rice are burned. With the rice-ceremonies we may connect the burlesque festival of the *ókya khǎo*, 'king of the rice,' which also takes place in May-June. While the real king remains within his palace, a mock king usurps his prerogatives for three days amid joy and feasting. The subjects of the new king scatter themselves over the port and the town, laying violent hands on the Chinese junks and ships that happen to be there, entering houses and bazaars, and taking possession of all that they find unless the owners make haste to buy everything back from them. But—most interesting of all—this rice-king goes into a field in the middle of the town and traces a furrow with a gilded plough. Above this field there has been erected a high swing; the minister of agriculture, who accompanies the ephemeral sovereign, takes his stand on the swing, amid the silence of the crowd, and balances himself in it in order to invoke celestial blessings on the field and all the crops of the year.¹ The rice-king mounts it in his turn and balances on it amid the laughter, shouting, and tom-tom beating of the people. The 'king' also leans against a tree-trunk, standing on his left foot and holding his right foot up as high as his left knee. Then a cow is brought, before which are spread rice, potatoes, beans, etc.; the food towards which it first turns will be scarcest and most expensive during the year.

Certain trees are worshipped on account of their antiquity or the Buddhist memories which they recall—e.g., the *phó* (= *Skr. bodhi*) tree (*Ficus religiosa*)—or because they are regarded as the dwelling-place of a powerful *phǐ*.

To the Buddhist beliefs must be attributed the pity that all the Siamese have for animals and the horror that they feel at their slaughter even by the laity; the rich buy barges full of fish at certain times in order to throw them back into the water, or cages full of captive birds which they set at liberty in the precincts of a pagoda. From a similar motive every eighth and fifteenth day of the month hunting and fishing are strictly forbidden, and on those days nobody would dream of selling, buying, or eating flesh.

(b) *White elephants*.—The best known of the Siamese superstitions connected with animals is the veneration of white elephants (*xang phǐ'ek*). It still seems entirely Buddhist, recalling the white elephant in which the Buddha became incarnate. Monkeys and 'white' sparrows (i.e. albinos) are also treated with respect, but not to such a degree as the white elephant, the possession of which is a promise of happiness for the king and the whole kingdom. During the 16th and 17th centuries the kings of Siam, Cambodia, Pegu, and Laos waged unending wars with each other for the possession of white elephants.

When a white elephant is discovered in the kingdom, the person who captures it is exempted by the king from royal corvées until the third generation, and receives a number of gold pieces; then a deputation from the court along with musicians goes with ceremony to fetch the majestic luck-bringer

to Bangkok, on a raft garlanded with flowers, where it is fed with cakes and ~~fruits~~ and ~~flowers~~ from all sides so much respect that European travellers have said at one time that the Siamese worshipped the white elephant. Its arrival in the capital is the sign for great festivities. The Brāhmins bathe it with lustral water and choose the pompous Sanskrit name by which it will henceforth be called, for, on entering the royal stable it also receives the title of 'great mandarin.' Its covers are of velvet; it eats and drinks from a gold or silver basin (fruits and choice herbs); its teeth are hooped with gold, and it often wears a precious diadem; a whole suite of slaves and followers bustle round it, and, when it takes a bath, it is shaded under a sumptuous red and gold parasol. Its slightest ailments are tended by the royal physicians; its death puts the whole court and kingdom into mourning. Servants suspected of having been careless with it are mercilessly put to death. The figure of the white elephant adorns the Siamese flag at the present day.

The tiger, which is very much dreaded by the Siamese because of its power and its ferocity, is always addressed with respectful fear, but is put to death whenever possible. An enormous freshwater lizard (*Monitor elegans*) is believed to bring misfortune to any one who meets or touches it.

(c) *Portraits*.—The Siamese are afraid to see a painting or a photograph of themselves; they think that it may be made use of in black magic. It is most probably this superstition, which is almost universal in the Far East, that is responsible for the non-existence of coins bearing the representation of the sovereign in Brāhmanic India, thus depriving us of valuable historical evidence. King Mongkut has done much to modify this prejudice against portraits: he has been photographed on several occasions with the dignitaries of his court, and he has had coins struck with a representation of himself. It is only fair to mention that in 1686 the Siamese who were sent as ambassadors to the court of Louis XIV. were not afraid to allow their portraits to be painted, for the picture of the whole embassy is still to be seen at Versailles; but these men—their voyage itself proves it—were exceptional.

(d) *Treaties*.—When a treaty is signed between the king of Siam and another party, the latter must immediately take charge of the copy of the treaty signed by the king without letting it remain in any intermediary dwelling-place for fear of bringing misfortune to the place.

18. *Human sacrifices*.—In Siam, as in Cambodia and Burma, tradition claims that the foundation of a new town always required a human sacrifice: when the walls were almost completed,—just when the gate was being put into position—it is said, the voluntary or involuntary sacrifice of one or even of three victims had to be obtained. As voluntary victims were usually not to be found, a great mandarin accompanied by guards used to post himself near the gate repeating his future name in a loud voice; if a passer-by, thinking that he was being summoned, turned his head in their direction, he was regarded as designed by fate, and he was seized and taken away. After a short retreat and a sumptuous banquet the victim or victims thus obtained were solemnly taken to the gate and buried alive under a foundation beam.

19. *Festivals*.—See art. FESTIVALS AND FASTS (Siamese).

20. *Organization of family life*.—(1) *Relations of the sexes*.—Marriage in Siam takes place early, usually at 15 years of age for girls and 17 for boys. The law allows polygamy, and the rich take full advantage of it; following the king's example, they have regular *harins*; but the poor are almost always monogamous. Moreover, only one of the numerous wives of a Siamese holds the rank of legitimate spouse, the one who was first wedded according to the solemn betrothal (*khan mǎk*), and brought a dowry instead of being bought. Even if others are afterwards wedded with similar ceremonies—which is very rare—they are, as com-

¹ This swing-rite seems to signify, as in India, the alternation of the seasons.

pared with the first wife (*miá luang*, 'chief wife'), only 'little wives.' As a rule it is the chief wife who chooses the wives of the second rank; the husband always asks her advice and her approval on this point, and she treats them as young sisters or as docile servants; even the favourite takes care not to go against the traditional dignity of her who is the only 'mistress of the house.' Further, only the chief wife and her children can inherit from the husband. It is therefore the position of the woman rather than that of the man that determines the legal status of the children.

(2) *Betrothal*.—Marriages are often arranged by the parents, but often also the young man makes his choice and then speaks to his parents. If his choice is approved, his parents request two trustworthy friends to sound the girl's parents. Though they are well received, it does not follow that they at once obtain a decisive answer; it is proper for the parents of the girl to ask leave to consult her, to reflect, not to appear in too great haste; it is only at the third of the requests, repeated at regular intervals, that they decide to agree. Then the conditions are discussed: the future husband must give a sum of money which his future parents-in-law will either keep for themselves, if they are poor, or give to the girl as a dowry to help her when she begins housekeeping. He must also present to his fiancée jewels according to his wealth, and sometimes also a house or a barge. When all this is settled, the betrothal (*khan māk*)—always very solemn—takes place; the young man, accompanied by his friends, all dressed in their finest clothes, enters a barge, decorated with flags, to convey to his fiancée's house appropriate gifts, such as betel, areca, and rice-cakes; on his arrival he greets all his future family, the dowry is counted, and the wedding-day fixed.

(3) *Marriage*.—This is a purely domestic ceremony; the State never interferes with it, and religion only occasionally by prayers and aspersions of lustral water on the young couple by the *bonzes* if they have been invited. The marriage is primarily a kind of 'wedding-party,' at which the parents and friends assemble at the house of the girl's parents to eat, drink, and be merry for one or two days according to the wealth of the couple. During a certain time, from one to three months, the young couple as a rule live near the girl's parents in a cottage which the man had to build for the purpose before the marriage. As the Siamese law gives parents absolute control over their children, and a greedy father might often take advantage of this to sell his daughter, under the pretext of marriage, to a man whom she hated, there is a custom to counterbalance this; when a pair of lovers cannot obtain their parents' consent, they elope, and go and live together some distance away; their union being thus affirmed, they return, preceded by two trustworthy friends to intercede in their favour, and ask their parents' forgiveness. The young man then presents his parents-in-law with the usual gifts and the marriage is concluded. If the parents persist in refusing, the young people repair to the judges, who generally arrange things in their favour. Marriage is forbidden between near relatives except in the case of kings, who are allowed to wed their half-sisters to maintain the purity of the royal line.

Although in Siam the wife never goes out with her husband, she is quite free to go and come indoors and out, is seen at the theatre, carries on business if need be, and is almost always consulted by her husband in all important undertakings. Legally the husband has the right to sell a wife whom he has bought; he cannot sell the chief wife, who brought him a dowry, except when the

woman, having consented to the contracting of the debt, has thus become surety for it; but both cases are very uncommon.

(4) *Divorce*.—Divorce (*yā*) exists, but is seldom practised. It cannot take place until after an attempt at reconciliation before the seniors. The guilty husband must sign a written agreement to alter his conduct; if he does not improve, divorce is granted. In cases of adultery (much rarer than in Laos) the man may send his wife away after giving her a letter of divorce (*nang-si'yā*) with his seal upon it. Divorce almost always takes place by mutual consent; the woman takes back her dowry; the common property and the children are divided—unless the children are grown up and show a preference for father or mother. When there are no children, the man returns to his parents.

(5) *Birth*.—The birth of a child is accompanied by various superstitious rites. Whenever it is born, it is washed, its arm is bound with bands of consecrated cotton, its horoscope is taken, and the name given is always an ugly one so as not to arouse the jealousy of the evil spirits; in the event of illness the name is changed in order to baffle the *phī* who is angry; the child is always breast-fed; every month its head is shaved; its body is washed daily, and is left naked except for one or two gold or silver necklaces, with small metal plates bearing mysterious characters and serving as amulets; girls also wear another gold or silver, or sometimes copper, plate, shaped like a heart and hung on a chain or string round the waist. At the age of four or five years a little tuft of hair is allowed to grow, which in the case of both sexes is shaved at the age of puberty in a great ceremony which is both religious and domestic.

(6) *Shaving of the fore-lock*.—After the diviner has fixed the most favourable day and hour for the ceremony of shaving the fore-lock (*kón chuk*), the parents send cakes and flowers to all relatives and friends to invite them to the festival. A gunshot or petard-reports open the ceremony. The *bonzes* come and recite prayers on the head of the child, who is decked with all the jewels procurable; he is sprinkled with lustral water, then one of his near relatives shaves his fore-lock, while hired musicians play their most lively tunes. All the guests congratulate the newly-tonsured boy on his entrance into the world of young men, and place money for him in a plate; this is put aside to buy jewels for the boy's fiancée, unless the parents are very poor, when they use it themselves. Then, for a day or more, they eat, drink, smoke, play, and attend cock-fights or theatrical shows in honour of the new young man or woman.

At the tonsure of a royal prince (*Pāli cūla-kantana mahāgala*, 'festival of the shaving of the fore-lock') all Bangkok goes on holiday. On the appointed day the prince, dressed in a red *langit* covered with jewels, and surrounded by armed soldiers and a long procession of children of his own age of all nationalities, wearing their national costume and each carrying a lotus-flower in his hand, goes in a gilded palanquin to the king's apartments. He prostrates himself before his father, who raises him up, and leads him by the hand to prostrate himself before the ashes of his ancestors in the temple of the palace. For three days in succession the same ceremonies are repeated; on the fourth day, in front of the ancestral tombs, the Brāhmins sprinkle him with lustral water, and divide his fore-lock into three locks (in allusion to the Hindu *trimūrti*); the king cuts the locks, and almost immediately the Brāhmins shave the boy's head. At the last stroke of the razor two Brāhmins sound the conch. Then the prince, accompanied by the king, goes in procession to a gilded pavilion on the top of an artificial mountain of pyramid shape, which symbolizes Mount Kailāsa, the famous peak of the Himālayas whither the god Śiva repaired at the shaving of the fore-lock of his son, Gaṇeśa. In this pavilion, in the presence of the royal family and all the high court officials, the prince purifies himself in a bath which seems to represent the Ganges; then he is sprinkled by the king and the highest persons in the assembly on the head, shoulders, and the whole body with five ewers of lustral water (in allusion to the five great rivers that issue from the Himālayas). The musicians at the foot of the mountain play a triumphal march; a Brāhman wipes the prince's face, and a crown of pure white cotton is placed on his head. Everybody descends, and the religious ceremony is over. The secular festivals now begin, and last for several days. The whole ceremony of shaving the top-knot is a Brāhmanical survival in a population for centuries Buddhist, which Buddhism not only has tolerated, but has made an effort to preserve. On the day after the shaving of the top-knot the young people usually enter the pagoda as novices, tradition requiring that all, even the kings, should have worn

the yellow robe for a time. Although King Mongkut spent years in the monastery, his son, King Chulalongkorn, imbued with Western ideas, would not stay more than three days, and would not have his eyebrows and his head completely shaved—which scandalized the most pious of his subjects.

Girls, after the shaving of their top-knot, return until marriage to the shelter of their parents' homes.

(7) *Parents and children*.—The relations between parents and children in Siam are as a rule marked on the one side by affectionate care and on the other by profound respect and deference. Infanticide is almost unknown, and the idea of parricide never enters their minds. Of course the law gives parents complete power over their offspring; although a man cannot sell his chief wife as a slave to pay his debts, unless she was aware of the contracting of these debts and had agreed to it, he can at any time sell his daughter as a slave temporarily or permanently to settle any kind of debt; this happens most frequently in the case of gambling debts.

(8) *Disposal of the dead*.—The most general method of disposal of the dead in Siam is cremation. When a Siamese is so ill that he cannot swallow rice, he is regarded as dying, and monks are summoned to his bedside to sprinkle him with lustral water, and to prepare him for death by the reading of sacred texts on the vanity of human things. His friends shout in his ears, '*Arahant! arahant!*', 'The saint! the just!' (Pali *araham*, 'the saint', 'he who has obtained lasting happiness'), in order to procure for him a better future lot. At his last breath his family and friends weep and mourn aloud for half an hour; then the corpse is bathed, and a *tical* (piece of money) is put into the mouth; the body is wrapped in a piece of white cloth and put into a coffin, covered with gilt paper and bits of glass, and dotted with little tapers. After two days it is taken down into the street by an opening at the side of the house—not by the door—and they carry it round the house running; the dead man has now become a dreaded spirit; it is their aim to make him forget the road from his house in order that he may not return to torment the living. Then the coffin is placed on a catafalque, and to the sound of plaintive flutes it is conveyed, amidst the relatives and friends in pure white mourning dress and with shaved heads, by barge or by land, to the funeral pile of the pagoda where it is to be burned. There, after renewed prayers, the person whose duty it is to burn the corpse washes its face with coconut-water and then places it on the pile, where it is consumed, while all present mourn. The few bones that are left after cremation are put into an urn, which is placed in the house, near the little altar of the household gods. The funeral ends with a banquet and entertainments of all kinds, including even theatrical performances. Among the rich these festivals may last for three days; many poor people ruin themselves in order to do things well on such occasions.

The funeral of a prince or a king requires no less than ten or twelve months' preparation; it costs enormous sums and gives occasion for rejoicings which the people long remember. The corpse is slowly dried by injections of mercury and placed in a golden urn; a huge pavilion of teak-wood is erected, on which the urn is to be placed and which symbolizes Mount Meru; its pillars, framework, and roof are covered with gold and silver leaves and inlaid with glass-work. Under the roof of the central pavilion there are other pavilions or kiosks for the king, princes, monks, high officials, and eminent strangers invited to the ceremony. The king's one is very large and contains reception-rooms and special apartments—even a bathroom. Under a special verandah are the valuable gifts which the king presents to the monks or to the other persons invited—sometimes including European agricultural machinery of the most up-to-date kind.

The cremation begins in the interior of the palace by a solemn procession of the relics of the Buddha and the ashes of the royal ancestors, to which strangers are not admitted. The relics of the Buddha are then enthroned on an altar situated above and in front of the remains that are awaiting cremation; the ashes of the royal ancestors are placed in the royal pavilion.

Then the monks recite the whole day sacred texts in Pali, holding the silver cord by means of which they communicate with the urn containing the mortal remains. The people outside share in the festival, receiving gratuitous refreshment and entertainment.

On the following day the monks again recite Pali texts, while holding the silver cord; outside the people are being entertained to scenes from the *Rāmāyana*, Chinese shadow-plays (*nang*), marionettes (*kūn*), and Peguan dances; but they also attend sermons preached by the monks, before scrambling for the lemons containing pieces of silver which the king throws to the crowd—one of the great attractions of the ceremony.

Next day, to the sound of guns and plaintive music, the mortal remains leave the pagoda, followed by a procession of great magnificence. They are carried three times round the pyramid and laid on the gilded throne or altar in the central pavilion; four groups of monks recite texts from the *Abhidharma*; outside the entertainments continue for four nights and four days.

At the end of the fifth day the gilded altars are removed from the throne of the central pavilion, or *phra:man*, and the provisional altars which are to be burned are substituted; on these are laid the bodies in sandalwood caskets amid sweet-scented flowers. The king sets fire to the pile for his near relatives by means of a fire kept perpetually burning in the pagoda. Then all the great personages throw sweet-scented wood and gilt-paper ornaments into the pile. Outside the games continue.

Next day the ashes are collected and in procession are thrown into the river from the top of a pagoda. The bones which have not been entirely consumed are placed inside a golden urn and returned to the pyramid on the altar which was set up for the purpose.

On the following day the relics of the Buddha, the remains of the royal ancestors, and the debris of the new cremation are carried by road to the palace and the

after funerals, when they appear traditionally in white, with shaved heads, the princes have adopted the custom of wearing black mourning-clothes, like Europeans.

There is another method of disposing of the dead which is sometimes required by the most fervent Buddhists, viz. the partial offering of their bodies to vultures. If it is arms or legs that are to be offered, the part is, in the case of a prince, cut up into small pieces, put on a golden plate, and presented thus in the Vat Sakét of Bangkok to the swarms of vultures which fly incessantly round this sacred charnel-house.

21. *Political and civil organization*.—(1) *King*.—Siam is governed by an absolute king, supreme judge and legislator, 'owner of the earth and its inhabitants,' whose despotism is moderated only by the mildness of Buddhist beliefs, secular traditions, and popular revolts. This king is called the *phra:*, 'the august,' 'the divine,' 'the sacred'; his subjects, whatever their rank, approach him on their knees and elbows and speak without daring to raise their eyes. The crown is hereditary; nevertheless within the space of 450 years, thanks to popular revolutions and court intrigues, Siam has been governed by four different dynasties. The order of succession is badly regulated; in theory the crown comes to the eldest son of the queen or the first wife; in reality the king appoints his heir; if he fails to do so, the great mandarins and ministers choose a king from the royal family.

(2) *Second king; royal family*.—Next to the king comes the second king, corresponding to the *uparāja* or the *obbarat* of Cambodia; he is a brother of the king, and has insignia, several attributes of royalty, special revenues, a house, and a court of his own. In time of war he used to be made generalissimo; this led certain European travellers to call him the 'war-king.' His authority is very slight, and even the officials of his palace are nominated by the real king. In reality the second king is the first and most respected of the twelve *krom*, or princes of high blood, brothers of the king, who surround the sovereign. Beneath them are ranged 200 or 300 other members of the royal family, with high titles, low revenue, and no authority whatever. At the fifth generation the descendants of royal race return to the common mass of subjects.

(3) *Mandarins*.—Nobility is not hereditary in Siam, so that the king can choose his mandarins or ministers. In former days their rank was indicated by the shape of their betel-box, the shape and material of the gold or silver crowns encircling their ceremonial *mokot* (Skr. *mukuta*), a sort of astrologer's peaked cap of white cloth, the arrangement of their *balon* (a highly ornamented shore-boat), the adornment of their swords, and the number of slaves who followed them; and they formed six classes. At the present day they are headed by the two *somdet chao phra:ya*—three words meaning 'lord,' 'king,' 'prince'—or great ministers, the one generalissimo (the *chakkra*), and the other admiralissimo (the *kra:lahôm*). Under them come five secondary ministers, *chao ph(r)a:ya*, who govern the palace, and look after the sacred and royal storehouses (*phra:khläng*), agriculture (*phölläthép*, Skr. *bālādēva*), law-suits, and the Peguans and other Asiatics not belonging to Siam. These ministers, assisted by more than 20 *pha:ya* or *phya*, are placed at the head of the important services of the capital. The governors of provinces are lower still, with the generic title of *chao mu'äng*, 'lords of the country,' and with great powers. They are both prefects and high judges, treasurers and controllers of taxes. They are nominated and dismissed at will by the king. All those officials are obliged to drink the water of allegiance twice a year. Great oppressors of the people, they are restrained only by the fear of royal punishment.

(4) *Justice*.—As in Cambodia, justice is slow and costly, although, according to the code, all cases ought to be settled in three days. At the foot of the scale justice is administered by the village-chiefs (*kām nān*), then by the governor of the province, to whom one may appeal from them. From him one may then go to Bangkok to the *lakhoṇban* (Skr. *nagarapāla*), presided over by the minister of justice. A special tribunal deals with European cases.

(5) *Codes of laws*.—Since the time of King Phra:Nārēt the Siamese codes have been collected into four volumes. This compilation, which is strikingly similar to the Cambodian one, is divided into three parts: (a) *Phra:tāmra*, a list of officials, their prerogatives and duties; (b) *Phra:thāmnuṇ*, a collection of ancient Siamese institutions; and (c) *Phra:rāxā kāmnot*, 'Book of Royal Ordinances,' the laws promulgated or revised under Phra:Nārēt. Divided into *lakkhāna*, or sections, they treat of theft, slaves, marriage, contracts and debts, trials and disputes, and inheritances. In all these laws, which are wise and well suited to the customs of the country, there are few specially Hindu traits.

A methodical modernized revision, in the light of European and Neo-Japanese codes, has been made of the *corpus* of Siamese laws under the excellent supervision of King Chulālongkorn; he himself has written the preface. The work is in course of publication, and European translations of it are beginning to be produced.

(6) *Ordeals*.—Trial by ordeal is still adopted in some cases—e.g., trial by clay.

In order to discover a thief, a sorcerer asks two *ticals* (about two francs) from the person who has been robbed. He lights a candle and places one of the coins at either side; then he mutters a magical formula, and, taking a bar of clay, raises it several times above his head, reciting formulas. He then measures it with his little finger and breaks it into pieces a little over three centimetres long; he gives one piece to each of the suspected persons and orders them to chew it and then spit. The one who cannot do so is declared guilty. There are also ordeals by water, boiling oil, melted tin, fire, etc.

(7) *Penalties*.—There is a great variety of penalties, including, besides imprisonment,—for life or for a time—public exhibitions, ignominious

parades, corporal punishment (flagellation, mutilation, etc.), and death by beheading or by drowning. Old authorities tell that a popular punishment was 'frying' the culprits in a huge copper filled with coconut-oil. The death penalty cannot be pronounced except after royal approval. Crimes of *lèse-majesté* and *lèse-religion* call forth the direst punishments.

(8) *Slavery and statute labour*.—In former times the slave was a slave by birth; now he becomes a slave by voluntary contract, by sale (of a daughter by her parents), or because of insolvency, conviction, or legal confiscation. Since 1890 children born in slavery become exempt from law on their twenty-first birthday. All free healthy men subjected to the 'royal service' are liable to statute labour. On his accession every sovereign orders all adult males to be tattooed on the wrist with a special sign. At the age of seventeen they are registered. They owe three months per annum of statute labour for the execution and repair of public works, but this must never occupy more than one month per quarter, so as not to hinder their agricultural operations. They may redeem themselves by means of a payment of 50 francs per annum; they have much to put up with from the bad faith and the greed of the royal officials. The hereditary serfs are undoubtedly the descendants of ancient criminals; the crown reserves them for its service. They have one month of work, during which they are fed, one month's rest, and so on. Often they can buy back their service for a certain sum. Their person is inviolable, and therefore their insolence is often great; they can run into debt and become the slaves of their creditors. The Asiatic 'slaves'—Peguans, Annamese, Cambodians, Chams, Laotians, and descendants of former prisoners of war—owe three months of military service in the year, and never leave the kingdom. Others are simply paid in money or in kind. The Chinese, duly inscribed in a special list and undergoing certain civil formalities, are subject to only one tax, the payment of which is certified by a wax seal applied to a string round their wrists.

ANTOINE CABATON.

SIBERIA, SIBIRIACS, SIBERIANS.—1. *SIBERIA*.—i. Origin of the name.—The name Siberia is usually considered to be derived from one of two sources: either from the Russian term for 'north,' Sievier, Sibir, or from Sybir-Isker, the name of the chief town of the Tatar dominion which the Russians found in Siberia at

the time of her conquest. But as a matter of fact the first hypothesis seems superficial, since the early Russians knew Siberia under the name not of North but of Yugra. By this term must be understood the land which in the 9th and 10th centuries stretched from the river Vyehgda in the west to the Upper Irtysh in the east. In the 15th cent. the geographical boundaries of Yugra changed; it was confined to the eastern side of the Ural, between the rivers Sygva, Konda, and Lower Ob (i.e. the lands north of 58° N. lat.). It is only after the 15th cent. that the Russian chronicles begin to abandon the name Yugra for that of 'Siberian lands.' Meanwhile the name Sybir as capital of the Tatar khanate appears on old maps of 1367 (unknown origin) and 1459 (Fra. Mauro); and under the last Tatar khan, Kuchum, in the 16th cent., the name was also used for the whole khanate. When, in 1583, Isker or Sybir was taken by the Cossacks of Yermak, the Russians adopted the name Sybir for the whole of the conquered territory, including Yugra. A new derivation of the word Siberia has been suggested by E. Blochet. He considers that the people known in the ancient Chinese annals as the Jwen-Jwen were the same as the people called Ib-Ib, Ibim, Ibil, Ibir, and that the last word is identical with Sybir.¹

2. **Geographical position.**—By the name Siberia is understood the country between the Arctic shore and the Central Asiatic mountains and steppes from north to south, and the Ural Mountains and the Pacific Ocean from west to east. Under the administrative division of the Russian Government up to 1917 it denoted a much smaller territory, viz. the governments of Tobolsk, Tomsk, Yeniseisk, Irkutsk, Yakutsk, and Trans-Baikal. All the lands east of these were called the 'Far East Country.' From a geographical and ethical point of view, however, this division is artificial, and we shall here take Siberia to include the Far East country, i.e. as being composed of the governments of Tobolsk, Tomsk, Yeniseisk, Irkutsk, Yakutsk, Trans-Baikal, Amur, the sea-coast, and the island of Sakhalin. The Caspian-Aral steppe country, with Turkestan and Transcaspia, forms under this division Russian Central Asia.

3. **History.**—The material relating to the earliest history of man in Siberia and the adjacent countries is only beginning to be unearthed. Whether palaeolithic man existed there is still unproved, though the Russian archaeologist Savrenkoff declares the stone implements found by him along the Middle Yenisei to be of palaeolithic types.²

The earliest epoch that is fairly well defined is that of neolithic kitchen-middens and pictographic writings on the cliffs, which are probably of the same date. These are met with chiefly in S.W. Siberia, between the rivers Ishim, Tobol, Yenisei, Abakan, and Kemchik.

The bronze age remains discovered in the Minusinsk country in S.W. Siberia and the Altai come next in antiquity. Besides bronze implements, the graves of this period contain implements of copper and gold and burial masks of gypsum.

While the neolithic remnants can be associated with the people whom one can call the Palaeo-Siberians, who are even now living to a large extent in a neolithic state of culture, it is very doubtful whether they had anything to do with the highly developed culture of the bronze age. It is more probable that Central Asiatic influences are responsible for it, either 'Arjan' or 'Turanian' or both.

Following on the bronze age we find remnants of the iron age spread over a much wider area: in fact all S. and W. Siberia is rich in iron implements and weapons, and also in memorial stones with Turkic-Uigur inscriptions. These can be ascribed without hesitation to the Neo-Siberians of Turkic (Turanian) affinities.³ One of these Turkic tribes, the Yakut, are even now in the stage of iron culture, owing to their isolation since they migrated to the north-east.⁴ It is difficult to ascertain what was the distribution of the Palaeo-Siberians at the time of the Minusinsk bronze culture, but it is fairly certain that it was the iron age people who were responsible for the forced migra-

tion of the Palaeo-Siberians to the north-east; some of the tribes to whom the introduction of iron has been ascribed still survive in S. Siberia and Central Asia. These are the Kirghiz called by the ancient Chinese 'Khakas.'

Politically, S. Siberia was from time immemorial directly or indirectly subject to China, till in the 7th cent. A.D. the Turkic khans became strong enough to free themselves from Chinese supremacy and to deprive the Palaeo-Siberians in the north of their freedom. In the north-west Siberia had been in the power of the Yugra and the Samoyed and then under the domination of Turks, and in the south and east under Turks, Chinese, and Mongols when the Russians appeared there as conquerors in the 16th century. Moreover, the peaceful migration of the Finnic and Great Russian tribes to W. Siberia, as far as the Ob, had been in progress since the 10th and 11th centuries. This natural colonization was stopped for the time being when in the 13th cent. Russia was over-run by the Turkic Tatars; but soon after the fall of the Golden Horde the Russian attitude changed again from defensive to offensive. In the 15th cent. the Yugra lands were subdued by Moscow, and in the 16th cent. W. Siberia as far as the Ob. Between 1613 and 1648 the Russians moved from the Ob to the Pacific. This conquest was not effected by the sweeping advance of an imperial army like that of Alexander the Great or Jenghiz Khan, but was the result of successful raids by small bands of Cossacks, which were the more effective since the aboriginal tribes, with the exception of the Turkic khanate of Siberia and the Kirghiz and Kalzak states, had no strong State organization and unity. Thus all opposition came from the Neo-Siberians of the steppe country and W. Siberia. The Samoyed, Tungus, Yakut, Buriat, and Palaeo-Siberians could offer hardly any resistance to the invasion. It was not the efforts of the Cossacks and the regular army, however, that won Siberia for Russia, but the unceasing and steady stream of emigrants from the Volga to the Ob and the Yenisei. This voluntary migration never reached as far as the Pacific, and that is why the Russian domination of the Pacific was due to strategical and political methods rather than to colonization.

Though the first Russian reached Amur in the 17th cent. (Okhotsk was founded in 1647), it was not till the time of the governor Muraviev-Amurski, in the middle of the 19th cent., that the Far East was conquered from both a strategic and a diplomatic point of view. Forcible colonization followed, but even after railways were constructed the Sibiriac and Russian workmen could not nearly hold their own in numbers against the overwhelming preponderance of yellow labourers.

4. **Exploration.**—The information about Siberia found in Chinese historians is still very little known and needs much interpretation; these historians are concerned chiefly with E. Siberia. Again, mediæval travellers like Marco Polo knew of Siberia only by hearsay. The first modern traveller who explored Siberia was Herberstein in the 16th cent. and then Messerschmidt (1719-27), who included in his party the Swede von Strahlenberg. The MSS of Messerschmidt have never been printed or fully used. Next come Dutch, English, and Danish travellers, whose explorations were confined to the sea-route between Asia and Europe, and Asia and America. In fact, from the time of the Novgorod Republic the northern sea-route from the West to Siberia was a matter of constant experiment. This route was established in the 16th cent. by the Muscovites, the Dutch, and the English. For a short period all colonization followed this route, and an international trade-station was established along the river Taz, east of the Bay of Ob, early in the 17th century.

The first study of the customs and religion of the aborigines we owe to Gmelin, Steller, Pallas, and Georgi, all of whom visited Siberia in the 18th century. But it is the travellers of the 19th cent., especially Middendorff, Radloff, Adrianoff, Schrenk, Czekanowski, Klements, Bogoras, Jochelson, Sternberg, and others, who have collected information which enables us to understand the present religious systems of Siberia.

5. **Classification of inhabitants.**—From the historical survey of Siberia it follows that we can find there representatives of all the peoples who at various times dominated the whole or part of this vast country, viz. the Palaeo-Siberians, the Neo-Siberians, the Chinese, the Russians, and the Japanese.

(a) By the name *Palaeo-Siberians* we mean the most ancient stock of Siberian aborigines who were pushed to the north and north-east by the

⁴ See art. YAKUT.

Neo-Siberians advancing from Central Asia, especially the Finnic and Turkic peoples.¹ The Palæo-Siberians are also known as Northern and North-Eastern Palæo-Asiats.² Neither of these terms is intended to indicate absolute community of race or linguistic identity between the various peoples who formed the original population of the country. We find among them both the hairy Ainu and the beardless Chukchi; and we include here also the Eskimo, who in physical type, language, and culture form a wedge between the Palæo-Siberians living in Asia and their kinsmen in America who are known as the north-western Amerinds. Hence this grouping of remnants of different races is merely justified historically and geographically, though to a large extent culturally as well.

This group contains the following tribes:

(1) The Eskimo, on the Asiatic shore of Bering Strait, (numbering 1415 in 1911); also the whole of Arctic America from Alaska to Greenland. Their total number is 25,000.

(2) The Aleut, in the Aleutian Islands and Komandor Islands (1232).

(3) The Gilyak, near the mouth of the Amur and in the northern part of the island of Sakhalin (4298).

(4) The Ainu, in the island of Yezo and the southern part of Sakhalin (1457).

(5) The Kamchadal (Itelmen), southern part of Kamchatka (2182).

(6) The Chukchi, on the Chukchi Peninsula, between the Anadyr river and the Arctic Ocean (12,968).

(7) The Koryak, south of the Chukchi, between the Anadyr river and the central part of Kamchatka (7943).

(8) The Evenki, Upper and Middle Anadyr (569), the Lower Yana and the Lower

(9) The Ostyak of the Yenisei, the most westerly of all, on the Lower Yenisei, between the Lower and the Middle or Stony Tunguska (1021).³

To this day 92 per cent of the Palæo-Siberians know no language but their own, and only 40 per cent of them are nominal Christians. They are said to be dying out only in cases where they have given up their native industries and taken up the life of a Russian colonist.

(b) The term *Neo-Siberians* will cover the peoples who, from a linguistic standpoint, made up Castrén's 'Ural-Altaic people'; but the people speaking Ural-Altaic languages are not limited to Siberia. By Neo-Siberian, therefore, we mean those of the Ural-Altaic peoples who originally came from Central Asia or E. Europe, but have been in Siberia for at least the last 1000 years, and are now sufficiently differentiated from the kindred peoples of the region of their origin to deserve a generic name. The Neo-Siberians include:

(1) The Finnic tribes of Siberia, viz. the Vogul between the Ural Mountains, Berezhoff, and Tobolsk, and the Ugrian Ostyak between the mouth of the Ob, the Yenisei, and Tomsk.

(2) The Samoyedic tribes, living along the Arctic shore between Cheskaya Bay in European Russia and the Khatonga river in Siberia, extending southward to the Abakan steppes.

(3) The Turkic tribes, inhabiting S.W. Siberia, and represented by one of their nations, the Yakut, in E. Siberia.

(4) The Mongolic tribes, including the Western Mongols or the Kalmuk, the Eastern Mongols or the Khalka, and the Northern Mongols or the Buriat of Baikal.

(5) The Tungusic tribes, scattered all over E. Siberia as far west as the river Taz and as far south as the southern frontiers of Manchuria.⁵

The native population, both Palæo- and Neo-Siberian, formed in 1911 only a small percentage of the total number of inhabitants—in Siberia proper 10.9 per cent, and in the Far East country 20.6 per cent (in the Aral-Caspian steppe country 60 per cent). This means that the number of Palæo-Siberians in 1911 was 32,000; of Neo-Siberians, 949,000 in Siberia and the Far East

(and 2,200,000 in the steppe country); while the European or semi-European colonists number some 8,000,000 in Siberia and in the Far East (and 1,500,000 in the steppe country). Thus, while in the steppe country the native element predominates, in Siberia it forms a quite unimportant percentage from an economic point of view. The strength of the Russian colonists lies in their birth-rate. Statistics of 1910 show that for each 100 Russian colonist women 11 children were born, while in the Turkic tribe of Yakut, which is supposed to be the most prolific of the native tribes, the number of children for the same number of women was only 9 and among the Kirghiz only 6.

(c) The name *Sibiria* is used for those Siberian colonists who have lived in the country for at least one or two generations, and have won the name of 'old settlers,' 'Starojily' (*stary*, 'old,' *jil*, 'lived'). The new emigrants are called 'Novosiely' (*novy*, 'new,' *sielo*, 'village'). Several E. European nations have a share in the composition of the Sibiria nation. The largest infusion is of Great Russian blood, and then Little Russian or Ukrainian, but it also includes Finns, Poles, White Russians, various Caucasian natives, and many Neo-Siberian peoples, especially those of Turkish blood.

Generally speaking, the ethnical classification corresponds to the distribution of the chief religious creeds. The Palæo-Siberians are in the main shamanists, and have only begun to be converted to the Russian Orthodox Church on the borders of their territory.

The Neo-Siberians are Muhammadans in W. Siberia, Lamaists in E. Siberia, shamanists in inaccessible parts of the country, and Russian Orthodox only where they are fused with the Sibiria. The farther south we go into Central Asia, the more general becomes the Muhammadan religion. The Sibiria are followers of various Christian Churches. Christianity in Siberia is represented chiefly by the Russian Orthodox Church (about 8,000,000 members in 1911); then by various Russian schismatic sects numbering at least 350,000; the third place is occupied by the Roman Catholic Church (about 90,000 in 1911).

These statistics, however, must be taken with some reserve. They are based on the general census of 1897 and on the additional census of the local statistical committees. Since the political purpose of this work was to show the success of the Russian Orthodox Church and to depreciate all other Christian Churches as well as the schismatics from Orthodoxy, it may be taken as certain that the number of the schismatics is about ten times greater than it appears. Moreover, to belong officially to the Russian Orthodox Church in Siberia in many cases means merely to combine the superstitious beliefs of shamanism with some of the ritual of the Russian Orthodox Church.

II. *THE SIBIRIACS*.—While emigration from Russia to Siberia since the construction of the Trans-Siberian railway has followed a definite plan, and was, in a way, compulsory, the same cannot be said of the early emigration. Thus, inquiring into the origin of 776 districts of the Yeniseisk government, we find that 674 of them were started by free emigrants and only 102 arose as the result of the old Russian Government order—i.e. were composed of political and criminal exiles and those Russian peasants who were brought by the Government Immigration Committee. The first category is called 'Po-volye' ('of free will'); the second category consists of those who came 'Po-nyevolye' ('not of free will').

1. **Colonization.**—The earliest colonists are to be found in W. Siberia. We can trace a remarkable regularity in the free and undirected colonization of the pre-railway period. The inhabitants of the steppes of S. Russia moved to the steppe regions of Siberia, while the people from the forest region settled in the *taiga* (dense forest). The government of Tomsk has received immigrants chiefly from the governments of Kursk, Voronej, Tamboff, Chernigoff, and Poltava. The government of Tobolsk has been peopled chiefly by the natives of the governments of Vitebsk, Mogileff, Chernigoff, Orel, and Poltava. Again, the steppe country is almost entirely populated by the immigrants from the southern or steppe provinces of European Russia, the governments of Poltava, Tavis, Ekaterinoslav, and Kherson. Thus it may be seen that Siberia, especially W. Siberia, has been peopled by the Great Russians no less than by the Little Russians or Ukrainians. The Far East contains but few old settlers, with the exception of the Siberian Cossacks; the Russian element there consists chiefly of peasants brought straight from Russia in the middle of the 19th cent., called, in contradistinction to the Starojily and Novosely, by the name of 'Starosely.'

Of all the inhabitants of Siberia the least susceptible to assimilation are perhaps the Cossack communities. Their origin is different from that of the European Cossacks, who were once in the 15th and 16th centuries national units. The Siberian Cossacks were formed as voluntary regiments composed of the most adventurous elements of the Russian State, and were used for the purpose of conquering Asiatic lands, safeguarding the frontiers, or keeping watch over the people exiled to Siberia. They are more devoted to the Orthodox Church, except those who belong to the Muhammadan creed, than the Sibiriks.

The Siberian Cossacks met the European Cossacks when the latter were sent as political exiles after each of their national risings, and through this contact the Siberian Cossacks adopted some of the national traditions and the schismatic spirit of the European Cossacks. Up till 1917 the social position of the Siberian Cossacks was better than that of either the colonists or the natives, since they were richly endowed with land and lived under their special Cossack organizations, and hence formed a community within a community. They are made up of eight units: (1) the Yenisei unit, with its centre at Irkutsk (numbering 30,000 members of both sexes); (2) the Ussuri unit, with its centre at Vladivostok (31,000); (3) the Semirechie unit, with its centre at Viernyi (45,000); (4) the Amur unit, with its centre at Blagoveshchensk (50,000); (5) the Siberian unit, with its centre at Omsk (180,000); (6) the Trans-Baikal unit, with its centre at Chita (270,000); (7) the Orenburg unit, with its centre at Orenburg (530,000); and (8) the Ural (Yaik) unit, with its centre at Uralsk (900,000). The half-breeds of Russian-Buriat blood form a special group called 'Karyny.' Among the ethnological curiosities of the Siberian colonial world are the people who live in 17 villages of the Bukhtarminsk district in the Altai. In the middle of the 17th cent. all people of Russian origin who were wanderers and had no identity books were banished there. They formed a colony of their own, called themselves 'Bezimyennye,' i.e. 'nameless,' intermarried with the Altai Turks, adopted their culture and beliefs, and became practically independent of the Russian Government. Towards the end of the 18th and the beginning of the 19th cent. they were compelled to become Russian subjects again, but under the same conditions as the local aborigines—i.e., their own 'steppe Duma' was their direct administrative body. In this way they enjoyed more freedom than the other Sibiriks.

We do not find many Russian old settlers in the steppe country or in Turkestan. The Russian element is represented there by Russian officials, who seldom became amalgamated with the local population, and by the Cossacks. One class of the old Russian administration, the Orthodox clergy, included a fairly large number of Sibiriks.

Within the Sibirik group the class distinctions of European Russia are unknown, since the institution of serfdom never penetrated beyond the Urals. According to their occupation, the Sibiriks are divided into town people, country people, and Cossacks. The Cossacks number some 2,000,000 (in all Asiatic Russia). The Sibiriks have some mental qualities in which they differ from the Great and Little Russians even more than they do from a physical point of view. These are a sense of equality, a national tolerance, energy and enterprise, and the power of becoming wealthy. They lack the great religious feeling and mystical attitude to Church and State so often found in European Russia. The Sibirik attitude of tolerance has played a large part in the racial history of the nation. Peoples who seldom, if ever, intermarried on the other side of the Urals—e.g., the Poles, Letts, and Great Russians—mix freely with one another in Siberia. Many Neo-Siberians, especially the Yakut, the Buriat, and the Tatars, merge willingly with the Sibiriks. Even some of the Palao-Siberians, especially the Chukchi and the Kamchadal, have begun to take part in this great fusion.

On the other hand, if it is difficult to find in European Russia a representative of a fairly pure Great Russian type, it is easy to find this in the colonies of 'Old Believers' in the Southern Altai and Trans-Baikal, since their religious beliefs have evolved a custom of endogamy and have protected them from any foreign admixture. On the other hand, among the Orthodox colonists in some cases the administrative orders of the Russian Government have made forced inter-racial marriages—

e.g., the ukase of 11th Feb. 1825, which ordered the local officials to buy children of the female sex from the aborigines for wives for the colonists in view of the preponderance of the male over the female population among the Russian colonists.¹

2. **Religious life.**—There is scarcely any evidence of the religious life of the early settlers in Siberia. Many of them must have been Christians already, but they do not seem to have been imbued with the missionary spirit, nor have they left material relics in the way of churches and eikons. The official propagation of Orthodoxy supported by the military and material help of the Russian Government began in the 16th and was at the height of its development in the 17th century. In 1620 the archbishopric of Siberia and Tobolsk was founded at Tobolsk.

The Raskol,² or schism from the Russian Orthodox Church, has had unusual success in Siberia from its very beginning (17th century). The first serious supporter of Raskol, Bishop Avvakum, was exiled in the second part of the 17th cent. to Siberia, where he was so earnest in propagating his ideas and opposing the official translation of the Bible (under supervision of the patriarch Nikon) that he was exiled still farther away into Dauria. To convert the heathen, and still more to effect the conversion of the schismatics, the Russian Government built as many as 32 monasteries in Siberia alone, 17 of which still exist; and in 1727 a bishopric of Irkutsk was founded. As regards the aborigines, their conversion has often been effected by such material means as freedom from *yassak* (tribute) or provision of flour and clothing. At the same time there are records of some true missionaries of real Christian spirit who acquired native languages (Tatar, Kalmuk, Yakut, and Buriat) for the purpose of spreading the gospel, and who incidentally have also added to ethnological literature. The number of Siberian saints and holy eikons does not correspond to the enormous numbers of monasteries and churches. In the 19th cent. there were added some 34 religious houses to the 11 administrative divisions of the Siberian Church, of which 21 were nunneries.

Among the few local saints of whom Siberia can boast is St. Innocent, the first bishop of Irkutsk, who was an active missionary among the Buriat and Tungus; 26th Nov. is celebrated as his day. His tomb was opened 70 years after his death, and the body was said to have been found unchanged. At present his remains (*moshchi*) are kept in the Voznesensky monastery in Irkutsk. This monastery is usually compared by the Sibiriks to the Kieff-Pecherskaya Lavra at Kieff in European Russia.

Another patron saint of Siberia is Simeon of Verkhoturys. The son of a boyar at the court of Tsar Boris Godunoff, young Simeon migrated across the Urals and settled in the village of Merkhushino near Verkhoturys. He was a wandering tailor by profession, spreading the gospel among the people for whom he worked. It was chiefly for the holiness of his character that he was beloved during his life and proclaimed a saint after his death. He died in 1642, and in 1701 his corpse, apparently still uncorrupted, was carried to Nikolayeff monastery in Verkhoturys. Many miracles are said to have been performed at his tomb.

The third patron saint of the Sibiriks is the only one with whom a story of martyrdom is associated. He is Basil of Mangazeya, once an important trading station on the river Taz, west of the Yenisei. He was a merchant's assistant, and his master, wrongly suspecting him of theft, tortured him to death and flung his body on to the

¹ In the Far East there are even now about 650 women to every 1000 men.

² See art. SECTS (Russian).

¹ See art. RUSSIAN CHURCH, vol. x. p. S71b.

tundra. Then a religious youth, who had not met Basil in life, living along the Yenisei, was ordered in a vision by the Holy Spirit to bring Basil's body to the monastery of Turukhansk. Awakening from his sleep, the youth arose, went alone across the cold country, and brought back the body. It was found that Basil had been martyring himself by wearing an iron-bond ring round his waist. His body is an object of worship to all N. Siberians.

Thus a bishop, a pilgrim of noble birth, a merchant's assistant, and a later saint, the old man Daniel of Achinsk (1845), a holy hermit sometimes identified with Tsar Alexander I., complete the number of local patron saints for the Orthodox Sibriaks.

Besides the tombs of the saints, there are in Siberia places recognized as holy on account of the eikons they possess. The eikon of Abalak, some 25 versts from Tobolsk, has an especial attraction for pilgrims, not only from Siberia but also from European Russia. It represents Mary the Virgin with child, and has a drawing of St. Nicholas in the right corner, and one of Mary of Egypt in the left. It originally came from S. Russia, but its early history is rather vague. All the other eikons which are regarded with peculiar reverence are copies of this eikon—*e.g.*, those in Kurgan, Tomsk, and Omsk.

The sect known as the Old Believers is spread in groups all over Siberia, but is most numerous in the Verkheudinsk district of the Trans-Baikal territory (where they are called 'Semyeynye,' from *syemya*, a 'family,' because they were exiled in whole families in the reign of Catherine II.), in the Barnaul, Biisk, and Zmeinogorsk districts of the Tomsk government, in the southern districts of the Tobolsk government, and in the Blagoveshchensk district of the Amur territory. The Old Believers of the Altai region of the Tomsk government are called 'Polaki,' which is the Russian name for Poles, since they, not unlike the Poles, live in communities apart. The Old Believers form for the most part the most stable and best organized element, and, together with the political exiles, though but a small percentage of the 8,000,000 Sibriaks, exercise a great moral influence and have contributed some of the best qualities of the Sibriak nation.

III. *THE PALÆO-SIBERIANS.*—Some of the Palæo-Siberians are dealt with under separate headings;¹ here we shall confine ourselves to those who, before the publication of the results of recent ethnological research, were practically unknown in scientific literature—*e.g.*, the Chukchi, the Kamchadal, the Koryak, the Yukagir, and the Aleut.

The first four tribes have more in common racially and culturally than the other Palæo-Siberians, and are also more akin to the American Indians on the other side of the Bering Straits, called the North-Western Amerinds. The North-Western Amerinds are commonly divided into: (1) Northern tribes: the Tlingit, Haida (*q.q.v.*), and Tsimshian; (2) Central tribes: the Kwakiutl and Bellacoola;² and (3) the Southern tribes: the Coast Salish,³ Nootka,³ and Chinook (*q.v.*). The Eskimo form culturally a wedge between the Palæo-Siberians and their American cousins. A short examination of the points of similarity between them will not only prove their cultural affinity, but also throw some light on their religious beliefs and practices. Whether further investigations will decide that the original home of these two groups was N. America or N. Asia, and will accordingly call them all Palæo-Americans or Palæo-Siberians, does not alter the fact that

their affinity is closer than can be ascribed to the influence of mere environment. The Palæo-Siberians, *e.g.*, are more like the people on the other side of the Bering Straits than they are like those Neo-Siberians (Tungus and Yakut) who live under the same climatic and geographical conditions.

I. *Cultural affinity with N.W. Amerinds.*—Culturally there is a resemblance between the boats and dwellings of the peoples on both sides of the Bering Sea. Their large skin boats are of the same structure and material, though the Koryak boats, with 'their flaring sides and semi-circular stern and bow,' and the Kamchadal wooden dug-outs are of different types. The dwellings of the Palæo-Siberians are of two main types. The first is the 'jawbone house,' the skeleton of which is composed of the ribs and jawbone of a whale or of driftwood and trees, where such material is available. These are covered with sods and earth, forming a house half underground. It is divided into three compartments inside, and has a square entrance through the roof and through two underground corridors, one for summer and one for winter. It was universal round the Bering Sea, but is now found only among the Koryak, Kamchadal, some Chukchi, and some of the Amerinds on the borders of the forest. But remnants of these underground houses can be found among all N.W. Amerinds, and mention of them is made in their myths. At present the Tlingit, Tsimshian, and Haida have quadrangular log huts. The second kind of house is typical of the Chukchi, and is called their 'genuine house.' It is a double skin tent, round outside and square inside. The Eskimo snow house is not found among other tribes, though the Koryak 'jawbone house,' when covered with snow for winter, may appear to be similar outwardly. Of all the peoples of these two groups the Koryak possess the richest mythology, just as they excel in the art of engraving human and animal figures in motion. In mythology the most characteristic feature of both groups is the Raven myth cycle, which appears in Eskimo mythology only in imported incidents.

The Raven or Big Raven was sent to the earth by the Supreme Being, who is identified with the sun or thunder. Big Raven married a young girl, called Miti, who was abandoned by her father, the Twilight, and their children were the ancestors of the Koryak. Big Raven is supplicated and propitiated only in the supreme crises of life for protection from malicious spirits.¹ In Chukchi mythology the Raven is called 'one self-created.' His wife becomes a woman and gives birth to four sons. Then Raven decides to create the earth, and does so by throwing his excrement down below him. Afterwards he teaches the people on the earth how to live and multiply.² Almost all the Koryak and many Tlingit myths deal with the life, travels, and adventures of Big Raven and his family.

Another point of resemblance between the peoples of the N. Pacific culture is their tradition relating to the remote era when there was no difference between men and animals. There are, however, some Asiatic elements among the Palæo-Siberians unknown to the N.W. Amerinds—*e.g.*, religious dualism and the sacrifice of reindeer and dogs to the chief deities. Again we find evidence of the great influence of the American Indian culture in general on the N.W. Amerinds in their totemic poles, ceremonial masks, and in the variety and richness of their facial painting, all of which are peculiar to totemistic people and hence do not exist among the Palæo-Siberians.

If we take into consideration the fact that the Palæo-Siberians make reindeer breeding their chief occupation and are merely incidentally hunters and fishermen, and the fact that the art of reindeer-

³ See art. VANCOUVER ISLAND INDIANS.

breeding is unknown (and seems impossible) on the American continent, we shall here find the essential economic explanation of the difference between the religious ceremonies of these two groups. In any case the N.W. Amerinds must have separated from the Palæo-Siberians before the appearance of the Eskimo along the Bering Straits. At what time and whence the migration of the Eskimo to the Pacific shore took place is difficult to determine, but traces of a long influence of Arctic geographical environment on their culture point to the conclusion that they must have been settled there for many centuries.

The question whether the Palæo-Siberian languages (with the exception of the Ostyak of the Yenisei) are nearer the N.W. American than the Ural-Altaic tongues has not been sufficiently studied because we cannot find any similarity even between the Indian languages which were formerly believed to exist. The Indian languages used to be called polysynthetic and incorporating, in contradistinction to the Ural-Altaic group; but it is now known that there is great grammatical variety among them. All the same, incorporation and polysyntheticism, as well as the division of substantives into animate and inanimate, are features especially strongly marked in N.W. American as in Palæo-Siberian languages.

As to their physical type, F. Boas¹ thinks that the colour of the skin and of the hair, and the shape of the head and of the face, are remarkably alike in these two groups, and he even suggests that the physical type of these Indians is nearer to that of their Asiatic brethren than to that of the Californian or Mississippi Indians. The materials of the Jesup North Pacific Expedition that have as yet been worked out have shown that the Chukchi, who are the nearest neighbours of the N.W. Amerinds, resemble them more than do the other Palæo-Siberians. So, e.g., the Ainu and the Yukagir are short-statured, the Kamchadal and Koryak under medium stature, while the Chukchi and the N.W. Amerinds are above medium stature. The Ainu, Yukagir, Koryak, and Kamchadal have medium-sized heads, the Eskimo are long-headed, while the Chukchi and the N.W. Amerinds are comparatively broad-headed. The colour of the skin of the N.W. Amerinds is much lighter than that of the other Indians and more like that of the Palæo-Siberians, and their noses, though prominent, do not resemble the typical eagle-like nose of the American Indian and are again more of the N. Pacific type.

The chief difference between the Neo- and Palæo-Siberians, besides the stature and the head-form (the Neo-Siberians are taller and more broad-headed), is that the Mongolian flat bridge to the nose and the Mongolian fold in the inner corner of the eyelid occur more often among the Neo- than among the Palæo-Siberians. Then the Neo-Siberians have the Mongolic straight black hair and sparse beards and moustaches which are not allowed to grow, while the Palæo-Siberians have often wavy hair and beards which they always encourage to grow.

2. The Chukchi country and people.—Of all the people of N.E. Asia, the Chukchi form both in physical type and in culture the essence of what is called Palæo-Siberian. We shall therefore consider them primarily and deal with the other Palæo-Siberians only so far as they differ from the Chukchi.

The name Chukchi is derived from Chuchu, 'rich in reindeer,' but this name is used of both the Reindeer Chukchi and the Reindeer Koryak, while Lyiyilylyt, 'those of genuine language,' is the name used by Chukchi alone, whether Reindeer or Maritime.² According to the Chukchi traditions, they were formerly a coast people, who, however, always had domesticated reindeer. But the facts that they keep so many dogs without making practical use of them as most of the Arctic people do, that the snake appears so often in their folk-tales (there are no snakes in their present abode), and that the climatic names of the months do not correspond to the changes of climate in their present locality seem to point to their original home being farther south. The Chukchi are, generally speaking, not a coast people; out of a total of 12,000 only some 1100 live on the Pacific

and some 2000 on the Arctic shore. Hence three-fourths of them are reindeer-breeders and only one-fourth live by maritime industries.

The Chukchi live in the far north-east of Siberia from the river Indigirka to Bering Straits in the east and to the Anadyr and even as far as Kamchatka in the south. But east of the river Omolon they are found only sporadically on the coast of the Bering Sea, and the Asiatic Eskimo (1600) occupy part of the shore, while south of the Anadyr the land is really Koryak. Farther within Chukchi territory to the south-west of Chaun Bay lives the tribe of Chuvantzy (probably the same as the half-mythical Chaachet), who are intermediary between the Chukchi and the Yukagir. Another people who are probably mixed with the Koryak more than with the Chukchi are the Lamut of the Tungus group. The Tungus group divides on the Middle Kolyma the Yukagir from the other Palæo-Siberian peoples.

It is perhaps owing to the splendid physical health and great fertility of the Chukchi¹ and their great reindeer wealth, partly also to the persistence of their language, which they have imposed not only on the Koryak of Kamchatka and the Asiatic Eskimo, but even on the Russians on the Anadyr, that the Chukchi occupy the predominant position among the natives of N.E. Siberia.

The so-called 'Chukchi Territory,' which has never been forcibly subdued by the Russians and hence enjoys a fictitious legal autonomy, lies west of the rivers Chaun and Anadyr to the river Omolon, and was probably the whole extent of the Chukchi land in the 17th century. If we believe Wrangell,² the Asiatic Eskimo formerly occupied a much larger space on the Arctic shore, but were driven away by the Chukchi. After the advent of the Chukchi it is probable that they migrated towards the Pacific Coast and also north-eastwards. Possibly it is to the latter event that those traditions are due which are common to all the peoples of N. Siberia, about the tribes which migrated north. Some native tribes believe that an unknown people live in Wrangell Land and the other islands; others that they are extinct as the half-mythical Shelagi from whose name is derived Cape Shelagsky on the Arctic coast. The Shelagi are said to have been Chukchi, while other extinct tribes of N.E. Siberia (Omoki, Khodyntsy, Anauli, Kongenty) were clans of the Yukagir tribe.³ Bogoras⁴ gives a list of village names from the Arctic and Pacific Coast Chukchi, which indeed are Eskimo in sound and in a sense support the theory that the Eskimo were formerly more widely extended, spreading east as well as west. The Chukchi land stretches to the tundra and northern fringe of the forest country; its climate is dry and cold, the average winter temperature being 31° F. (Nijne-Kolymsk), and the average summer 52° F. On the Pacific the climate is less dry, the average in winter being 8° F. and in summer 54° F.

We can take the Chukchi as physically the most free from foreign admixture among the Palæo-Siberians, and in this connexion it is interesting to consider the anthropometric results obtained by the Jesup North Pacific Expedition.⁵ The average height of the men is 162.2 mm., and their cephalic index averages 82. Their cheek bones are much less prominent than those of the Tungus or Yakut, and the low Mongolian nose bridge and Mongolian eyelids occur only very rarely. Their hair—and in this respect the Koryak can be put in the same class with them—is wavy and sometimes even curly. Beards are more frequent than among the Tungus and Yakut, and, contrary to the customs of the latter, are allowed to grow freely. The colour of their hair is less dark as the Pacific is approached, while their complexion is bronze-red, and their ideal is to be as 'red as blood.'

3. Material culture.—The elements of four cultures can be observed in the Palæo-Siberian tribes: the Asiatic, the N. Pacific, the Eskimo, and the American Indian.

The domesticated reindeer is a purely Asiatic element, common to Neo- and Palæo-Siberians. Among the Palæo-Siberian reindeer-breeders one sometimes finds a light portable tent, similar to the tent of Neo-Siberians. The underground houses are a N. Pacific element. The skin boats and harpoons are of Eskimo origin, while the

¹ In 1897, 10 per cent of the families had no fewer than five children living (Bogoras p. 55).

² Bogoras, p. 11.

dug-outs, the basket- and rug-making, and the occasional ceremonial masks are of American origin.

With the exception of the Ainu all the Palæo-Siberians are reindeer-breeders. In most of their legends—e.g., those of the Chukchi—they always appear as owners of reindeer. Now many of the Gilyak, Chukchi, and Koryak have reindeer no longer and rely on hunting and maritime industries for their livelihood. Together with the reindeer we find the dog used for draught purposes and to provide clothing.

4. Social organization.—The social structure among the Palæo-Siberians is of a less regular character than among the N.W. Amerinds. We do not find here the strictly exogamous, totemistic clans of the Tlingit, Haida, and Tsimshian, but rather organizations resembling those among some Salish and Athapaskan tribes in N.W. America. On the whole, the family is the most regular unit. Only the Gilyak have now a distinct clan organization, though the Yukagir and Chukchi might have had such an organization in the past. The Chukchi live in local groups based on community of economic interests, reindeer-breeding, hunting, fishing. The reindeer-breeders are naturally more nomadic than the maritime people. Thus there is no word for 'family' among the Chukchi, and the people living together are called 'those in the house.' There is, moreover, the term *varat*, meaning 'those who are together,' which relates to those who take part in blood-revenge, but, as this unit changes its members very often in practice, it is the relatives in the paternal line, and, failing them, those on the maternal side, or 'group-marriage' companions, that are held to the duty of taking revenge for blood. The Koryak family is organized on the principle of seniority, the father being the head of the family. On the whole, all Palæo-Siberians, with the exception of the Ainu, are patriarchal. Even what looks like a matrilineal arrangement, when the bridegroom goes to live for a time or permanently in his father-in-law's house, is seen by closer study to be merely the way of procuring a wife by 'serving' for her.

The Gilyak clan is called *khal*, 'foot-sack' (used in travelling), and is a group of people united by marriage ties, common cult, responsibility for blood-revenge, or its compensation, and common tabus. The clan is divided into three exogamous sub-clans. Clansmen prefer to live together, and the relationship within the clan is classificatory. They carry on together bear-hunting, trapping of sable, and fishing.

5. Marriage.—On the whole, marriage among the Palæo-Siberians tends to be endogamic. The Gilyak marriage regulations are the most complicated. Within the clan they are endogamic, while the sub-clans are exogamic. Cross-cousin marriage seems to have been the original custom, and the third clan originated probably when one of the two sub-clans could not produce the necessary number of females.

The people who are in the relation of *angey* (wife) and *pu* (husband) have the right of sexual intercourse, if the individual husband is away.¹ This 'group-marriage' arrangement is questioned by some investigators, who think that it amounts to this, that, if a woman betrays her husband with her 'potential' husband, it is considered less blameworthy than if she had done so with a stranger.²

Another kind of 'group-marriage' is to be found

among the Chukchi. It is in the nature of a supplementary union. Several men married individually join a group, and each man belonging to such a group may exercise the right of a husband when visiting the camp if a husband is away. No two brothers can belong to the group, but the people joining the group, if not relatives before, become so and call themselves 'companions in wives.' Some marriage rites are performed on this occasion, though shorter than in the case of individual marriage. These supplementary unions are seldom arranged between people living in the same camp. The custom of levirate is common among most Palæo-Siberians.

In some respects marriage customs among all the Palæo-Siberians are similar. Thus they all tend to endogamy, with the exception of the Gilyak at present and possibly the Yukagir in the past. The *kaly*m, or bride-price, which occurs occasionally, was introduced by the Neo-Siberians, since it is by serving for her that the wife is obtained among most Palæo-Siberians. In connexion with this custom the bridegroom goes to live permanently or temporarily in his father-in-law's house, and his position in the family and the name by which he is called are secure only after the first child is born. Among the Koryak, Kamchadal, and Kuril the ceremony which gives the husband full rights to his wife is the act of 'seizing' her. It is different from marriage by capture and consists in a fight of the bridegroom with the bride and several other women, in the process of which the bridegroom must tear the clothes of the bride, who is carefully wrapped up for the occasion, and touch her sexual organs with his hand. This symbolic ceremony has been compared¹ to the somewhat similar ceremony of the Lillooet and Thompson Indians in N.W. America. According to recent investigators² of this region, the most essential marriage ceremony in these tribes is for the bridegroom to touch the bride's naked breast or heel, for, since the usual sitting position is squatting on the heels, touching these practically corresponds to touching her sexual organs. This symbolic action, together with the preliminary attack on the man by the women, may possibly be placed in the same class as the tortures during the initiation of the youth. In all these cases the men are entering on a new phase of life, and have to pass through a period of probationary sufferings, which in the case of couvade are merely symbolic.

6. Religion.—The Palæo-Siberians are typical shamanists. By shamanism (*g.v.*) is meant a religion based on animistic and pre-animistic conceptions in which the person of the shaman, or medicine-man, plays an important rôle. The shamanism of the Palæo-Siberians differs from that of the Neo-Siberians in its (a) religious conceptions, (b) ceremonies, (c) shamanistic accessories, (d) ideas of gods and spirits.

(a) *Religious conceptions.*—The pre-animistic beliefs, i.e. beliefs in a somewhat chaotic unpersonified supernatural power, are more often met with among the Palæo-Siberians, especially among the Chukchi and Koryak, than among the Neo-Siberians, with perhaps the exception of the Samoyed, who are the most primitive of the Neo-Siberians.³ Thus the Palæo-Siberians are, as it were, at a more primitive evolutionary stage of their beliefs, and their objects of worship are

slightly different, corresponding to the difference of geographical environment. The worship of the sun and sky is not as developed as among the Neo-Siberians, and the animals which play a part in their religious belief are pictured fantastically, not realistically.¹ It is curious and hard to explain why the reindeer, which plays such a unique rôle in the life of the Palæo-Siberians, is neither worshipped nor venerated, and does not in any way enter into the religious life of the people except as a sacrificial animal. In the case of the horse, which occupies a similar position among the inhabitants of Central Asia, it is quite the reverse.

Animism among the Palæo-Siberians is in the highest state of development.

¹ Even the shadows on the wall constitute definite tribes and have their own country where they live in huts and subsist by hunting. The rainbow and sun-rays have "masters" who live above on the highest part of the rainbow and at the place where the sun's rays emanate, and descend to earth along these paths of light.²

Even such things as the voice of an animal, the sound of the drum, or human speech, have an existence independent of the object which produces them.³ Anything which formed part of a body—e.g., a lock of hair which has been cut off or even the human or animal excrement—has a soul of its own, or, as the Chukchi say, it is 'having a voice.' These objects 'having a voice' do not entirely lose their qualities as material objects.

⁴ A stone endowed with a "voice" would simply roll down and crush a man against whom it had a grudge.⁴

It is not quite clear, however, whether objects belonging to one man, as household utensils, have an independent life like natural objects or whether they are spirit-guardians of the family to which they belong. For it is stated by Jochelson that among the Koryak these household objects may warn the people of the house of danger and attack their enemies.⁵

(b) *Ceremonies*.—In their religious ceremonies the Palæo-Siberians differ from the Neo-Siberians in that their prayers are simpler and less regularly offered. Reindeer and dogs are usually slaughtered for sacrifice, and occasionally a substitute for reindeer is made of willow-leaves or even of snow. In this respect and in the method of slaughtering the sacrificial animal the Palæo- and Neo-Siberians do not differ very much. The bear ceremony which is such a feature of N. Asia seems to have originated among the Palæo-Siberians, since nowhere is its ritual so rich and complicated as among the Ainu and Koryak. The bear ceremony has a dual nature: the bear is the sacrificial animal and at the same time receives the sacrifice.

Before the bear is slaughtered, women perform a ceremonial dance round his cage, and ceremonial food is given to him. Then the woman who acts as the bear's foster-mother performs a little drama of sorrow at his departure. Again, after the animal is slaughtered for the sacrifice to the spirit of the wood, a series of sacrifices to the victim are made.⁶

Bear-sacrifice and the sacrifice to the fire or new fire are common to all the Palæo-Siberians, whether living on the coast or farther inland. Another ceremony common to them all is the wolf-sacrifice, though the latter is more often found among the Reindeer people. But the wolf-sacrifice has not the dual character of the bear-sacrifice, since no sacrifice is made to the wolf.

After the wolf has been killed, food is presented to him and a ceremonial dance is performed to the beat of the drum. Its meaning is expressed by the prayer addressed to the High Being on such occasions by the Koryak: 'Be good; do not

make the wolf bad.'¹ Further, the festival does not end, as the bear-festival or the whale-festival performed among the Palæo-Siberians, with equipment for the homeward journey and the invitation to repeat its visit the following year. The wolf, which does not serve as food and is a danger to the reindeer herd, needless to say, is not encouraged to return, but, the spirit of the dead wolf being particularly malignant, must be carefully propitiated at the ceremony.

The wolf-festival therefore must be looked upon, not as a fertilization ceremony, but as a preventive measure. Together with the wolf, a reindeer is killed, and the bodies of both are placed on a high platform. This symbolizes that the High Being is propitiated that he may not allow the wolf to attack the reindeer.

In comparing the ceremonies of the Palæo- and Neo-Siberians, we must first note the lack of maritime ceremonies among the latter. Of these ceremonies the most important are the whale-festival, celebrations connected with the launching of the boats in the summer, and putting them away for the winter—all known to the Koryak, Chukchi, Eskimo, Kamchadal, and Aleut. Then each maritime tribe has its own conception of the spirit of the god-owner of the sea or of the sea-animals. The Chukchi have even two conceptions of such a god. One is the powerful old woman who lives at the bottom of the sea, called 'the mother of the walrus'; her mouth was adorned with two walrus-like tusks, one of which got broken; and she was so angry that she limited the number of sea-animals. Sad to say, when her other tusk breaks, all sea-animals will perish.² This goddess bears a faint resemblance to the goddess Sedna of the Eskimo, but, as the picture of the latter goddess is fuller, it is probable that the Chukchi borrowed her from the Eskimo. The chief 'being of the sea' of the Chukchi, Keretkun, is an old man with a family. A similar idea is attached to the Kachak of the Asiatic Eskimo, who possibly borrowed the god and the ceremonies connected with him from the Chukchi. The Keretkun ceremonies are more detailed and elaborate. The ceremonies last at least three days, and an image of Keretkun is made which is burnt at the end of the ceremonies. Feasts, shamanizing, exchange of presents, and finally an orgiastic dance between the members belonging to the 'additional' marriage group, complete the proceedings. The 'group marriage' arrangements are usually made at this ceremony.³

The annual ceremonies of the Reindeer Palæo-Siberians are not unknown to Neo-Siberian reindeer-breeders. The economic rôle of the spring and autumn boat ceremonies of the maritime peoples corresponds to the fawn ceremony in the spring and the ceremonies attending the return of the herd from the summer pastures in autumn. But, though there exists a faint conception of a god-owner of the reindeer, he does not occupy the position of Keretkun, nor are there any special ceremonies connected with him. The fertility of the reindeer herd apparently depends more on keeping certain tabus during the spring and autumn festivals as well as permanent tabus connected with reindeer-breeding than upon sacrifices to the god or spirit of the reindeer.

The annual ceremony of sacrifice to the fire is performed to gain two objects: (a) to obtain the new fire or the continued welfare of all those who gather round it, and (b) to consecrate a new fetish representing the hearth, which fetish is considered the protector of the hearth and herd, and is anointed with the sacrificial blood and fat.

Though the Palæo-Siberians obtain fire by the use of a flint and steel, the sacrificial fire is obtained by the drilling method, which may point to the fact that that was the original way of ob-

taining fire among them. The fire-board, on which the drill is turned by means of the bow, is usually made of dry wood and shaped in human form. This fire-board acquires magical power after the new fire is obtained on it, but, to make this magic power work to protect the hearth which it symbolizes, it is necessary that bloody sacrifices of animal victims be offered to it and that an incantation be pronounced over it. The implements used in this ceremony are considered sacred, and even the dust obtained by the drilling is carefully gathered up, 'for it is considered a sin to scatter it.'¹

(c) *Shamanistic accessories*.—The Palæo-Siberians differ from the Neo-Siberians more in the accessories used at the religious ceremonies by the shamans than in their religious conceptions or in their actual ceremonies. This again is to a great extent due to the influence of geographical environment, since in the accessories of the Neo-Siberian shaman the influence of the Central Asiatic environment can still be traced. The ceremonial dress of the shaman—e.g., the ceremonial drum—and the representations of the gods and spirits are very often adorned with or made of metal among the Yakut or Tungus, but not among the Palæo-Siberians, unless of course the latter have borrowed it from the former, as the Yukagir have borrowed it from the Yakut. On the other hand, the form of the drum shows an independence of environment and expresses the tribal individuality. The Chukchi and Eskimo drum is round and its diameter is only from 40 to 50 centimetres. It is very light and has no rattles, which are such an important part of the Neo-Siberian drum. The typical Neo-Siberian drum is of course oval in shape and much greater in diameter, and has protuberances on the outer circle of the rim, which, according to the Yakut, represent the horns of the shaman's spirit. Needless to say, the shamanistic garments of the Palæo-Siberians are, on the whole, much simpler than those of the Neo-Siberians.

(d) *Ideas of gods and spirits*.—The highest gods of the Palæo-Siberians are less anthropomorphic than those of the Neo-Siberians. They all have animal characteristics, for the line of demarcation between the human and animal worlds is very obscure. Thus, e.g., the Raven (called, in Chukchi, Kurkil, in Koryak, Kutqi, in Kamchadal, Kutq) takes the form of an animal more frequently than that of a man. He is certainly worshipped as a god by the Koryak, and was worshipped by the Kamchadal till their religion decayed under the influence of the Russian Orthodox Church. But there is also a name in Koryak for the Supreme God, identified with the universe, with the dawn, and with strength. He seems to be above Big Raven and to have sent Big Raven to earth to arrange human affairs. It is Big Raven, therefore, who is considered creator and plays the chief part in religious ceremonies. Among the Chukchi and N.W. Amerinds the Raven has not such a high position and is of more importance in myths than in religious ceremonies.

Religious dualism, so well marked among the Neo-Siberians, is here less defined. There are spirits, as the *kelet* of the Chukchi or *kelau* of the Koryak, who are mostly malicious, and bring disease, death, and all sorts of misfortune. The half-mythical giants dwelling on distant shores and endangering the existence of the Chukchi are also called *kelet*, but the shamanistic spirits are apparently *kelet* too, and these obviously cannot be definitely malicious, at least towards the person on whose behalf they are used by the shaman. So *kelet* may after all mean only 'spirits'; and there is another class of spirits, *vairgit*, which are often

benevolent, but *agam-vairgit* means 'bad spirits,' the same as *kelet*, which seems to point to the fact that *vairgit* also is the name of a class of spirits without a well-defined character. All the celestial bodies are *vairgit*, but, while the sun is a benevolent *vairgin* (singular of *vairgit*) imagined as a man in a radiant garment, the moon is a malicious *vairgin* and could be called a *kele* (sing. of *kelet*), assuming that this class of beings is more malicious than the *vairgit*. Of all the celestial bodies the Polar Star is held in the highest esteem. Her house is in the zenith, higher than the other stars, and she is called 'Motionless star' or the 'Sole-stuck star.' *Kelet* and *kelau* are fond of the human liver, which accounts for that part of the Chukchi funeral rites which demands the opening of the abdomen of the corpse and the search, especially in the liver, to discover which *kele* has killed the man. At the same time the Chukchi believe that the chief soul (*uvirit*, 'belonging to the body') resides in the liver, though other parts of the body have their own souls. A disease in any part of the body is supposed to be caused by lack of a soul in that particular part. The Koryak have no conception corresponding to that of the Chukchi *vairgit*. The soul of a dead man goes to a world above or below the earth, but the soul of a man who was strangled or had otherwise a violent death resides, according to the Chukchi, in the *aurora borealis*. A shaman can easily wander from our world to a world above or beyond ours or anywhere else, for there are many other worlds. All the celestial bodies are inhabited by people. In the time of Big Raven, i.e. when he was sent from the sky to create the world and man, and afterwards when he lived among the peoples and taught them industries, every one had the power to pass from one world to another.

SIBYLLINE ORACLES.—I. The Sibyl.—The *Sibylline Oracles* form one of the curiosities of ancient literature. The belief that certain women are possessed with an occult power, however derived, that enables them to predict the future is indeed common to many races of men. But the Sibyl was no ordinary witch, or prophetess, or 'damsel possessed with the spirit of divination'; rather she seems to have gathered into her person all the mystery and reverential awe which attach to a communication from an unknown and intangible world. Not that she was ever regarded or worshipped as a goddess. In her essence she was always an old woman compelled by some hard fate to be the organ of communication between some god and man. She was venerated, but she was never envied; and the children's game of question and answer, 'Sibyl, what would'st thou?' 'I would I might die,' sums up the strange mixture of awe and pity with which she was regarded. But it was not so much the Sibyl herself as her message that aroused the curious interest of the

¹ Jochelson, *Jenup N. Pacific Exped.*, vol. vi. pt. 1. p. 33.

ancient world. She might appear in person, as she did to Tarquin, but her great importance to men lay rather in the collections of her writings, which were looked upon as providing in some inscrutable way superhuman answers to all kinds of questions, when approached with due reverence and ceremony.

There are Sibyls connected with many different towns and localities. The earliest is undoubtedly that of Erythræ¹ in Asia Minor; she is connected by tradition with Apollo, and her prophecies dealt with Helen and the Trojan war. It may be, indeed, that the Sibylline tradition originated in a kind of rivalry with the cycle of Homeric poems. The most famous Sibyl next to the Erythrean is that of Cumæ in Campania.² She it was who in the well-known story appeared to Tarquin, and of whom Vergil wrote in *Eclogue* iv. and *Æneid*, vi. The Sibyl third in importance was associated with Delphi.

2. Classical Sibylline verses.—It is probable that Sibylline verses, when once they had obtained a vogue, multiplied rapidly, and in course of time collections were made. Their general character seems to have been more or less stereotyped. As befitted an old woman who had seen a good deal of the seamy side of life, the tone of the Sibyl was generally pessimistic, and prophecies of disasters in different places formed her stock-in-trade. This is plainly brought out by the testimony of Heraclitus, as cited by Plutarch,³ who specifies among the 'many mirthless things' prophesied by the Sibyl 'many revolutions and transportations of Greek cities, many appearances of barbarian armies, and deaths of leading men.' Another special device was the division of the history of the world into generations, usually ten in number, sometimes corresponding with the metals, or assigned to various gods.⁴

As far as can be ascertained, all Sibylline verses were written in Greek, and there were undoubtedly early collections in Greece. The Erythrean Sibyl had various imitators, among the most famous of whom was a certain Mæseus of Athens, whose writings were collected, at Pisistratus's command, into one book by Onomacritus. Aristophanes has several allusions to the Sibyl scattered through his writings, and Plato speaks of her with distinct respect. But it was at Rome that the influence of Sibylline writings as a political force was most pronounced. Their history begins with the visit of the old woman to Tarquin, and his purchase of three of the nine books which she brought. These were buried in the ground for safe custody, probably in the temple of Capitoline Jove. They were consulted first of all at rare intervals, but later every three or four years. In 82 B.C. the Capitol was destroyed by fire, and the Sibylline books perished entirely. Seven years later three men were sent out on a special mission to Erythræ to bring back any Sibylline verses that they could find. A thousand lines or so were discovered, and others were brought from other places, and out of the materials thus collected the *ex viri sacris faciundis* were deputed to make a selection.⁵ This selection was in later years subjected to a searching criticism by Augustus, who rejected all but a small residuum. This was carefully guarded, but the best days of the *Sibylline Oracles* were over, and they became more and more neglected; and, although they enjoyed a temporary revival of popularity under Aurelian and later under Julian, they never really regained their hold over the

credulity of man. They were finally burned by Stilicho in the principate of Honorius.

3. Jewish adaptations.—If the history of the *Sibylline Oracles* had been confined to Greece and Rome, it would still have been a very curious and interesting phenomenon in the ancient world. But their main interest to the modern student lies in the fact that their form and, to a considerable, though uncertain, extent, their substance were copied by Jewish, and later by Christian, writers mainly for the purpose of propaganda. It says a good deal for the influence of the ancient Sibyl that such a device should have been put in practice, and it says still more for the credulity of the ancient world that it should so largely have served its purpose. The Jew who first lit upon the expedient of borrowing the authority of the Sibyl for the propagation of his national faith lived in Egypt, and probably in Alexandria, in the first half of the 2nd century B.C. He was therefore a contemporary of the author of the book of Daniel, and of that of the original section of the book of Enoch. His work is seen in the main portion of bk. iii., beginning at line 97. His method of procedure is worthy of note for its strange mixture of OT history and ancient legend, the latter probably borrowed from ancient Sibylline writings. So the destruction of the Tower of Babel is followed by the reign of Cronos, Titan, and Iapetus, and the birth of Zeus. Then, after passing summarily over the rise of different world-powers, he comes to his main theme in Jewish history. This is all put in the future tense as representing a prophecy of the Sibyl. In the rest of the book there is a strange mixture of ancient oracles, more or less contemporary history, eschatological details, and especially extravagant praise of the Jewish nation, and a description of the happiness of the members of it.

How far these Jewish Sibylline writings had a direct value as a proselytizing force we have no means of knowing. But at a time when Greek culture and the study of Greek literature were more and more coming into vogue, when superstition was rife, and when there was a good deal of scepticism abroad as to the value of the gods of Rome, it is not hard to imagine that the indirect influence of these Sibylline verses on cultivated minds may have been considerable. The Romans seem to have been always impressed with the Jewish religion ever since their first contact with it, and there may well have been many who would be disposed to view with sympathy the suggestion that in the ancient and venerable Sibyl might be found a point of union between the austere and moral religion of the Jews and the literature of ancient Greece, which was being increasingly studied and adapted. At the same time we must remember that till 82 B.C. the official collection of Sibylline verses was being preserved with the utmost secrecy at Rome. It is probable, therefore, that the Jewish portions were studied in Eastern lands, and more especially at Alexandria.

4. Christian Sibyllines.—But the chief argument for the success of the Jewish Sibylline verses as a means for proselytizing lies in their imitation by Christian writers. As the Christian writers of the 1st and 2nd centuries, following St. Paul's line of argument, boldly took over as the heritage of the Christian Church the special privileges given of old to the Jews, so the Jewish Sibyl was impressed into the service of the Christian faith. In the books that have come down to us we have therefore three elements: (a) fragments of oracles of unknown antiquity, possibly stretching back into a remote past; (b) Jewish oracles of the last two centuries B.C. and the first two centuries A.D., dealing partly with contemporary history put in

¹ Pausanias, x. xii. The Sibyl's head appears on ancient Erythrean coins.

⁵ Tac. *Ann.* vi. 12.

the form of prophecy, partly with Jewish teaching and propaganda, and partly with the eschatological conjectures that played so conspicuous a part in the thought of that transitional age; (c) Christian writings, sometimes a few lines sandwiched in between Jewish or pagan writings, sometimes extending to long continuous sections, as in bk. ii. and especially in bk. viii. These Christian writings deal largely with the life and work of Christ, but in them also eschatology plays a leading part. Bk. vii. is evidently tinged with Gnostic thought.

It cannot be said that the Christian Sibyllines have made any marked contribution of their own to the general literature. And yet the early Fathers laid very great stress on the witness of the Sibyl to Christ. For the most part they regarded her as undoubtedly inspired, but they drew a distinction between her and the prophets of the OT. The latter were, to some degree at any rate, conscious interpreters of the message of God, though exactly how far their human thought and language had moulded their message was not always clear. But the Sibyl was but a mouth-piece—by her own confession an unwilling mouth-piece—of the oracle of God;¹ and consequently her testimony was all the more striking as being anything but spontaneous. It will readily be seen than an argument like this, in so far as it appealed to the critical instinct of the time, would have a real apologetic value. To our minds it may well appear strange that verses which seem obviously so late should be regarded as possessing the reverence of hoary antiquity. But we must remember the Sibylline tradition stretching back into centuries far away, the air of mystery which had always surrounded it, and above all the credulity of the average man in the matter of literary records.

The first mention of a Sibyl in a Christian writer appears to be in *Hermas*.² The writer sees an old woman splendidly arrayed, holding in her hands a book from which she reads. He takes her to be the Sibyl, but is told that she is the Church. The passage is interesting as showing the idea of the Sibyl's personality. According to Justin,³ Clement of Rome referred to the Sibyl's prophecy that the world should be judged by fire. Justin himself has several allusions to her,⁴ and does not doubt that she spoke under divine inspiration. Theophilus is the first to preserve fragments i.-iii. Athenagoras has at least one quotation from the fragments. Clement of Alexandria cites freely from most of the books, but it is noticeable that he never mentions the specially Christian bk. viii. He could hardly have omitted to do so had it been extant at the time, or had he not had suspicions of its genuineness. Soon after his time the Christians fell under the suspicion of coining oracles in their own favour. Celsus⁵ roundly accused them of interpolating and faking many passages in the ancient and genuine Sibylline writings, and Lucian makes merry over the idea of Christian oracles, and produces some very clever parodies. Here is one on the gematria of the *Sibyllines*:

Εὐθέινον ποίητοι παρ' ἧδ' ἄγχι Σινύπης
ἔσται τις κατὰ Τύρσιν ὑπ' Ἀσσυρίοισι προφήτης
ἐκ πρώτης δεκνὺς μόναδος, τρισσῶν δεκάδων τε,
πένθ' ἑτέρας μόναδας καὶ εἰκόσαδα τρισάκθον
ἀνδρὸς ἀλεξήτηρος ὁμωνυμῆν τετρακύνθον.

The name is 'Ἀλεξάνδρος' (A=1, λ=30, ε=5, ξ=60).⁶

The force of these onslaughts upon the Christian teaching of the Sibyls will be felt when it is remembered that some Christian writers went so far as to make St. Paul himself appeal to the testimony of the Sibyl.

ἔπει ὅτι καθάπερ Ἰουδαίους σώζεσθαι ἐβούλετο ὁ θεός, τοὺς προφήτας δίδους, οὕτω καὶ Ἑλλήνων τοὺς δοκιμωτάτους, οἰκείους αὐτῶν τῇ διαλέκτῳ προφήτας ἀναστήσας, ὥς οἱ οἶτε ἦσαν δέχεσθαι τὴν παρὰ θεοῦ εὐεργεσίαν. τῶν χυδαίων ἀνθρώπων διεκρίνε, δηλώσει πρὸς τὸν Περροῦ κηρύγματι ὁ ἀπόστολος λέγων Παῦλος· Λάβετε καὶ τὰς Ἀλληνικὰς βίβλους, ἐπίγνωτε Σίβυλλαν, ὥς δηοί ἐνα θεὸν καὶ τὰ μέλλοντα ἐσεσθαι.¹

After this there are few allusions to the Sibyl in the Greek Fathers. But among Latin writers there are frequent quotations. Lactantius is a mine of Sibylline verses. Constantine's speech to the elders at Nicæa, as recorded by Eusebius, abounds in allusions. Augustine discussed seriously the Sibyl's claim, and, finding nothing in her whole poem that advocated the worship of false gods, he decided that she must be included in the number of those who belong to the City of God.²

5. MSS.—The great majority of MSS of the *Sibylline Oracles* date from the 15th cent.; only two appear to belong to the 14th, and none are earlier. The first printed ed. is that of Xystus Betuleius (Basel, 1545), containing bks. i.-viii. 485. The first ed. to contain the whole of bk. viii. is that of Johannes Opsopæus (Paris, 1599). The last four books were discovered by Angelo Mai and published in 1817, in his *Scriptorium veterum nova collectio*. The fragments, six in number, are preserved in Theophilus, ad *Autolyum*, and in Lactantius.

Of the many edd. of the *Oracles* special mention should be made of the monumental work of O. Alexandre (*Oracula sibyllina*, 2 vols., Paris, 1841-56) and of the most recent ed., that of J. Geffcken (Leipzig, 1902). Geffcken built upon the unpublished work of Mendelssohn, and both in this ed. and in various magazine articles he has rendered valuable service to the problem of the text.

6. Contents.—A brief summary of the different books is subjoined. Of the fragments only the first and third are of any considerable length. They are quoted by Theophilus as occurring 'at the beginning of [the Sibyl's] prophecy,' and therefore it is possible that they formed an introduction to bk. iii. They are certainly of early date, and their theme is the majesty of God, especially as seen in the works of creation, the folly of idolatry, and the wisdom of worshipping God.

First and second books.—Bks. i. and ii. are best treated as a unity, the division between them being found in no early MS. The general scheme is to give a summary of the world's history from the earliest times to the end. This purpose is not fully carried out. Bk. i. indeed recounts six generations, up to and including the Flood, but then a new generation (of Titans) arises, and the intervening history is omitted till the coming of Christ. Bk. ii. begins with a short introduction, and then describes the coming of the tenth generation, which is to witness the breaking down of the dominion of Rome. There is to ensue a period of deep peace, and afterwards Christ is to appear, heralded by a star, and is to distribute rewards to those who have proved themselves worthy. At this point 92 lines are inserted, mostly from pseudo-Phocylides, which have no obvious connexion with what precedes or follows. Four transitional lines intervene, and then commences a new section which is occupied principally with eschatological details. Many of these details are closely parallel to the descriptions in the Apocalypse of Peter.

The most probable view of these books is that in their original scheme they form a Jewish work dealing with the ten generations of man, but that this scheme was for some reason abandoned half-way through, and the interest of the writer passed to eschatology. The book, being thus left as a kind of medley, was further confused by the insertion of various Christian elements. In its present form it is therefore late, and is to be ascribed probably to the 2nd cent. A.D. The section from pseudo-Phocylides (ii. 56-148) is obviously an insertion, and has possibly displaced iii. 1-92.

Third book.—Bk. iii. is the most important, and in some ways the most perplexing, of the Sibylline writings. It is obviously composed of several different elements, but great uncertainty exists as to the exact character of them. The following division of the book is suggested:

- 1-62. An introduction written by a Jew living probably in Palestine about 80 B.C.
- 63-92. A Jewish or Christian eschatological section from the end of the 1st cent. A.D.; a very much later addition to the book.
- 93-96. A Jewish or Christian fragment.
- 97-161. A passage overworked from the Babylonian Sibyl.
- 162-294. A Jewish passage dating from 140 B.C. or a little earlier.
- 295-488. A collection of prophecies on the whole Jewish and anti-Roman. The bulk deals with the years 170-140 B.C., and seems to have been composed about the latter date, though some sections may be much

⁵ *Orig. c. Cels.* vii. § 56.

⁶ For such puzzles in the *Sibyllines*, cf. i. 140-146, 326-331.

earlier. Lines 464-488 are considerably later and may be dated about 80 B.C.

489-829. Another Jewish collection incorporating several ancient oracles, but dating on the whole from 140 B.C., or very near that time. The eschatological element is strongly marked towards the end, and the hortatory tone is more noticeable. The ending bears signs of interpolation.

Lines 1-96 can hardly be homogeneous in themselves. One section (46-82) appears to belong to the same date as the section 464-470, i.e. about 80 B.C. But lines 62-92 are obviously late and cannot be placed earlier than the 1st cent. A.D. Indeed their eschatology is to be compared with ii. 105 ff. The first part (8-45) comes nearest in thought to frag. i., while 92-95 seem to be, like v. 256-259, a Christian interpolation.

The middle section (295-488) is mainly historical in its allusion and has very little direct teaching. The history has to do partly with Antiochus Epiphanes and the struggles of his successors, but partly with the events of the next century. Lines 350-355 seem to refer to the Mithradatic war, and 464-470 bring us in all probability to the stirring times of Sulla. But more ancient writings are incorporated—e.g., 401-418, 419-432—and oracles on various lands are interspersed. The view of Rome is interesting. She is regarded with bitter hatred, and the writer looks forward with savage joy to her discomfiture at the hands of Asia. This goes far beyond the unfavourable view of Rome expressed in the first of the three divisions (175 ff.).

There is no sign of any special interest in Egypt, though the struggles between the brothers Ptolemy, Philometor and Euergetes, seem to be alluded to in line 316. The writer seems to belong to Asia, and perhaps to Phrygia.

With regard to the question of date, lines 97-294 and 489-829 represent, with possible interpolations, the oldest portions of the book and reflect very much the same date, though lines 97-294 are probably a little earlier. The standpoint of this section is that of an Egyptian Jew of about 140 B.C., who sees in the recent troubles of his nation a parallel to the Babylonian captivity, and in their reviving fortunes under Simon Maccabaeus a type of their former deliverance under Cyrus. Imbued with the same kind of spirit as that which prompted Aristobolus some twenty years before to maintain that all the flower of Greek philosophy and poetry was in some way dependent on the Jewish Scriptures, he begins with an ancient Sibylline writing (97-164), which he introduces by a few lines dealing with the Flood and the Tower of Babel, and then goes on with an account of the fortunes of the Jews and the prosperity that is in store for them. Certain other nations are mentioned, but only one at any length. The Romans have already made their mark in Eastern history and have inspired terror of their arms. The moral obliquities ascribed to them in line 184 ff. may be out of place here, or they may be grossly exaggerated. But we cannot say certainly that they were entirely unfounded.

In line 489 *ad fin.* the country most in the writer's mind is not Rome, but Greece. In true Sibylline style he leads up to his main theme by allusions to various other lands, but Greece forms evidently his main theme. A great disaster has lately overtaken it. A barbarian land has laid it waste, and its long history seems to have closed in irretrievable catastrophe. This can hardly refer to anything but the expedition of L. Mummius in 146 B.C., which was crowned by the capture and destruction of Corinth. Other allusions make for the same date (c. 140 B.C.); these will be found in 607-615, 732-740, and in the general idea of the renewed prosperity of the Jewish race. The writer is a patriotic Jew, well-versed in OT prophecy. His interests are largely eschatological. He believes intensely in the coming of Messiah, he foresees further troubles and a fresh determined onslaught on the Holy City by the evil powers of the world; but beyond that he looks forward to a reign of peace and happiness, in which the nation shall dwell contentedly around its restored Temple, and the peoples of the world shall bring their gifts and offer their sacrifice of praise. The whole spirit of this writing seems to reflect the exuberant hope of the days of Simon Maccabaeus.

Fourth book.—Bk. iv. deals with the same kinds of subjects as bk. iii., but in much shorter compass. The history of man is divided into twelve generations, and catastrophes on various cities and countries are foretold. Among these catastrophes earthquakes play a noticeable part, and it is probable that the severe earthquake which ruined Laodicea in A.D. 60 is comparatively fresh in the writer's mind.¹ The destruction of the Temple is presupposed (116 ff.), and the curious belief in the return of Nero points to a date not long after A.D. 70. We may with considerable confidence assign the book to about A.D. 80. The author appears to be chiefly interested in Asia Minor. His religious position is marked by (a) rejection of temples or shrines, (b) rejection of sacrifices, (c) belief in the imminence of a final judgment, to be followed by a reign of the just upon earth, (d) insistence on ceremonial washings. Formerly the author was widely believed to have been a Christian, but the prevailing opinion now sees in him a Jew, possibly an Essene.

Fifth book.—Bk. v. falls into two unequal divisions: (a) 1-51, (b) 52-531. In section (a) the writer goes through a list of the Roman emperors, whom he identifies by their initials, as far as possible. Section (b) is for the most part taken up with the foretelling of woes on various lands and cities, and with predictions which seem to stand out as striking a different note. Such are 223-240, an address to

Ysaie, 260-285, a panegyric on Judaea, and 256-259, a Christian interpolation.

The characteristic of section (b) is bitter hatred against Rome and a strong vein of patriotism for Judaea. Mingled with the hatred for Rome there is also a marked bitterness against Egypt, where there had apparently been a recent persecution of Jews. Lines 411-413 refer to the belief, attested elsewhere, that Titus, on his way home after the capture of Jerusalem, would die the moment he set foot on Italian soil.

The expectation of the return of Nero appears in both sections, but in 331. Nero is still the historical personage, while in 137-164 and 361-385 he is invested with superhuman traits.

Section (a) appears to date from the middle years of the principate of Hadrian, when Rome could be regarded with favour by a patriotic Jew. Section (b) is the work of a Jew living in Egypt, and writing shortly after the suppression of the rebellion of Bar Cochba in A.D. 132.

Sixth book.—Bk. vi. is a short hymn describing the ministry and death of Christ. Its date is probably towards the end of the 2nd century A.D. The following may be reckoned as peculiar features: (a) the appearance of fire at the Baptism of Christ (line 6); (b) the dove at the Baptism specified as white (7); (c) the reference to Adam and Eve having seen Christ (18); (d) the taking of the Cross into heaven (27). The anti-Jewish feeling is noticeable. Judaea is called the 'land of Sodom' (21).

Seventh book.—Bk. vii. has come down in a fragmentary condition. It falls into three divisions, 1-50, 51-95, 96-162, each beginning with detached oracles of woe and passing on to some definite religious teaching. The author is deeply tinged with Gnosticism. He believes in three towers in heaven, which are the dwelling-place of the three 'Mothers of God'—Hope, Piety, and Worship (71-73). He enjoins quaint ceremonies, prayers, and incantations (76-91). He is familiar with the Gnostic ogdoad (140). His eschatology is marked by sternness. Fire is to play an important part at the end of the world, and the torments of the ungodly are apparently to be eternal. The date may be tentatively placed in the first half of the 3rd cent. A.D.

Eighth book.—Bk. viii. is the most definitely Christian of all. It falls into two main divisions at line 216. The first is marked by a bitter hatred against Rome, whose miserable end is expected at a definite day, i.e. A.D. 195. This date is arrived at by counting the numerical value of the letters of PDMH=943, and reckoning from the foundation of the city. The theme of the fall of Rome leads on to eschatology, in which special features are the return of Nero Redivivus and the dominion of a woman apparently regarded as the incarnation of evil. A 'holy son' is to slay the wicked woman by launching upon her the waters of the great deep, and is to save mankind in a second ark. In the resurrection that is to follow there is to be a perfect life of communism and happiness. The author is probably a Christian, though there is little distinctively Christian in his outlook.

The second division is frankly and avowedly Christian, and contains the famous acrostic on IHCOYΣ XPICTOCΘ EOY YIOΣ ΣΩΤΗΡ ΣΤΑΥΡΟΣ, the five first letters of which form another acrostic, ΙΧΘΥΣ; hence the common symbol of the fish for Christ as noticed by Tertullian and Augustine.¹ This acrostic is the basis of the whole division, and it is expanded by various details of the life and especially of the death of Christ, and rounded off by an eschatological section. Between 358 and 465 there is inserted an independent section dealing with the nature of God and the worship due to Him. There are no certain marks of date in this division of the book, but it may be placed somewhere in the 3rd cent. A.D.

The last four books.—The last four bks., xi.-xiv., are mainly historical, and of less interest. Bk. xi. begins with the Flood, dated in the fifth² generation, and proceeds at once to the story of the Tower of Babel in the tenth generation. Then comes a rapid survey of successive empires beginning with Egypt and the Exodus. The second half of the book deals principally with Rome, especially in its connexion with Egypt.

The writer is evidently an Egyptian patriot, who traces his country's history down to the loss of her independence. He is probably an Alexandrian Jew, and perhaps a proselyte. His chief model is bk. iii., especially in its historical portions. The latest mark of date is the reference in line 160 to the extension of the Roman empire to the Tigris and Euphrates, which occurred in the principate of Hadrian.

Bk. xii. follows a simple scheme. Beginning with eleven lines taken bodily from the commencement of bk. v., it proceeds to give a short history of the Roman emperors from Augustine to Elagabalus, each emperor being indicated by the numerical value of his initial. The history is usually straightforward, though there are occasional inaccuracies—e.g., in the statement that Caligula was put to death in an outburst of feeling occasioned by the execution of a Vestal Virgin, and that Vespasian was murdered. There are a few Christian passages; e.g., 30-36 speak of the Incarnation, and 190 ff. refer to the story of the Thundering Legion. But the religious side is not emphasized. The writer is little more than a versifier of history. His date is probably in the reign of Alexander Severus (A.D. 222-235).

Bk. xiii. continues the history from the reign of Alexander Severus to about the reign of Tacitus (A.D. 275). After a

¹ The acrostic is quoted in Eusebius, *Const. Or. ad Sanct. Conf.* xviii., and a Latin tr. is found in Augustine, *de Civ. Dei*, xviii. 23.

² Reading πέμπτη (so Bzach) for πένη in line 7.

¹ Cf. Tac. *Ann.* xiv. 27.

stereotyped introduction the book begins so abruptly that it is evidently mutilated. The history is narrated so allusively that the identification of the references is frequently attended with great difficulty. There is much more of the Sibylline woes on various places than in the preceding book. The religious teaching is again very slight. The writer seems to be a Jew rather than a Christian, and possibly he is an Alexandrian. He writes under the spell of the consternation caused by the capture of Valerian by Sapor, the Persian king, and the troubles and upheavals of the second half of the 3rd cent. are faithfully reflected in his lines. But throughout all the enumeration of troubles there runs a vein of hope and confidence. The writer by no means despairs of the Roman empire (contrast 46-49 with viii. 148-150).

The style is somewhat conventional, but not without a certain vigour. There are allusions to earlier books, and the vocabulary is 'Sibylline,' but we find no such patchwork of borrowed fragments as in the preceding book.

Bk. xiv. evidently sets out to be a continuation of bk. xiii., and therefore it starts with the death of Odenatus (lines 12-17) and the reign of Aureolus (18-20). But after this no scheme of history has been propounded that can be adapted to the allusions to the names of emperors. It is possible to pick out one or two here and there that seem to fit, but in the general chaos of the book it appears to be an unprofitable task to do so. Either the writer lived about the 6th or 7th cent. A.D. and had a very inaccurate knowledge of history or, if he is writing about A.D. 800, he is giving rein to a very vivid imagination. In either case his work can hardly be pronounced worthy of serious study.

SICKNESS.—See DISEASE AND MEDICINE.

SIDGWICK (HENRY).—i. *Life*.—Henry Sidgwick was born in 1838 at Skipton in Yorkshire, where his father, the Rev. William Sidgwick, was headmaster of the Grammar School. He came of Yorkshire stock, and there is a tradition that in the last generation one might hear this family referred to in the neighbourhood of Skipton as 'the good and great Sidgwicks.' William Sidgwick's wife was Miss Mary Crofts, also of Yorkshire descent, and it is told of her that she was a beauty and a wit. Her third son, Henry, the subject of this article, was three years old when his father died. Henry's sister, Mary, became the wife of her cousin, E. W. Benson, afterwards archbishop of Canterbury, and his youngest brother Arthur, a brilliant classical scholar, was Reader in Greek in the University of Oxford. Henry Sidgwick's life is most admirably set before us by his brother and his wife, Arthur Sidgwick and Eleanor Mildred Sidgwick, in *Henry Sidgwick: a Memoir by A. S. and E. M. S.*

In Sept. 1852 Henry Sidgwick went to Rugby, and from there, in Oct. 1855, to Trinity College, Cambridge. He won the Bell and Craven Scholarships—the latter the 'blue ribbon' among Classical scholarships at Cambridge—and in Jan. 1859, having taken both the Classical and Mathematical Triposes, he came out 33rd Wrangler and Senior Classic, and also won the first Chancellor's Medal. In October of the same year he was elected a Fellow of Trinity. Henry Sidgwick felt at that time no difficulty in making the declaration required from all Fellows of Colleges on admission, that he was a member of the Church of England, and he was appointed an assistant tutor in Classics, being then a little over 21 years of age. Thus began that life of academic teaching which he carried on for over forty years.

In an autobiographical fragment dictated in his last illness, which is included in the *Memoir*, Sidgwick, referring to his membership of 'The Apostles,' says:

'In the Michaelmas term of my second year an event occurred which had more effect on my intellectual life than any one thing that happened to me afterwards: I became a member of a discussion society—old and possessing historical traditions—which went by the name of "The Apostles" . . . [The spirit of this Society] "gradually absorbed and dominated me. I can only describe it as the spirit of the pursuit of truth with absolute devotion and unreserve by a group of intimate friends, who were perfectly frank with each other. . . . Absolute candour was the only duty that the tradition of the society enforced." 'It came to seem to me that no part of my life at Cambridge

was so real to me as the Saturday evenings on which the apostolic debates were held; and the tie of attachment to the society is much the strongest corporate bond which I have known in life. I think, then, that my admission into this society and the enthusiastic way in which I came to idealise it really determined or revealed that the deepest bent of my nature was towards the life of thought—thought exercised on the central problems of human life. But many years elapsed before the consciousness of this led me to embrace the study of philosophy as my life's work.¹ In the same fragment he describes the 'central and fundamental aim' of his life as 'the solution, or contribution to the solution, of the deepest problems of human life. The peculiarity of my career has been that I have sought light on these problems, and that not casually but systematically and laboriously, from very various sources and by very diverse methods.'²

In 1869 Sidgwick had come to feel that he could no longer honestly declare himself to be a member of the Church of England. His secession from the Church was perhaps a foregone conclusion, but his future life seemed only the more deeply devoted to an unwavering passionate allegiance to truth. He resigned his Fellowship. His reasons for doing so were recognized and respected, and he retained the post of college lecturer. It was considered that this action of Sidgwick's was one of the influences which led to the removal of religious tests in the University in 1871.

In 1885 he was re-admitted a Fellow of his college, having been elected to the Knightbridge Professorship of Moral Philosophy two years previously. In 1876 Sidgwick had married Miss Eleanor Mildred Balfour, sister of Mr. A. J. Balfour.

To attempt to give here anything like an adequate list of Sidgwick's occupations and activities would be out of place, but three main directions of sustained and fruitful activity—in addition to his philosophic or moral sciences work—must be mentioned, each of which would in itself have made a good life's record. These are (1) his work for the education of women, chiefly in connexion with Newnham College—work crowned with most signal success; to him women's education in Cambridge owes an immeasurable debt; (2) his work in University matters generally; he was, as has been said, one who led the leaders, and he took his full share of ordinary business. It may be noted how excellent his work in this connexion was—how accurate, able, and thorough. He was one who 'sought peace and ensued it,' but he always stood up for the right and strove valiantly for it, and in this

'His strength was as the strength of ten
Because his heart was pure.'

(3) His interest in psychical research must also be referred to. There is perhaps no part of Sidgwick's work which shows in a more marked measure the initiative and courage which were so characteristic of him. His was a brave and candid spirit—in bondage to no fears, no weaknesses, no hypocrisies. Psychical research was, as Sidgwick indicates, to some extent connected with that search after enlightenment, that study of the central problems of human life, to which he had deliberately chosen to consecrate his chief effort. To this choice he remained true, with an unswerving devotion, an inexhaustible patience.

We must regard as an important part of this study and devotion the labour which he bestowed upon the affairs of the Moral Sciences Tripos and all connected with it. Philosophy was his main interest; and among philosophical subjects it was ethics that had the first place in his thought, and in ethics that his most successful and influential work was accomplished.

In May 1900, in the full vigour of mental power, with so much accomplished, yet so much still to do, with life so full of interest, happiness, and promise, Sidgwick received his death-warrant from his physician—with grief and pain indeed, but with

1 P. 85.

2 P. 33f.

an indomitable sweetness and unselfishness and 'a most moving courage.'

'For nearly a fortnight he told no one but his wife. It was easier to carry on life in a normal manner when no one knew. But he began to set his affairs in order.'¹

He wrote for the Oxford Philosophical Society a promised paper on T. H. Green, which, said one of those who heard it read on 19th May, was 'the most lucid, sincere, and impressive piece of philosophic criticism it had ever been my privilege to hear.'² And so, fulfilling his ordinary engagements, doing what he could to prepare against the contingency of an unfavourable result of the operation which he decided to undergo, comforting his friends, he bore the suffering and weakness of the last stage of life with 'unbroken patience and the simplest unselfish fortitude.'³ He died on 28th Aug. 1900 at Terling Place, Essex, and was buried in the village churchyard at Terling.

2. Writings and philosophy.—We may begin our account of Sidgwick's main ethical doctrines and conclusions with a summary in his own words of the scope of the subject:

'The subject of Ethics, most comprehensively understood, includes (1) an investigation of the constituents and conditions of the Good or Wellbeing of men considered individually, which chiefly takes the form of an examination into the general and particular species of (a) Virtue or (b) Pleasure, and the chief means of realising these ends; (2) an investigation of the principles and most important details of Duty or the Moral Law (so far as this is distinguished from Virtue); (3) some inquiry into the nature and origin of the Faculty by which duty is recognised and, more generally, into the part taken by Intellect in human action, and its relation to various kinds of Desire and Aversion; (4) some examination of the question of human Free Will. It is connected with Theology, in so far as a Universal Good is recognised, inclusive of Human Good, or analogous to it; and again, so far as morality is regarded as a Code of Divine appointment. It is connected with Politics, so far as the wellbeing of any individual man is bound up with the wellbeing of his society; and again with Jurisprudence—if this is separated from Politics—so far as morality is identified with Natural Law. Finally, almost every branch of ethical discussion belongs at least in part to Psychology.'⁴

In his great work, *The Methods of Ethics* (1874), Sidgwick has given us a full and lucid discussion of these topics, and has gathered up the results of previous ethical thought; and both in that book and in the *History of Ethics* we have a dispassionate, penetrating account of the work of earlier moralists, from the pre-Socratics down to Herbert Spencer, T. H. Green, and German post-Kantians. This critical history, brief as it is, is unique and invaluable. But it is to *The Methods of Ethics* that we must go if we are to learn, as fully as we can, the doctrine of this great English moralist.

Of the three questions, (1) What ought I to do?, (2) How do I know what I ought to do?, (3) Why should I do what I see to be right?, it is as an answer to the second that Sidgwick has laid out his scheme of treatment in *The Methods of Ethics*; hence the title of the book.

'My object,' he says, 'in the present work is to expound as clearly and as fully as my limits will allow the different methods of Ethics that I find implicit in our common moral reasoning; to point to their mutual relations; and where they seem to conflict, to define the issue as much as possible.'⁵

In his view, until the logical question, the question of method, is answered, it is not possible to offer a reasoned answer to the primary question, What ought I to do?

'In deciding what they ought to do,' he says, 'men naturally proceed on different principles, and by different methods. There are two *prima facie* rational Ends, Excellence or Perfection and Happiness. . . . It is also commonly thought that certain Rules are prescribed without reference to ulterior consequences. The Methods corresponding to these different principles reduce themselves in the main to three, Egoism, Intuitionism, Utilitarianism. These methods we are to examine separately, abstracting them from ordinary thought, where we find them in

1 *Memoir*, p. 554.

2 *Ib.* p. 550, n. 1.

3 *Ib.* p. 553.

4 See *Outlines of the Hist. of Ethics* p. 101.

5 *The Methods of Ethics*, p. 14.

confused combination, and developing them as precisely and consistently as possible.¹ The end of egoism is the happiness of the agent; the end of utilitarianism is the general happiness. The method which proceeds on the assumption that 'certain rules are prescribed without reference to ulterior consequences' is called intuitionism—more precisely, dogmatic intuitionism.

It is this common-sense ethics—the dogmatic intuitionism of popular morality—that Sidgwick examines in bk. iii., in ch. xi. of which he sums up his results, and concludes that the maxims of common sense do not possess the characteristics required in scientific axioms; for they are sometimes tautologous, sometimes vague, sometimes inconsistent with one another—to every rule, or almost every rule, exceptions are allowed.

'The maxims of Wisdom and Self-control are only self-evident in so far as they are tautological: nor can we state any clear, absolute, universally-admitted axioms for determining the duties of the Affections: and as for the group of principles that were extracted from the common notion of Justice, we cannot define each singly in a satisfactory manner, still less reconcile them: and even the Duty of Good Faith, when we consider the numerous qualifications of it more or less doubtfully admitted by Common Sense, seems more like a subordinate rule than an independent First Principle . . . similarly with other virtues . . . The common moral maxims are adequate for practical guidance, but do not admit of being elevated into scientific axioms.'²

The search for rules which can be accepted as scientific axioms, for 'some deeper explanation why . . . conduct commonly judged to be right is so, for 'some rational synthesis' of commonly accepted precepts, leads the inquirer from dogmatic intuitionism to that phase of intuitionism called philosophical—

a method which, 'while accepting the morality of common sense as in the main sound, still attempts to find for it a philosophic basis which it does not itself offer; to get one or more principles more absolutely and undeniably true and evident, from which the current rules might be deduced, either just as they are commonly received or with slight modifications and rectifications.'³

Such principles Sidgwick finds in Kant's Categorical Imperative: 'Act as if the maxim of thy action were to become by thy will a universal law of nature,' and in Samuel Clarke's rule of equity and rule of love or benevolence. Kant's Imperative gives the *form* of a law or general rule: 'What is right for me is right for anyone else in similar circumstances.' The Rule of Equity is:

'Whatever I judge reasonable or unreasonable for another to do for me; that by the same judgment I declare reasonable or unreasonable that I *in the like case* should do for him.'⁴ This maxim is simply a precise statement of the 'Golden Rule' of the gospel: 'Do unto others as ye would that they should do unto you.' The Rule of Universal Love or Benevolence declares:

'Every rational creature ought in its sphere and station, according to its respective powers and faculties, to do all the Good it can to all its fellow-creatures: to which end universal Love and Benevolence is . . . plainly the most direct, certain, and effectual means.'⁵

'Love your neighbour as yourself' perhaps sums up the Rules of both Equity and Benevolence. The Maxim of Prudence, or rational self-love, is that 'one ought to aim at one's own good on the whole.' These maxims are among those 'absolute practical principles, the truth of which, when they are explicitly stated, is manifest.'⁶

'Hereafter as such is to be regarded neither less nor more than *Now*'⁷ is a self-evident maxim of impartiality educible from the Maxim of Prudence. It is self-evident too that 'whatever action any of us judges to be right for himself, he implicitly judges to be right for all similar persons in similar circumstances.'⁸ As regards the Rule of Equity, Sidgwick says of it:

'Common Sense has amply recognised the practical importance of the maxim: and its truth, so far as it goes, appears to

me self-evident.'¹ 'And it is evident to me that as a rational being I am bound to aim at good generally,—so far as it is attainable by my efforts.'²

It is found (a) that of the commonly received maxims of duty most, when closely examined, 'contain an implicit subordination to the more general principles of Prudence and Benevolence; and (b) that no principles except these, and the formal principle of Justice or Equity, can be admitted as at once intuitively clear and certain; while, again, these principles themselves, so far as they are self-evident, may be stated as precepts to seek (1) one's own good on the whole, . . . and (2) others' good no less than one's own, repressing any undue preference for one individual over another. Thus we are brought round again to the old question with which ethical speculation in Europe began, "What is the Ultimate Good for man?"—though not in the egoistic form in which the old question was raised. When, however, we examine the controversies to which this question originally led, we see that the investigation which has brought us round to it has tended definitely to exclude one of the answers which early moral reflection was disposed to give to it. For to say that "General Good" consists solely in general Virtue,—if we mean by Virtue conformity to such prescriptions and prohibitions as make up the main part of the morality of Common Sense—would obviously involve us in a logical circle: since . . . the exact determination of these prescriptions and prohibitions must depend on the definition of this General Good. . . . For example, Common Sense may seem to regard Liberality, Frugality, Courage, Placability, as intrinsically desirable: but when we consider their relation respectively to Profusion, Meanness, Foolhardiness, Weakness, we find that Common Sense draws the line in each case not by immediate intuition, but by reference either to some definite maxim of duty, or to the general notion of "Good" or Wellbeing. . . . Other qualities commonly admired, such as Energy, Zeal, Self-control, Thoughtfulness, are obviously regarded as virtues only when they are directed to good ends.'³ Again, 'Wisdom is insight into Good and the means to Good: Benevolence is exhibited in the purposive actions called "doing Good": Justice (when regarded as essentially and always a Virtue) lies in distributing Good (or evil) impartially according to right rules. If then we are asked what is this Good which it is excellent to know, to bestow on others, to distribute impartially, it would be obviously absurd to reply that it is just this knowledge, these beneficent purposes, this impartial distribution.'⁴

What, then, is the Good, that which is ultimately and intrinsically good—good in itself?

This—the question debated in the ethical controversy of ancient Greece—assumed that any 'rational individual would make the pursuit of his own good his supreme aim: the controverted question was whether this Good was rightly conceived as Pleasure or Virtue, or any *tertium quid*.'⁵ . . . 'Which of the objects that men think good is truly Good or the Highest Good?'⁶

As we have just seen, the commonly accepted rules of virtuous conduct involved a reference to good otherwise determined. There remain, therefore, pleasure and the *tertium quid* (if any).

Now, pleasure is 'Feeling which is *in itself* desirable, and which is apprehended as desirable by the sentient individual at the time of feeling it,' and happiness is pleasure and the absence of pain. At the end of ch. ix. of bk. i. in which the meaning of good is closely discussed, Sidgwick reaches this conclusion:

In the view of common sense 'beauty, knowledge and other ideal goods, as well as all external material things, are only reasonably to be sought by men in so far as they conduce either (1) to Happiness or (2) to the Perfection or Excellence of human existence.'⁷

Other objects of pursuit do not seem to be in themselves intrinsically and ultimately good. Fame, e.g., which is so eagerly pursued, is not 'an object which it is reasonable for men to seek for its own sake. It only commends itself to reflective minds either (1) as a source of Happiness to the person who gains it, or (2) a sign of his Excellence, moral or intellectual, or (3) because it attests the achievement by him of some important benefit to society, and at the same time stimulates him and others to further achievement in the future. . . . a man is commonly thought to benefit others either by making them happier or by making them wiser and more virtuous.'⁸ Similar considerations are recognised in the case of other commonly accepted sources of happiness—e.g., health, wealth, social position.

As to human perfection or excellence, it is not 'in accordance with Common Sense to regard Subjective Rightness of Will, or other elements of perfection as constituting Ultimate Good.' Subjective rightness of will—a man's will to do what he thinks is right—is compatible with the most

mistaken views as to what is right. A fanatic may be a most dangerous and mischievous person.

'And what has been said of Virtue seems . . . still more manifestly true of the other talents, gifts, and graces which make up the common notion of human excellence or Perfection. . . . Reflection shows that they are only valuable on account of the good or desirable conscious life in which they are . . . actualised, or which will be somehow promoted by their exercise.'

'What is ultimately good or desirable must be desirable Consciousness,' i.e. either (1) happiness or (2) relations of the conscious subject to something objective, something that is 'not merely consciousness'—e.g., the relation of the mind to truth (in cognition), to beauty (in contemplation of beauty), to freedom or virtue (in volitions to realize virtue or freedom). To Sidgwick it seems clear that such objective relations of conscious subjects are not in themselves ultimately and intrinsically desirable.

In bk. iii. ch. xiv. he appeals first to the intuitive judgment of the reader, 'after due consideration of the question when fairly placed before it: and secondly to a comprehensive comparison of the ordinary judgments of mankind. As regards the first argument, to me at least it seems clear after reflection that these objective relations of the conscious subject, when distinguished from the consciousness accompanying and resulting from them, are not ultimately and intrinsically desirable; any more than material or other objects are, when considered apart from any relation to conscious existence. Admitting that we have actual experience of such objects, as described, of which the merely consciousness:

Butler's phrase) we "sit down in a cool hour," we can only justify to ourselves the importance that we attach to any of these objects by considering its conduciveness, in one way or another, to the happiness of sentient beings.

The second argument, which refers to the common sense of mankind, obviously cannot be made completely cogent; since, as above stated, several cultivated persons do habitually judge that knowledge, art, etc.—not to speak of Virtue—are ends independently of the pleasure derived from them. But we may urge not only that all these elements of "ideal good" are productive of pleasure in various ways; but also that they seem to obtain the commendation of Common Sense, roughly speaking, in proportion to the degree of this productiveness. This seems obviously true of Beauty; and will hardly be denied in respect of any kind of social ideal: it is paradoxical to maintain that any degree of Freedom, or any form of social order, would still be commonly regarded as desirable even if we were certain that it had no tendency to promote the general happiness. The case of Knowledge is rather more complex; but certainly Common Sense is most impressed with the value of knowledge, when its "fruitfulness" has been demonstrated. It is, however, aware that experience has frequently shown how knowledge, long fruitless, may become unexpectedly fruitful, and how light may be shed on one part of the field of knowledge from another apparently remote: and even if any particular branch of scientific pursuit could be shown to be devoid of even this indirect utility, it would still deserve some respect on utilitarian grounds; both as furnishing to the inquirer the refined and innocent pleasures of curiosity, and because the intellectual disposition which it exhibits and sustains is likely on the whole to produce fruitful knowledge. Still in cases approximating to this last, Common Sense is somewhat disposed to complain of the misdirection of valuable effort; so that the need of honour commonly paid to Science seems to be graduated, though perhaps unconsciously, by a tolerably exact utilitarian scale. Certainly the moment the legitimacy of any branch of scientific inquiry is seriously disputed, as in the . . . case of vivisection, the controversy on both sides is generally conducted on an avowedly utilitarian basis.^{1,2}

Though it has to be allowed that common sense is disinclined to admit happiness (=sum of pleasures) to be the ultimate Good, yet this can be explained by considering (1) that the term 'pleasure' is very commonly used in a bad sense and with a restricted scope; (2) that many pleasures depend on our experiencing desires for other things than pleasures; (3) that, when happiness is taken as the ultimate Good, it is often supposed that what is meant is that each individual should pursue only *his own* happiness; (4) 'from the universal point of view no less than from that of the individual, it seems true that Happiness is likely to be better attained if the extent to which we set ourselves consciously to aim at it be carefully restricted.'³

As the result of this appeal to common sense,

¹ *The Methods of Ethics*, p. 393.

² *Ib.* pp. 400-402.

³ *Ib.* p. 405.

Sidgwick concludes that we are justified in considering that common sense is disposed to accept happiness as the ultimate Good.

It may seem almost superfluous to insist on men's ineradicable belief in the value of happiness. Our desire that virtue should be rewarded—rewarded with happiness, that is—that there should be a heaven for the good, answers some of the deepest demands of our nature. We are convinced that the 'wages of virtue' ought not to be 'dust.' What we wish to those we love is 'long life and happiness,' 'many happy returns,' and so on. Long life without happiness is not desirable, and an hour, a day, a week, of torturing pain, or even of simple discomfort or mere indifference, is in itself entirely undesirable.

Sidgwick's argument has eliminated every alternative except happiness; and he points out that the acceptance of cognition of objective truth, contemplation of objective beauty, and so on, as ultimate Good, instead of happiness, would leave us without any 'criterion for determining the comparative value of different elements of "Good".' He concludes that 'the Intuitionist Method rigorously applied yields as its final result the doctrine of pure Universalistic Hedonism.' Thus the utilitarianism of Bentham and Mill is provided with that intuitional basis which it had previously lacked, and the effort of thought which has so fully explained and systematized the maxims of common sense has also accomplished a further great constructive achievement, and has succeeded in unifying intuitionism and Benthamite utilitarianism. The 'consilience' is very impressive.

The problem that occupied the ethical schools of Greece is thus solved: it is seen that virtue consists in the promotion of happiness (pleasure and absence of pain); as far as human conduct is concerned, the practice of virtue is the best means to the general happiness, and 'that most excellent of all practical principles, the active principle of benevolence,' as Butler calls it, the principle which aims at the happiness of others, is the root and support of common-sense morality. And not only so, but—since this fundamental principle is in essence no other than the Golden Rule of the Gospels—we have here the coalescence of intuitional hedonism with Christian ethics. This unification, though recognized by Sidgwick, was not emphasized by him; but it furnishes a striking confirmation of the view which he reached as the result of systematic and profound reflexion on ethical thought.¹

This is perhaps the most convenient place for some further consideration of that doctrine of the dualism of practical reason to which reference has already been made. This dualism is regarded by Sidgwick as the final ethical difficulty—'the profoundest problem of Ethics.'² He accepts as intuitively certain the maxims of reasonable self-love and of rational benevolence, but he does not find in his moral consciousness 'any intuition, claiming to be clear and certain, that the performance of duty will be adequately rewarded and its violation punished,' though he feels a 'desire, apparently inseparable from the moral sentiments, that this result may be realised.'³ He has not been able to reach the desideratum of the practical reason—a reconciliation of the individual with the universal reason. There seems to be no clear and certain intuition that the action most conducive

¹ A most interesting and important account of the steps by which . . . on an intuitional basis . . . with and subsequent ed. of *The Methods of Ethics*, and in *Mind*, new ser., x. [1901] 257 ff.

² *The Methods of Ethics*, p. 386, note 4.

³ *Ib.* p. 507.

to the agent's good is always coincident with that most conducive to the good of others, no convincing and indisputable metaphysical or theological proof. Again, it is not found that such invariable coincidence is supported by an appeal to experience, that 'inseparable connection between Utilitarian Duty and the greatest happiness of the individual who conforms to it' can 'be satisfactorily demonstrated on empirical grounds.'¹ His conclusion is:

The discussion of the 'profoundly difficult and controverted question' with which we are here concerned 'belongs rather to a treatise on General Philosophy than to a work on the Methods of Ethics: as it could not be satisfactorily answered without a general examination of the criteria of true and false beliefs. Those who hold that the edifice of physical science is really constructed of conclusions logically inferred from self-evident premises, may reasonably demand that any practical judgments claiming philosophic certainty should be based on an equally firm foundation. If on the other hand we find that in our supposed knowledge of the world of nature propositions are commonly taken to be universally true, which yet seem to rest on no other grounds than that we have a strong disposition to accept them, and that they are indispensable to the systematic coherence of our beliefs,—it will be more difficult to reject a similarly supported assumption in ethics, without opening the door to universal scepticism.'²

We may observe that it is practical dualism which alone among ethical doctrines clearly sees, honestly recognizes, and fairly faces the claims (for the individual agent) of both self and others, and it gives a clue to the mixture of good and evil that is in men, and does not leave us with a hopeless puzzle—self-love and benevolence are recognized as both natural and both rational.

There is another consideration, which is not insisted on by Sidgwick, but which appears to be of great interest and importance in its bearing on the dualism of practical reason. It is this. Whoever accepts the end of rational benevolence—i.e. the happiness of others—can accept it only on the ground that each individual's happiness is *to him* ultimately and intrinsically valuable, valuable in itself, and, since a man cannot directly experience any happiness but his own, this belief in the value for others of their own happiness must be based on his recognition of the value for himself of his own happiness. The reasonableness of benevolence implies the reasonableness of self-love. If we start from rational benevolence, we are irresistibly led back to self-love as our starting-point, and in the precept 'Love your neighbour as yourself' we find the same implication that love of our self is logically prior to, and sets the standard for, love of our neighbour.

On the other hand, as Sidgwick points out, the egoist who 'puts forward, implicitly or explicitly, the proposition that his happiness or pleasure is Good, not only for *him* but from the point of view of the Universe . . . may be brought to accept Universal happiness or pleasure as that which is absolutely and without qualification Good or Desirable.'³

This reciprocal implication of the 'two chief or superior principles' of conduct is striking, and is another instance of the 'consiliences' which are so impressive in Sidgwick's ethical construction.

Sidgwick's account of the relation between ethics and politics is highly interesting and important. The two are in his view so closely connected that they are in fact parts of one whole—i.e. the science of conduct, of what ought to be done.

'Ethics aims at determining what ought to be done by individuals, while Politics aims at determining what the government of a state or political society ought to do and how it ought to be constituted.'⁴

The relation between ethics and politics is in the utilitarian view particularly close, and must in any case be such that some common measure can be applied in both departments; otherwise hopeless confusion will result. It is imperative that any satisfactory theory of ethics should have a corresponding theory of politics, and that any theory of

politics should be considered in relation to ethics. Further, the two must be harmonious; for, unless they have a common principle and the same conception of ultimate human good, they cannot pretend to divide between them, and to regulate without inconsistency, the whole region of human conduct.

In *The Elements of Politics* Sidgwick has given us an indispensable supplement to the ethical work published seventeen years previously, accepting the same fundamental principle—the principle of rational benevolence, the supreme aim of which is the promotion of the general happiness. The aim is all-embracing—'the happiness or well-being of humanity at large.' In the preface to the *Politics* Sidgwick explains that what he has tried to provide is 'a book which would expound . . . the chief general considerations that enter into the rational discussion of political questions in modern states.'

'The Theory of Politics as here expounded is concerned with human societies regarded as possessing Government. Its primary aim is to determine what the constitution and action of Government *ought* to be: accordingly its method is not primarily historical, but deductive, based on psychological propositions not universally and absolutely true, but approximately true of civilised men. It has two main divisions: one concerned with the Functions of Government, internal and external, and the other mainly with its structure.'

The part played by the dualism of the practical reason is different in politics from what it is in ethics.

According to this dualism, 'Reasonable Self-love and Conscience are the chief or superior principles in the nature of man, because an action may be suitable to this nature, though all other principles be violated, but becomes unsuitable if either of those is.'¹

In the case of the individual agent it seems to be theoretically possible that the good of the agent may conflict with the good of the whole, and experience seems to confirm this view. Common sense admits the possibility and the actuality of self-sacrifice. A man may give his life for others; many a man has done this and more.

The statesman as such is not subject to this division in the counsels of practical reason. He exists for the good of the governed in the political community to which he belongs. The promotion of the good of his community (with of course a due regard to the good of the larger whole of which it is a part) in his *raison d'être*.² But for him too the dualism is, from a different point of view, momentous. Though as statesman he is not liable to be faced with the conflict (which emerges primarily as a conflict of motives) between interest and duty, between the happiness of self and the happiness of others, yet, since the community which he administers consists of individuals who are one and all liable to this conflict, it is his business to reconcile the conflict to the utmost of his power, to make it for the interest of individuals to do that which, if they would do it, would be for the good of the whole—to furnish at any moment motives sufficiently strong to induce individuals at that moment to do what is for the general good. In proportion as the attainment of happiness for self and the attainment of it for others are—so far as the power of government extends—made coincident in any community, in proportion as they are promoted by the same course of action, in that proportion is the community well organized and well governed, to that extent do the members of the community enjoy what Kant calls the 'Supreme Good'; they are both virtuous and happy. The great problem for rulers, as for teachers, is to promote this coincidence of well-doing and well-being. Herein lies much hope for the future—the reduction for the individual agent of the conflict between self-love and rational benevolence does

¹ We have seen why Sidgwick would here substitute rational benevolence for conscience.

² See essays on 'Public Morality' and 'Morality of Strife' referred to below, p. 505^a.

³ *The Methods of Ethics* 7, p. 503.

² *Ib.* p. 508 f.

⁴ *Ib.* pp. 420, 421.

¹ *Ib.* p. 15.

seem to be to a very considerable extent in the power of rulers and educators.

Sidgwick's posthumously published *Development of European Polity*, which is 'an evolutionary study of the development of polity, within the historical period in Europe, beginning with the earliest known Græco-Roman and Teutonic polity and carried down to the modern state of Europe and its colonies as the last result of political evolution,' has an interesting relation, complementary and illustrative, to *The Elements of Politics*; and in this connexion mention may also be made of three admirable essays on 'Public Morality,' 'The Morality of Strife,' and 'Luxury,' in the volume entitled *Practical Ethics: a Collection of Addresses and Essays*.

These exemplify the 'practical' effort of the author 'to bring into a more clear and consistent form the broad and general agreement as to the particulars of morality which we find among moral persons, making explicit the general conceptions of the good and evil in human life, of the normal relation of a man to his fellows, which this agreement implies.'¹

Besides the books already mentioned, four volumes on philosophical subjects were published after Sidgwick's death, namely, *Philosophy, its Scope and Relations* (1902), *Lectures on the Ethics of T. H. Green*, Mr. Herbert Spencer and J. Martineau (1902), *Lectures on the Philosophy of Kant and other Philosophical Lectures and Essays* (1905), and a volume of *Miscellaneous Essays and Addresses* (1904), selected from already published work.

The lectures on Green, Spencer, and Martineau are to some extent supplementary to *The Methods of Ethics*, as the early editions of that work were published before Green's *Prolegomena to Ethics* (1883), Spencer's *Principles of Ethics* (1879-93), and Martineau's *Types of Ethical Theory* (1885).

The Kant volume contains lectures on 'The Metaphysics of Kant,' 'The Metaphysics of T. H. Green,' 'The Philosophy of Mr. Herbert Spencer,' and five reprinted essays. The *Lectures on Philosophy, its Scope and Relations*, were intended as an introduction to the study of philosophy, an 'attempt to define the Scope of Philosophy and its relation to other studies' and that relation between theoretical and practical philosophy which Sidgwick regarded as the profoundest of philosophical problems.

This volume exemplifies the stress on comprehensiveness and articulation of view which pervaded Sidgwick's teaching as well as his writings, and is of such exceptional importance in the moral sciences.² Although his writings on metaphysical topics are of great value and interest, he never published any book on the subject; he had not formulated any metaphysical system. In addition to the books referred to above, Sidgwick published (between 1860 and 1900) a large number of articles, reviews, and pamphlets, a list of over 130 of which is given at the end of the *Memoir*. One of these was the article on 'Ethics' in the *EBR*, which was expanded later into the *Outlines of the History of Ethics*; and among them we find a remarkable series of ethical reviews and articles which are models of philosophical criticism and literary form. The range of topics of the other articles is very wide, taking in history, classics, literature, psychology, logic, biography, economics, psychical research, education, theology, law, and sociology. It may be permitted to make special mention of three—(1) 'A Dialogue on Time and Common Sense' (reprinted in the Kant volume from *Mind*, new ser., lii. [1894] 441 ff.), which is a gem both as philosophy and as literature; it is very characteristic—full of wit and wisdom, graceful and subtle—and gives a very suggestive idea of what Sidgwick's talk was like; (2) 'The Ethics of Religious Conformity,' and (3) 'Clerical Veracity' (both in the volume of *Practical Ethics*)—which are for a different reason of particular interest, since they deal with a difficulty which is poignant and many-voiced in the Anglican Church.

3. Appreciation.—We find in Sidgwick's work a rare combination of learning and originality, of imaginativeness together with good judgment, sense of perspective, and comprehensiveness of view, of unsparing pains and intense and vivid interest. It would not be too much to say that he took great joy in his work. We find, too, a generous capacity of intellectual sympathy and appreciation and an extraordinary freedom and boldness. Thought was to Henry Sidgwick his native element—a medium in which he moved at ease. Hence his swiftness and sureness of mind, his analytical and critical power, his insight and constructive force. He never misses the point, never fails or falters. In *The Methods of Ethics*, e.g., there are no slack places, no confusions slurred over, no difficulties shirked—the whole is as co-

1 P. 8.

² It may be pointed out that the 'moral sciences' at Cambridge included moral philosophy, i.e. ethics and politics, metaphysics, psychology, logic, and—previous to 1905—political economy.

herent as a living organism. Analysis and comparison only serve to bring into greater relief the articulation of the parts and the living thought which animates them. No summary, not even the author's own admirable analytical summaries of contents, no quotations even, can convey an adequate idea of the excellence and interest of the work, which is perhaps the best extant treatise on ethics, a classic for all time. The book is difficult, but it repays the closest study, and that it receives full meed of recognition as indispensable for students of philosophy is evidenced by the fact that since its publication in 1874 a steady demand for it has continued, and an eighth edition was published in 1914.

What one feels in reading not only *The Methods of Ethics* but also Sidgwick's other writings (we may indicate in particular here *The Elements of Politics*, *The Principles of Political Economy*, and *Outlines of the History of Ethics*) is that confusion and muddle have been cleared away, dark places illuminated, logic and coherence introduced. *The Methods of Ethics* gives the clue to all Sidgwick's work; in its method—logical procedure—is fundamental.

To a close student Sidgwick's ethical writings reveal, as perhaps no other records of him do, the spirit and mind of their author. They are his most considered intellectual output—his great and lasting monument. They breathe throughout absolute sincerity, a steady belief in goodness and enthusiasm for it, an unrelaxing pursuit of truth, with a grasp, insight, and fullness of knowledge in which the student learns to place a confidence that is never betrayed. His writings are educative in the same sense as his oral teaching and his work as an examiner were. They compel inquiry, and stir honest effort in the learner from first to last. A full and interesting account of Sidgwick's lecturing is given in ch. v. of the *Memoir*. We may extract a few sentences from a speech there quoted of F. W. Maitland, one of Sidgwick's most distinguished pupils:

'I feel safe in saying that within the field [of teaching] that was most properly his own Sidgwick's work has borne excellent fruit. . . . I believe that he was a supremely great teacher. . . . I believe that no more truthful man than Sidgwick ever lived. I am speaking of a rare intellectual virtue. However small the class might be, Sidgwick always gave us his very best. . . . as the terms went by, we came to think of lecture-time as the best time that we had in Cambridge; and some of us, looking back now, can say that it was in a very true sense the best time that we ever had in our lives. . . . The matter of the lectures, the theories and the arguments, might be forgotten; but the method remained, the spirit remained, as an ideal—an unattainable ideal, perhaps, but a model of perfect work.'¹

Sidgwick's letters, as given to us in the *Memoir*, help, in a delightful fashion, to fill out our picture of him—they reveal his thoughts and moods of the moment, the growth of his opinions, his changes of view; they show how constant and loyal and affectionate he was, how friendly with his friends, how full of fun and of interest in current life and thought, especially university matters, politics, and of course books, how vivid and active, how unselfish and generous in small things and in great. They bring home to us in unexpected ways how large-minded he was and how large-hearted; and they are so sympathetic and so responsive that they often seem to tell us as much about his correspondent as they do about himself. His was a soul touched with divine fire, and men felt in him a purity of heart which no evil could invade. Truth and right were to him the 'pearl of great price,' and he had the crowning happiness of a wife like-minded with himself.

LITERATURE.—The following is a list of Sidgwick's published books: *The Methods of Ethics*, London, 1874, 21s.7d., 21s.5s., 1890, 51s.93, 61s.91, 71s.97, 1914; Supplements to *The Methods*

of *Ethics*, to 1st ed., 1877, to 2nd ed., 1884; *The Principles of Political Economy*, do. 1883, 1887, 1901; *The Scope and Method of Economic Science* (presidential address delivered to the Economic Science and Statistics Section of the British Association at Aberdeen, and republished in *Miscellaneous Essays and Addresses*), do. 1885; *Outlines of the Hist. of Ethics for English Readers*, do. 1886, 1888, 1892, 1896, 1902, reprinted 1906, 1910, 1916; *The Elements of Politics*, do. 1891, 1897, 1903; *Practical Ethics: a Collection of Addresses and Essays*, do. 1893; *Philosophy, its Scope and Relations: an Introductory Course of Lectures*, ed. James Ward, do. 1902; *Lectures on the Ethics of T. H. Green*, Mr. Herbert Spencer and J. Martineau, ed. E. E. C. Jones, do. 1902; *The Development of European Polity*, ed. Eleanor Mildred Sidgwick, do. 1903, 1913; *Miscellaneous Essays and Addresses*, ed. Eleanor Mildred Sidgwick and Arthur Sidgwick, do. 1904; *Lectures on the Philosophy of Kant and other Philosophical Lectures and Essays*, ed. James Ward, do. 1905. (The last five books were published posthumously.) A list of articles, reviews, pamphlets, etc., is given in the *Memoir*, pp. 617-622.

The biography written by his brother and his wife, *Henry Sidgwick: a Memoir by A. S. and E. M. S.*, London, 1906, gives a detailed account of Sidgwick's life, consisting largely of extracts from his own letters. It does not include any description or evaluation of Sidgwick's ethical and other philosophical writings. At the end of the *Memoir* (p. 623) is a list of the biographical notices of Sidgwick which had appeared previous to 1906.

Objections to Sidgwick's utilitarianism (sometimes referred to by him as utilitarianism on an intuitional basis) have been summarized and replied to by E. E. C. Jones in art. 'Rational Hedonism,' in *J.E.v.* [1894-95] 79 ff., and 'Discussion on Same,' *ib.* pp. 218 ff., 376 ff., and art. 'Professor Sidgwick's Ethics,' in *Proc. of the Aristotelian Society*, new ser., iv. [1903-04] 32 ff.

E. E. CONSTANCE JONES.

SIDHE.—See FAIRY, CELTS.

SIEVE.—I. Sieves used in rain-making ceremonies.—Sieves, and especially winnowing-fans,¹ are frequently employed by primitive peoples for magico-religious purposes, such as rain-making.

Among the Ainus, e.g., when rain is urgently needed, the people are gathered together and the master of the ceremonies appoints certain men to head small companies to execute particular functions. It is the duty of one of these parties to take sieves and scatter water about with them,² just as Buddhist monks, during the ceremonies to promote the fertility of the earth, 'pour water into little holes in the floor of the pagoda as a symbol of the rain which they hope Buddha will send down on the rice-fields.'³ In comparatively recent times (1868) Russian peasants in the Tarashchansk districts are known to have dug up the corpse of a Rasolnik (Dissenter), and to have beaten it, exclaiming, 'Give us rain!', while others poured water on it through a sieve in imitation of a shower of rain.⁴ In times of drought in S. India the Kāpu women 'tie a frog alive to a new winnowing fan made of bamboo. On this fan they spread a few marigold leaves, and go singing from door to door, "Lady frog must have her bath. Oh! rain-god, give a little water for her at least." This means that the drought has reached such a stage that there is not even a drop of water for the frogs. When the Kāpu woman sings this song, the woman of the house brings a little water in a vessel, pours it over the frog which is left on the fan outside the house, and gives some alms. The woman of the house is satisfied that such an action will soon bring down rain in torrents.'⁵

2. Sieves used as cradles.—It was a regular custom among the Greeks and many other people to employ a winnowing-fan as a cradle for infants.⁶

In Java the midwife places the newly-born child in a bamboo basket like the sieve used for separating the rice from the chaff. As she does this, she knocks with the palms of both hands on the basket in order that the child may not be timid. Then she exhorts the child, saying, 'Cry not, for Njai-among and Kaki-among [two spirits] are watching over you.' Next she addresses the two spirits, saying, 'Bring not your grandchild to the road, lest he be trampled by a horse; bring him not to the bank of the river, lest he fall into the river.' The object of the ceremony is said to be that these two spirits should always guard the infant.⁷

Similarly in Laos, when a child has been born in a house, it is laid upon a rice-sieve and placed by the grandmother or other near female relative at the head of the staircase or ladder leading to the house. There the woman calls in a loud voice to the spirits to come and take the child away or for ever to let it alone, stamping on the ground violently to make it cry. The precaution, however, is taken of tying strings round its wrists

on the first night after birth, lest the spirits should take the invitation too literally. If the infant should fail to respond to the treatment, it is regarded as an evil omen. If, on the other hand, it behaves naturally and lifts up its voice, all will be well. 'On the day after its birth the child is regarded as being the property no longer of the spirits, who could have taken it if they had wanted it, but of the parents, who forthwith sell it to some relation for a nominal sum—an eighth or a quarter of a rupee perhaps. This, again, is a further guarantee against molestation by the spirits, who apparently are regarded as honest folk that would not stoop to take what has been bought and paid for.'¹

The same notion of rescuing a new-born infant from the power of evil spirits is seen in the Panjāb custom of putting a new baby into an old winnowing-basket (*chhaṭ*) with the sweepings of the house and dragging it out into the yard. After this has been done, the child will bear the name of 'Winnowing-basket' (Chhajju) or 'Dragged' (Ghasitā). The object of this procedure is probably to deceive the spirits by rendering the child unrecognizable. The same may perhaps be the intention of a ceremony employed among the Gaolis of the Deccan. As soon as a child is born, it is bathed and then laid on a sieve for a few minutes. On the fifth day the sieve, with a line and *pan*-leaves on it, is taken outside the house and, after the worship of Chetti has been performed, is thrown away.²

In Upper Egypt a newly-born child is merely dried, not washed, and immediately laid upon a corn-sieve; beside its head the knife with which the umbilical cord has been cut is laid, and corn is scattered round about. This is intended to drive away the *kasina*, the child's evil brother or sister from the spirit-world. On the morning of the seventh day the child is again placed on a sieve, tapers are fixed on metal plates and on the point of a sword, and the child is carried in procession through the whole house, while the midwife scatters wheat, barley, peas, and salt for the wicked spirits. The child is then shaken on the sieve, in order that it may lose fear for the rest of its life.³

Children born in an unlucky month (Faosa) among the Tanala people of Madagascar are either buried alive in the forest or placed in a winnowing-fan along with certain herbs and washed in water medicated with some of the same herbs. The ceremony is thought to avert the threatened ill-luck. Similarly the Chinese of Foo-Chow set a lad suffering from smallpox in a large winnowing-fan, placing a piece of red cloth on his head and on the cloth some parched beans. The beans (whose name in the local dialect is identical with the name for smallpox) are allowed to roll off to represent the passing away of all traces of the disease from the boy's body.⁴

3. Sieves used in marriage-rites.⁵—Among the Naoda, a caste of ferrymen in the Central Provinces of India, a winnowing-fan together with certain other articles is passed by the mother in front of the bridegroom to keep off evil spirits and scatter them to the winds like chaff. The Rajjhars in the same district exorcise the bridal pair by touching the head, breast, and knees of the bridegroom with a winnowing-fan, a pestle, and a churning-stick.⁶

4. Divination by sieves.—There was an early form of divination known as cōscinomancy (*κόσκινορ*, 'sieve'; *μαύρελα*, 'divination'), or, as it is described in *Hudibras*, 'the oracle of sieve and shears, that turns as certain as the spheres.' A sieve was suspended, held by a thread or by the points of a pair of shears stuck into its rim; the movement, turning, or fall of the sieve at the naming of the person suspected of a crime, coupled with the repetition of an incantation or other magic formula, decided the guilt or innocence of the person.

In the Highlands of Scotland, on Hallowe'en, the young people until recently assembled in one of their houses for the express purpose of ascertaining future events by divination. In the Lowlands also similar customs prevailed at this season. In order to cause the apparition of a future husband or wife, it was necessary to visit a barn alone and secretly, taking care to open both doors or, better still, take them off their hinges, to guard against complications that might arise on the arrival of the stranger. Having done this, the diviner takes a sieve (*reecht* or *waicht*) and goes through the action of winnowing corn. After this has been done three times, the 'future husband or wife will pass through the barn, entering at the windy door and passing out at the other.'⁷

5. Conclusion.—From the foregoing examples it would seem that the sieve or winnowing-fan

his grandson, Har Rai, his son, Gurditta, having entered the Udāsi order and thus being disqualified to succeed to a secular office. He too entered into relations with a rebellious scion of the Mughal dynasty, Dārā Shikoh, and on his defeat he sent his son, Rām Rai, to Delhi to negotiate a pardon. The lad was still a hostage in the hands of Aurangzib when his father died, and either on that account or because he had in fear of ill-usage misquoted a verse of the *Granth* he was disqualified by his father, who designated his second son, Har Kishn, as his successor. This son too was summoned to Delhi, where he died after vaguely appointing as his successor one 'at Bakāla,' a village on the Bīas river.

No fewer than 22 Khatriś of the Sodhī sept claimed the *gurus*hip, but it was awarded to Tegh Bahādūr, the only Sodhī who divined that a devout follower had not fulfilled a vow made in distress. He was duly installed, but, saying that he was unworthy to wear his father's sword, he proclaimed his ambition to be styled Degh Bahādūr, or 'lord of the vessel,' the *deg*h which symbolizes the world. His accession led to many dissensions. Rām Rai had founded a sect of his own, which still endures in the Dehra Dūn. Dhir Mal, probably an older brother of Guru Har Rai, who had refused to acknowledge his accession, had possession of the *Granth* and supported Rām Rai's pretensions to the *gurus*hip. This opposition from his own kin compelled Tegh Bahādūr to seek a refuge in the Jaswān Dūn beyond the Siwālīk hills, and there in 1665 he founded Anandpur. Nevertheless he was able to make progresses through the Mālwa of the southern Panjāb, the Kurukshetra, eastern and lower India, while his influence extended even to Ceylon. But the intolerance of Aurangzib led to his seizure and execution at Delhi in 1675.¹

We now come to the 10th and last *guru*, Govind Singh, founder of the militant Sikh theocracy. Born at Patna in 1666, and installed at Anandpur in 1676, he made momentous changes in Sikh ritual and polity. His policy was to raise the Sikhs to one and the same high caste, the Khālśa. To this end he chose five faithful followers, whom he initiated with the *khanda pahul*, 'whetting by the two-edged dagger.' These five in turn initiated the *guru* himself, and he thus placed initiators and candidate on the same level.

In this rite the candidate bathes and dons clean clothes. He is seated in an assembly generally convened for the purpose, and a Sikh who is regular in his observance of Sikh rules of conduct stirs with a dagger some sugar in water in an iron basin, while chanting verses from the *Granth*. This solution is called *amrit* (whence the rite is sometimes called *amrit chhukna*, 'to be filled with nectar') and is sprinkled on the candidate's hair and body. He is also given some of it to drink and is made to repeat certain vows which constitute the *rahat*, or Sikh rules of conduct. The *amrit* is believed to confer immortality and to make the initiate a son of Govind Singh and a Singh ('lion') or true Kṣatriya. He also becomes a son of Mātā Sāhib Devī, the childless wife of that *guru* who was promised the motherhood of the whole Khālśa. The *pahul*, erroneously derived by J. D. Cunningham² from the Greek *πύλη*, 'gate,' is generally regarded as a baptismal rite, but the bathing is merely to obtain ceremonial purity. The use of the dagger is doubtless intended to communicate soldierly qualities to the initiate. The Baloch have at birth a very similar practice. The *amrit* confers immunity in battle. The *charn pahul* (see below) conveys the sanctity of the *guru* to his disciple.

¹ Recent research has shown that the network of Sikh organization had been spread by Tegh Bahādūr's predecessors as far east as Patna and even Dacca, which became a *kūzūr sangat*, or provincial *sangat*, at first under the pontifical throne at Anandpur and later under the *takht*, or archiepiscopal throne, at Patna. When Tegh Bahādūr visited Dacca in 1666, he found prosperous *sangats* at Sylhet, Chittagong, Sandip, Lashkar, and elsewhere, and by the time of Guru Govind Singh Dacca had earned the title of 'the home of Sikhism.' The *takhts* were four, viz. Anandpur, Amritsar, Patna, and Nander (in the Nizām's Dominions, Deccan (Gurbakhsh Singh, *Sikh Relics from Eastern Bengal*, Dacca, 1915, p. 225f., 1916, p. 376ff.)).

² *Hist. of the Sikhs*, p. 74 n.

The *guru* assumed the suffix of Singh instead of his Hindu affix, Rai, at initiation, and all initiates take that suffix. His five initiators were a Khatri and four men of castes generally regarded as Sūdras who had offered their heads in his service. Various versions of this choice of the *pañj piāras*, 'the five beloved ones,' of the *guru* are current. That of the *Panth Prakāsh* relates that the *guru* called for Sikhs willing to offer their heads for his sword, the goddess, and five came forward. The *guru* took them one by one into his tent, and, emerging with his sword dripping with the blood of a goat, tested their devotion by pretending that he had killed each in turn.¹ But the Sikhs who seek to retain the cult of Devi and to reconcile it with the *gurus*' monotheism say that one of the five was actually sacrificed to the goddess at Naina Devi, and this is the version current in the Simla hills, where Sikhism never found a footing.² In requital the Devi promised him the success of his sect. Guru Govind Singh was a man of considerable learning. A Gurmukhi, Sanskrit, and Persian scholar, he deputed five Sikhs to learn Sanskrit at Benares, and had many important Sanskrit and Persian works translated into the *bhāṣa*, or vulgar tongue. In accord with his democratic policy, he abolished the system of collecting tithes through *masands* (collectors), which Guru Arjan had organized, and the system was maintained only by some dissident Sikh sects. He was, moreover, a military leader of parts. His refusal to pay tribute in any form to the *rājā* of Bilāspur, from which state Tegh Bahādūr had purchased the site of Anandpur, led to his first battle. He defeated the *rājā* in 1682, but his victory cost him the hostility of many of the hill states in the mountainous country which forms the north-east corner of the Panjāb. Among them he found some allies, but his teaching made no headway among the ancient Hindu polities of those states, and his only effective ally was the *rājā* of Sirmūr, a state lying west of the upper Jamna, who allowed him to found Paonta in the Kiārda Dūn of that state in 1684. Had Sikhism succeeded in winning over the hill people, its history might have been different, but the influence of their Rājput overlords and Brāhmanical priests was too firmly planted to allow a democratic theocracy to make converts among them. Guru Govind Singh sought support in other directions. He enlisted 500 Muslim Pathāns, but they failed him at a crisis, as did the Udāsis whom he had fostered. His military position was weak. It lay in the *dūns*, or valleys, of the outer Himālayas; behind him were the hill *rājās*, jealous of one another, but still more jealous of a plainsman preaching a new creed. On his widely extended front he was opposed to the decadent but still organized and powerful authority of the Mughals. He was not without supporters among the Muhammadans of the plains, notably the *pir* of Sādhaura and other spiritual notables. But the Mughals, by a well-conceived campaign in conjunction with the hill *rājās*, drove the *guru* out of Anandpur, and in the flight of the Sikhs his children were captured. They were buried alive at Sirhind, and their martyrdom made that thriving city for ever accursed in the eyes of the Sikhs. The *guru* himself escaped to the south of the Sutlej and, on Aurangzib's death, threw in his lot with Bahādūr Shāh, whom he helped to defeat Prince 'Azim. This ensured him tolerance, if not favour, but in 1708 he was treacherously stabbed by a Pathān who had been reared in his family, and he died soon afterwards.

Before his death a new and devastating force had arisen in 'Banda, the Bairāgi.' Born at Rājauri, the capital of an ancient principality in the Jammū hills, Lachlman, as he was first named, became a Bairāgi and then a Yogi with the style of Madho Dās, and in the latter character he acquired skill in the occult sciences. Meeting Guru Govind Singh on the Godāvāri in S. India, he became his slave (*banda*), but not his disciple, with the title of Banda Bahādur, 'the lord slave.' On him the *guru* bestowed his own sword, bidding him observe strict continence and truthfulness and avoid schism, the use of a cushion in the Sikh temple, and the title of *guru*, but enjoining on him brotherly love and peace with the Singhs. These behests Banda did not obey. He married, and started a sect of his own, the Bandāi Singhs; he substituted for the *khanda pahul* the *cham pahul*, in which the initiate drinks water used in washing his *guru's* feet; and for the war-cry of the true Singh, '*Fatih wāhe-guru ji kī*,'¹ he enjoined the cry, '*Fatih daras* (or *darshan*) *fatih dharma*,' 'Victory to religion and the faith!' He donned royal dress and lorded it over the Sikhs, instead of regarding himself as merely an equal and a brother. He also ceased to enforce the Singh rule against cutting the hair, and exhorted the Sikhs to abstain from flesh, though Govind Singh had encouraged its use for military reasons. But this does not complete the tale of Banda's backslidings. The Sikh *gurus* had been installed by a special rite, in which five pice and a coco-nut were placed before the *guru*-designate, while his predecessor and appointer circum-ambulated him four times. By this rite the spiritual light of Guru Nānak had been transmitted to his successors, and on the forehead of each in turn the *tilak* (coronation mark) was made by a member of a family of cultivators in which the office was hereditary.² Guru Govind Singh had installed the sacred *Granth* itself as his sole successor, but Banda claimed to be the eleventh *guru*. This and his other heresies in the end alienated the true Singhs, and, though in his earlier years as a soldier-saint Banda had won notable successes against the Mughal government, even taking Sirhind and sacking it with merciless slaughter of the Muslims, his career ended in defeat and failure. At its zenith in 1714 he had convened a royal *darbār* at Amritsar and assumed kingly robes with an aigrette in his turban, and the country from Lahore to the banks of the Jamna had passed into the possession of the Singhs. Banda had also succeeded in extorting some kind of allegiance from the hill *rājās*, and indeed he found in the hills a refuge in time of stress and a retreat for religious meditation, to which he seems to have abandoned himself at critical moments when he might have followed up a success or organized territory already won. But his character lacked consistency. While, on the one hand, he chastised the heretic Rām Rāias, on the other, he dealt mercilessly with Muhammadan towns whose inhabitants had befriended Guru Govind Singh. The true Singhs, the Tat Khālsa, the elect of the elect, separated themselves from Banda, who left them Amritsar and retired to Gurdaspur, nearer the hills, where his strength lay. Thence he carried on a predatory warfare until the Tat Khālsa reluctantly appeared in arms with the Muhammadans against him. This en-

sured his downfall, and in 1716 he was probably captured and put to death at Delhi. Tradition says that he was executed with every circumstance of cruelty, but it also avers that by a mental process he triumphed over his physical sufferings, resuscitated himself, and retired to the banks of the Chenab in his native state of Jammū. There his tomb is still held by his descendants, and his followers are still to be found in the Panjāb under the name of the Banda-panthis.

Banda's death left the Singhs without a secular leader, and, though most of the Bandāis rejoined the true Khālsa, they had no definite policy. Their forays provoked reprisals, and a price was offered for every Sikh head. Farrukhsīar attempted to conciliate them and assigned tracts of territory to some at any rate of their leaders. One of them, Kapūr Singh, accepted (contemptuously, some say) the Muhammadan title *nawāb*, and he with many of the other leaders formed what was known as 'the veteran army' (*budhā dal*), while the younger (*tarū dal*) organized itself into five companies, the Shahīds (*q.v.*), Amritsarias, Dallewālīās, Rāmdāsīās, and another. The *budhā dal* clung to Amritsar, and many of both *dals* settled down to cultivation, but the younger generation found itself pressed for subsistence, and sought an outlet in Rājputāna. The Muslim governors seized the occasion to harass the veterans, and in revenge the two *dals* recombined and ravaged the whole of the northern Panjāb. Upon the distracted province fell Nādir Shāh's invasion of 1738-39. The Sikhs did not respond to the Mughal governor's request for aid to oppose him, but they harassed him on his retreat and refused to surrender their booty. This led to fresh persecution, and Ahmad Shāh's inroads found the province still more rent by internecine strife than those of his predecessor. Finally the Mughal governor, Adina Beg, sought Sikh aid and with it recovered a fraction of the province, but, distrusting his allies, he called in the Marāthās, who overran it, driving the Durrānis across the Indus, in 1757. On Adina Beg's death, in the following year, the Sikhs killed his principal minister and made themselves independent in the central and north-eastern Panjāb.

By this time their old division into two armies had disappeared, and of the five companies only one, the Shahīds, remained, twelve new *misls* (confederacies) having taken the place of the five companies. Of these twelve, however, four are more correctly to be described as *dehras* (militant orders), like the Shahīds, who formed the oldest and at one time the most important *dehra*. No attempt had been made to revive the *gurus*hip, but Nawāb Kapūr Singh, who was childless, bequeathed his honours and the leadership of the Khālsa to Jassa Singh, Ahlūwālīā, saying that he was destined to be a *bādshāh*, 'king,' a title subsequently accorded him by his own followers. Yet, although he had been treated by Mātā Sundri, a widow of Guru Govind Singh, as her own son, he did not aspire to any authority over the Khālsa and was content to be elected head of the Ahlūwālīā *misal*, although he struck coin in the old Mughal mint at Lahore with the inscription in Persian: 'Struck in the world by grace of the Everlasting: Jassa, the Kalāl,' seized Ahmad's country.' Initiation by him was highly prized, and Rājā Anr Singh of Patiala was one of his initiates. Alā Singh of Patiala consented to take the province of Sirhind on lease from Ahmad Shāh in 1767, with the title of Rājā-i-rājagūn Mahindar Bahādur, the Muhammadan chiefs of Māler Kotla and Raikot fearing the Sikhs too much to undertake its charge. This paved the way for the

¹ The form usually given is '*Wāh Gurū ji kī Khālsa, Wāh Gurū ji kī fatih*' (Narang, p. 120; but cf. Khazān Singh, *Philosophic Hist. of the Sikh Religion*, p. 219).

² Its founder, Bhūi Budhiā, was so named by Guru Nānak when he expressed fear of an early death. Owing to the *guru's* prophecy or gift of long life, he survived to install the first five successors of Guru Nānak. The 'light' of the *gurus* is sometimes called *baryat*, a term borrowed from Islām.

³ Kalāl = Ahlūwālīā; see below.

organization of the Sikh territories south of the Sutlej into Sikh kingships, the principal being the Phūlkīān states (Patiāla, Nābha, and Jind), Faridkot, Kalsia, and the now extinct chiefship of the Bhāis of Kaithal. But Muhammadan states like Māler Kotla, Raikot, and many religious institutions whose incumbents had befriended the Sikhs from time to time, were tolerated and protected.

Meanwhile to the north of the Sutlej the introduction of a monarchical system (for which Kapūr Singh and Jassa Singh had paved the way) and the authority of the *Granth* materialized, as it were, in a *gurumatā*, or cabinet. This institution is by some ascribed to Guru Govind Singh, who had declared that wherever five orthodox Sikhs were assembled the *guru* must be deemed present. But probably the first *gurumatā* as a council of state was held at Amritsar in 1762. It was convened by the *granthis*, or exponents of the *Granth*, or, according to others, by the Akālīs (q.v.). Its precise functions were ill-defined, but it certainly exercised some judicial powers. In 1765 a national council held at Amritsar proclaimed the Khālśa the supreme religion and minted coins with the Persian legend: *Deh wa Tegh wa Fatih nusrat bedrang—Yāft az Nānak Guru Govind Singh*, 'Guru Govind Singh received from Nānak the *deh*, the sword and unfailing victory.' Thus the Sikhs marked their rule as a theocracy, democratic in principle and owning no allegiance to an earthly king. The failure of Ahmad Shāh's last invasion in 1767 left them masters of the Panjāb from the Jamna to the Indus.

With these events the religious development of Sikhism may be said to have closed. The next phase in its political history is the transformation of the *misl*s into hereditary chiefships or clans. The ruling family of the Kapūrthala state is descended from Jassa Singh, 'Bādshāh'; that of Kalsia from the elected chief of the Karori-Singhi, or Panjgarhia, *misl*; and those of the Phūlkīān states and other fiefs from Phūl, the founder of the *dehra* of that name. The Rāmgarhia *misl* founded by another Jassa Singh, who was a carpenter by caste, gives its name to the Sikh carpenter caste generally, just as all Sikh Nebhs or Kalālśas aspire to be called Ahlūwālīās. The founders of the Nishānānwālī *misl* were the standard-bearers of the Khālśa, but its chiefship soon became hereditary and Ranjit Singh extinguished it in 1808. The Dallewālīā *misl* was founded by a Khatri surnamed Rāthor on account of his valour, and from his village it took its name, but a Jāt was elected its chief, his descendants divided its territories, and their disunion enabled Ranjit Singh to annex nearly all its possessions.

The secularization of the possessions of the Khālśa and the inveterate tendency of the leaders of *misl*s to treat their territories as private estates paved the way for the rise of Mahārāja Ranjit Singh, chief by inheritance of the Sukarchakīā *misl*. Its territories, which were considerable, lay in the north of the province, but of his fellow-chiefs several were more powerful, and it was only by the exercise of great natural abilities, astuteness, and good fortune that he was able to weld the Sikh states north of the Sutlej into a kingdom. He extended its power to the Afghān frontier beyond Peshāwār, conquered Kashmir, and effectively reduced the hill states to submission. He also extended his power over the south-west Panjāb, but south of the Sutlej a British protectorate of the cis-Sutlej states barred his ambitions. Autocratic though his power was in reality, he continued to mint coins bearing the Khālśa legend, and, while he appointed Muhammadan *qāzis* and *muftis*, he upheld Sikhism as the State religion.

2. Theology and ritual.—The distinctive tenet of Sikhism is monotheism, and, though the existence of the countless gods and goddesses of the Hindu pantheon is not denied, their worship is not inculcated and may be said to be implicitly condemned. The *Granth* repeatedly condemns idolatry. Nevertheless the masses worship the *Granth* itself in almost the same way as Hindus worship images. It is, however, difficult in India to draw the line between worship and reverence. Sikh theology is somewhat nebulous. Guru Nānak's idea of God is pantheistic rather than theistic, but he displayed an utter disregard of form and formal theology. He respected every religion so far as its real essence was concerned, but despised mechanical worship in any aspect. Guru Govind Singh made Sikhism more formal. He forbade smoking and cutting of the hair at any period of life. As a uniform he prescribed the wearing of the five *k's*, viz. the *kes* (long hair), the *kachh* (short drawers ending above the knee), the *kara* (iron bangle), the *kripān* (sword),¹ and the *kangha* (comb).

The Sikh retains the Hindu reverence for the cow, but is generally a meat-eater and disregards most of the Hindu ceremonial in the preparation of food. A merciful regard for animal suffering, however, makes him eschew all flesh not killed by a single stroke of the sword or jerk of the neck.² Female infanticide was sternly prohibited by the *gurus*, and Sikh women are permitted to acquire education, especially in the semi-sacred Gurmukhi script. At weddings the Hindu ritual is discarded, no Brāhman need be employed, and Vedic texts are dispensed with. The worship of Ganesh and the planets is not allowed, and in recent years an agitation for an independent marriage ritual led to the passing of the Anand³ Marriage Act (Act I of 1909). In this rite the *Ādi Granth* is circumambulated in lieu of fire, and texts from it are recited to sanctify the union as emblematical of that between the soul and the Supreme. Metempsychosis is a cardinal tenet in Sikhism, and each successive *guru* was Nānak; indeed Guru Hargovind so signed himself. Where Sikhism has failed as a social force is in the abolition of the caste system. Nānak did not attempt its condemnation. He observed its rules and was content to preach that God cared not for a man's caste but for his deeds. Guru Govind Singh abolished it in theory, but in practice Sikhism fully recognizes caste distinctions, though at initiation, and in theory after it, all Singhs may be equal.

3. Sects and orders.—Sikhism is rent by schisms so that it is difficult to enumerate all its sects and movements. Two great groups may be distinguished: the Nānakpanthis,⁴ or Sikhs of Nānak, are merely Hindus who follow Nānak's teaching; the Sikhs of Guru Govind Singh are the Singhs, the Khālśa or Tat (wā) Khālśa.⁵ With the Nānakpanthis may be roughly equated the Sahijdhāri,⁶ 'easy-going' Sikhs; and with the Khālśa the Kesdhāri Sikhs, i.e. those who wear the long hair (*kes*). These two groups are tending to separate, though a Kesdhāri will still take a Sahijdhāri girl to wife. The Rām Rāiās⁷ have not much following in the Panjāb. The Hindālīs,⁸ once influential,

¹ Some authorities give the *khanda* (steel knife), but this is an error, due to the use of the *khanda* in the *pahul* rite.

² *Jhatka*, a sudden shake, a jerk; cf. *jhat*, a moment, snatch or sudden attack.

³ *Anand* means 'joy,' and is the equivalent of the Urdu *shādī*. Used at first by the lower classes in widow re-marriage and similar non-ritual unions, the tendency is now to bring it into vogue among the higher classes.

⁴ H. A. Rose, *Glossary of Panjab Tribes and Castes*, Lahore 1914, iii. 1521. They are to be distinguished from the Nānak putras and the Nānakshāhis (ib. p. 155).

⁵ Ib. p. 460.

⁷ Ib. p. 307.

⁶ Ib. iii. 243.

⁸ Ib. ib. 325

lost ground by throwing in their lot with Ahmad Shāh Abdālī, and they are now called Nārinjani, or 'worshippers of the Bright One (God).' The Nirankārīs, a modern sect, revived Nānak's teaching, though they respect the later *gurus* also. The Gangūshāhīs,² who refused initiation from Guru Govind Singh, the Minās,³ or 'deceitful' followers of Prithi Chand, and the Dhirmālīs,⁴ founded by Dhir Mal, elder brother of Guru Har Rāi, are all schismatical sects. The Sanwal-Shāhīs⁵ are followers of a disciple of Guru Nānak, and are found chiefly in the south-west Panjāb; the Sewapanthis⁶ are confined to the Sindhi Sāgar Doāb. The Kūkas⁷ are an extremist sect whose tenets are kept secret, but they disclaim female infanticide. Orders rather than sects are the Diwāna Sādhs,⁸ or 'ecstatic saints,' the Nirmalās and Udāsīs (*q.v.*). The term 'Rāmdāsī'⁹ has various meanings, but it is usually applied to a weaver or tanner who has been converted to Sikhism. Mazhabī¹⁰ is similarly applied to a converted sweeper.

4. Present conditions.—The Sikhs have now a central association, called the Chief Khālśa Diwān, with its headquarters at Amritsar and local societies (Singh Sabhas) all over the Panjāb and at some places beyond it. They have also at Amritsar the Khālśa College, and at Tarn Tāran and Gujranwāla two theological seminaries receive grants from the Diwān. They possess 33 girls' schools, a newspaper (the *Khālśa Advocate*), orphanages, a tract society, and a Khālśa Young Men's Association, besides a Sikh Bank. Attempts are also made to help the depressed classes.¹¹

LITERATURE.—See the works referred to in the text and especially Khazān Singh, *Philosophic Hist. of the Sikh Religion*, 2 vols., Lahore, 1914; M. A. Macauliffe, *The Sikh Religion*, 6 vols., Oxford, 1909; J. D. H. A. ROSE.

SIKKIM.—Sikkim is a small country lying between Nepāl and Bhutān and between Tibet and India, and consists of the larger part of the mountain valley of the Tista river. It is a land of steep and lofty ridges and peaks and of deeply cut valleys. The area is only 2818 sq. miles, and, while its lowest elevation, at the junction of the Tista and the Rangit, is about 700 ft., its highest, the top of Kinchinjunga, is 28,146 ft. This range of elevation implies an immense variety of vegetable life and also of insect and bird life. Other animal life is rather restricted in both individuals and species, most probably by the influence of the hordes of leeches which infest the jungles and roads in the rainy season. The rainfall is abundant, and the forests are thick, but from 2000 to 5000 ft. these have been to a great extent cleared to make way for cultivation. Apart from agriculture there are no industries, though an attempt is now being made to develop the mineral resources (mostly copper) of the country.

The population at the 1911 census numbered 87,920. It also is varied, but consists principally of immigrants from Nepāl. There are 20 Nepālese castes (many of which are really tribes) represented. Besides these there are Tibetan and Bhutānese tribes, and Lepchās, the so-called aborigines of Sikkim. Nepālīs, Tibetans, and Bhutānese are described elsewhere.¹² It need only be said here that the Nepālīs profess Hinduism of the type found in Nepāl. They are recent immigrants and

have not had time to develop any peculiar features or to build any but insignificant shrines. The Bhutānese, migrant herdsmen, are very few. The Tibetans came into the country in the 17th cent. and usurped the government. They have now much Lepchā blood in them, which, however, has not sufficed to improve them. They brought Lāmaism (*q.v.*) with them, with Lāmaistic literature, and introduced the elements of civilization. It has been said that it was a tribe of robbers that entered Sikkim as the first colonists, and it is easy to believe this. They are a dishonest race in speech and act, given to bullying and violence, but thorough cowards, filthy in their persons, habits, and conversation, and generally tainted with venereal disease. Both polygamy and polyandry are common among them. Needless to add, they are priest-ridden to a degree, and their priests are, with some exceptions, exemplars to the flock in all their vices. There are over 40 monasteries and nunneries.

The origin of the Lepchās (in their own speech Rong, 'valley men') is not known with certainty. They are thought to have come from somewhere on the borders of Tibet and Burma. According to their own traditions, they came to Sikkim from the east in company with the Jimdars (who went on to Nepāl and who share this tradition) and the Mech (who settled in the plains at the foot of the hills). The Lepchās settled in Sikkim, which they called Ne-lyang (= 'cave country'), and lived a primitive life in its deep forests, keeping no cattle and cultivating very little, but living mainly on forest produce. They claim yet to be able to live wherever the monkey lives. The Lepchā is gentle, inoffensive, and timid, fond of solitude, with no peculiar arts or industries; indeed he is not at all fond of work. His speech is Mongolian and monosyllabic, though during years of Tibetan dominance many Tibetan words have been introduced. His faith and his folklore are, like his speech, certainly Mongolian, and now more or less Tibetan. Lāmaistic Buddhism of the unreformed Nying-ma-pa is generally attributed to him, but it is its animistic, not its Buddhist, elements that appeal to him. There is still extant a tradition of a former religion in which the Lepchās believed in a good spirit, but preferred, for prudential reasons, to worship bad ones. One may also hear sometimes of Lepchā scriptures, written by a king of Rokangkorung, in which the king appears as a kind of Lepchā prophet. But, as the Lepchā alphabet is the Tibetan one slightly modified by an early Tibetan king of Sikkim, this tradition is of doubtful value.

It is very difficult to say how much of the folklore is originally Lepchā and how much is Tibetan. Many of the stories of jackals and tigers are common to the two peoples. It is interesting to note that there was a tribe of very foolish Lepchās like our wise men of Gotham. But the inquirer is sure to be informed that these 'great fools' are extinct. One of their achievements was to build a tower meant to reach the sky. When it was very high, the builders on the top called down for more stones and those below thought they were being told to cut away the foundations. They did so, and the tower fell and killed half the tribe. The site and ruins are still shown. There is also a flood tradition, in which a Lepchā family is saved by the mountain Tendong ('the uplifted horn') elevating its summit, on which they were perched, above the rising waters. As the flood passed away, the uplifted horn again contracted.

organization of the Sikh territories south of the Sutlej into Sikh kingships, the principal being the Phūlkīān states (Patīāla, Nābha, and Jind), Farīdkot, Kalsia, and the now extinct chiefship of the Bhāis of Kaithal. But Muhammadan states like Māler Kotla, Raikot, and many religious institutions whose incumbents had befriended the Sikhs from time to time, were tolerated and protected.

Meanwhile to the north of the Sutlej the introduction of a monarchical system (for which Kapūr Singh and Jassa Singh had paved the way) and the authority of the *Granth* materialized, as it were, in a *gurmattā*, or cabinet. This institution is by some ascribed to Guru Govind Singh, who had declared that wherever five orthodox Sikhs were assembled the *guru* must be deemed present. But probably the first *gurmattā* as a council of state was held at Amritsar in 1762. It was convened by the *granthis*, or exponents of the *Granth*, or, according to others, by the Akālīs (q.v.). Its precise functions were ill-defined, but it certainly exercised some judicial powers. In 1765 a national council held at Amritsar proclaimed the Khālśa the supreme religion and minted coins with the Persian legend: *Deh wa Tegh wa Fatih nusrat bedrang—Yāft az Nānak Guru Govind Singh*, 'Guru Govind Singh received from Nānak the *deh*, the sword and unfailing victory.' Thus the Sikhs marked their rule as a theocracy, democratic in principle and owing no allegiance to an earthly king. The failure of Ahmad Shāh's last invasion in 1767 left them masters of the Panjāb from the Jamna to the Indus.

With these events the religious development of Sikhism may be said to have closed. The next phase in its political history is the transformation of the *misl*s into hereditary chiefships or clans. The ruling family of the Kapūrthala state is descended from Jassa Singh, 'Bādshāh'; that of Kalsia from the elected chief of the Karori-Singhi, or Panjgarhia, *misl*; and those of the Phūlkīān states and other fiefs from Phūl, the founder of the *dehra* of that name. The Rāmgarhia *misl* founded by another Jassa Singh, who was a carpenter by caste, gives its name to the Sikh carpenter caste generally, just as all Sikh Nebs or Kalālīs aspire to be called Ahluwālīs. The founders of the Nishānānwālī *misl* were the standard-bearers of the Khālśa, but its chiefship soon became hereditary and Ranjit Singh extinguished it in 1808. The Dallewālī *misl* was founded by a Khatri surnamed Rāthor on account of his valour, and from his village it took its name, but a Jāt was elected its chief, his descendants divided its territories, and their disunion enabled Ranjit Singh to annex nearly all its possessions.

The secularization of the possessions of the Khālśa and the inveterate tendency of the leaders of *misl*s to treat their territories as private estates paved the way for the rise of Maharāja Ranjit Singh, chief by inheritance of the Sukarchakīā *misl*. Its territories, which were considerable, lay in the north of the province, but of his fellow-chiefs several were more powerful, and it was only by the exercise of great natural abilities, astuteness, and good fortune that he was able to weld the Sikh states north of the Sutlej into a kingdom. He extended its power to the Afghan frontier beyond Peshāwār, conquered Kashmir, and effectively reduced the hill states to submission. He also extended his power over the south-west Panjāb, but south of the Sutlej a British protectorate of the cis-Sutlej states barred his ambitions. Autocratic though his power was in reality, he continued to mint coins bearing the Khālśa legend, and, while he appointed Muhammadan *qāzis* and *muftis*, he upheld Sikhism as the State religion.

2. Theology and ritual.—The distinctive tenet of Sikhism is monotheism, and, though the existence of the countless gods and goddesses of the Hindu pantheon is not denied, their worship is not inculcated and may be said to be implicitly condemned. The *Granth* repeatedly condemns idolatry. Nevertheless the masses worship the *Granth* itself in almost the same way as Hindus worship images. It is, however, difficult in India to draw the line between worship and reverence. Sikh theology is somewhat nebulous. Guru Nānak's idea of God is pantheistic rather than theistic, but he displayed an utter disregard of form and formal theology. He respected every religion so far as its real essence was concerned, but despised mechanical worship in any aspect. Guru Govind Singh made Sikhism more formal. He forbade smoking and cutting of the hair at any period of life. As a uniform he prescribed the wearing of the five *k's*, viz. the *kes* (long hair), the *kachh* (short drawers ending above the knee), the *kara* (iron bangle), the *kripān* (sword),¹ and the *kangha* (comb).

The Sikh retains the Hindu reverence for the cow, but is generally a meat-eater and disregards most of the Hindu ceremonial in the preparation of food. A merciful regard for animal suffering, however, makes him eschew all flesh not killed by a single stroke of the sword or jerk of the neck.² Female infanticide was sternly prohibited by the *gurus*, and Sikh women are permitted to acquire education, especially in the semi-sacred Gurmukhī script. At weddings the Hindu ritual is discarded, no Brāhman need be employed, and Vedic texts are dispensed with. The worship of Ganesh and the planets is not allowed, and in recent years an agitation for an independent marriage ritual led to the passing of the Anand³ Marriage Act (Act I of 1909). In this rite the *Adi Granth* is circumambulated in lieu of fire, and texts from it are recited to sanctify the union as emblematical of that between the soul and the Supreme. Metempsychosis is a cardinal tenet in Sikhism, and each successive *guru* was Nānak; indeed Guru Hargovind so signed himself. Where Sikhism has failed as a social force is in the abolition of the caste system. Nānak did not attempt its condemnation. He observed its rules and was content to preach that God cared not for a man's caste but for his deeds. Guru Govind Singh abolished it in theory, but in practice Sikhism fully recognizes caste distinctions, though at initiation, and in theory after it, all Sikhs may be equal.

3. Sects and orders.—Sikhism is rent by schisms so that it is difficult to enumerate all its sects and movements. Two great groups may be distinguished: the Nānakpanthis,⁴ or Sikhs of Nānak, are merely Hindus who follow Nānak's teaching; the Sikhs of Guru Govind Singh are the Singhs, the Khālśa or Tat (wā) Khālśa.⁵ With the Nānakpanthis may be roughly equated the Sahijdhāri,⁶ 'easy-going' Sikhs; and with the Khālśa the Kesdhāri Sikhs, i.e. those who wear the long hair (*kes*). These two groups are tending to separate, though a Kesdhāri will still take a Sahijdhāri girl to wife. The Rām Rāiās⁷ have not much following in the Panjāb. The Hindālīs,⁸ once influential,

¹ Some authorities give the *khanda* (steel knife), but this is an error, due to the use of the *khanda* in the *pahul* rite.

² *Jhatka*, a sudden shake, a jerk; cf. *jhat*, a moment, snatch, or sudden attack.

³ *Anand* means 'joy,' and is the equivalent of the Urdu *shādī*. Used at first by the lower classes in widow re-marriage and similar non-ritual unions, the tendency is now to bring it into vogue among the higher classes.

⁴ H. A. Rose, *Glossary of Panjab Tribes and Castes*, Lahore 1914, iii. 152 f. They are to be distinguished from the Nānak putras and the Nānakshāhis (ib. p. 155).

⁷ *ib.* p. 307.

⁶ *ib.* iii. 343.

⁸ *ib.* ii. 325

lost ground by throwing in their lot with Ahmad Shāh Abdālī, and they are now called Narinjani, or 'worshippers of the Bright One (God).' The Nirankāris,¹ a modern sect, revived Nānak's teaching, though they respect the later *gurus* also. The Gangūshāhis,² who refused initiation from Guru Govind Singh, the Minās,³ or 'deceitful' followers of Prithi Chand, and the Dhirmalās,⁴ founded by Dhir Mal, elder brother of Guru Har Rāi, are all schismatical sects. The Sanwal-Shāhis⁵ are followers of a disciple of Guru Nānak, and are found chiefly in the south-west Panjāb; the Sewapanthis⁶ are confined to the Sindh Sāgar Doāb. The Kūkas⁷ are an extremist sect whose tenets are kept secret, but they disclaim female infanticide. Orders rather than sects are the Dīwāna Sādhs,⁸ or 'ecstatic saints,' the Nirmalās and Udāsīs (*q.v.*). The term 'Rāmdāsī'⁹ has various meanings, but it is usually applied to a weaver or tanner who has been converted to Sikhism. Mazhabī¹⁰ is similarly applied to a converted sweeper.

4. Present conditions.—The Sikhs have now a central association, called the Chief Khālśa Dīwān, with its headquarters at Amritsar and local societies (Singh Sabhas) all over the Panjāb and at some places beyond it. They have also at Amritsar the Khālśa College, and at Tarn Tārān and Gujranwāla two theological seminaries receive grants from the Dīwān. They possess 33 girls' schools, a newspaper (the *Khālśa Advocate*), orphanages, a tract society, and a Khālśa Young Men's Association, besides a Sikh Bank. Attempts are also made to help the depressed classes.¹¹

W. G. MACKEAN.

SILENCE.—Silence, as an aid to worship or as a method of preparing the soul for spiritual experiences, has been practised among larger or smaller groups in almost all periods of religious history and in almost all parts of the world. It was given an important place in the Pythagorean societies and probably also in the Orphic circles in Greece. Pythagoras is said to have made silence the form of initiation into his religious order, requiring the initiate to remain silent and listen for an entire year—some say even three years. Socrates, at least the Socrates of Plato, refers frequently to the importance of silence, and he appears to have practised silence as a form of inward culture. One striking account of Socrates in an intense long-continued silent meditation is given in the *Symposium*.¹ Plutarch, too, pronounces silence the best way to wisdom and far superior to speech.

The OT contains many references to the value of silence as a preparation for spiritual vision or revelation. Many of the prophets and leaders of Israel were prepared for their mission by the discipline of silence, and the voice in the stillness was felt to be a clearer revelation of God than earthquake, fire, or storm. The most emphatic passages on the value of silence, however, are to be found in the Psalms and in the later period of Hebrew literature, i.e. after the Exile:

'Be still, and know that I am God' (Ps 46¹⁰); 'Praise is silent for thee, O God' (65¹); 'Keep thou silence at the presence of the Lord God' (Zeph 1⁷); 'The Lord is in his holy temple: let all the earth keep silence before him' (Hab 2²⁰); 'Keep thy foot when thou goest to the house of God; for to draw nigh to hear is better than to give the sacrifice of fools [i.e. talk] . . . Be not rash with thy mouth, and let not thine heart be hasty to utter any thing before God' (Ec 5¹⁴).

The later uncanonical books show an increasing appreciation of silence. One passage from the book of Wisdom (18¹⁴) must suffice:

'When all things were in quiet silence and night was in her swift course, Thine Almighty Word, O Lord, leaped down from heaven.

The practice of silence is implicit rather than positively explicit in the NT. Christ prayed frequently apart alone, and sought the opportunity for quiet communion. He also enjoined upon His followers the practice of retreat from noise and disturbance to the silent closet for solitary prayer. There seem to have been periods of silence in the meetings of the primitive Christian Church, though this is implied rather than overtly stated or emphasized in the accounts. The worshippers of Mithra, as was true of the initiates in all the mystery religions, exalted silence. The preparatory instructions to these initiates contained these directions:

'Lay thy right finger on thy mouth, and say Silence! Silence! Symbol of the living, imperishable God.'

Egyptian mystical worshippers called God 'the Lord of the silent' and addressed Him thus:

'Thou sweet Well for him that thirsteth in the desert; it is closed to him who speaks, but it is open to him who is silent. When he who is silent comes, lo, he finds the well.'²

Many of the Christian Fathers encouraged the practice of silence and appreciated its value as a way of cultivating the spiritual life. Ignatius of Antioch, Clement of Alexandria, Gregory of Nazianzus, and Gregory of Nyssa especially dwell upon its use. Gregory of Nazianzus says:

'To speak of God is an exercise of great value, but there is one that is worth much more, namely to purify one's soul before God in silence.'³

Augustine refers in many places to the need for retirement, solitude, and silence, if the soul is to find God. The most impressive passage on the effect of silence is the famous one in the *Confessions* describing 'the sweet communion' which he and his mother, Monica, had at Ostia just before her death:

'When in one's body the storm of the flesh is silenced, when the voices of land and sea are hushed, and the canopy of heaven is silent; when the soul is mute within itself; when the dreams and fancies of the imagination are silent; when every tongue, and every sense, and all that is perishable, is silent; and when the Creator speaks, not through any of these, but speaks Himself directly, and we thus hear His voice, not from any man's lips, and not from the lips of angels, not in thunder and darkness, and not in unintelligible parable, but hear Him whom we adore in these things, Himself alone apart from them all, even as we have risen above them, and, in rapturous flights of thoughts, have reached the eternal wisdom which is highly exalted above them all; if then this condition could be a lasting one, and all other thoughts and imaginings of a different nature could be banished for ever, and the beholder were thus carried away, consumed, swallowed up in joy, and the soul's yearning satisfied, would not then this be the moment to which these words apply, "Enter thou into the joy of thy Lord"?'⁴

Mystics in all ages, whether Christian, Neo-Platonic, Persian, Indian, Arabic, or mediæval Jewish, have made large use of silence and have considered it a way to find God. A well-known passage from Hierotheus—a pseudonym for a Syrian mystic of the 5th cent.—furnishes a good example of the Neo-Platonic attitude:

'To me it seems right to speak without words, and understand without knowledge, that which is above words and knowledge; this I apprehend to be nothing but the mysterious silence and mystical quiet which destroys consciousness and dissolves forms. Seek, therefore, silently and mystically, that perfect and primitive union with the Arch-Good.'⁵

Thomas à Kempis in the *Imitation* expresses in striking words what all Christian mystics say in one form or another:

'In silence and in stillness the religious soul grows and learns the mysteries of Holy Writ. There she finds rivers of tears wherein she may wash and cleanse herself night after night that she may be more familiar with her Creator, . . . Whoso, therefore, withdraweth himself from his acquaintances and friends, God will draw near unto him with His holy angels. . . . Shut thy door behind thee, and call unto thee Jesus thy Beloved. Stay with Him in thy cell: for thou shalt not find so great peace elsewhere.'⁶

The Roman Catholic mystics of the Counter-Reformation and the Quietists of the 17th cent. show an increased appreciation of silence, and they made the practice of the presence of God in silence the very centre of their religion.

In the monastery silence was a large element of the religious life. St. Benedict made very strict rules regarding the practice of silence for the monks of his order, and all other monastic orders laid strong emphasis upon it and set apart periods of 'great silence.' The Cistercians were especially strict in their observance of silence, while the Reformed Cistercians, or Trappists, carried their demands for silence to excessive lengths of strictness, some of them taking perpetual vows of silence. The Carthusian monks, in their periods of purity and strictness, lived as contemplatives and spoke little.

The members of the Society of Friends (g.v.) have given a greater place to silence than any other Protestant sect. They took from the 'Seekers' (g.v.) of the English Commonwealth period the custom of sitting silent in meetings for worship, and they considered silence essential to worship and a preparation for all public service. George Fox, their founder, practised silence and solitary meditation during his long period of search for light on his own path, and, when he went out to gather others to the truth which he had found, he insisted that those who gathered about him should first learn to sit still and listen.

⁴ 220 B.
⁵ Quoted from J. H. Breasted, *Development of Religion and Thought in Ancient Egypt*, New York and London, 1912, p. 356.
⁶ *Quat.* xxvi.

On one occasion he sat in silence for 'some hours,' in order 'to famish' the people 'from words.' At last he 'was moved of the Lord to speak,' and the people were 'reached by the Lord's power, and word of life.'¹

Robert Barclay, the most distinguished of the early defenders and interpreters of Quakerism, wrote from his own experience a striking account of the power of this Quaker silence. He says:

'Sometimes, when there is not a word in the meeting but all are silently waiting, if one come in that is rude and wicked, and in whom the power of darkness prevaileth much, perhaps with an intention to mock or do mischief, if the whole meeting be gathered into the life, and it be raised in a good measure, it will strike terror into such an one, and he will feel himself unable to resist; but by the secret strength and virtue thereof, the power of darkness in him will be chained down: and if the day of his visitation be not expired, it will reach to the measure of grace in him, and raise it up to the redeeming of his soul. . . . For not a few had come to be convinced of the truth after this manner, of which I myself am a true witness, who not by strength of arguments, or by a particular disquisition of each doctrine, and convincement of my understanding thereby, came to receive and bear witness of the truth, but by being secretly reached by this life. For when I came into the silent assemblies of God's people, I felt a secret power among them, which touched my heart, and as I gave way unto it, I found the evil weakening in me, and the good raised up: and so I became thus knit and united unto them, hungering more and more after the increase of this power and life, whereby I might feel myself perfectly redeemed.'²

After the writings of the Continental Quietists, Molinos, Madame Guyon, and Fénelon, became the favourite books in Quaker circles, and as a result of this influence the whole Society became permeated with quietistic ideals, especially in the period from 1760 to 1830, Friends came to regard this silence as the essential mark of spiritual life

thou thyself but hold thy tongue for one day: on the morrow, how much clearer are thy purposes and duties; what wreck and rubbish have those mute workmen within thee swept away, when intrusive noises were shut out! Speech is too often not, as the Frenchman c Thought; but of quite stifling there is none to conceal. . . . ! Eternity. Bees will not work except in darkness; Thought will not work except in Silence.' . . . 'Silence, the great Empire of Silence: higher than the stars; deeper than the Kingdoms of Death! . . . The great silent men! . . . A country which has none or few of these is in a bad way. Like a forest that has no roots; which had all turned into leaves and boughs;—which must soon wither and be no forest.'¹

SILENOI.—In the recently discovered *Ichnutæ* of Sophocles Silenos is the leader of the Satyr-Trackers. Though the art-form, origin, and exact connotation of the Satyr are still open to question, the nature and art-form of the Silenoi have, thanks to recent investigations, been clearly defined. In fig. below, from the François vase,² are represented and, happily, inscribed three Silenoi. They form part of the cortège of Dionysos, who brings back to Olympus Hephaistos, mounted on a mule; they are characteristically employed: one carries a wine-skin, another plays the double-flute, and the third carries a nymph. These inscribed Silenoi have characteristic equine ears, up-springing tail, and hooves. This leaves no doubt that,

and as the one way to communion with God. The favourite texts of the Bible for Friends of this period were those on silence and stillness, and silence seemed almost to possess magic power. Many meetings were held year after year without any interruption of the silence, and the only public vocal utterances in many Quaker communities were heard when visiting ministers came from a distance on itinerant service. This Quaker quietism largely yielded place before the evangelical wave which swept over the Society of Friends in the first half of the 19th cent., the great exponent of this movement being Joseph John Gurney of Norwich (1788-1847).

In recent times silence as a method of communion has been given a new and growing place in the Church of England. This modern practice of silence had its beginnings in New Zealand, was transmitted to London, was taken up in many churches in England, and later became a feature in some of the Episcopalian churches of America.

Carlyle, in rhapsodical manner, has expressed an appreciation of silence which has many parallels in literature but which may be taken as a striking literary estimate of the moral and spiritual value of silence:

'Silence and secrecy! Altars might still be raised to them (were this an altar-building time) for universal worship. Silence

whatever be the art-form of the cognate Satyr!³ (q.v.), the Silenoi are in the 6th cent. B.C. horse-daimons. In horse-breeding countries the horse is a familiar 'daimon of fertility'—witness the October-horse of the Romans and our own hobby-horse. On the original of fig. above the Silenoi are markedly ithyphallic.

Happily the explanation of Silenoi horse-daimons is now confirmed by philology. O. Lagercrantz⁴ has solved the long riddle. Σιληνός with its by-form σιλανός is derived from the Indo-Germanic *kēl. The word σιλανός is Thracio-Phrygian, a 'satem' language, so the sigmatism of the velar-guttural is all in order. The Greek cognate κήλων naturally preserved the guttural, and clinches the argument. According to Hesychius, κήλων = ὄξεύτης, the horse as stallion; according to Archilochos,⁵ the he-ass

ἢ δέ οἱ σάθη
ὥσει τ' ὄνον Πριηνός
κήλωνος ἐπλήμυρον ὀτρυνγῆράγου.

² *Apology*, London, 1678, prop. xl. sect. 7.

In Thraco-Phrygian *κῆλων* attained the semi-divinity of a capital letter, Silenos in Greek never.

That originally the Silenoi were ass-daimons as well as horse-daimons is abundantly clear from the myths of the two arch-Silenoi, Marsyas and Midas. S. Reinach¹ has shown that the flaying of the flute-playing Silenos, Marsyas, was in its origin not the savage punishment of a rival, but the sacrifice of a sacred ass. The skin was preserved for its magical properties, and shown at Celænæ in the time of Aelian.² He further suggests, though the etymology is not quite certain, that the name Marsyas is connected with *μάρσυνος*, from which comes our 'marsupial.' Marsyas became human in Græco-Roman art,³ and carried his own hide in the form of a wine-skin—a figure exactly parallel to the first Silenos in fig. above. The skin of Marsyas may well be the origin of the famous 'peau d'âne' of French literature.⁴

Even more unimpeachable is the evidence of King Midas, who judged the case of the Silen Marsyas and who caught 'Silen' in his rose-gardens. Midas, says Philostratos⁵ in telling his story, 'had something of the race of satyrs about him, witness his ears.' By the time of Philostratos the word 'satyr' is loosely used to cover any half-animal daimon. The asses' ears mark Midas for us as a Silen, in ass- not horse-form. We think of the ass as the patient burden-bearer, and it surprises us that he should figure as fertility-daimon side by side with the splendid horse, but to the ancient Greek (as to the modern) it was the mule that was beast of burden; the ass was primarily sire of the useful mule and ever prone, as Simonides of Amorgos⁶ says, *πρὸς ἔργον ἀφροδισιον*. It may well be, as Reinach⁷ suggests, that the ass-daimon was the primary basis of the Silen, and that the horse-form was due to a later blend with the popular horse-Centaur. The connexion of ass and Silen was remembered down to Alexandrian times. In the great Dionysiac procession of Ptolemy II. Silens and Satyrs alike are mounted on asses, not horses.⁸

Midas in popular legend is a Phrygian, but Herodotus⁹ knew that his real home was in Europe, not Asia. The Macedonians claimed that Silenos was caught by Midas in his wondrous rose-gardens overshadowed by Mt. Bermios. The magic roses as fodder for the ass live on in Apuleius.¹⁰ The spring in which Midas mixed the wine to snare Silenos is placed by Athenæus¹¹ (on the authority of Bion) on the borderland between the Mædi and the Paonians. Its name was *Ἰννα*, and the name is instructive; *ἴννος* is Greek for a mule, the sire being a stallion, the dam a she-ass.¹² Silenoi are constantly associated with springs and rivers; the old interpretation¹³ was that they simply were springs; but the ass- and horse-form points to a wider fertility connotation.

Midas, the ass-eared Silen, is a Phrygian, and, like all other Phrygians, before he passed from Europe into Asia, he was a Brigian¹⁴ of Indo-European stock, but, like Dionysos, Thracian, not

Greek. It is now clear why the word 'Silenos' is from the Thraco-Phrygian 'satem' form of an Indo-Germanic root. The sanctity and sacrifice of the ass—so strange to the Greeks—were familiar to the Thraco-Phrygians. A portion of the Thraco-Phrygian stock dwelt about the great snow peak of Bora¹⁵—the modern Nidje, 2000 ft. high, the highest point between Haliakma and the Axios; hence its name, which means simply 'mountain,' the guttural form surviving in Russian *gora*, 'mountain.' Here was the home of the Silenoi; witness the coins of Macedonia. It was to these Hyperboreans that Apollo, and Perseus before him, fared and saw them 'sacrificing splendid hecatombs of asses.' In these feasts, Pindar² tells us, Apollo took special joy and—most instructive for our purpose—'the god laughed aloud to see the romping licence of the monstrous beasts.'⁸ The Silen is dissolute even in old age, and yet as flute-playing Phrygian, countryman of the Thracian Orpheus, he is redeemed always by the spirit of music and mysterious prophetic wisdom. It was not for his snub-nose only that Socrates was dubbed Silen.

LITERATURE.—In the Lexicons of Roscher and Daremberg-Saglio Silenos must be sought under 'Satyroi'—a serious defect in method tending to confuse the known with the uncertain. O. Gruppe, *Griechische Mythologie*, Munich, 1897-1906, discusses Silenos under 'Pan, Satyroi, Silenos.' The same defect must be noted in the present writer's discussion of the horse-shaped Silenoi in *Prolegomena to the Study of Greek Religion*, Cambridge, 1903, pp. 380, 389. In the articles of the Lexicons will be found full references to the older literature, in which the Silenoi are explained as either *Quell-* or *Berg-daimonen*. The references for the new view are given more conveniently in the text. Indispensable to the study of the ass- and horse-forms, though not dealing directly with the Silenoi, is A. B. Cook, 'Animal Worship in the Mycenaean Age,' *JHS* xiv. [1894] 81-169. He there figures (fig. 1) the ass-demons of Mycenæ which are the nameless ritual ancestors of the Silenoi.

SILVER.—See METALS AND MINERALS.

SIMON MAGUS.—Simon Magus, the subject of an episode in the first evangelization of Samaria recorded in Ac 8⁹⁻²⁴, appears in ecclesiastical tradition under three aspects: (1) as a false Messiah, who practised magical arts and subsequently attempted, by the aid and with the sanction of Christianity, to set up a rival universal religion; (2) as the founder of a Gnostic sect; (3) as a travesty of the apostle Paul. Our information about him is derived from three distinct types of early Christian literature—the heresiologists of the 2nd to the 5th cent. A.D., the Clementine literature, and the apocryphal *Acts of SS. Peter and Paul*. The first two features of the tradition are present in a greater or less degree in each of those sources; the last occurs with certainty only in the *Clementine Homilies* and *Recognitions* and possibly in the apocryphal *Acts*.

1. The narrative of Ac 8⁹⁻²⁴.—In Acts Simon is described as a man who had bewitched the people of Samaria by his sorcery, 'giving out that himself was some great one: to whom they all gave heed, from the least to the greatest, saying, This man is the great power of God.' At the preaching of Philip, Simon believed and was baptized; but later, when Peter and John came down to Samaria to confer the gift of the Holy Ghost upon Philip's converts by the laying on of hands, he offered the apostles money, saying, 'Give me also this power, that on whomsoever I lay hands, he may receive the Holy Ghost.' Peter cursed him for his presumption and bade him repent; the

incident concluded with Simon's request for the apostles' prayers on his behalf.

The authenticity and integrity of the narrative in Acts are suspect on several grounds. (1) The text shows traces of interpolation. In v. 11 *προεῖχον* and *ἐξοτρύνει* look like an echo of *ἐξίστην* in v. 9 and *προεῖχον* in v. 10a, and the verse simply repeats the sense of the foregoing narrative. (2) The commotion caused by Simon in Samaria, resulting in the adhesion of the whole city and the declaration that he was the great power of God, must be an exaggeration, since it is quite out of proportion to the importance of the representative of a common type of impostor. (3) There is no close to the story: nothing is said as to what became of Simon after his repudiation by the apostles. (4) It has been urged that the theory implicit in vv. 14-18, that the power of conferring the Holy Ghost belonged exclusively to the apostles, is an unhistorical transference of the ideas of a later age into the conditions of the primitive Church.

According to the theory that the text has been interpolated, Simon was at first represented merely as desirous of acquiring Philip's miraculous powers. His acclamation by the people as the great power of God, his confronting with Peter, and the suggestion that his purpose was to purchase equality with the apostles are relegated to a later version of the story, whose motive has thus been fundamentally recast.

2. Simon in ecclesiastical tradition.—(a) *Justin*.—In the 2nd cent. A.D. a cycle of legends concerning Simon's doings in Rome grew up as a sequel to the story of Acts. Justin Martyr¹ is our earliest authority, and his evidence should carry considerable weight, since he was a native of Nablus (Shechem) in Samaria,² though allowance must be made for misrepresentation natural to a champion of orthodoxy and an apologist of the Church. Justin describes Simon as a native of Gitta in Samaria, who was acknowledged almost universally by his fellow-countrymen as the transcendent God 'above all principality, power, and dominion,'³ but does not definitely connect him with the impostor of Acts. He was the master of the heretic Menander of Cappadocia,⁴ who taught in Antioch that his followers should never die, and was accompanied in his travels by a woman named Helena, who had formerly been a prostitute and whom he declared to be 'the first intelligence' proceeding from himself. For Simon claimed to be and was accounted a god both in Samaria and elsewhere. He had won the favour of Caesar (presumably Claudius),⁵ and a statue was erected to him as god on an island in the Tiber by command of the Senate,⁶ bearing the inscription 'Simoni Deo Sancto.'

Justin has confused Simon with the old Sabine deity Semo Sancus, who presided over compacts.⁷ His mistake can be checked with absolute certainty, thanks to an accident of Roman archeology. In the year 1574 the base of a statue was discovered on an island in the Tiber, with the following dedication inscribed on it:⁸

'Semoni | Sanco | Deo. Fidio | Sacrum | Sex. Pompeius. S.P.F. | Col. Mssianus | Quinquennalis | Decur. | Bidentalis | Donum. Dedit.'

(b) *Tertullian and Origen*.—The ecclesiastical writers of the next two generations add little but detail to Justin's account. His story of the statue which the Romans dedicated to Simon became part of tradition and is repeated by Irenaeus and almost all later authorities. Tertullian⁹ identifies Simon the heretic with the Simon who had been cursed and expelled by the apostle Peter, attributes his magic art to the service of angels, as Justin had ascribed it to the help of demons, and says that he

ransomed Helen of Tyre to console himself for the loss of the powers which he had desired to purchase of the apostles. Origen,¹ like Justin, places Simon in a series of pretenders to divine honours, who had appeared since the ascension of Christ, and puts him in the line of the Samaritan Messiahs—Theudas, Dositheus, and Cleobius.

3. The tradition of Simon's conflict with St. Peter in Rome.—Hippolytus is the first ecclesiastical writer to connect the tradition of Simon's sojourn in Rome with the tradition of St. Peter's presence there. Justin alludes to the disillusionment of the Roman people,² but Hippolytus gives the earliest extant version of the legend of Simon's conflict with Peter, his final defeat, and death.³ His narrative, however, disagrees completely with the legend of Simon's flight and fall from heaven in the presence of the emperor Nero, which was accepted later. Hippolytus makes no reference to the conflicts of Simon and Peter in Syria, and only in passing mentions the opposition of the Apostle in Rome. Simon taught sitting under a plane-tree and, in order to convince his hearers and to escape exposure, promised that, if he was buried alive, he would rise again the third day. A trench was dug and Simon was buried, but the test failed. This version of the legend of Simon's death is perhaps parodied in the apocryphal *Acts of SS. Peter and Paul*⁴ by the story of Simon's undertaking before Nero to rise again after he had been beheaded and of his successful imposture by substituting a ram for himself.

The earliest connexion of the death of Simon with the incident of his attempted flight extant in ecclesiastical tradition is found in Arnobius (fl. c. 310).⁵ Peter invoked the name of Christ, and Simon was precipitated from his fiery chariot. This account varies from later tradition in that Simon does not die outright as a consequence of his fall, but is conveyed to Brunda (= Brundisium) and there, overcome by his sufferings and by shame at his failure, casts himself down a precipice. The pre-Catholic *Actus Petri cum Simone*⁶ agrees with Arnobius in prolonging Simon's life after his fall, but attributes his death to the assistance of the physicians of Terracina. This writing must belong to the earlier part of the 3rd cent. A.D., since Commodian⁷ (fl. 250) alludes to the dog which, being made to speak by Peter's command, betrayed Simon's presence in the house of Marcellus and prophesied his overthrow. The *Syriac Didascalia*,⁸ which was later expanded into the *Apostolic Constitutions* and is dated about the end of the 3rd cent., i.e. slightly earlier than Arnobius, describes Simon's attempted flight, but seems to imply that he survived his fall, from which he suffered a broken ankle, since it relates that, while many turned away from him, others claved to him. The same document and also Eusebius⁹ refer to a previous contest between Peter and Simon Magus in Palestine, but there is no reason to suppose that either had any other source of information than the narrative of Acts. Eusebius's account of Simon's overthrow is ambiguous. Philaster¹⁰ (c. 350) is the earliest writer who definitely alludes to previous conflicts in Palestine other than that recorded by St. Luke: he mentions the flight of Simon from Jerusalem to Rome and his challenge to Peter before Nero, ascribes his fall to the intervention of an angel at the prayer of Peter, and makes his death immediate. Philaster apparently did not derive this information from his chief source, the lost syntagma of Hippolytus (c. 200). Cyril of Jerusalem¹¹ is the earliest of the Fathers to attribute the fall of Simon to the joint prayers of the apostles Peter and Paul, as it is recorded in *Passio Petri et Pauli*.¹² The author of the work *de Excidio urbis Hierosolymitanæ*¹³ draws upon the apocryphal *Acts* for a number of incidents in his account of Simon. The *Apostolic Constitutions*¹⁴ weaves together all the strands which were finally combined in the legend of Simon Magus.

4. Difficulties in identifying Simon the Gnostic with the Simon of Acts.—From Irenaeus onwards the Fathers of the Church are unanimous in ascribing to Simon Magus the origin and author-

ship of heresy.¹ But, in addition to his character as the progenitor of heresy in general, the authorship of a particular Gnostic system is also attributed to Simon. There are serious difficulties in accepting the tradition that the Simon of Acts was the founder of the sect called by his name and professing these doctrines.

Simon's attempt to purchase the power of the apostles occurred in the reign of Claudius; but Hegesippus² asserts that Gnosticism arose in the times of Trajan, after the sacred choir of the apostles had ceased. The heretic Menander is universally represented as the disciple of Simon, and Justin Martyr³ in the reign of Antoninus Pius (A.D. 152) mentions that some of Menander's followers were still alive. One of the sayings attributed to their founder by the Simonians, which has every appearance of being genuine, is inconsistent with the hypothesis that he is the Simon of Acts. The Gnostic Simon⁴ claimed to have appeared as the Son in Judaea, where he simulated death, to have descended in Samaria as the Father, and to have visited the Gentiles as the Holy Spirit. He seems to have held the doctrine of metempsychosis; but his claim of identity with Jesus rules out the possibility of his reappearance as an incarnation of the Father in the reign of Claudius. Moreover, writings were current in this sect under the name of Simon in which two passages from St. Paul's epistles are quoted (1 Co 11³², Eph 6¹⁴), and allusion is made to the parable of the lost sheep.⁵ If the identification of the Simon of Acts with the founder of the Simonian sect is maintained, his system would be distinguished from all other Gnostic sects in this respect, that it arose before St. Paul had re-interpreted Christianity to the Gentiles; yet the speculations attributed to Simon are in their main outlines closely akin to the Gnostic systems of the 2nd cent. A.D., except that Simon himself is substituted for Christ in the part of the Redeemer. Simon is the subject of the Gnostic speculations current in the Simonian sect and cannot be regarded as the author of them, at least in their developed form. Nevertheless, after Justin the Fathers agree in identifying the leader of the Gnostic sect with the Simon of Acts and in making Samaria the scene of his first activities.

5. Sources from which our knowledge of Simon's doctrine is derived.—Two independent traditions profess to preserve the teaching of Simon, the one betraying the influence of Alexandrian allegory (Hippolytus), the other of Syrian and Babylonian religion (Irenaeus, Epiphanius, Theodoret). The former survives only in the fragments of a book ascribed to Simon and entitled *The Great Announcement*, which are preserved by the author of the *Philosophumena*.⁶ The contents of this work, which is written in the form of an allegorical commentary on the Pentateuch, consist chiefly of cosmological speculations. The latter tradition is derived ultimately from a lost treatise of Justin against all heresies,⁷ which is the common source underlying the account of Simon's doctrines given by Irenaeus, Epiphanius, Theodoret, and pseudo-Tertullian. Epiphanius seems to have had access to the original document whence Justin drew his information, since by an awkward transition he twice introduces Simon as speaking in the first

person. Hippolytus was also acquainted with this treatise of Justin and supplemented his use of *The Great Announcement* by quotations from it. *Phil.* vi. 191. repeats the story of Helen's deliverance as given by Irenaeus, sometimes with verbal coincidences. The central theme of this tradition is a myth of redemption.

6. Cosmogony of 'The Great Announcement'.—*The Great Announcement* professes to solve the riddle of the universe by a theory of emanations.

The principle of all things is fire,¹ a boundless power so compounded of two natures, the one hidden and the other manifest, 'that the hidden are concealed in the manifest portions of the fire, and the manifest derive their being from the hidden.' The cosmos, or ordered universe, originated as the self-realization of the unbegotten fire and is arranged in a series of three successive worlds, in which the lower is a reflexion of the one above. An intermediate world mirrors the primal world and is itself the paradigm of the lower world of sense. It is difficult to decide whether Simon conceives of the three worlds as co-existing together or simply as stages in a process of evolution. For the infinite and self-existent Power is the source of all finite and manifold existence, since it includes all things potentially within itself from eternity. 'This,' says Simon,² 'is one power, divided above and below, generating itself, making itself grow, seeking itself, finding itself, being mother of itself, father of itself, sister of itself, spouse of itself, daughter of itself, son of itself, *μυητοράνθρωπος*, the root of the entire circle of existence.' The originating principle of the universe is styled 'the Standing One,' *ὁ ἑστὸς, ὁ σῆς, ὁ σπυρίωνος*.³

The highest world was unfolded from the Unbegotten Fire by means of three pairs of roots called respectively Mind (*Νοῦς*) and Thought (*Εννοία*), Voice (*Φωνή*) and Name (*Ὄνομα*), Reason (*Λογισμός*) and Desire (*Ενθύμησις*).⁴ In each of the six roots the infinite Power resides simultaneously and in its entirety, potentially but not actually: the roots are regarded as aspects of the Supreme, having no independent existence of their own, while their addition together is necessary to complete the fullness of his being.⁵ Together with their source these six roots, which are named 'Powers' (*δυνάμεις*), constitute a hebdomad. The intermediate world is also composed of a hebdomad, the head of which answers to the boundless Power of the primal world and is similarly styled 'the Standing One.' He, like his prototype, is both male and female and generates a similar chain of three pairs, or syzygies, of emanations, which are named *Eons*. The roots of this second world—Heaven and Earth, Sun and Moon, Air and Water⁶—correspond to the hierarchy of abstract principles in the primal world and form the archetypes or ideal patterns of the phenomena of the sensible world. The lower world came into being from chaotic matter quickened by the breath of the seventh Power of the intermediate world, who is identified with the Spirit wafted over the face of the waters, 'an image from an incorruptible form which alone reduces all things to order.'⁷ The angels and authorities were charged with its government.

By obscure and confused imagery *The Great Announcement* attempts to explain the procession of the two upper worlds from their sources.⁸ In the bisexual nature of Power Silence, the female element, which alone possesses the power of conceiving and producing new beings, was originally concealed within the male element, as the thought is concealed within the mind, and was called 'Silence invisible, incomprehensible,' because she has no independent existence until her emission as Thought, just as the thought conceived by the mind becomes comprehensible only by utterance. Each of the roots, like the principles from which they proceed, has a double aspect and is both male and female, since each is the offspring of, and therefore the cause of conception to, that which is above it, and each controls and is a source of being to the Power or *Eon* below.⁹

Simon's system has been called an 'anthropological pantheism.'¹⁰ In attempting to explain the presence of a multiplicity of being within the indivisible and all-embracing unity of the supreme principle of the universe, he has recourse to the analogy of the processes of human consciousness. In this respect the Gnostic doctrine of emanations anticipates the later theology of the Church, which sought to illustrate the distinctions within the Trinity from the traces of the divine image in man's constitution.

7. Doctrine of redemption in 'The Great Announcement'.—The anthropology of *The Great Announcement* is developed in a paraphrase of the Bible narratives of the Creation and the Fall.

⁷ Justin, *Apol.* i. 26. 8: *σύνταγμα κατὰ πασῶν τῶν γεγενημένων αἰρέσεων.*

The seventh Power of the intermediate world, the Father of all, moulded man by taking dust from the earth and fashioned him after His own image and likeness. The image of the Father is the organizing principle in man, since by it alone he attains actuality, just as the Spirit wafted over the face of the waters, i.e. 'Εὐνοία, with which it is identified, is the organizing principle of the world of sense.¹ Hence man was originally compounded of two elements—a spiritual and an earthly—and was both male and female, reproducing the nature of the Father, in whose likeness he was made. The primal man, as the image of God and the microcosm, remains in the intermediate world; he is the ideal copy of the men of earth, whose present condition explains their need of redemption. For they are in a fallen state and no longer reflect the perfection of their archetype, since the sexes have been separated. Redemption was apparently represented as the reunion of the sexes, i.e. the renewal of man in his original likeness to the Father. Unfortunately the doctrine of redemption survives only in an isolated and very obscure fragment of *The Great Announcement*.² Man's nature is the theatre of a conflict arising from the combination within him of two mutually hostile elements, the divine spark both animating and at the same time striving against the previously existing matter from which he was fashioned. Lest it should free itself by returning upwards to its source, whither it continually tends, the soul was divided, and the two parts were imprisoned in male and female bodies. The soul, thus maimed and entangled and subject to changeable generation, is powerless to raise itself into the upper world, until after passing into many bodies it discovers and is conjoined with its affinity. Redemption consists in the deliverance of man from slavery to finite things and his restoration to his original home, and is effected by the gradual reunion of the sexes; the completion of the process would coincide with the regeneration of all things.

8. Affinities of 'The Great Announcement' with Greek philosophy and pagan religion.—The system of *The Great Announcement* is an attempt to reconcile two incompatible things. The popular theology and science of Hellenism provide the matter, but the form of its presentation is determined by reverence for the inspired traditions of its author's nation. In order to commend alien doctrines to his countrymen, he had to discover them in their Scriptures, and allegory supplied the means of penetrating beneath the surface to the deeper meaning which they enshrined. But this device has scarcely modified the substance of the thought, though the violent expedients of interpretation required, while heightening the sense of mystery, have rendered its presentation unnecessarily obscure. As Hippolytus points out,³ in affirming that fire is the principle of the universe 'Simon' is following Heraclitus, and his teaching about the manifest and hidden properties of which it is composed is simply an echo of Plato's speculations concerning the intelligible and the sensible and Aristotle's distinction between *θεῖον* and *ἐρπύρεα*. The theory of redemption by the reunion of the sexes is borrowed from the *Symposium*⁴ and assimilated by taking Plato's irony seriously. In adopting the method of allegory to reconcile the Jewish Scriptures with Greek science Simon had a forerunner in Philo, and therefore coincidences of thought as well as of expression are not surprising in the two writers. Philo also designates God 'the Standing One'⁵ and interprets the story of Adam's creation by reference to the myth of a primal man⁶ who is a hermaphrodite. But the use of allegory also opened the door for the immediate influence of Græco-Oriental religion and mythology. For the pretensions of *The Great Announcement* to scientific culture are merely superficial. The history of Greek philosophy had completed a circle. Having arisen as an interpretation of mythology, it had once more become the handmaid of a religion which discovered in primeval tradition a revealed wisdom anticipating all the conclusions of science. The ultimate source of the speculations of *The Great Announcement* is to be found in the cosmogonies of the Greek and Oriental religions modified by astrology. In Orphic speculation the bisexual Phanes begot Heaven and Earth of Night, who as the child and companion of Zeus corresponds to 'Εὐνοία.

Zoroastrianism differentiated a hierarchy of personal attributes within the Supreme and depending from Him like links in a chain. And the Egyptian priests, by combining native speculations with Plato's theory of ideas, interpreted the myth of Isis and Osiris as a parable of creation, the child Horus representing the perceptible world which is the image and reflexion of the *κόσμος νοητός*.¹ The prevalence of Chaldean astrology, which named the planets after the most important gods of the nations and, by thus identifying the stars with persons, reinforced its teaching as to the influence of the stars on the destiny of the world, made it possible to ascribe personality to cosmological potencies as the rulers of this world (*ἀρχαί*), each of which presided over particular periods of time (*αἰῶνες*), while the pessimism which it fostered drove men to depreciate the world of sense as a derivative reflexion of the world of abiding realities under the tyranny of apostate angels.

9. The myth of Helen.—The myth of Helen's redemption, which forms the common tradition of the heresiologists, appeals to the authority of the Greek legend of Helen of Troy, in the shape in which the sceptical mock reverence of Stesichorus² developed it. Justin once refers to his lost account of the Simonian doctrine, when he relates that Simon was worshipped as 'the god above all principality, power, and dominion.' Irenæus, Theodoret, and Epiphanius³ agree in identifying Simon with the supreme God and Helen with 'Εὐνοία, the first conception of His mind and His agent in creation. Through her He created the angels and archangels, who in turn created the world of men and were charged with its government. Her fall, and consequently the origin of evil in the world, was due to the rebellion of these spirits. For, as she was proceeding forth, they seized her and detained her on earth by imprisoning her in a human body and subjecting her to a series of transmigrations. The motive of the angels is variously given in our different authorities. Irenæus attributes their act to jealousy, because they were unwilling to be looked upon as the progeny of any other being, Epiphanius to concupiscence. In the course of time 'Εὐνοία passed into the body of Helen of Troy; according to his interpreters, Simon wished to signify by this that 'Εὐνοία 'was the object of universal pursuit and the eternal cause of strife, wasting the life of her foes until they recant.'⁴ Helen was identified with the lost sheep of the parable; for at each new incarnation her ignominy increased until she passed into the body of a prostitute at Tyre.⁵ Meanwhile the angels misgoverned the world in their rivalry for pre-eminence. And therefore the supreme God descended, deceiving the successive ranks of the world-ruling angels who barred His passage by 'transfiguring himself in the form of the dwellers of each heaven,' until at last He appeared in the similitude of a man among men and was deemed to have suffered death in Judæa. Simon rescued Helen from her shame and was thus reunited to his affinity, who throughout the ages was awaiting the advent of her consort and redeemer.⁶

10. The conception of salvation.—The myth of Helen is only vaguely connected with the salvation which Simon brought his adherents. Hippolytus declares that Simon, having purified Helen, brought salvation to men by his own discernment (*διὰ τῆς ἰδίας ἐπιγνώσεως*).⁷ Epiphanius records that Simon interpreted the story of the wooden horse as a symbol of the self-destruction wrought by the *ἄγνοια* of the Gentiles.⁸ Salvation therefore consists in *γνώσις*. It is possible that the descent of

the Supreme through the ranks of the angels was regarded as initiating a process of redemption; for it was necessary that the redeemer should assume every form of creation that harmony might be restored to the world. In the end Simon promised to bring the world to naught along with the angels. But the dissolution of the world is anticipated by Simon's followers and salvation is partially realized as an already present boon. Origen says that Simon took away from his followers the fear of death, but has probably confused him with his disciple, Menander, who promised his followers that they should never die.¹ The promise of an indefectible salvation sanctioned an antinomian ethic.² Simon taught that the precepts of the law and the prophets were inspired by the angels in the desire to reduce men to slavery, but those who believed on him and Helen, since they were delivered from the sinister tyranny of the law, were free to act as they would. For men are saved by his grace and not by good works. The antinomianism of the Simonians issued in libertine conduct and a compromise with heathenism,³ possibly also in licentious rites.⁴ Their docetic theory of the Saviour's passion presupposed that matter was irredeemably corrupt. The soul of the redeemed could contract no pollution from the deeds of the body, and therefore purity of life was a matter of indifference. 'All earth is earth and it makes no difference where any one sows, provided he does sow.'⁵

12. Pagan sources of the myth of Helen.—Epiphanius, when he ascribes the imprisonment of Helen to the concupiscence of the angels, probably has in mind the story of the seduction of the daughters of men by the Watchers, to which the book of Enoch⁶ attributes the origin of sin and the fall of mankind. The fundamental ideas of Gnosticism were probably derived from Jewish apocalyptic; but it appealed to the sympathies of the pagan world by the tolerant eclecticism which allowed it to adopt and combine elements from the most diverse religions. The original of Simon's Helen is the moon-goddess of Syria and Babylonia. In the *Clementine Recognitions* Helena is always translated 'Luna.'⁷ The theory that Simon was accustomed to borrow from paganism is corroborated by the assertion of the Fathers that he and Helena were worshipped by their sect with the attributes of Zeus and Athene and received the cult-title *κύριος* and *κύρια*.⁸ Baur suggests that Simon transferred to himself and his consort the cult of the Phœnician sun-god and moon-goddess, Melkart and Astarte; it only required a slight alteration to confuse his own personal name, which was formed from the same root, with that of the former (שֶׁשֶׁן). But, apart from this theory, there existed a wide-spread cult of the moon-goddess (*selênê*) in Syria and Egypt under the name of Helene; she was identified with Aphrodite, Atargatis, and the Egyptian Isis, who was often represented with horns to betoken her relation to the moon.⁹ One feature of the myth of Helen can be traced to the very ancient connexion of the religion of Osiris with Syria (especially with Byblus).¹⁰ According to legend, Isis spent ten years in a brothel at Tyre during the course of her wanderings in search of the scattered limbs of her husband.¹¹ The imprisonment of Helen is thus only a variant of the many myths relating the degradation of the Queen of Heaven, which all originally symbolized the waning of the moon. The orbit of the moon was, according to the astronomy of the time, the boundary between the realm of light and freedom and the realm of fate. Helen therefore, as the moon-goddess, was suited to be the source of all the distress of the sublunar world.

12. Relation of the myth of Helen to 'The Great Announcement.'—There is no reason to doubt the trustworthiness of Hippolytus or to discredit the authenticity of his quotations from *The Great Announcement*. Writings¹² purporting

to be the composition of Simon were certainly current in the sect called after him. And the two traditions of his teaching, though divergent, show unmistakable points of contact. At the head of both systems stand the same pair of beings, the Supreme God with His companion *Ἐρμῶα* or *Ἐρῶα*, who acts as His agent in the creation of the lower world; and the theosophical speculations of *The Great Announcement* provide a cosmic setting in which the drama of Helen's redemption can be enacted. The greatest divergence appears in the conceptions of salvation respectively characteristic of the two traditions. Whereas *The Great Announcement* regards redemption, consisting in the reunion of the sexes, as the goal to which all things tend and as a universal process whose completion will result in the salvation of all men, in Justin's account the deliverance of Helen is indeed brought about by reunion with her affinity, but this is not co-ordinated to the redemption of the believer as either symbolizing its method or guaranteeing its fulfilment. For salvation is acquired for Simon's adherents simply by faith in himself and his companion. Nevertheless the fundamental idea is the same in both conceptions. The visible world is in a state of distress and tension owing to the mixture of two incompatible elements, and harmony can be restored only by retrieving the spiritual essence which belongs to the upper world from its captivity in the alien kingdom of matter. Just as the imprisonment of Helen, who is the animating breath of God, symbolizes the bondage of the spirit, so her deliverance typifies the redemption of the soul from thralldom to matter and fits her to act as a medium by which her children can regain freedom.

The assertion of Hippolytus¹ that Simon concocted the myth of Helen to conceal his shame from his adherents can be dismissed as a calumny, since, if his disciples followed the example of their master's licence, as the same author states, such a device would be gratuitous. Perhaps the speculations of *The Great Announcement* may be taken as the esoteric doctrines of the sect, the myth of Helen as the popular teaching intended to attract adherents. The allusion to a Greek legend and the adoption of a heathen cult were calculated to appeal to the Hellenized and semi-pagan inhabitants of Samaria; the obviously symbolical form in which this teaching was cast would awaken curiosity by suggesting the possession of deeper mysteries to be imparted later. Eusebius² distinguishes the cult of Simon and Helen from *τὰ ἀπορρητότερα*, the more secret mysteries of the Simonian sect; Epiphanius³ has distorted the charge that the sectaries were initiated into delirious doctrines by imputing to them the practice of licentious rites.

13. Date and place of composition.—We possess no exact criterion for determining which of these two forms of teaching is prior to the other in date. Since both refer to the NT, both, in the form in which they reached the knowledge of the ecclesiastical writers, must have been composed long subsequent to Simon's historical activities in Samaria. And therefore, since the hypothesis that the leader of the Gnostic sect is a distinct person from the Simon of Acts is entirely unsupported by any proof, both *The Great Announcement* and the myth of Helen must be regarded as products of the Simonian sect fathered on its reputed founder. The starting-point of these speculations was probably the universally attested tradition that Simon claimed divine honours and associated with himself a woman named Helen, whence his followers were sometimes known as the Helenians.⁴ Much of the substance of the myth of Helen possibly goes back to the Samaritan voluminibus scripta dimittens: Ego sum sermo Dei, ego sum speciosus, ego paracletus, ego omnipotens, ego omnia Dei'; *Apost. Const.* vi. 8: οὐδὲν ἐστὶν οἱ περὶ Σιμόνα καὶ Κλεόβιον ἰδιῶν συντάξαντες βιβλία ἐν ὁνόματι Χριστοῦ καὶ τῶν μαθητῶν αὐτοῦ περιφέρουσιν εἰς ἀναγνῆναι; *Præfatio Arabica ad Concilium Nicænum*: 'Sibi autem perfidi isti Simonitæ Evangelium effinxerunt quod in quatuor tomos secantes, librum quatuor angulorum et cardinum mundi appellarunt.'

Simon himself. For the two references to the NT, by which Helen is compared to the lost sheep and St. Paul's description of the Christian armour (Eph 6¹⁴) is adduced to justify her identification with Athene,¹ may very well be portions of the propaganda of his later followers embodied in the traditional exposition of his teaching. *The Great Announcement*, on the other hand, must have been composed later than the 1st cent. A.D., since its quotations² from the NT (1 Co 11³², Mt 3¹⁰) are an integral part of the text. There is no difficulty in accepting Samaria as the place of its composition, in spite of its use of Alexandrian allegory, since the Samaritans readily adopted the methods by which the Jews of the Dispersion attempted to reconcile their religion with Greek culture.³ Just as they imitated the pragmatism of such apologetic historians as Eupolemus and Artapanus⁴ in harmonizing the traditions of their race with Greek mythology,⁵ so some unknown Samaritan perhaps borrowed from Philo the science of allegory to transform the Pentateuch into a vehicle of Hellenistic theosophy.

14. Relation of the Simonian system to other forms of Gnosticism.—Harnack regards Simon as the founder of 'a new religion, and that a world-religion, upon the principle of embodying all the important articles of the older ones.'⁶ Lipsius dismisses the system attributed to Simon as 'an obvious adaptation of the earlier popular Christian Gnosticism, as it was propagated in Syria about the time of Trajan.'⁷ The Simonian in its main outlines resembles other Gnostic systems, but is an early and original version of the common type.

Apart from his character as the author of heresy in general, Simon is regarded by the Fathers as in particular a heretic from Judaism. Hegesippus places him at the head of a list of Jewish heresiarchs.⁸ Tertullian⁹ contrasts him with Marcion and Valentinus and classes him with Hebion, as a typical representative of Jewish and Samaritan heresy. His hostility to Judaism is manifested chiefly by his disparagement of the prophets and his rejection of the moral law. Epiphanius¹⁰ attributes to Simon's followers the doctrine that the God of the Jews was one of the angels of the lower world who created man; but this doctrine, if it ever found a place in the teaching of the sect, is not one of the original tenets of Simonian Gnosticism, and must have been introduced later, probably owing to the influence of Marcion. For Simon's sense of the antagonism between the law and grace did not issue in the antithesis of a just God, the creator of the lower world, and a good God, the creator of the world of light. And just as he is less logical than Marcion, so his hostility to Judaism is less radical than that of the Ophites. The strained interpretation of Scripture characteristic of Simon's system is not peculiar to him, and his use of a pagan legend is parallel to the Gnostic Justin's allegorical interpretation of the myth of Heracles by which Herodotus prefaces his account of the Scythians.¹¹ But he accepts the Pentateuch as containing a true revelation, and does not read it

backwards like the Ophites, who worshipped the serpent as a benefactor for persuading men to taste of knowledge and revered the sinners of the OT as saints.

Nevertheless the Simonian system is most closely akin to Ophitism and to Valentinianism, in which the leading characteristics of primitive Gnosticism tend to recover their central position. It must be assigned to a comparatively early date in the history of Gnosticism, since its dualism is by no means absolute. The origin of evil is subsequent to creation; the lower world was willed by the supreme God, and His immediate companion was charged with the task of bringing life to quicken it. And, just as the creation of the lower world is not attributed to the malice of a subordinate demiurge, low in the scale of divine being, or to an act of rebellion in heaven, so the conception of a mediator in redemption is absent: the Most High Himself descends to seek and redeem His companion. In respect of the doctrine of a primal man, Simon's system is closely similar to that of the Ophites. For in that system primal man, who in Simon's system is the image of the Supreme, is identified with the supreme God Himself, and His immediate companion, second man, is His thought¹ (*ἔννοια*). Simon, however, unlike the Ophites, practises a rigid economy in the number of persons whom he brings upon the stage; this simplicity indicates an early date by contrast with the many differentiations of God among whom the successive parts in the drama of redemption were distributed by the later Gnostics. The actors are reduced to the two essential persons—the fallen deity and the saviour, Helen and Simon; and therefore primal man plays no part in the fall or in redemption, as in the system of Valentinus. But Helen (*Ἑρμωια*) is a variant of the fallen female principle whom Valentinus named Sophia or Achamoth. The Fathers were quick to notice points of similarity: pseudo-Tertullian identifies Helen with Sapientia;² Simon himself is reported to have called her *Προβυκος* and Holy Spirit.³ The earthly degradation of Helena emphasizes the thought that the exile of the fallen goddess here below, as the thrall of her own creation, itself calls for a redeemer. In the system of Secundus,⁴ a disciple of Valentinus, Sophia is distinguished from her abortive offspring Achamoth, and remains throughout in the upper world, where she is redeemed by becoming the saviour's bride. This transference of scene from the earthly to the celestial world is the product of reflexion and marks the Valentinian as a later version of the myth of a fallen goddess.

The points of contact with the earlier forms of Gnosticism are more frequent in the case of the myth of Helen than in that of the system of *The Great Announcement*. The device, e.g., by which Helen's redeemer escaped the notice of the world-ruling angels resembles the descent of Jesus, as it was sung by the early Naassene sect of the Ophites;⁵ the theory of emanations in *The Great Announcement* resembles Valentinus's developed doctrine of syzygies. The doctrine of transmigration does not play so conspicuous a part in most Gnostic systems as in *The Great Announcement*, where it is represented as a process by which the seeds of divine light are sifted and purified from their imprisonment in evil matter; perhaps the theory was originally employed to justify the one feature which is absolutely peculiar to this system. For the identification of the supreme God and His consort with historical persons distinguishes the doctrine of the Simonians as unique in the many forms of Gnosticism.

15. Simon Magus in the character of a Gnostic in the 'Clementines.'—The chief catchwords of Simonian Gnosticism were known to the author of the original work which underlies the *Clementine Homilies and Recognitions*. Both versions of this early Christian romance give accounts of Simon's history,¹ which agree so closely that they must have been derived from a common source.

Simon, a native of Gitta in Samaria, was educated in Alexandria, where he learned the wisdom of the Greeks and became an adept in magic. He later became a disciple of Dositheus, the successor of John the Baptist, and supplanted him in the leadership of the sect. He announced himself to be the highest Power, exalted above the creator of the world, and called himself 'the Standing One,'² signifying that he would be established for ever and would never see corruption. He associated with himself Helena, who is called Luna in the *Recognitions*, and had been the only female disciple of John the Baptist. According to his account, she had come down from the highest heavens and was Wisdom, the mother of all things; the Greeks and barbarians who fought at Troy were contending for an image of the truth, being ignorant that she was the consort of the one and only God, with whom she dwelt in heaven.

The *Clementines* are acquainted with the distinctive catchwords of Simonian Gnosticism in each of its forms; but, since this acquaintance is only superficial, no attempt is made to avoid confusion with other similar systems. Helen is confused with the Sophia of Valentinus, and her identity with Helen of Troy is explained by the theory that the object of contention between the Greeks and barbarians was a phantom of the celestial Wisdom, not by the theory of transmigration. The claim that Simon himself was the supreme God is confused with the distinction between the supreme God and the subordinate creator, which is characteristic of later forms of Gnosticism, but is not original in the Simonian. Subsequently in the romance Simon expounds the doctrine of an unknown and perfect God and contrasts Him with the creator, whose imperfection and weakness are manifest.³ St. Peter is the champion of the Monarchian theory in the form in which it was developed early in the 3rd cent., and especially at Rome in the controversy of the Church with Gnosticism. Moreover, doctrines similar to those taught by his historical disciple, Menander, are placed in the mouth of the Simon of the *Clementines*. Menander promised his followers that they should never die. Similarly Simon is represented as denying a future resurrection, since the knowledge of its heavenly origin makes the soul at once superior to its bodily prison.⁴ Simon is attacked in the *Clementines*, not as the leader of a particular Gnostic sect, but as the author and typical representative of Gnostic heresy in general.

16. The attack on St. Paul under the mask of Simon Magus.—In addition to this hostility to Simon Magus as the representative of Gnosticism, which is the fundamental characteristic of the disputes between St. Peter and Simon described in the *Clementines*, there are undoubted traces of a veiled attack on St. Paul, most frequently in the disguise of Simon, but in one instance under cover of the designation 'the enemy' (ὁ ἐχθρὸς ἀνθρώπου). St. Paul is attacked (1) for having stirred up persecution against the infant Church; (2) on account of his claim to equal authority with the apostles in virtue of the personal call heard in the vision on his way to Damascus; (3) for his opposition to the original apostles and their emissaries, in particular for the rebuke which he administered to St. Peter at Antioch.

(1) In the *Recognitions*⁵ Paul the persecutor is referred to as 'the enemy'; and, since the section in which this designation is used in the *Recognitions* also occurs in the table of heads

given in the last chapter of the third book, it must also have stood in the lost *Circuits of Peter*, which underlies both the *Homilies* and the *Recognitions*. St. Peter describes how an enemy raised a tumult in the temple and thus interrupted the preaching of James, when the conversion and baptism of the people at Jerusalem was imminent; after throwing James headlong from the top of the steps, this man was dispatched with a mission from Caiaphas to Damascus. The designation does not occur in the *Homilies*, but in the epistle¹ prefixed to the book St. Peter, its putative author, attributes the rejection of his own preaching to the lawless and babbling teaching of the enemy. This is an allusion to St. Paul, not in the character of a persecutor of the Church in his unconverted days, but as the apostle of the Gentiles.

(2) In other portions of these works, when the disguise of Simon is adopted, the hostility to St. Paul is much more covert. In one passage of the *Homilies*,² in which this hostility is generally more violent than in the *Recognitions*, St. Peter refutes Simon's contention that revelation in visions is more certain than that given in personal intercourse. There is an obvious allusion to St. Paul's vision on the road to Damascus and to the claims to an equal apostolate which he based upon it. After suggesting that the real purpose of his vision of Jesus was to confound him as the adversary of the faith, St. Peter proceeds: 'But if he made you an apostle after a brief discipleship in a single vision lasting but an hour, prove it by preaching His message, by interpreting His doctrines, by loving His apostles, by not contending against me, His companion.' But St. Paul supported his authority not merely by the single vision on the road to Damascus; he also claimed to have visions³ subsequent to his conversion. This claim is perhaps disparaged in the *Recognitions* by words put into the mouth of St. Peter,⁴ when disputing with Simon concerning the power of imagination to rise above the apprehension of things perceived by the senses: 'But if you think that there is easy access for your mind above the heavens, and that you are able to conceive the things that are there and to apprehend that immeasurable light . . . The miracles which St. Paul wrought are perhaps discredited by ascribing Simon's ascendancy over his followers to his skill in magic.'⁵

(3) (a) During the earlier part of his mission to the Gentiles at least St. Paul was involved in bitter controversy with opponents who claimed to be emissaries of the apostles, and sometimes even with the original apostles. His opponents accused him, on the one hand, of undue laxity in dispensing his converts from fulfilling the obligations of the Jewish law and in allowing them to compromise with heathenism by eating meats offered to idols, and, on the other hand, of a desire to establish his own authority and to make capital out of an insincere profession of Christianity by preaching himself rather than Christ,⁶ which issued sometimes in undue severity in the exercise of the power to which he pretended.⁷ Some of their taunts are quoted in St. Paul's apologies. He was accused of pleasing men and not God,⁸ and was referred to as an 'enemy' (ἐχθρὸς)⁹ and a 'deceiver' (πλάνας).¹⁰ Similarly, according to the *Clementines*, it is Simon's whole mission to commend himself under shelter of his professed allegiance to the truth which the apostles teach; St. Paul's supposed laxity in the matter of meats offered to idols is parodied in an episode at Tyre, where Simon is reported to have entertained the people to a feast on sacrificial flesh;¹¹ Simon is also called the 'enemy' and the 'deceiver,' who misleads his converts into receiving him as a friend and a preacher of the truth.¹²

(b) St. Paul perhaps sometimes provoked his opponents by the strong terms of condemnation with which he retaliated. 'I would,' he says, 'they were even cut off which trouble you';¹³ and he pronounces a curse on any one, though an angel from heaven, who should preach any other gospel than that which he had preached.¹⁴ In the *Homilies and Recognitions* the charges levelled by St. Paul at his opponents are retorted on Simon Magus. Just as he called them 'false apostles . . . transforming themselves into the apostles of Christ,'¹⁵ so St. Peter denounces Simon as a false apostle, who opposes the true (ψευδοἀποστόλος).¹⁶ In the *Recognitions* there is an echo of the phrase which St. Paul used to expose the seductions of these false teachers: 'for Satan himself is transformed into an angel of light.'¹⁷ Simon, since he is the Devil's minister, is described as 'the Evil One transforming himself into a splendour of light.'¹⁸ On one occasion St. Paul denounced one of the original apostles himself. The passage in the *Homilies*¹⁹ in which St. Peter confutes Simon's theory of the greater certainty of a revelation obtained in visions is a counterpart to St. Paul's withstanding St. Peter at Antioch.²⁰ St. Peter says that Simon had pitted himself against a solid rock, the foundation of the Church, and was slandering the preaching which he had heard from Christ, and then, referring to a phrase used by St. Paul to the Galatians,²¹ he proceeds, 'or

St. Paul in the person of Simon is attacked not for repudiating the law, but for his opposition to the original apostles, which he justifies by a claim to equality with them. It is true that St. Peter, in the epistle prefatory to the *Homilies*, describes his doctrine as lawless; but his real sin is the assumption of the right to expound the law in opposition to the twelve apostles whose peculiar prerogative it is, as the custodians of the teaching of 'the True Prophet' and His personal disciples.¹ It is the mission of St. Peter to resist the false apostle, Simon Magus, as Moses resisted the magicians in Egypt,² and to warn his hearers not to listen to any preacher who has not received a testimonial from James, the Lord's brother. The offence of this false gospel is recognized as inevitable; for the True Prophet in His last charge to His apostles had foretold that a preacher of error must necessarily precede the true gospel in order that by his overthrow the truth might be the more clearly established.³ Simon Magus, like St. Paul, is a chosen vessel, but of the Evil One.⁴ He is the deceiver who is chosen by the Devil to go as St. Peter's forerunner to the Gentiles with a counterfeit gospel.⁵ Simon Peter, according to the *Clementines*, is the real apostle to the Gentiles, who brings them the salvation to which they have been called by following in the footsteps of Simon-Paul and correcting the errors which he teaches.⁶ The contest between St. Peter and his adversary in both forms of the romance ends in the complete defeat of the latter, when Faustianus, the father of Clement, in the form of Simon publicly recants his errors at Antioch in language reminiscent of St. Paul's style.⁷ The sham Simon confesses that he was brought to make this avowal because an angel of God had scourged him by night; this is an allusion to the affliction which St. Paul attributed to an angel of Satan sent to buffet him.

In the episode of the *Recognitions* which describes the persecution of the Church by St. Paul in his unconverted days the future apostle, under the designation of 'the enemy,' is clearly distinguished from Simon, since he himself denounces the apostles as disciples of the magician.⁸ Moreover, the theory that Simon plays a providential part in the dissemination of the true gospel as the false forerunner of the apostles is only a particular application of the Helxastic doctrine, generally characteristic of the *Homilies*, that good and evil necessarily go in pairs.⁹ But there can be no doubt that St. Paul is attacked under the mask of Simon Magus; for, whereas elsewhere in these books Simon does not believe in Jesus at all, in these passages he is represented as falsely claiming to have received a commission from Christ in opposition to the claims of the original apostles.

17. Modern critical theories based on the equation Simon=Paul.—Starting from the evidence which the *Clementines* afford of a veiled attack on St. Paul in the person of Simon Magus, inspired by Jewish-Christian or Ebionite hatred of the Apostle of the Gentiles, Baur put forward the theory that the figure of the arch-heretic and false apostle Simon Magus was simply invented by his opponents as a caricature of St. Paul, and that the traditions of a conflict between St. Peter and Simon Magus had their origin in the contest between St. Peter and St. Paul. Baur was followed by the critics of the Tübingen school—Volkmar, Hilgenfeld, Lipsius, Zeller, and others. And more recently his thesis has been defended by Kræyenbühl, Krenkel, Preuschen, and Schmiedel. The theory consists of two main contentions: (1) the story of Simon Magus in Acts is a modification of a Jewish-Christian tradition, whose original anti-Pauline tendency has been forgotten; and (2) the ecclesiastical traditions of St. Peter's travels and labours among the Gentiles, and especially of his martyrdom at Rome, are unhistorical and had their origin in the journeys and labours of St. Paul.

(1) The story of St. Peter's resistance to Simon Magus at Samaria was originally intended as a counterpart to St. Paul's condemnation of St. Peter at Antioch,¹ representing the victory of the Prince of the Apostles and the complete discomfiture of his opponent. The rapid conversion of Simon is intended to question the genuineness of St. Paul's sudden change from a persecutor to a disciple. The personal pretensions of Simon Magus are distortions of the claims of St. Paul. Simon Magus proclaiming himself to be some great one, and acclaimed by the Samaritans as 'the great power of God,' is St. Paul claiming that he lives by the power of God, or that the power of Christ rests upon him, or that his gospel is the power of God.² St. Paul's pretensions to equality with the apostles are caricatured in the request of Simon to receive the power of conferring the Holy Spirit by the laying on of hands. For Simon offering money for this power is really St. Paul attempting to purchase the apostleship by the contributions of the Gentile churches to the poor saints in Jerusalem.³ St. Peter's rebuke to Simon is understood only when it is seen to be a reflexion on the conduct of St. Paul. 'Thou hast neither part nor lot in this matter' is a refusal to acknowledge his right to the *κλῆρος τῆς ἀποστολῆς*.⁴ 'I perceive that thou art in the gall of bitterness' is an allusion to his bitterness in controversy. This theory presupposes that tendency in an opposite direction is also present in the Acts; that St. Luke in fact wrote the work as a pamphlet in defence of St. Paul, suppressing some facts and modifying others, with the object of representing the relation of the original apostles to his master as always harmonious. He has inadvertently preserved legends of an anti-Pauline tendency owing to the fact that their original purpose has been forgotten.

(2) Lipsius maintained that the tradition of St. Peter's mission to the Gentiles and martyrdom at Rome was an Ebionite fabrication, whose motive was a desire to detract from the glory of St. Paul's labours by misrepresenting him as the false forerunner of the preacher of the true gospel, which corresponded to the standards of Jewish-Christian orthodoxy. St. Paul is already subordinated to St. Peter in Acts, since the latter is there represented as initiating the mission to the Gentiles. The legend of St. Peter's visit to Rome was later adopted in a Catholic sense, when it was realized how easily it might be used to subvert the interests and ambition of the Roman Church. Its intention was thereby fundamentally transformed. Whereas originally the purpose of St. Peter's presence in Rome was represented to be the final discomfiture of the false apostle, i.e. Simon-Paul, in the Catholic version of the legend St. Paul is introduced as co-operating with him in the foundation of the Roman Church and as his second in the contest with Simon.

18. Arguments used in support of the Tübingen theory. — Three arguments have been chiefly urged in support of Baur's thesis that the legend of Simon Magus originated in a distortion of St. Paul: (1) there is evidence of a bitter polemic against St. Paul in his lifetime, emanating from Jewish-Christian circles; (2) the *Clementine Homilies* and *Recognitions* embody traditions of a time much earlier than the date of their compilation; (3) all the versions of the apocryphal *Acts of St. Peter* betray a similar hostility to St. Paul under the mask of Simon Magus, and go back to the same cycle of legends as the *Clementines*, since the legend of St. Peter's travels in Palestine and the legend of his visit to Rome presuppose each other.

(1) That St. Paul was engaged during his lifetime in bitter controversies with opponents who disparaged his claims to be an apostle and appealed against him to the authority of the original apostles is sufficiently attested by the evidence of his own epistles. The internal evidence of his own writings is corroborated by external evidence. Epiphanius⁵ mentions certain fictitious discourses current among the Ebionites, in which St. Paul was accused of being the son of a Greek father and mother and which ascribe to him an exaggerated hostility to the law, due, as they assert, to his disappointment in failing to obtain the hand of the priest's daughter in marriage, after he had become a proselyte. Evidences of an attack on St. Paul, sometimes veiled and sometimes open, have been discovered in the Apocalypse, in the Gospels, and in certain incidents recorded in Acts. It is ultimately against him that the condemnation of the Nicolaitans is directed in the Revelation of St. John;⁶ his laxity had led him to violate the commands of the Apostolic Council at Jerusalem, to eat things sacrificed to idols, and to commit fornication; his phrase, 'the depths of God,' is parodied in the condemnation of those of Thyatira 'who know not the depths of Satan.'⁷ St. Paul is the enemy in the parable, who oversowed the wheat with tares.⁸ St. Luke in the Acts has attempted to wrest to St. Paul's honour certain episodes invented to discredit him, but their original

intention can be detected; e.g., the incident of his deification at Derbe¹ originally parodied his claims to speak with the authority of Christ; his champion goes out of his way to explain the reasons of St. Paul's light imprisonment under Felix,² which was probably urged against him to his reproach. The story of St. Paul's contest with the sorcerer Elymas or Bar-jesus in Cyprus³ is introduced to counterbalance the story of St. Peter's conflict with the magician Simon, and 'thus anticipates the later apocryphal legends in which St. Paul in alliance with St. Peter combats a caricature of himself.'⁴

(2) It is contended that the *Clementine Homilies* and *Recognitions* preserve the earliest form of the legend of St. Peter's conflict with St. Paul in the disguise of Simon Magus, and therefore embody a Jewish-Christian myth of the 1st cent. all but contemporary with the first generation of Christians. The *Homilies* and the *Recognitions* relate the story of the wanderings of Clement of Rome in Egypt and Palestine in search of the lost members of his family, during which he accompanies St. Peter and witnesses his conflict with Simon Magus at Caesarea and Laodicea. Neither gives the romance in its original form, but both are recensions of a common written source, the *Circuits of Peter*, known to Origen⁵ (c. 240), which itself had an archetype in the *Preachings of Peter* (c. 200). Whether any of these versions was made at Rome has not been decided; there is a general tendency among recent critics to accept the opinion that they were all composed in Syria. The *Circuits of Peter*, fragments of which have been preserved by Epiphanius,⁶ presents no very definite sectarian features, and the view has been maintained (e.g., by C. Bigg) that the *Homilies* represent a recast of an orthodox work by an Ebionite editor. But it is probable that the Ebionite features, including the hatred of St. Paul, were present in the *Preachings of Peter*, the earliest known ancestor of the whole literature. Lipsius proposed to bridge the gulf of over 100 years which separates this work from the 1st cent. A.D. by conjecturing the existence of an earlier Ebionite *Acts of Peter*, and supported his hypothesis by the contention that the account of Simon Magus given in the *Apostolic Constitutions* is a summary of the contents of this book. But the discovery of the *Syriac Didascalia* disproved his hypothesis; for this work (the earlier form of the *Apostolic Constitutions*), the composition of which was contemporary with that of the *Preachings of Peter*, contains no reference to a visit of Simon Magus to Caesarea. Lipsius's attempt to reconstruct an original 1st cent. romance relating the contest between St. Peter and Simon has since been abandoned, and the champions of the Tübingen theory now have recourse to the hypothesis of an oral tradition. The *Homilies* are undoubtedly composite and embody elements of the tradition not contained in the *Circuits*—e.g., the dispute with Apion concerning idolatry; the hypothesis of an oral source, it is maintained, would explain the confusion of characteristics in the person of the Simon of the *Homilies* and *Recognitions*.

(3) The legend of St. Peter's contest with Simon at Rome and his subsequent martyrdom is given in a series of apocryphal *Acts*. The earliest of these, the *Actus Petri cum Simone*, is a heretical composition; the *πράξεις Πέτρου καὶ Παύλου*, preserved in two recensions, is an orthodox recast of the legend.⁷ St. Paul appears in both forms of the legend: in the earlier he departs from Rome for the evangelization of Spain, before St. Peter's arrival; in the latter he acts as St. Peter's second in the dispute with Simon and is martyred with him.

(a) These books preserve traces of a polemic against St. Paul under the mask of Simon similar to that carried on in the *Clementines*. In the *Actus Petri cum Simone* St. Peter denounces Simon as a cheat and an impostor,⁸ using the very same term (*planus*) with which Simon was stigmatized in the *Clementines*, and St. Paul by his opponents. Moreover, this term of reproach is used of St. Paul himself and coupled with that of *magus* by apostate Christians,⁹ who had been misled by Simon. Simon is also called 'the enemy.'¹⁰ Traces of hostility to St. Paul are more numerous in the Catholic *Acta*, which perhaps represents an orthodox recension of a document of distinctly anti-Pauline tendency, since Paul is associated with St. Peter to combat his own caricature. St. Paul in the disguise of Simon is attacked for his inconsistent attitude to the question of circumcision.¹¹ Simon warns the emperor Nero against the apostles, because they are circumcised. The apostles answer that Simon himself is circumcised and suggest that his object is to deceive souls by his strict conformity to the Jewish law. The favour which Simon enjoys with Nero is perhaps a reflexion on the mild treatment which St. Paul was supposed to have secured during his captivity at Rome by his recommending obedience to the power of the emperor. The pretended beheading of Simon and his trick of substituting

a ram for himself¹ are possibly malicious perversions of the legend of St. Paul's martyrdom. The story of Simon's attempted flight perhaps originated in St. Paul's claim to have been caught up into the third heaven in a vision. For in the *Actus Petri cum Simone*² the object of Simon's flight is not to regain his ascendancy over the people by a proof of his magical powers, but to manifest his divinity by ascending to God, whose power he is.

(b) The conflicts between Simon and St. Peter are located in the Clementine literature entirely in Palestine and Syria; in the apocryphal *Acts* in Rome. But the Roman contest is not a mere echo of the Syrian. For the books of apocryphal *Acts* presuppose earlier conflicts in Palestine; the *Clementines* foreshadow a final conflict in Rome. The *Clementines* regard St. Peter's commission to follow and refute Simon as the divinely appointed method of bringing salvation to the Gentiles. St. Peter continually contemplates Rome as the goal of his travels,³ and his adversary prophesies that Rome will be the scene of his crowning glory, when he will be adored as a god.⁴ The apocryphal *Acts*, and especially the *Actus Petri cum Simone*, mention a previous victory of St. Peter over Simon in Judaea and give details of one incident⁵ which place it beyond doubt that these allusions do not refer exclusively to the contest recorded in Acts.⁶ Lipsius found in this agreement of the *Clementines* with the apocryphal *Acts* an argument in support of his hypothesis of 1st cent. Ebionite *Acts of St. Peter*; but, now that this hypothesis has been abandoned, the original oneness of the tradition underlying these two classes of literature is still urged in support of the theory that the veiled attack on St. Paul under the mask of Simon Magus in the *Clementines* derives from a 1st cent. legend orally handed down, since the anti-Pauline interest seems to be the basis on which they agree.

19. The theory that Simon-Paul = Simon of Cyprus.—The attempt to answer the objection, Why was the name Simon adopted to conceal St. Paul?, has given rise to an ingenious theory. Originally it was supposed that the name was given him to contrast him with St. Peter as the false Simon with the true. But later the suggestion was made that it was given him at the time of his imprisonment under Felix. Josephus⁷ mentions a courtier of Felix, a Jew of Cyprus, named Simon, whom he used as a go-between in his intrigue with Drusilla, the wife of Azizus, king of Emesa, since he pretended to be a magician. It is just possible, though very improbable, that this person may have been the same as Simon of Gitta, Josephus having confused his native place with Kition, i.e. Cyprus. But that St. Paul was ever accused of using the disguise of this man's name for the purpose of doing such a favour for Felix is out of the question. Those who maintain the theory disagree as to who were responsible for the calumny, Kreyenbühl attributing it to the Jews who accused St. Paul before Felix, Krenkel to his Jewish-Christian opponents.

20. Criticism of the Tübingen theory.—Pushed to its logical conclusion, this theory amounts to a denial that the Samaritan sorcerer ever existed; he originated as a caricature of the apostle Paul, and his later characteristics either arose out of the rôle which the Apostle of the Gentiles was represented by Jewish-Christian hatred to have played in the early history of the Church or were added when his connexion with St. Paul had been forgotten and the tradition had been adopted by the Catholic Church. Simon Magus became the father of heresy, because St. Paul was attacked in his person as the typical false apostle, whose mission is to oppose the true; since Gnosticism was the most serious danger to the Catholic system in the 2nd and 3rd centuries A.D., it was inevitable that the arch-heretic should be represented as a teacher of Gnostic error.

Preuschen⁸ has discovered the origin of the conception of Antichrist as a false teacher—as opposed

to the earlier conception of him as a persecuting monarch—in the figure of Simon-Paul, and appeals to the evidence of the Christian apocalypses. Simon Magus is detected in the Antichrist of the Christian *Apocalypse of Elias*, in the second beast of the Revelation of St. John,¹ who deceived the people of the earth by his signs and caused men to worship an image of himself, and also in a false teacher prophesied in the *Sibylline Oracles*.² The latter foretell the advent of a beast (*Βελίαρ*) from the Sebastenes, who would mislead three classes of men—the elect, the lawless Hebrews, and the Gentiles. If the mention of the Sebastenes (*i.e.* the people of Augustus) alludes to Samaria (Sebaste), the passage must be an interpolation, since it is inserted in a context which probably refers to the triumvirs and Cleopatra, *i.e.* to a time before Octavian had assumed the name Augustus, though it is possible that allusion is made to the events of A.D. 70. But it is improbable that, even if Simon is a caricature of St. Paul, he was so important a figure at this early date as to be identified with Antichrist. The passage more probably alludes to the worship of the emperor. Most of the defenders of Baur's thesis, while still maintaining that St. Paul is attacked in the disguise of the sorcerer, have been convinced that Simon was a historical personage, whether they identify him with the Samaritan impostor whose doings are recorded in the earlier uninterpolated version of the story in Acts or with the hypothetical 2nd cent. leader of a Gnostic sect.

Nevertheless it is still contended that the Pauline features in the composite figure of the Simon of the *Clementines* are older than the Gnostic, and are in fact the cause of the vitality of his legend. By the time that the earliest Clementine romance was written St. Paul's peculiar contribution to the development of Christianity had been forgotten, and the uniqueness of the part that he had played in the mission to the Gentiles was obscured by the growing reverence of the Catholic Church for St. Peter. And yet it is just this claim of St. Paul to be the Apostle of the Gentiles that is traversed and distorted in the controversy of St. Peter with Simon Magus. The *Clementines* repeat the reproaches which were made against St. Paul in his lifetime. Schmiedel³ thinks it 'a psychological impossibility' that any one should venture to attack the memory of a now revered apostle in the 3rd cent. A.D. But this is exactly what the author of the *Recognitions*, at least, has done; the allusion to St. Paul's persecution of the Church is too obvious for the writer to have repeated it without realizing that he was bitterly attacking the memory of the Apostle of the Gentiles under the name of 'the enemy.' Moreover, the currency among the Ebionites of writings which attacked St. Paul without any disguise is well attested for a period much later than the date of the composition of the *Clementines*.⁴ It is more probable to suppose that the terms with which St. Paul is reproached—'the deceiver' and 'the enemy'—were handed down in the Ebionite sect through long generations of conscious hatred, against the adversary of their sectarian narrowness, than that they survived because they were embedded in a tradition whose original intention was no longer understood. The intensity of the hatred manifested against St. Paul in the *Clementines* is due to the fact that it was still felt; their inability to make any progress or to forget any prejudice was the distinguishing characteristic of the Ebionites. The intense hatred manifested against Simon Magus as the representative of Gnosticism is self-explained.

The figure of the champion of Gnostic error was chosen as a disguise for St. Paul, probably because certain tenets characteristic of this heresy—*e.g.*, the antinomianism—were supported by an appeal to his epistles and arose from an exaggeration of his doctrines. An Ebionite of the 2nd or 3rd cent. could justify the long cherished hatred of his sect and discredit its object by pointing to the results of his teaching. Moreover, whenever the figure of Simon Magus was adopted as a disguise of St. Paul, he was most probably regarded as a distinct historical person, since the sting of caricaturing an adversary under the name of another consists in the historical infamy associated with that name.

The *a priori* improbability of the theory is corroborated by a closer examination of the evidence on which it rests. In the dispute at Laodicea described in the *Homilies*, where the attack on St. Paul is most violent, Simon is the mouthpiece of the doctrines of Marcion. An innuendo against St. Paul would not be out of place, since Marcion's antithesis of the law and grace was simply an exaggeration of Paulinism. In the apocryphal *Acts of Peter* Simon, so far from representing a rebellion against Jewish-Christian exclusiveness, is a champion of Judaism in its controversy with the Church. This work probably belonged to the Leucian collection, and, if so, there is positive evidence that it could not possibly have been written under Ebionite influence; according to Photius,⁵ the Leucian *Acts of Peter* taught that the God of the Jews was evil and that Simon was his minister. Moreover, the contention that St. Paul was introduced into the later recensions of the Acts with the object of distinguishing him from Simon is untenable, since the tradition of his association with St. Peter at Rome, mentioned by Dionysius of Corinth,² is older than the tradition of St. Peter's encounter with Simon at Rome, of which Hippolytus gives the earliest extant account. Justin Martyr's authority for the visit of Simon to Rome is weakened both by his mistaken conjecture about the statue and by the confusion which makes him date it in the reign of Claudius. Probably the story of this visit is entirely legendary, and the later traditions about it arose by the transference from Syria to Rome of the scene of St. Peter's victory in the conflict with Simon. For both the *Clementines* and the earliest extant version of the *Acts of Peter* reproduce Justin's story of the statue,³ just as they are both acquainted with some of the catchwords of the Gnostic system ascribed to him.

21. The real Simon Magus.—In each of the three types of early Christian literature from which our information about Simon Magus is derived he is represented to have claimed divine honours and to have set up a rival religion to Christianity after his encounter with the apostles, by attempting to transfer to himself the worship which men paid to Jesus.

The founder of the Gnostic sect of the Simonians himself claimed to be the supreme God, and this claim distinguishes the system attributed to him from all other forms of Gnosticism. Justin's mistake about the statue was probably suggested by his knowledge of this claim. Simon and his consort were worshipped by their followers with the attributes of Zeus and Athene. The *Clementines* represent the object of his journey to Rome to have been that he might there be adored as a god. The story of Simon's flight was perhaps invented

with the purpose of ridiculing his pretended apotheosis. In the *Actus Petri cum Simone* Simon undertakes to fly to God, after he had been exposed by St. Peter, and leaves the earth with this invocation to the Father:

'Me, the Standing One, thy son, they wished to overthrow; but having refused to agree with them, I have come to thy self.'

The self-immolation of Peregrinus Proteus² on his pyre at the Olympic games had familiarized the Christians of the 2nd cent. with the pagan craze for deification. The details of the episode were probably suggested by an anecdote of Suetonius:³ at games held in the presence of Nero an acrobat personated Icarus and, when he fell, besprinkled the emperor with his blood.

Origen⁴ tells us that the Simonians never confess Jesus as the Son of God, but say that Simon is the power of God. It is difficult to understand why Simon was ever regarded as a Christian heretic. For, though he claimed that Jesus was an incarnation of himself, he is more frequently represented as rivalling the religion of Christ's followers and travestying His passion. Simon's promise to rise again the third day, after he had been buried or beheaded, which is related with variations in detail both by Hippolytus and in the apocryphal *Acts*, is a parody of the resurrection of Jesus Christ, and is the early version of the story of Simon's death which was later superseded by the legend of his attempted flight. His aspect as a false Christ is older than his aspect as a false apostle.

Considering the independence of the three classes of documents to which we owe our information about Simon, there is a strong presumption that the points in which they agree contain the original kernel of truth. And these points of agreement tend to vindicate the authenticity of St. Luke's account of his doings. The author of *Acts* probably obtained his information about this incident in the early history of the evangelization of Samaria from Philip the Deacon, to whom its inception was due, while staying in his house when accompanying Paul to Jerusalem.⁵ Simon Magus was a Samaritan Messiah similar to Dositheus and Cleobius, with whom he appears to have had some connexion; he assumed some of the cognate traits of the pagan *θεῖος ἀνθρωπος*. Celsus⁶ had seen such enthusiasts in Samaria and heard them proclaim their gospel:

'I am God, or the Son of God, or the Divine Spirit. The dissolution of the world is at hand, and I come. . . . I desire to save and ye shall behold me again coming in the power of heaven. Blessed is he, whose pays me reverence now, but on the rest I will cast everlasting fire.'

Later, when he came into contact with Christianity, Simon conceived the idea of using the new movement for his own ends. The gospel of the Samaritan saviour already contained in germ the peculiar doctrines of Gnostic salvation, and it was natural that his later followers approximated more and more to the common type of Christian Gnosticism, with which it had always had close affinity; but this approximation never entirely obscured the original relation of the sect to its founder or the central place which he occupied as the object of worship. Simon probably owed his reputation as the father of heresy to the fact that he is the only heretic mentioned in the NT and that he opposed the apostles, to whom, according to the theory of the 2nd cent., was committed the custody of the catholic and apostolic faith.

22. Subsequent history of the Simonian sect.—According to the Fathers, Simon was succeeded in the headship of the sect by his disciple Menander.

⁷ *Ap. Origen, c. Celsus*, vii. 9.

The Simonians were also known as the Helenians¹ and the *Ἐρηνικάι*.² They were ill famed for their practice of magical arts.³ The author of the tract *de Rebaptismate* says that they made fire to appear on the water when they administered baptism.⁴ The history of the sect is a record of dwindling numbers. Justin Martyr mentions a school of Simonians existing in Rome in the time of Antoninus Pius. Theodoret⁵ asserts that they spread chiefly in Syria, Phrygia, and Rome. Origen⁶ says that in his time (c. A.D. 230) Simon had no followers anywhere outside Samaria, and not more than 30, if that, in his native land. But his evidence must be discounted, since Eusebius⁷ speaks of them as still numerous in the reign of Constantine, though compelled to conceal themselves or to dissemble their faith. Epiphanius⁸ says that Gitta had by his time sunk from a populous town into a village, and that there were still some Simonians in existence.

23. The survival of the legend of Simon Magus.

—The encounter of Simon Magus with the apostles in Samaria was quoted by the canons of the Church as the stock instance of the sin of attempting to purchase or confer spiritual gifts or preferment in return for money, and 'simony' (*q.v.*) became a technical term of ecclesiastical law. Simon's reputation as the author of heresy lived on long after the last remnant of his sect had vanished. In a Byzantine Psalter of the 9th cent. A.D. the overthrow of Simon Magus by St. Peter is depicted as the Biblical prototype of the triumph of orthodoxy won over the errors of the iconoclasts at the 7th Ecumenical Council of Nicaea.⁹ The story of Simon Magus survived in the popular mythology of the Middle Ages and contributed some elements to the legend of Faust. Faust, like Simon, enjoyed the companionship of Helen of Troy, and the incident of the *homunculus* which he made by chemistry originated in the legend that Simon had fashioned a boy from air and, having slain him, used his soul for the purposes of magic.¹⁰

SIMONY. — 1. Definitions. — 'Simony' is a word of somewhat varied meanings. The most general definition of it perhaps is 'buying or selling spiritual gifts or offices'; and it is named from Simon Magus (*q.v.*), who, when he 'saw that through the laying on of the apostles' hands the Holy Ghost was given'—some outward manifestation seems to have accompanied the gift, over and above the laying on of hands—offered them money that they might give him the same power (Ac 8¹⁸). The evil here mentioned has proved to be of wide ramifications in the Christian Church, and it may safely be said that no age and no country has been quite free from it; when it is suppressed in its more obvious forms, it takes a veiled form and becomes the more difficult to overcome.

In its primary sense simony is the buying or selling of sacraments or sacramental ordinances—*e.g.*, the exacting or paying of money for baptism or the Eucharist, or especially for the conferring or receiving of holy orders, including the episcopate. But the term was soon extended so as to include more indirect forms of the same evil, such as the buying or selling of ecclesiastical offices, and the exacting or giving of undue promises in order to obtain ordination or preferment, even if no money passes, and the improper procuring of presentations to benefices. At a somewhat later date distinctions were made between *munus a manu*, when money or something of value is given or received, *munus ab obsequio*, when promises are exacted or given for the performance of the duties of a benefice in some way which the particular Church has not prescribed, and *munus a lingua*, when preferment is given or procured, not because of the merits of the person presented, but because of the influence of an outside party.

2. Early period.—The earliest known instance of simony after NT times is that of Paul of Samosata in N. Syria, bishop of Antioch A.D. 280-270, and a celebrated Monarchian heretic.¹ Simony certainly appears to be included in the charges made against him by the bishops in their letter quoted by Eusebius.² Paul enriched himself at the expense of the Church, but no doubt this was chiefly owing to his holding the office of *duccenarius* under Zenobia, queen of Palmyra, and to his selling justice in that capacity. There was, however, not much temptation to simony as long as the Church was poor, and suffering under persecution. In the 4th cent. the evil began to show itself in widely separated parts of the Christian world. At the Council of Elvira or Illiberis in S. Spain (c. A.D. 305) fees for baptism were forbidden; the gift received gratuitously by the priest (*sacerdos*) was not to be made a gain of.³ The practice of exacting baptismal fees was also blamed in the East. Gregory of Nazianzus in Cappadocia (A.D. 381) refers to candidates for baptism being kept back thereby; he says that baptismal offerings are not necessary, for the real offering is oneself. The *Apostolic Constitutions*, a Syrian work written c. A.D. 375, speaking of Simon Magus and of his trying 'to obtain the invaluable (*ἀδύνατον*) grace by purchase,' bids its readers avoid oblations to God's altar which do not come from a good conscience;⁴ and this is found, expressed less explicitly in the *Older Didascalia* (3rd cent.) from which the later writer borrows.⁵ The *Apostolic Canons* (c. A.D. 400,

from the same school as, or perhaps compiled by the author of, the *Constitutions*) forbid giving or receiving the episcopate, presbyterate, or diaconate for money, and mention Simon Magnus.¹ The Council of Sardica (the modern Sofia in Bulgaria; c. A.D. 347) denounces bribery in the election of a bishop,² and forbids the translation of bishops from one see to another, as this (it says) is always done from avarice, for 'no bishop has been found to go from a better to an inferior see';³ translations were evidently common in practice. But the genuineness of these canons is disputed.

An extension of simony already appears in the 4th century. At the Council of Antioch in *enacensis* (A.D. 341) a bishop is forbidden, even on his deathbed, to appoint his successor;⁴ and in the *Apostolic Canons*⁵ a bishop is forbidden to give the episcopate to his brother, son, or other kinsman, or to ordain those whom he himself desires (so explicitly the Latin, and less plainly some texts of the Greek), for the gift of God may not be sold by him or made a matter of inheritance.

From the 5th cent. onwards we have numerous indications of the prevalence of simony. At the ecumenical Council of Chalcedon (A.D. 451) not only is ordination for money to any order (including those under the diaconate) strenuously forbidden, for it is turning the grace which cannot be bought (*τὴν ἀπαρὸν χάριν*) into merchandise, but equally are those who give or accept bribes for appointments to Church stewardships and other ecclesiastical posts condemned, as well as the middlemen who negotiate these transactions.⁶ The *Novellæ* of the emperor Justinian I., issued A.D. 534 to 565, prescribe an oath against simony to be taken at the consecration of a bishop by the elect and by the electors.⁷ A large number of councils deal with the subject.⁸ A Roman synod under Pope Symmachus, held A.D. 499 soon after his election, forbade canvassing and promises of votes before papal elections in the life-time of the reigning pope⁹—an early instance of what became a notorious evil in the Middle Ages. The 2nd Council of Orleans (A.D. 533 or 536) forbids ordination for money.¹⁰ The 3rd Council of Braga (in Portugal, A.D. 572) forbids bribes for ordination, and the exaction of fees for baptism, chrism (confirmation), and the consecration of a church.¹¹ At the Council of Rheims (c. A.D. 625) a bishop is forbidden to take anything from another Church for his own advantage or for that of his Church.¹² At the 4th Council of Toledo in Spain (A.D. 633) bishops are forbidden to appropriate Church property;¹³ and the 8th (A.D. 653) strongly condemns simony.¹⁴ At the 11th (A.D. 675) the demanding, or even accepting, of fees for baptism, chrism, and ordination is forbidden.¹⁵

Nor was the East less emphatic. The 'Trullan' Council of Constantinople (A.D. 691 or 692) forbids ordination for money or the demanding of compulsory fees for the Eucharist.¹⁶ The 2nd Council of Nicaea (A.D. 787) was strong against simony,¹⁷ whether in the case of a bishop demanding money or the like from other bishops or clergy or monks or in the case of any one obtaining a position in the Church by payment.

But perhaps the writer in the early period who deals most with the subject is Pope Gregory the Great (A.D. 590-604). In his epistles he constantly speaks of it, especially with reference to ordination. He declares that in parts of Gaul and Germany no one was ordained without a fee,¹ and so also in Achaia² and Epirus.³ He exhorts Brunichild, queen of the Franks, to prevent ordination for money, and 'selling the Holy Spirit.'⁴ Gregory declares in his letter to Isaac, patriarch of Jerusalem,⁵ that he has heard that in the Churches of the East no one is ordained without bribes. In ii. 23 he urges an Illyrian bishop not to allow any ordinations for money or entreaties (here we have the *munus a lingua*), but only for merit. In ii. 48 he says that the Donatists bribed a Catholic bishop in Numidia to allow one of their own bishops to be appointed in the place where he lived; and in iii. 48, writing to the same correspondent (Bishop Columbus), he strongly deprecates the ordination of boys, and all venality in ordination or 'influence or entreaty.' In iv. 27, writing to Januarius, bishop of Cagliari (Calaris) in Sardinia, he forbids the receiving of any fee for ordinations, marriages of clerics, or the veiling of virgins (nuns), unless it is voluntarily offered. A Roman synod under Pope Gregory (A.D. 595) forbade any compulsory payment for the pallium—the vestment sent by the papal see to archbishops, at least from the 6th cent. onwards.⁶

Accusations of simony against individuals in this period must be received with some caution. It was very easy to charge a theological opponent with this crime. A few instances may be mentioned. For that of Paul of Samosata see above. Ambrose accuses the Arian bishop, Auxentius, of simony.⁷ At Chalcedon Ibas, bishop of Edessa, was accused (falsely) of taking money for ordinations, as well as of spending the money of the Church on himself.⁸ Maximus, bishop of Salona in Illyricum (Dalmatia), was accused to Gregory the Great of having been consecrated bishop by simony,⁹ but was afterwards declared innocent. In many such cases it is obvious that a charge of simony was a convenient weapon when the real accusation was one of heresy or schism.

Most of the prohibitions of the Councils in this period on the subject of simony were embodied in the *Corpus juris canonici*.

3. Mediæval period in the West.—The form of simony which chiefly gave trouble in the Middle Ages was the buying and selling of ecclesiastical preferment. But two councils in the 12th cent. deal with compulsory fees: that of Tours (1163) forbids the exaction of payment for the admission of monks, or for appointments to monastic or clerical posts, or for burials, chrism, and unction with holy oil;¹⁰ the 3rd Lateran Council (1179), for enthroning bishops, installing abbots, instituting presbyters to benefices, burials, benediction or marriages, or for the other sacraments.¹¹ Thomas Aquinas¹² (1226-74) treats of simony at some length. He defines it as buying or selling anything spiritual or annexed to what is spiritual (*spirituali annexum*), since spiritual grace, being freely given, cannot be equated to any earthly price.¹³ It is therefore simony to give or accept anything for the sacraments as a price, though not as a stipend for priest's sustenance.¹⁴ It is clear from the objections which Aquinas answers that it was the common practice to exact money for the

sacraments—for baptisms and masses, for absolutions under the name of penance, for ordinations, marriages, and so forth. And a widely spread practice such as this perhaps prevented the 'angelic doctor' from showing with his usual perspicacity the real distinction in these cases between simony and an innocent offering. A priest might demand fees for baptism on the plea that it was the only way by which he could get his living, but the demand would be simoniacal; if the fee is exacted as a condition of giving the sacrament, it comes under the head of simony, though a free-will offering is permissible and laudable. Aquinas goes on¹ to observe justly that accepting and giving anything for the support of those ministering spiritual things is not simony unless there is any intention of buying or selling. Here comes in the same distinction as that made above. In art. 4 Aquinas explains what he means by buying or selling things which are 'annexed to what is spiritual,' and gives as an example that a bishop who demanded as a condition of collating a person to a benefice that part of the income thereof should be paid to himself would be guilty of simony. He then goes on² to deal with *munus ab obsequio* and *munus a lingua*, terms which had been in use long before his day; both these, he says, are simoniacal just as if money were received and paid.³ Finally Aquinas deals⁴ with the proper penalty for simony, for which see below, § 6. It is noteworthy in view of the history of the times that the question is raised whether the pope can commit simony. Aquinas answers⁵ that the pope can incur the guilt of simony like any other man, for the higher the place filled, the greater the sin. The things of the Church are his only as dispenser, not as possessor.

That in England simony was considered a grave offence during this period is seen from the *Salisbury Cathedral Statutes* of 1392,⁶ which, though only mentioning these cases incidentally, refer them expressly to the cognizance of the bishop himself. It was one of the regulations at Salisbury that the clergy were not to receive the oblations of the laity on Easter-day even after Mass, because it indicated avarice;⁷ this was to prevent simoniacal exactions (see below). The extent of simony in mediæval England is seen by the denunciations of Chaucer (c. 1340-1400) in his *Canterbury Tales*. The 'Persones Tale' (*de Avaritia*) says:

It 'is the gretteste sinne that may be, after the sinne of Lucifer and of Antecrist' . . . 'be it by catel, be it by procuring, or by fleshy preyere of his freendes,' i.e. by *munus a lingua*, of which Chaucer says that, if the nominee is worthy, it is not simony.

There were, indeed, many exceptions. Not all the clergy were guilty in this respect. Of the 'poore persone of a toun' Chaucer says:

'Ful looth were him to cursen for his tythes,
But rather wolde he yeven, out of doute,
Unto his poure parissheis aboute
Of his offring, and eek of his substaunce.
He coude in litel thing han suffisaunce.'⁸

The evil of simony had been prevalent all over the West under Popes Boniface IX. (1389-1404) and John XXIII. (1410-17), and the Council of Constance on 21st March 1418 decreed the vacation of offices obtained thereby; but the decree was half-hearted, and had little effect.⁹ Offices in the curia were openly sold under Innocent VIII. (1484-92);¹⁰ and the elections to the papacy of Alexander VI. (1492), and of Julius II. (1503) were openly

promoted by bribes.¹ A stronger effort to abolish the evil was made by the Council of Trent in the 16th century. Bishops were forbidden² to receive money for ordinations or for letters dimissory, or the like, though their notaries might charge certain fees; and so³ with regard to benefices and other ecclesiastical posts, and the making of conditions (the *munus ab obsequio*; see above, § 1). The council in sess. xxii. ('Decr. de observandis et evitandis in celebratione missae') forbids the importunate exaction of alms for masses as being simoniacal.

The extension of the meaning of 'simony' is illustrated by some chapters of the *Scotichronicon* of the Scottish historian John of Fordun, written c. A.D. 1385.⁴ Thus an abbot who gained his office by undue persuasion, and another who procured the succession to his office for his nephew,⁵ are judged to have been guilty of simony, even though no money passed. And this name is even given to the offence of a layman of Richard Cœur de Lion's court who received gifts from Saladin. It is also applied to the case of a monastery of women which would admit only nuns who brought a certain dowry to the community.

In mediæval Scotland offerings by parishioners came to be regarded as dues, and were exacted in spite of explicit regulations to the contrary, that 'neither sacraments nor sacramentals' (e.g., sprinkling of the people with holy water or benediction by the priest at Mass) 'were to be sold.'⁶ It was the custom (though explicitly forbidden by law) for the priest to retain the host in his hand on Easter-day till the communicant paid his dues.⁷ Offerings for masses, baptisms, burials, confession (called in England 'shrift-silver'), and the churching of women were common, and were exacted as of right, the priest refusing otherwise to officiate or to absolve.⁸ A relic of a quasi-compulsory offering by women when churched is still found in the last rubric of that office in the Book of Common Prayer; the woman 'must offer accustomed offerings' (in 1549 'her chrism [chrism, the white garment of the baptized child], and other accustomed offerings'). The exaction of 'kirk richts and Pasche offrandis' and the withholding of the sacraments till they were paid was denounced at the last provincial synod of the unreformed Church in Scotland, held in 1558.⁹ In 1483 a Scottish Act of Parliament was passed to prevent money being taken out of Scotland to pay for promotion and for pleas in Rome; for no ecclesiastic could expect preferment without paying the cardinals and officials in Rome. A striking instance is the appointment of a bishop of Brechin in 1488, the deeds relating to which are printed in the appendix to the *Registrum Episcopatus Brechinensis*.¹⁰

4. The East.—As the Church in the West became richer, the form which simony took had reference chiefly to the presentation to benefices. But in the East, especially in the Far East, it seems that the ecclesiastical authorities have had to deal with the evil chiefly in connexion with the exaction of what are called in England 'surplice-

fees'—the exaction, not as a matter of free-will offering, but of right, of money for baptisms and other offices. In many cases the Eastern clergy have had to live principally on those fees. And, it is to be feared, the exaction of money for ordination (under whatever name the fees are charged) has been very common. Yet the decisions of the *Apostolic Canons* (which were believed to have apostolic authority) and of Chalcedon¹ are held to be still binding.

In Egypt simony was first introduced as a regular system by the Coptic patriarch Michael (Chail) III. (A.D. 881-884), who exacted large sums from bishops-elect to meet the demands of the Musalmān government, and this system continued for several hundred years.² In India, among the Christians of Malabar, one of the efforts of the Synod of Diamper under the Portuguese (1599) was directed towards the extirpation of simony.³

With regard to the other minor Eastern Churches, it may suffice to quote the canons of two of them. The West Syrian (Monophysite or Jacobite) canons given by H. Denzinger⁴ say that a bishop may not receive a gift for ordination or for giving judgment; for in this and similar communities the civil authorities allow the bishop to be somewhat of a judge in ecclesiastical or quasi-ecclesiastical matters, such as marriage and divorce. Further, priests and deacons are forbidden to receive a gift from those to whom they distribute the sacraments;⁵ and those who confer or receive the priesthood by payment of a gift are to be submitted to the penance of adulterers and fornicators.⁶ The East Syrian (Nestorian) *Shanhadhus*, or Book of Canon Law, deals with ordinations to the episcopate, presbyterate, or diaconate, effected by bribes,⁷ and with improper appointments to the episcopate of persons who have been under penitential discipline;⁸ and forbids the exaction of fees for baptism, 'because baptism is spiritual circumcision,' though it allows the giving of voluntary offerings.⁹ In spite of canons, however, bribery for ordination has always been the bane of the Far Eastern Churches. A particularly bad case occurred in the 6th cent., when one Abraham was consecrated through simony bishop of Beith Lāphat in the south of Persia, with the result that he and his three consecrators were excommunicated by two succeeding patriarchs.¹⁰

5. Modern Anglican regulations.—After the Reformation simony comes into view in England almost entirely with regard to preferment, but the statute 31 Elizab. cap. 6 imposed fines on those who conferred or received holy orders simoniacally, as well as voiding presentations to benefices so made. In the English canons of 1604 an oath is directed to be taken by those who are about to be admitted to office, that they have not obtained it by simoniacal payment, contract, or promise.¹¹ This applies to ordinations as well as to admissions to benefices and other ecclesiastical offices. The same oath is prescribed in the present canons of the Church of Ireland.¹² Under modern conditions this regulation serves indirectly to protect the clergy from undue pressure by patrons of livings to make promises not required by the Church for the performance of their duty (the *munus ab obsequio*). This is seen very clearly in the canons of the Episcopal Church in Scotland. A provision of long standing enacts that no promise

other than the ordinary canonical subscriptions is to be required or given in the case of an episcopal election as a condition of the election, or of the confirmation of the election by the provincial bishops.¹ Another, dating from 1911, forbids (with certain reservations) any bishop, priest, or deacon about to be admitted to an office or order to make any promise, or to lay himself under any obligation inconsistent with his retaining his lawful liberty of judgment in performing his duties.²

But there is a danger of simony, direct or indirect, to which any system of ecclesiastical patronage is liable unless stringent precautions are taken. The sale of advowsons and of next presentations has given much trouble in the Church of England. The prohibition of the sales *in toto*, if the system of patronage is maintained—and there are at least equally great dangers in popular election of the clergy by the parishioners—would lead to the patronage in many cases being held by persons who had no interest in the parish. On the other hand, if patronage is bought and sold indiscriminately, simony must be the result. One way in which this has in the past been the case is by exacting a resignation bond from the presentee to a benefice—i.e. a promise to resign after a definite period. General resignation bonds have long been forbidden, but a statute of the early part of the 19th cent. (9 Geo. IV. cap. 94) allowed such a bond to be given if it were in favour of some person named in the bond. The great reform in this matter was effected in England in 1898, when the English Benefices Act, among other provisions, required sales of advowsons to be registered, forbade sales of next presentations, or sales by auction of any right of patronage except as part of an estate, and invalidated agreements to exercise a right of patronage in favour of a particular person. The new declaration against simony was of a very stringent character.³ For this reform the Church of England is chiefly indebted to the persistence of Archbishop E. W. Benson, who, however, did not live to see the Act passed.⁴

6. Penalties for simony.—In the earlier authorities the penalty prescribed, in the case of all parties concerned, was excommunication for laity and monks (who at first were almost always laymen, and therefore judged under that category), and, in addition, deposition and deprivation for the clergy. But, as time went on, the penalty of excommunication seems by degrees to have been relaxed. Aquinas in his *Summa*¹ says that the proper penalty for simony is for a man to be deprived of that which he has got thereby, as is laid down in canon 2 of Chalcedon.² And the Nestorian *Sunhadhus*³ decrees deposition,⁴ and only in some cases excommunication.⁵ In England the Elizabethan statute⁶ imposes fines and voidance of the benefice.

But the Council of Chalcedon,⁷ saying that a layman or monk who has been guilty of simoniacal transactions is to be anathematized, and that the cleric is to be deposed, says also that the bishop who receives the money endangers his own office (*βαθμὸς*). Excommunication is also prescribed in the Sardican canons;⁸ in the *Apostolic Canons*,⁹ expressly for both giver and receiver 'as Simon Magus [was excommunicated] by Peter';¹⁰ also at the 3rd Council of Braga.¹¹ Subsequent practice, however, varied. The 2nd Council of Orleans orders deposition of a priest ordained simoniacally, without mentioning the punishment of the ordainer;¹² the Council of Rheims orders deposition of a bishop appropriating the property of other Churches, saying that he is to be deposed 'as he cannot be excommunicated.'¹³ The 8th Council of Toledo¹⁴ adds imprisonment in a monastery to excommunication ('anathema'); the 11th¹⁵ in some cases adds a flogging. The 'Trullan' Council mentions only deposition,¹⁶ and so the 2nd Council of Nicæa¹⁷ in some cases, though in others¹⁸ excommunication is added. The Council of Tours¹⁹ only says that simoniacs will have their portion with Simon [Magus]; so the third Lateran, substituting Gehazi for Simon.

SIN (American).—There is, of course, no such thing as an aboriginal critique, or science, of conduct in America. Accordingly, among the American Indian peoples there is no conscious demarcation of classes of offence with respect to responsibility and object, such as is represented by the civilized man's conception of crime as offence against law, vice as offence against society, and sin as offence against the divine in nature or in human nature. Sin, vice, crime, pollution, and even misfortune, are, for the American Indian, all embraced in the category of evil; the range of the things which he recognizes as evil (and also as good) is, in the broad, equivalent to the range of things evil (and good) recognized by other races of men; but he did not, aboriginally, make a reflective separa-

tion of these things into classes. For this reason, it is impracticable to treat the native Americans' conceptions of sin except as related to their general notions of morality, of which subject this is a special continuation.

1. Pollution.—It is a commonplace of the study of primitive thinking that the notions of spiritual and material, of psychical and physical, are not clear-cut, and that the distinction is, therefore, no more significant than it was to those Ephesians whom Heraclitus satirized for their purifications by blood. It is, indeed, perfectly natural to the animistic or pantheistic frame of mind to conceive

physical nature as susceptible of giving or of receiving spiritual taint, and hence to imagine that the spiritual taint may be removed by physical purifications. This notion of uncleanness and its medicine, as pertaining both to men and to things, is as universal as is religious ceremonial. Nor can it be dismissed as mere superstition while we repeat—and with reason—that cleanliness is next to godliness.

The American Indian does not differ from the rest of the human race in respect of this confusion of spiritual and physical. Notions of pollution and purification are a part of his habit of mind and the explanation of much of his ritual. Birth and death, the functions of sex, preparation for war, for great hunts, for sowings and reapings, and above all for the great clan and tribal festivals, are everywhere attended with purificatory ceremonies—among which are abstinences, fastings, sacrifices, catharsis and emesis, and dedicatory rites such as painting of the body and face with symbols, bathings, aspergings, anointings, and sacramental feasts. The Indian stands before his lodge at the dawn in order that the young and growing sun may strike him with the rays of its vigorous youth, and make him strong; he strokes his child with green vegetation that its life may be green and flourishing.

'The old Indians,' writes a missionary to the Sioux, 'continuously bathed their feet in dew and snow, and their bodies in snow and rain and "sacred living water." The purpose of this was more to "keep the perceptions keen" than to keep the body clean.'¹

The rite of baptism as practised by some of the Plains tribes, by the Aztec, and by the Maya was governed by a similar motive.

Thus, in the *Hako*, the officiating elder 'makes certain wet lines on the face of the child.' These signify that the sustaining of life through the power of water comes from Tira'wa atius, i.e. from Father Heaven.² Bishop Landa says of the Yucatec that they named their baptismal rite *caputzihi*, meaning to be 'born anew'; and he adds that 'they have such a respect for it that those who have sins on their conscience or who feel themselves inclined to commit a sin, confess to the priest in order to be in a state to receive baptism. . . . They believe that they receive therefrom a disposition inclined to good conduct, that it guarantees them from all temptations of the devil, with respect to temporal things, and by means of this rite and a good life they hope to secure salvation (*gloria*).'³ Another most interesting rite described by Landa⁴ was the feast of 1 Zac (February), in which expiation for the shedding of blood in the chase was made: 'for they regarded as abominable all shedding of blood apart from sacrifices.'

Pollution of places and things is, of course, recognized along with pollution of persons. The destruction of old utensils and the preparation of new for new undertakings or for the new year is connected with such a conception, of which perhaps the clearest symbol is the sweeping of sacred or festival precincts—a feature of the Creek *Busk*, and of numerous festivals of the Pueblo, Aztec, Maya, Inca, and other tribes with elaborate rituals. One of the most affecting anecdotes of the Mexican Conquest is related by Bernal Diaz.

A few days after Cortes' entry into Tenochtitlan a group of the Spaniards were conducted by Montezuma to the summit of the great *teocalli* overlooking the market-place. There the Mexican monarch first proudly indicated the wealth and populousness of the rich valley over which he ruled, and then brought the strangers into the presence of his gods. Cortes seized the occasion to demand permission to erect there a Christian cross. 'You will see,' he said in effect, 'how these symbols of the devil which you have placed here will wither before the symbol of the true faith.' Montezuma indignantly refused, upbraiding the Spaniards for their impiety; and when they departed he remained behind to perform expiation and cleanse the temple of the sin wherewith it was tainted.⁵

2. Vice and crime.—Even among peoples with a scientific ethics the conception of vice (as a social offence punishable by public opprobrium) and of

crime (as physically punishable, by law) is not wholly distinguished from the conception of sin (as offence against God or nature). Vices and crimes, though they may be punishable evils, are not regarded as sins when there is no guilty motive; and sin, at the other extreme, exists where there is temptation to guilt, entertained without resistance, even though it may eventuate in no vicious or criminal action. Nevertheless, in the great mid-realm of conduct most offences are regarded as having the twofold character of social offence punishable by society and sinful offence to be answered by the mercy of God or by the conscience. The practical problem of the distribution of responsibility is so complex that it forms to-day one of the greatest and least-settled fields of ethical controversy.

Such being the case among the more advanced, it is certainly not to be expected that primitive peoples should make any clear distinction between the two types of offence—least of all, in view of the fact that primitive societies, almost without exception, are theocratic in their sanctions: a people whose customs are regarded as established and sustained by tutelar or patron gods, or by ancestral heroes become divine, must inevitably regard offences against society as offences against divinity, and all social offences, therefore, as sins. This is the prevalent American Indian notion. Murder is punished for the appeasement of the *manes* of the murdered rather than for injury to the tribe. Impurity, and especially sexual perversion, was regarded in many localities as an abominable impiety, to be atoned only by bloodshed (though it may be suspected that the charge of this offence was sometimes brought, as by the Aztec against the Huastec and by the Inca against the Yunca, mainly as an excuse for bloody conquest). Disobedience to tribal custom has all the taint of blasphemy, and Indian legends abound with incidents of supernatural retributions for tabus defied.

Perhaps as clear a notion as may be gained of the range of Indian moral ideas is suggested by native terms for types of persons.

Thus the Omaha tribe have words to designate: (a) on the side of good: an unselfish person, a self-controlled person, a straightforward or truthful person, a willing, a sympathetic, a courteous, a hospitable person; (b) on the side of the bad: a liar, a thief, a quarreller, a glutton, a meddler, a libertine, a boaster, a talebearer, a beggar, and, again, an impudent, an obstinate, a stingy, a discourteous person. 'Religion and ethics, closely interwoven, pervaded the life of the tribe, and in judging the evidences of constructive thought on these topics one should not consider them apart from the natural and social environment of the people.'¹ Of the kindred Sioux Beede says that the old Indians made much of humility (*igluhukuniye*) and charity (*wacantkiye*), and in another connexion he gives the interesting information that the soul of 'a willful suicide cannot dwell in any living object; a suicide, who does his deed willfully, is painless and hopeless, sole, alone and exclusive, an "aristocrat" in all but the ability to make others serve him.'²

Both the virtues and the offences give an enlightening glimpse into the Indian's conception of the spiritual sociality of the world. Moral standards and moral enlightenment varied, and still vary, greatly from tribe to tribe; but it is probably true that everywhere the maintenance of custom rested upon the entirely theological grounds given to Knud Rasmussen by the old Eskimo:

'We observe our old customs, in order to hold the world up, for the powers must not be offended. We observe our customs, in order to hold each other up; we are afraid of the great Evil. . . . Men are so helpless in the face of illness. The people here do penance, because the dead are strong in their vital sap, and boundless in their might.'³

3. Sin, confession, and penitence.—The conception of sin in the more precise sense, as offence against divine powers, calling for repentance and inner regeneration, is by no means absent from the Indian consciousness. In a number of localities, and especially in the more civilized native states, confession and penance under priestly supervision were important rites in pre-Columbian times. Nor can we suppose that the institution of these rites in Christian forms by the first missionaries would have received the hearty and conscientious favour which the mission relations attest, had there not been in the aboriginal disposition some natural intuition of their significance. As a matter of fact, impiety, blasphemy, and a willingness to do evil were thoroughly reprobated; while, on the converse side, the Indian sought by every means to find favour and enlightenment from the higher powers by which he deemed himself to be surrounded and sustained. Probably no human race has laid such general stress upon the significance of visions, won in fast and solitude, as a form of inspiration; in many tribes it was the common practice for a man or woman in trouble to seek help and consolation by this means, while it was no less general for each individual, on approaching maturity, to conduct a similar quest of his life's helper, making a kind of consecration of his strength to the tutelary power.

There are stories, not a few, of pagan Indians, visited by remorse for some crime, and expiating it even by self-inflicted death; stories, too, of entire change of character as a result of vision or of some similarly intimate experience. But for the more doctrinated conception of sin and responsibility it is necessary to turn to the ritualized religions of the semi-civilized nations—at least, for pre-Columbian practices. Thus, Las Casas, describing the religion of the Guatemalans, whom he knew intimately, presents their compunctions and penitences as worthy examples of piety to the Spaniards themselves,¹ while the similar practices of the Yucatec and Mexican peoples are described by Landa, Sahagun, and other writers. Of the Yucatec Landa says:

'The Yucatec knew naturally evil when they committed it, and they believed that it was in punishment for sin and evil that death came to them, as also illness and suffering. They had the custom of confession, and when they were in the mind for it, it was made in the following manner. When, in consequence of illness or something else, they were in danger of dying, they confessed their sins; but if they forgot to think thereof, their nearest relatives or friends reminded them of it. Thus they told publicly their sins to the priest, if he were present; if not, to their fathers and mothers, wives to their husbands, and husbands to their wives. The faults of which they most commonly accused themselves were theft, murder, weaknesses of the flesh, and false testimony. But it often happened, when they came to recover, that there arose quarrels between husband and wife, because of their infidelities, and with those who had caused them. Men confessed their delinquencies (*laquezas*), except those which they had committed with their slaves, for they said that it was permitted to use those who belonged to them as they willed. They did not confess sins in intention, although they regarded such as evil; and in their counsels and preachings they preached their avoidance.'²

Sahagun gives many prayers which are penitential or confessional in tone, and describes the numberless penitences imposed by the priests. Formal confession, it appears, was made primarily to the god Tezcatlipoca, 'Smoking Mirror,' the invisible and impalpable deity who penetrates all things and sees even into the recesses of the heart.

'Thou, Lord, who art father and mother of the gods and oldest of divinities, know that hither comes thy vassal, thy slave; weeping, he approaches with great sadness; he comes plunged in grief, recognizing that he has fallen into error, that he has fallen into vile sins and grave derelictions meriting death; he comes deeply pained and oppressed with all this.

Our merciful master, who art the sustainer and defender of all, receive in penitence and hearken to the anguishes of thy slave and vassal.'

After this prayer the priest exhorts the penitent to tell all, omitting nothing for shame or weakness; and, when the confession is made, he assigns the penance according to the gravity of the sin. Sahagun says that the confessors kept secret what was confessed to them, stating that it was not to them but to their god that the sin was confessed: 'they had not confessed to man, but simply to God.' Nevertheless, it appears that confession and penance relieved the culprit from civil penalties (again an instance of the confusion of crime and sin); and, when Spanish priests replaced the native with the Christian confession, the Indians expected the certificate of confession, which they asked of the fathers, to satisfy any legal complaint against their conduct. As in Yucatan, confession was not frequent, but only with approaching age or fear of calamity; but they at least 'believed themselves obliged to confess once in their life, and this, *in lumine naturali*, without having any previous notion of the faith.'¹

The narratives of the French Jesuits and other Roman Catholic missionaries to the wilder tribes uniformly describe the enthusiasm with which the confessional was welcomed by the Indians, and their willingness to undergo penance for their faults. This, of course (though there is some evidence for a pagan practice of confession even among very primitive Indian tribes),² does not argue any previous acquaintance with the rite, but it does indicate a ready comprehension of its meaning—for which there is some analogy in such pagan customs as that described in the 'Relations' of the mission to the Hurons:

'They address themselves to the Sky, paying it homage; and they call upon the Sun to be witness of their courage, their misery, or of their innocence. But, above all, in the treaties of peace and alliance with foreign nations they invoke, as witnesses of their sincerity, the Sun and the Sky, which see into the depths of their hearts and will wreak vengeance on the treachery of those who betray their trust and do not keep their word. So true is what Tertullian said of the most infidel nations, that nature in the midst of perils makes them speak with a Christian voice,—*exclamant vocem naturaliter Christianam*,—and have recourse to a God whom they invoke almost without knowing him,—*Ignoto Deo*.'³

The 'Relation of 1653-54' contains a number of affecting narratives of Indian conversions, and in the midst an account of the reception of the confessional rite, not without its amusing features. Says the good father:

'When winter expires in giving birth to spring, all our hunters betake themselves, with all their goods, to the banks of the great river, at the cove or harbor which we call Tadoussac; and here, a public confession is held, without gehenna [rack], without torture, and without any coercion. There is said to be a country where the cold is so great as to freeze all words uttered there; and, when spring approaches, upon these words thawing out, there is heard, almost in a moment, all that was said during the winter. Whatever may be the foundation of this story, it is true that all the evil that has been committed during the winter in these great woods is told to the father publicly in the month of April. The first-comers recite aloud the confessions of those who follow, and this from a zeal which they feel for Christian justice.'⁴

Incidents of zeal for confession and baptism are related by many missionaries, and often in connexions that leave no manner of doubt that the candidates conceived the religious significance of the rite correctly, judged by the standards of the Church; i.e., the purification sought is clearly conceived by the Indian as an inner and spiritual change, not as a mere release from external taint and public obloquy. In the older native rites there are many elements that represent a conception of regenerated life. In most cases, it is

¹ B. de Sahagun, *Hist. general de las cosas de Nueva España*, Mexico, 1829-30, bk. i. ch. xlii.

² Ch. xxvii.

true, the native prophet or preacher promises material as well as spiritual advantages; but the latter are nearly always present. The Indians have learned lessons of religion from both Roman Catholic and Protestant missionaries, and their native prophets have adopted elements from both forms of Christianity, but obviously because of a distinctly native foundation upon which to build.

'Long time I knew nothing—just like an animal,' said one convert to such a semi-Christian native creed. 'I was a drunkard, was a thief, and a robber. When I joined this religion, I was told to be good. . . . I prayed and was sick—my soul was sick. I prayed to God and he pays me for that. . . . A good Christian man in the dark sees a light toward God. God makes a fog—a good Christian man goes straight through it to the end, like good medicine. I believe this religion. It helps poor people.'¹

The form of the idea underlying this expression is Christian, but its substance is the universal one of a human conscience, first oppressed by the sense of sin, then redeemed by an intimate and buoyant consciousness of grace received.

4. The origin of sin.—Theology is, of course, no primitive science. Nevertheless, the problems with which the theologian must deal are too elemental in human life not to have appealed to the minds of men in all grades of reflective advancement. Among them no problem is more universally felt than is that of the origin of evil: how comes it that men are tried with suffering, and above all oppressed by their own inescapable shames? This is the problem of the tales of Pandora and Eve, of Job and of Œdipus, as well as of the Epistles of St. Paul; and it is the problem at the heart of many of the most ancient myths of the aboriginal peoples of the New World.

Not infrequently in American myth an age of innocence preceded the present condition of men. Thus the Cheyenne tale of the 'Great Medicine'² tells of a paradisaal age when men were naked and innocent, amid fields of plenty, followed by a period in which flood, war, and famine ensued upon the gift of understanding. In the usual N. American stories death and evil come into the world as the result of sorilege, but there are many examples in which moral motives enter—as in the Eskimo tale in which man is given choice between eternal life in eternal darkness or mortality blessed by the light of day, and chooses the latter. Probably the most beautiful of all these tales is the Wintun story of 'Sedit and the Two Brothers Hus.'³

Olebis, the creator, caused the demurgic brothers Hus to make a road to heaven, at the top placing two springs, one for internal and one for external purification. Mortals growing old could mount to these springs and there renew their youth. But Coyote—also a demurgic power—opposes this: 'Joy at birth and grief for the dead is better,' he says, 'for these mean love.' So the road is destroyed.

Of course, in the great number of tales, it is a broken tabu that first brings the disaster of evil into the world.

But certainly, of all native American beliefs, that of most extraordinary interest in this connexion is the Aztec conception. In Mexican and Mayan myth alike the origin of the world is represented as occupying a series of cycles or ages, each, as it were, an experimental creation, and each, up to the present, destroyed cataclysmically to make place for a better effort. The present age—or 'Sun,' of the world, as the Aztec conceived it—endures by reason of the continual expiation, self-maceration, and sacrifice of human hearts, offered to gods who had made of themselves the first great sacrifice. The fullest version of this remarkable myth is in the anonymous *Historia de los Mexicanos por sus Pinturas*, though it is to be

found also in the *Anales de Cuauhtitlan*, fragmentarily. The idea underlying the myth is apparently related to the notion of Anaximander that individual life (even of gods) is in some sense an arrogance and injustice to be atoned for, and a great part of the ceremonial of Mexican religion was devoted to acts of atonement. How completely the idea dominated the Mexican mind is most impressively shown by the prayers recorded by Sahagun, for the whole sixth book of the *Historia* is virtually an elaborate ritual of penitence—not so much for individual sins as for the presumptuousness of living.

See artt. COMMUNION WITH DEITY (American), ETHICS AND MORALITY (American), PRAYER (American).

LITERATURE.—In addition to the authorities cited above, see J. Mooney, 'The Ghost-Dance Religion,' in *14 RBEW* [1896], pt. 2; *Jesuit Relations and Allied Documents*, 73 vols., ed. R. G. Thwaites, Cleveland, 1896-1901; *Life, Letters and Travels of Father Pierre-Jean de Smet, S.J., 1801-1875: Missionary Labours and Adventures among the North American Indians*, 4 vols., New York, 1905. For a survey of Indian myth and full bibliographies see H. B. Alexander, in *The Mythology of All Races*, x., 'North American,' Boston, 1916, and xl., 'American (Latin),' do. 1919. H. B. ALEXANDER.

SIN (Babylonian).¹—Free will was completely assumed by both Sumerian and Semite in Babylonia. Although the tendency to sin is attributed to man as a natural inheritance, the theologians never raise the problem of its ultimate origin in the divine order of things. The attitude of the Babylonian in this regard may be described as one of perpetual humility and concern for his frail human will, which is never sufficient to attain to the divine standards of purity. To introduce the subject in its general aspect, we cannot do better than quote from a Sumerian bilingual confessional (*ersaghunga*):

'Oh lord, my wrongdoings are many, great are my sins.²
Mankind is dumb knowing nothing at all.
Mankind, as many as bear names, what do they know?
Whether he has acted shamefully, whether he has acted well,
he knows not at all.

Oh my god, my wrongdoings are seven times seven, forgive my wrongdoings.'³

The penitential psalm from which this selection is taken is perhaps the best statement in cuneiform literature concerning the naturally sinful state of man, his abject foolishness compared with the wisdom of the gods, and his inability to avoid sin, even though his desire be set upon righteousness. Another prayer, probably employed in a magic ritual of atonement, has been recently discovered and throws more light upon the general aspect of the problem of sin:

'Who is there who forever [is sinless]?
Mankind as many as there be [commit] sin.
I thy servant have sinned and . . .
Before thee I stand and I turn . . .
Rebellious things I plot, I have set free the wicked.
I have spoken what is not good; but whatsoever is wicked
thou knowest.
The food that belongs to god I have eaten.
I have trodden on the interdicted thing; evil I have done.
Upon thy vast possessions I have lifted a [covetous] face.
Unto thy precious silver my greed goes up.
I have lifted my hand and touched what should not be
touched.
In my uncleanness I have entered into thy temple.
I have thus committed thy mighty abomination.
I have transgressed thy borders,⁴ a thing which is obnoxious
to thee.
In the wrath of my heart I have cursed thy divinity.
Wrong known and unknown I have committed.
I go about, I behold, and before me shame I obtain.
Oh my god, it is enough, may thy heart repose.
Oh Ishtar, who hast been enraged, may it be pardoned.

³ Jeremiah Curtin, *Creation Myths of Primitive America*, Boston, 1898, p. 163 ff.

Oh deliver, thou who hast wrought thy heart to a mighty rage.

Thy favour which I have rehearsed be unto me for welfare.
Verily many are my wrongdoings, oh sever my bonds.
[Seven times] seven are my disgraces, but may thy heart repose.¹

The inborn sinful nature of man is not only due to the weakness of the will, but may be inherited.

'Oh great lord Marduk, merciful god,
Mankind as many as bear names,
Who among them learns anything by himself?
Who has not been negligent, who has not acted despicably?

The penalty of my father, of my grandfather, of my mother,
of my grandmother,
Of my family, of relations through brothers and sisters,
May it not come nigh me, but may it go elsewhere.

O ye gods that dwell in heaven, absolve my penalty.
The great wrong which from my youth I have committed,
Oh scatter and seven times absolve.²

Babylonian conceptions of sin passed through various stages of religious and ethical values during the long period covered by the Sumerian and Semitic sources. Sumerian and Babylonian doctrines concerning transgression may be divided into two great groups—(1) religious and ceremonial sin, and (2) ethical sin. The former group is naturally the more fundamental and original.

1. Religious and ceremonial sin.—A term frequently employed in religious texts for transgression is *ag-gig*, *dg-gig*, Semitic *ikkibu* (loan-word) or *an-zillu*. The fundamental meaning of these words is 'forbidden thing,' 'sacred possession of a deity.'³ It was apparently first employed for the food assigned to a deity or to the holy places consecrated to deities. To eat of such food or to tread upon such places without proper purification and habit constituted one of the greatest of sins.

'Have I eaten the forbidden thing⁴ of my god unknowingly?
Have I trodden on the interdicted place of my goddess⁵ unknowingly?'⁶

Here we touch upon the most ancient Babylonian conception of sin, an unconscious violation of the ceremonial regulations. By metonymy 'to eat interdicted food' came to mean to commit an abomination, and hence both *ikkib* and *anzillu* became synonymous with 'abomination,' 'desecration.' The terms connote always a most serious religious transgression, and in the psalm translated above the sinner connects the violation of divine law with 'thy mighty abomination I have done.'

As in Hebrew, so also in Babylonian the principal words for sin, both noun and verb, are derived from the root *wn*, 'be faulty,' 'be defective,' 'fail,' 'sin.' The verb is *haṭā*, and the noun *ḥittā*, *ḥittu*. The Sumerian equivalent is *sebida*, whose original meaning is unknown. In Sumerian this word invariably denotes a religious sin which entails the anger of the gods and a stain upon the soul. Hence the ritual of atonement must be employed to free man from the deadly effect of this transgression.⁷ This form of sin is often contrasted with *namtag*, 'overturning,' violent transgression of civil laws and social customs. The Semitic equivalent is *annu* or *arnu*, which is best rendered by 'wrongdoing.' The discussion of this term falls under ethical sin (below, § 2). The essential difference between these two categories may be best illustrated by repeating a line from the well-known 'psalm to all gods':⁸

¹ E. Ebeling, *Keilschrifttexte aus Assur*, Leipzig, 1915, no. 45.

² L. W. King, *Babylonian Magic and Sorcery*, London, 1890, no. 11. See also J. Hehn, *BASS v.* [1903] 364; H. Zimmern, *Der alte Orient*, vii. pt. iii. [1905] p. 18.

³ The Sumerian *ag-gig* is an abstract noun derived from the root *gig*, 'exclude,' 'divide off,' 'separate.'

⁴ *Ikkib ili-ia = dg-gig-ga dimmer-mu.*

⁵ *Anzil ilat Iš-ta-ri-ia = amad Innini-mu dg-gig-ga.*

⁶ Rawlinson, iv. 10a, 32-35.

⁷ *Sebida asial-ta-e-ne = ḥittu duppiri*, 'Oh remove my sin'; P. Haupt, *Akkadische und sumerische Keilschrifttexte*, Leipzig, 1882, p. 117, 7.

⁸ Rawlinson iv. 10a, 36.

'Oh lord, my wrongdoings are many, great are my sins.'¹

The spiritual and religious aspect of sin is almost invariably denoted by the words *haṭā*, *ḥittā*, *ḥittu* in Babylonian. 'The sin which I have committed' is expressed by *sebida dib-ba-mu*, 'the stigma which I have laid upon myself' in Sumerian.² The ethical and religious contrast of these terms is indicated by a line of a liturgy:

ta nam-tag-ga ta nam-se-bi-da
minū annu-ma minū egt-ma,

'What was the wrongdoing? What was the sin?'³

Here the Semitic root *npw*, 'sin' (in a religious sense), is employed. The verb *egā* has the same force in Babylonian as *haṭā*, and the grammatical texts explain one by the other. The ceremonial character of sin conveyed by *egā* is illustrated by the passage, 'Who has sinned against Esagila (temple of Marduk)?' The noun *egitu*, 'desecration,' 'ceremonial sin,' must always be interpreted in this sense.⁴ In one passage *sebida* has been rendered into Semitic by a verb (*šātu*) which means 'be negligent,' i.e. neglect the rules and ceremonials of religion.

'Where has the wise not been negligent, and not committed despicable deeds?

Where has he who acted cautiously not been afflicted?'⁵

These terms are frequently employed for ethical sins, political disturbances, and law-breaking, but, when so employed, they obtain a weakened sense and become synonymous with *annu*, *arnu*, and similar words.⁶

2. Ethical and political sin.—The Sumerian noun for this type of sin, *namtagga*, means 'perversion,' 'violent disturbance of the legal order,'—meanings almost invariably assigned to the Semitic translations of this word, *annu*,⁷ *arnu*, *sertu*.⁸ These terms may be described as denoting both wrongdoing and the punishment for wrongdoing. *Arnū* is probably a phonetic variant of *annu*, and both words appear to have been derived from a root meaning 'oppose,' whence is derived the word *anantu*, 'hostility,' 'conflict'; *sertu* has probably the meaning 'perverseness,' 'treachery,' 'dishonesty.'⁹ *Arnū* and *sertu* are, therefore, the words recognized in legal procedure for violation of ethical standards and civil law; e.g., a woman treacherously seeking to break a contract sues another woman concerning property; the judges convict her of *sertu*, i.e. treachery.¹⁰ Another record of a lawsuit of the period of Hammurabi,

¹ *Belum annu-a ma-da rabd ḥittā-a*, where the Semitic version properly distinguishes the nature of *annu* and *ḥittu*, *ḥittu*, by the selection of its adjectives.

² Rawlinson, iv. 10a, 44, b 39.

³ G. Reisner, *Sumerisch-babylonische Hymnen*, Berlin, 1896, p. 119, rev. 5.

⁴ The original meaning of the verb *egā* is perhaps discovered in the obscure phrase of the fifth tablet of Creation, 1. 7, *ana la epis anni la egā manama*, 'That no one of them do wrong or go astray (?)', said of the stars. It is difficult to explain why the verbs *haṭā* and *egā* ordinarily came to convey the deeper aspect of sin.

⁵ *BASS v.* 640, 15-18.

⁶ The terms usually employed for each type of sin cannot be brought under definitions which have no exceptions. Terms of each class are found conveying the sense of their opposite class. The rules given above are almost invariably true with respect to the Sumerian words, but the Semites employed their terms more loosely.

⁷ Semitic root probably *npw*, 'oppose,' after Zimmern, *Babylonische Busspsalmen*, p. 13. Derivatives of the same root are *enunu* (found as yet only in the sense of penalty for sin) and *ennitu*, which is employed in the sense opposed to its cognate *annu*, as a synonym of *ḥittu*, 'religious sin.'

⁸ Employed occasionally for 'religious sin' (*Šurpu*, II. 32; Ebeling, p. 90, rev. 31.).

⁹ Note that in *Šurpu*, III. 12, *kittu*, 'honesty,' is contrasted with *sertu*, where a variant text has *partu*, 'trickery.' The 'Chicago Syllabary' published by D. D. Luckenbill in *AJSL* xxxiii. [1917] has an entry *emedup = suḫtu* ('forgery') and *sertu*.

¹⁰ The phrase is *sertam emēdu*, 'to lay (the decision of) treachery upon.' See M. Schorr, *Altbabylonische Rechtsurkunden*, Leipzig, 1913, p. 267, 7; see also p. 313, 33, *sertam lā immidu-natā*, 'Verily they convict us of falsehood.' The words *sertu* and *annu*, when employed with *emēdu* in legal documents, do not mean 'penalty,' as Assyriologists render them, but 'falsehood,' 'error,' 'wrongdoing.'

⁶ *Samyutta*, ii. 105; tr. C. A. F. Rhys Davids, in *Buddhism*, p. 83f.

dividual in his long and, mainly, painful pilgrimage to higher, happier experience.

To the handicap imposed on each individual which is known among us as 'original sin' the doctrine of *karma* lends emphasis. From what has been said it is clear that no son of man can be born into the world free from the heavy mortmain of the follies and misdeeds of past lives, so far as these have not been already redeemed by unpleasant experiences. The same teaching, however, is equally insistent in the matter of the inheritance of a *plus* quantity of happy experience resulting from what we might call 'original virtue.' No lovely deed, word, or thought but brings its future reward, mundane or supramundane.

It should not, however, be concluded that sound Buddhist doctrine recognized, in the experiences of any given individual life, a mere gathering in of a predestined harvest of mixed crops, pleasant and painful, sown in previous lives.¹ That doctrine viewed every individual as a growth, or growing thing, both physically and spiritually. And all growth, while it is, on the one hand, the outcome of conditions (favourable or unfavourable to desirable growth), is, on the other hand, essentially creative. In the efforts at self-expression that we call 'creation' lay the capacity, and in the environing conditions the opportunity, of each individual to slough off the latent vices (*anusaya*) of his lower nature (called collectively the *kilesa*'s), and mould for himself, *i.e.* the resultant of his present self, a lighter burden of 'original sin,' a brighter heritage of future destiny.

LITERATURE.—The foregoing remarks are gleaned from countless passages in Buddhist canonical and early commentarial literature, most of which are as yet untranslated into English. But *Anguttara*, i. 173f. is discussed by Ledi Sadaw, 'Some Points in Buddhist Doctrine,' *JPTS*, 1913-14, p. 1171, and other texts in C. A. F. Rhys Davids, *Buddhism*, London, 1912, ch. v. T. W. and C. A. F. RHYS DAVIDS.

SIN (Celtic).—In the Celtic sections of the artt. COMMUNION WITH DEITY (§ 3) and CRIMES AND PUNISHMENTS (§ 1) it has been shown that the Celts had clear notions on the subject of the gods' being offended by neglect, whether of an individual or of a community. Their wrath manifested itself in illness, calamity, defeat in battle, and the like; and it had to be propitiated by sacrifice, usually of human victims, for the Celts considered that, unless man's life were given for man's life, the majesty of the immortal gods could not be appeased.² The proof of this is found in the passages from classical observers cited in these articles.³ How far the idea of sin against the gods had an ethical colouring we do not know, but this was probably not lacking, as the kind of crimes included among those punished by society suggests. In Gaul, too, the Druids acted as judges, and there, apart from punishment by death, excommunication from religious rites, especially sacrifice, was in common use in the case of those who would not submit to their decision. This was equivalent to outlawry, and the offender was regarded as impious and wicked.⁴

These statements receive further illustration from various mythical stories, mainly in Irish MSS. Though these have been redacted in most cases by Christian scribes, there is little doubt that, in so far as they describe the action of the gods or ideas purely pagan, they have undergone but small change through colouring by Christian conceptions. Even in such a Welsh legend as that of Nynnyaw and Peibaw transformed into oxen by God for their sins it is likely that the legend was a pagan one and that a pagan divinity was the

punisher of the culprits.¹ In the euhemerized account of the relation of the Milesians to the Tuatha Dé Danann, *i.e.* of the pagan Irish Celts to their gods, the latter are said to have destroyed the corn and milk of the Milesians. To prevent this in future these made friends with Dagda, the chief of the Tuatha Dé Danann, and now their corn and milk were safe.² This story appears to reflect the idea that corn and milk depend upon the gods, and may be withheld or destroyed by them because of man's misdoings. The compact with Dagda suggests the fresh covenants made with Jahweh by His worshippers in the OT after they have been punished by Him for their sins. The story of the yearly destruction by fire of the fort of Tara by Aillen mac Midhna of the Tuatha Dé Danann may be based on some idea of human guilt thus punished. Aillen made every one in the fort sleep through his fairy music and then set it on fire, until he was destroyed by Fionn.³

The gods punished the taking of things dedicated to them, or tabu, and this may have been the subject of current stories known to classical writers. These speak of their own gods punishing the Celts for taking things devoted to them, perhaps applying to their divinities the anger of native Celtic gods.⁴ Such breach of tabu was also punished with torture by the ministers of justice.⁵ Trespass upon a sacred place was also obnoxious to the gods, and this is illustrated by several stories.

In one of these Eochaid, having encamped on a meadow, was told by the god Oengus, in disguise, to remove from it. He disobeyed, and Oengus sent plagues upon him, killing his cattle and horses, and threatening to slay his household if he would not go.⁶ This resembles the tales of the bursting of a sacred well and its waters overwhelming an impious trespasser. Boand, wife of Nechtain, went to the fairy well which her husband and his cup-bearers alone might visit, and, when she further showed her contempt for it, the waters overwhelmed her. They now flow as the river Boyne. Similarly Sinend was destroyed for trespassing on Connla's well, the pursuing waters now forming the river Shannon.⁷

Myths of origins are here mingled with myths of punishment by the spirit or divinity of a sacred well, meted out to women to whom a sacred place was tabu. In other tales women who are the guardians or priestesses of sacred wells, and must keep them covered save when water is drawn, are similarly overwhelmed by the waters bursting forth when they fail to put the cover on, thus neglecting the ritual of the well.⁸

The breach of personal tabus, or *geasa*, is frequently described as punished by destruction or death. Heroes like Cúchulainn or Fionn broke the tabus which they had hitherto observed carefully, and this led to disastrous events culminating in death. These results are sometimes regarded as the inevitable operation of a kind of fate. The *geasa* are put upon one person by another, perhaps framed as an incantation or spell; he must obey; if not, disaster followed as it might do in the case of a curse. But the punishment, automatic though it might be, was also regarded as divine vengeance for wrong done to the gods, not always by the victim, but sometimes by his ancestors.

⁴ Caesar, vi. 13.

The best illustration of this is found in the long, tragic Irish story of *The Destruction of Da Derga's Hostel*,¹ in which the *sid*-folk (beings of a fairy type who represent the older gods) avenge themselves upon Conaire for wrong done by his ancestor Eochaid to the god Míder. Conaire was told by Nemglan, a divinity who can take the form of a bird, of the tabus which he must observe. He became king, and at first all went well with him, and the land prospered. But the vengeance of the god began to work. Through fate or circumstances which he could not resist Conaire broke one tabu after another, until at last he was defeated in battle and himself slain. The events leading up to the final vengeance are told with great detail and realism, and Conaire is clearly shown to be the innocent victim of a divine vengeance which he could not resist.

So also the story of *Da Choca's Hostel* tells of the destruction of Cormac for breaking his *geasa*.² Another curious story tells how Correchenn of Cruach slew the god Dagda's son Aedh for seduction of his wife. Dagda punished him for this by making him carry the corpse on his back until he had found a stone for the grave as long as Aedh's body.³

In Irish Celtic belief the fruitfulness and prosperity of the land depended largely upon the king's observing his *geasa*; this also kept misfortune from him. But this was changed into the idea that the king's goodness or the reverse affected the fertility of the country. Probably there was not much difference between the two conceptions, though some of the *geasa* detailed are of an arbitrary and, to us, unmeaning character. In any case some idea of obeying what were really divinely appointed rules seems to be implied, though perhaps the king, looked upon as a divinity, subject himself to rules, had been regarded as the source of fertility.⁴

How far the conception of retribution after death for wrongdoing was known to the pagan Celts is uncertain. Possibly cowards may have been regarded as doomed to miss the joys of the after life, since the hope of these made warriors face death without a tremor. Some characteristics of hell in Irish Christian visions of the other world and in folk-belief may be derived from pagan belief—e.g., the sufferings of the wicked from cold.⁵ But they may equally be of Christian origin. As the idea of transmigration after death was not unknown to the Celts, the later folk-belief that souls of the wicked appear after death as ravens, crows, black dogs, and the like may be derived from some earlier pagan myth of retribution, though here again transmigration without retribution is quite as likely as not to have been believed in.⁶

The idea of sinlessness, i.e. innocence from particular sin or from sin in general, occurs now and then in the mythic tales, not apparently as a reflexion of Christian ideas.

When Bran on his voyage met the god Manannan mac Lir, the latter described to him the Elysian land, on which his coracle seemed to be sailing, and its people. They were immortal and sinless, unlike Adam's descendants, and they made love without crime.⁷ In another tale, cited below, the son of a sinless couple is required as a sacrifice, and he turns out to be the son of the inhabitants of such a divine land as Bran saw.

Other tales show that the gods could punish members of their own group for wrongdoing.

Aoife transformed her step-children into swans, in the pathetic story of *The Children of Ler*, and for this the god Bodb punished her by . . . demon of the air.⁸ In another instance . . . being fallen in love with a mortal man . . . Druid, Fer Fígall, to bring her to him. He brought her from her home and left her slumbering on the shore while he sought a boat to carry her to Elysium. There a great sea wave sent by the god, or the god himself in that form, overwhelmed her, and Fer Fígall

was afterwards slain by Manannan.¹ The cause of offence is not stated, but doubtless it was that the Druid had forestalled Manannan in his love for Tuag. In another tale the goddess Becuma was banished from the gods' land because of her sin with Manannan's son. She came to earth and by spells induced Conn, king of Ireland, to succumb to her wiles and to banish his son. During the year that he remained in dalliance with her there was neither corn nor milk in Ireland—an example of the idea of a bad king causing disaster to his land (itself a divine punishment). His Druids told Conn that nothing could save the land but the sacrifice of the son of a sinless couple. This was the son of the queen of an Elysian region. She came to rescue him, bringing a cow, which was sacrificed in his stead, and she told Conn that he must renounce Becuma, else Ireland would still lose a third of its corn and milk.²

On the whole, the ideas which these stories reveal suggest breaches of religious ritual and custom, and of customary law, passing over, however, into more ethical conceptions, while all through bringing the gods into relation with men as punishers of their wrongdoing.

LITERATURE.—This is referred to in the footnotes. See also the chapter on 'Divine Enmity and Punishment' in J. A. MacCulloch, *Celtic Mythology* (= *The Mythology of all Races*, vol. iii.), Boston, 1918. J. A. MACCULLOCH.

SIN (Chinese).—The knowledge of sin in China has developed in the course of her long religious history. The Chinese have always possessed 'a sense of sin and its consequences.'³ Man is described by Cháu Chi (2nd cent. A.D.) as differentiated from the brute creation by 'the knowledge of righteousness.'⁴ Mankind is thus endowed with a moral sense.⁵ The emperor Tang (766 B.C.) said, 'The Great God has conferred on the common people a moral sense.'⁶ But man is prone to err.⁷

1. Earliest ideas.—In the early period of Chinese history, prior to 221 B.C., sin or crime was 'the disturbance of celestial routine,' 'the celestial order forming a human guide.'

'Offences against the gods or the spirits in a vague sense were often spoken of.' 'Sin was only conceivable in the sense of an infraction of nature's general laws.'⁸

Though sin was 'a moral and spiritual delinquency,'⁹ and transgressions would call down divine retribution, yet at the same time the idea of sin was vague, and the opinion has been expressed that it might be said to have no well-defined existence at all.¹⁰

Time and again tyrants and evil rulers have received condign punishment at the hands of those who, in accordance with the will of Heaven, overthrew their thrones and rescued the country from their misrule. Their names, sins, and crimes are set forth in the Chinese classics and histories as terrible examples of the retribution which sins or crimes against high Heaven produce.¹¹ The punishment for sin was a material one, meted out in this life. There was no hell or purgatory known to the early Chinese. There were some hazy ideas about a state of bliss where the good and even the bad went.

2. Terms used.—There are three principal words used for sin, *tsui*, *ok*, and *kwo*. *Ok* means evil, bad, vicious, etc.; *kwo*, to transgress, to go beyond what is right. Among the 'wealth of distinctive terms'¹² for sin, evil, transgression in Chinese the nearest to the idea of sin is *tsui*, but it also means

a crime, punishment, penalty, to treat one as a criminal. Further it means a violation of order, to give occasion for blame, a wrong, fault, or iniquity, and is also applied to a violation of decorum, a breach of the laws of etiquette. It is used in a phrase nearly equivalent to 'I beg your pardon.' The ethical force of meaning of the word is thus greatly dissipated by the breadth of ideas connoted. It has been said that the task of tasks is to bring home to the native mind the sense of what sin is. Nearly all writers on the religious and ethical side of Chinese nature draw attention to this, though there are some who have found notable instances to the contrary.¹

3. Confucian ideas.—There is not much light thrown on the subject of sin in the sayings of Confucius. He was not inclined to split hairs upon the vexed question of sin, or even to speak of sin except in connexion with the practical affairs of life. He considered that there were five capital sins besides theft and robbery, viz. malignity, perverseness, mendacity, vindictiveness, and vacillating weakness.² He said that of the 3000 offences against which the five punishments were directed there was not one greater than that of being unfilial.³ This is the sin of sins. Confucianists declare that their sage was perfect and did not need to repent of any errors, and that any statement by him which might be construed to the contrary was due to his humility, but the sage had a better knowledge of himself, for he dared not rank himself with 'the man of perfect virtue.'⁴ Confucius never expressed any opinion as to a future state or as to rewards and punishments for sin.⁵ The Confucian doctrine of man's nature is that he is naturally formed for virtue. There is no acknowledgment of a universal proneness to evil. All Chinese scholars have not, however, subscribed to the doctrine of a sinless nature. Suen believed that the nature of man was evil.⁶

Thus Confucianism has but little room for sin in its outlook on human life. 'All fundamental views of Confucianism are optimistic, human depravity and sin are not taken into account.'⁷ Sin is therefore to a great extent outside the purview of Confucianism. Virtue can be practised and evil-doing given up by all. Reformation is a sufficient panacea for sin, even for one who sins against Heaven and 'who has nowhere left for prayer,' as Confucius once said.⁸ Reformation is urged by both Confucius and Mencius. The former said, 'When you have faults [or bad habits],⁹ do not fear to abandon them.' The latter said that all dispatch should be used in putting an end to what one knows as wrong.¹⁰ These and similar passages in the Classics are used as proverbs by the Chinese.¹¹ Confucianism considers that 'the perfecting of knowledge and the influence of some good examples is sufficient to produce a good character.'¹²

Heaven was distinctly and directly cognizant of the actions of men whether good or evil. The great Chinese philosopher Chu Hsi (12th cent. A.D.) thus wrote:

¹² E. Faber, *Hist. of China*, Shanghai, 1902, Introd. by P. Kranz, p. 7.

'Heaven knows all our good and all our crimes [sins]. It is as if Heaven noted them down and numbered them up. Your good deeds are all before God, and my evil deeds will also be before Him.'¹

'Sin to the Confucianist is an offence against the majesty of Heaven, a departure from law. It is constantly spoken of as error, deflection, something to be grown out of by self-culture. . . . There is no consciousness of the deep guilt of sin, no conception' of its 'deceiving, blundering, destroying power. All men have strength, if they would only use it, to overcome the tendencies to evil. . . . Sin becomes a kind of external tarnish, that obscures the lustre of the naturally bright virtues, that can be easily brushed aside, when these virtues assume their original brilliancy.'²

4. Buddhist ideas.—The influence of Buddhism in China in the religious sphere has been great. In place of a hazy notion of a future state it introduced a complete system of future rewards and punishments. The description of its heavens and hells, couched in realistic terms for the common man, met a crying want in the Chinese conceptions of a future state. There was thus introduced for the first time into Chinese religious thought a definite doctrine of the future punishment of sin committed in the present life.³ The religious terms and the new conceptions which Buddhism infused into existing terms all widened the outlook of men on sin and its consequences. The Chinese by the worship of ancestors had developed what amounted to not much more than a shadowy faith in something like ghosts. There was apparently no strong conviction about the future life, and sin had no connexion with it. A certainty took the place of vague hopes. This life was linked on to the next. A future life was the inheritance of every living being, and the happiness or misery of this future life was within the power of every one to enjoy or suffer, for rewards or punishments were conditioned by the conduct of each in the present life. The chanting of liturgies, repentance, meritorious actions, the life of an ascetic, will produce the forgiveness of sins, according to popular Chinese Buddhism.

Yet, with all that Buddhism introduced into China, the absence of a strong conviction of sin among the Chinese is doubtless due in a measure to the negative view of virtue which this religion presents. With its lack of inspiration towards goodness and its inability to strengthen man in a struggle against evil, it has had the effect of obscuring the idea of sin and has exerted a weakening effect on the moral nature. For sin, viewed from its standpoint, is more a calamity or a misfortune than a moral evil.⁴ Even in the best sects of Buddhism, such as that of the Paradise of the Western Heavens, it is not deliverance from a world of sin that its followers look forward to, but deliverance from the 'bitter seas' of sorrow and suffering in this world and rescue from almost interminable births and *nirvāna* itself by a rapid transfer to the Land of Peace by faith in Amitabha Buddha and salvation through his name. But even in this abode of bliss sin is mentioned as being absent.

5. Taoist ideas.—In the ideal state of pristine perfection which Lao-tse (born c. 604 B.C.) describes, and to which mankind would revert were his philosophy carried out, good and evil were unknown. All suffering is due to a departure from this state. Chuang-tse, his eminent follower, a few centuries later also spoke of primitive innocence. In that Golden Age the people were upright and correct.⁵ There was no room for sin to enter into such an Eden. But Taoism has become

debased, superstitious, and idolatrous; among its devotees evil and sin are constantly present, and the consequences of sin have to be guarded against in this world and the next. The idea of sin is the same in Taoism as in Confucianism to a considerable extent. But, while an approving conscience is what Confucianism aimed at, the Taoist desires virtue to be rewarded by material benefits, such as long life, wealth, health, official rank, and many descendants.¹ In the fundamental doctrine that 'every creature is good in its essence' Confucianism and Taoism are at one and opposed to Buddhism. While Confucianism has simply its plane of action in the present life, Taoism 'looks beyond this world' and aims at purifying 'the heart [and the body] by special methods.'

The influence of Buddhism on Taoism has been most marked, especially in its doctrine of future rewards and punishments for sins committed in this life.

'A hell, with many apartments for multifarious tortures, has been adopted . . . as also many means, derived from the same source, for escape from the torments there. A system of merit and demerit and of retribution through spiritual agents in this life and hereafter was developed.'²

Through Buddhism, Taoism has borrowed the Hindu ruler of the dead, King Yama, and he presides over the nine other judges in the hell mentioned above. This development in the ideas of a future state where sin was thus dealt with took place in the 11th cent. A.D. One Taoist notion also accepted by some Confucianists and indigenous in China is of a conditional immortality. The good souls, but only they, inherit heaven, a place of happiness.

Sin, thus practically unknown in Taoism's early days, has now a definite position in its later elaborated system of beliefs. This position is shown in the popular religious tracts and books in which Taoist beliefs are the *motifs*, though, of course, tempered in some by Buddhist ideas. At the same time the latter religion is responsible for the inception and development of many of the statements figuring as Taoist. This literature has a wide circulation, and many of the tracts are very popular. One of the most widely read and best known is *Actions and Recompenses*, probably written by an unknown author in the 10th century. One passage in it is as follows:

'Transgressions, great and small, are of several hundred kinds. He who wishes for long life must first attend to strictly avoiding all these sins.'³

Nor is the sinner left in doubt as to what his sins are, for categories of them are given in books of this sort. They are very full, as the following will show:

'Blasphemy, simply ridiculing and breaking images of the gods, undutifulness to parents, oppression of the people, deception of the prince, lewdness of all sorts, careless scattering about of the five kinds of grain, slaughtering oxen and dogs for food, the use of false weights and measures, injuring others to benefit oneself, cheating of the good by the wicked, ill-treatment of the poor by the rich, aggravated forms of covetousness, crimes of violence, house-breaking, selling adulterated goods, cheating the simple in buying and selling, trampling lettered paper underfoot, deceiving the aged and despising the young, breaking off marriage contracts, striking and cursing grandparents,' etc.⁴

It will thus be seen that relations between the gods and mankind, dutiful regard to parents, rightful and just intercourse between mankind, business relationships, and charity, as well as offences against the laws, are all thought of in this list of sins and crimes which would subvert family order and civil life. These and similar transgressions bring their retribution according to their heinousness, for life is shortened by twelve years for great ones, and one hundred days for small ones. A regular system of accounts is

adopted, and evil deeds and faults are entered to the debit of the keepers of these registers, and to their credit good actions are entered, a numerical value being assigned to each entry according to its position in the scale of virtue or evil. That the introspection, in some cases at all events, is most searching is shown by the following statement in one of these religious books:

'The most of what you do, what you say, the thoughts you think . . . are on the side of evil.'

The conflict between sin and the good in our own hearts is most strikingly stated in a philosophical work issued about the beginning of the 18th cent., and reminds one of St. Paul's reference to the subject in Ro 7th:

'When you have advanced sufficiently in knowledge of yourself, you will find it a grief. There will be, as it were, two men in your bosom. When you desire to do good, evil will come between. Again, when you wish to do wrong, a sense of shame will oppose you. Thus a battle goes on within you.'⁵

Some of the gods even are not perfect or free from sin. The gemmeous ruler of Taoism had a covetous heart, so one of his three souls had to become incarnate in 'the dusty, troublesome world.' Again, the Neptune of Taoism, the Sea Dragon, was disobedient, and his son was a drunkard, and the god of fire (originally a Buddhist god) committed theft. These stories are recounted in Taoist books published a few centuries ago.⁶

The Chinese, thanks largely to the moral teaching of Confucius, are remarkable, in comparison with many other non-Christian nations, for the purity of their religions. Yet the baser elements of human nature are to be found occasionally, so that not only are the everyday needs of life as well as riches, honours, health, prosperity, and offspring sought for from the gods, but there are a few deities worshipped by those who hope for help from them for the commission of sins and the carrying out of evil deeds. There is a small temple on the hill-side over the eastern portion of the city of Victoria, Hongkong, near some rocks which are believed, by the Chinese, to exert an evil influence on the morality of the city.⁷ The goddess of this temple is the patroness of prostitution.⁸ The present writer found on inquiry that the powder rubbed on the face of the image was supposed to make the worshippers who earned their living by that vice fair and attractive. There are also gods of gamblers⁹ and of thieves,¹⁰ gods of revenge¹¹ and of cruelty.¹² The drunkards even take as their patron saint Li Tai-pò, an anaercentic poet of former times.¹³ Some men of former times who have been renowned for their evil deeds have been even deified and worshipped owing to an idea that it is well to propitiate them for fear of what they may be able to do to the living.¹⁴ The tendency is, however, more to canonize the good.

6. Present-day popular beliefs.—The resultant of all the preceding influences is that, with his eclectic attitude towards all these elements of belief, the average Chinese has evolved a blend or amalgam of the whole as regards the religious side of his life—his ideas of sin and forgiveness of sin and all else connected with his spiritual life.

SIN (Christian).—This article in large measure presupposes what has been written in the artt. **FALL** and **ORIGINAL SIN**. It confines itself to a discussion of the Christian view or doctrine of sin as a state or power actually present in the developed moral consciousness of man. Since a modern interpretation must rest on the history of thought, our first task is to study the teaching of the NT and of great Christian minds.

1. The New Testament.—(a) Jewish literature of the 1st cent. B.C. and A.D. takes a sombre view of man. Constant allusion is made to the all but universal corruption, and, as man's relation to God is construed in essentially legal terms, the prevailing temper is fear of utter condemnation. Though sin may be inherited, moral freedom is intact, and man can choose whether he will or will not live righteously. The heart, not the flesh, is the seat of the inborn evil impulse (*yezer hara*); but at least the flesh makes sin intelligible, and, as Holtzmann puts it, 'there is no clear agreement whether the flesh represents a power ethically indifferent or one that somehow leads to sin.'¹ At the same time exceptional cases of sinless life are known. Each sin is an individual act, which can be weighed and numbered. Much responsibility for sin belongs to evil spirits which tempt men even to apostasy from God. But isolated offences can easily be expiated by penitence. Thus the Rabbinic mind swings between despair and pride. 'Far better were it for us,' says 4 Ezra, 'that we had not to face judgment after death' (7^{68t}); on the other hand, the busy acquirer of merit thanked God that he was not like the rest of men (Lk 18¹¹). Sin is never put in relation to the love of God. Even by John the Baptist it is viewed solely as contumacy or rebellion. God is creditor, judge, king; man is debtor, culprit, subject.

(b) Jesus has no doctrine of sin in general; it was not abstract considerations creating an intellectual problem that He fastened on, but concrete sins. He does not speak of the Fall. But sin is a terrible fact, which is always committed against God, not merely against fellow-men (Lk 15¹⁸), and the sinner is guilty. It has been said that Jesus dispersed the old morbid consciousness of sin like mist before the sun, but, if this means that He took it lightly, it is untrue. He does speak freely of good men and bad, and in the Beatitudes He implies the existence of those whom they describe. But He does not regard 'sinners' as merely one class of men among others; 'the righteous' are named so ironically. 'If ye then, being evil' (Mt 7¹¹), is one of His most arresting phrases; Peter is rebuked as 'Satan' for attempting to hold Him back from the Cross and told that he thinks like men; 'no one is good' (19¹⁷), He replies to one questioner. Men must look like that to One who bids them love God with their whole heart and strength (22³⁷). The call to repent, with which Jesus' ministry opens, assumes that all have sinned, and more than once this call is repeated. All must be merciful, for all need pardon, and all will perish unless they show a change of mind. It is the man who cries 'God, be merciful to me a sinner' who is justified (Lk 18¹³). The preaching of Jesus begins with individual acts of sin, but in addition He points to the corrupt heart which underlies them, for it is out of man's inner life that everything capable of defiling proceeds. Unless the heart is single, all is wrong. The sources of actual sin are this evil heart, stumbling-blocks put in the way by others (Mt 18⁷), and the temptation of the devil (13³⁰)—all of them influences which man can perceive and oppose. But no necessary determination to sin is

¹ *Neutest. Theologie*², I. 67.

even glanced at. The kinds of sin against which Jesus specially warns men¹ are unkindness, which will come up at the Last Judgment (Mt 25); the passions of anger and lust, the impure look and desire being equally wrong with the impure act (Mt 5²⁸); self-deception and unreality of thought ('Thou blind Pharisee,' 23²⁸); and moral indecision (Lk 9⁶²). Sin develops; the inner treasure of the heart becomes evil (Mt 12³⁵), and men, growing worse and worse, come to resemble a bad tree bearing fruit after its kind. God punishes sin, but far greater is the truth that men can repent and that all sins can be forgiven except that which connotes final hardening and therefore entangles men in guilt for ever (Mk 3^{28t}). It is when He is speaking of forgiveness that we can perceive how much sin means to Jesus. Guilt in His eyes is the heaviest of all loads, as is clear from the episode of the paralytic (Mk 2); men need pardon constantly (Mt 6¹²); and in God's sight even disciples are laden with an overwhelming debt calling for the sheer mercy of the Father (18^{33t}).

(c) St. Paul, unlike Jesus, offers the data for a doctrine of sin in the sense that sin (oftenest used in the singular) is generalized from a profound interest in its nature and significance as a whole. Broadly it means what is opposed to the law of God—His will expressed in commandments—and through law man becomes fully aware of it (Ro 3²⁰ 7⁷). But law too can be generalized; it is present not merely in the Law of Moses, though its embodiment there rose most naturally in the apostle's mind, but in man's heart everywhere. All are under law; all have violated law; hence all are under sin. The sin manifested in individual acts is a power, a universal condition or tendency of human life, a principle confronting men which St. Paul virtually personifies, though it does not possess objective existence for him as 'a power in *rerum natura* but not in this or that will.' The personification is half poetic, just as in the case of death, law, or flesh. But the meaning is a terrible reality; there is a system of sin, to which all are hopelessly enslaved, their only wages death. Except for the counter-activity of the Spirit of God or Christ, human life is sinful through and through. The manifestations of this principle are variously named—transgression, unrighteousness, lawlessness, disobedience, etc.

St. Paul proves the universality of sin by several considerations: by inspection of the life of Jews and Gentiles (Ro 2 and 1); by citation of the OT (Ro 3); by deduction from the universality of death, its penalty; by regressive inference from Christ's atoning death, which implies a universal need; finally by what is to all intents and purposes a metaphysical argument about the compelling power of the flesh. This universality he does not hesitate to call a divine ordinance. The law was intended to multiply transgressions by provoking the natural antipathy of the flesh (Gal 3¹⁹), and thus to lead sinners to despair of attaining righteousness otherwise than through Christ and faith.

The original element in St. Paul's teaching does not lie in what he says regarding the various types of sin, or its moral character, or its effect on man's relation to God, who reacts upon it in the doom of death. He seldom touches the connexion of sin with Satan or demonic powers, though we must not forget phrases like 2 Co 4⁴: 'The god of this world has blinded the minds of unbelievers.' His originality in contrast to Rabbinic thought lies in his explanation of the necessity of sin. To many scholars he seems to offer two unreconciled theories. First, the necessity is due to Adam's fall—a familiar Judaistic conception made impressive by its insistence on the unity of the race

¹ T. R. Glover, *The Jesus of History*, London, 1917, ch. vii

for which Adam stood (Ro 5^{12a}). But for St. Paul this scarcely had the importance which it came to possess for historic theology; he really glances at it by way of illustrating the solidarity of believing men with Christ. 'Sin entered the world by one man' (5¹²) may mean that Adam created for posterity the conditions of sinning, or it may only mean that Adam's was the first sin of history. St. Paul may have conceived of him as but the first instance of the sin inherent in man's fleshly nature, which brings up the second theory. This is that the flesh is radically antagonistic to God: as has been said, it represents for St. Paul 'the virulence and constitutional character as well as the omnipresence of sin.'¹ The will of the flesh and the will of man are one thing, the tie between the two being so close that there occurs in Ro 8³ the phrase 'flesh of sin.' It is because he is in the flesh that man does sin and can do no other. This is not a Jewish conception; according to the OT and Judaism, the flesh, so far from being the point of departure, rather by its frailty extenuates the sinner's guilt, and in any case entails no hopeless compulsion to evil. Nor is the theory traceable to the dualistic psychology of Hellenism, in which matter is opposed to mind—a view far too intellectual for the moral passion and despair of St. Paul. He does not equate sin and evil matter, or sin and sensuality, for there are spiritual sins, and he never forgets that God has created the flesh and can make it the abode of Spirit. A careful linguistic inquiry has led E. D. Burton to the following result:

'Neither the evidence of contemporary usage nor that of the New Testament itself warrants us in finding in Paul . . . the notion that the flesh is by reason of its materiality a force that makes for evil, or that a corporeal being is by reason of that fact a sinful being.'²

We must then believe that to St. Paul the flesh is a power productive of sin not because it is sin, but because sin, seated in the flesh as an alien power, utilizes it as organ and instrument. Till Christ came, the empirically sinful fleshly principle ruled; ever since, the counteractive Spirit has been victoriously on the ground. For the man who lacks the Spirit and lives on the soil of law the flesh must always be the gateway through which sin, in the shape of lust, invades experience, but this inevitable revolt against God leaves responsibility undiminished. Man's state is revealed to him by conscience, not to furnish him with an excuse, but to prove that no way to righteousness is open except God's.

(d) The doctrine of sin in the Johannine writings has been described as accidental or even almost wholly absent. For the writer of the Fourth Gospel, it is held, sin is a mere privation, which in itself involves no moral culpability; it is 'the natural incapacity of man to possess himself of the higher life.' It is true that we cannot identify the Johannine teaching with the Pauline. The former allows more for degrees of sin (19¹¹). Sin is indeed universal, but some men are, as it were, naturally of the truth (18³⁷) or of God (8⁴⁷). At the other extreme is unbelieving Judaism; in fact the sin in which the writer of the Gospel, from his historical and apologetic purpose, is chiefly interested, and upon which he generalizes, is disbelief in Christ with its inevitable judgment. It is on this ground that the Spirit convicts of sin (16⁹). Those who sin purely out of blindness may come to faith if they are given sight, but the bulk of men have this condemnation resting on them that they preferred darkness to the Light now present in the world (3¹⁹), and this because light, by exposing evil acts, incurs the hatred of all whose practices are corrupt. Their blindness

is guilty. Such unbelievers are children of the devil, that murderer and liar from the first, in whose power the whole world lies (1 Jn 5¹⁹); they have learned of their father and do his will. Not that Christians are sinless, though in principle they have broken with moral evil (3⁹); on the contrary, they need pardon constantly (1⁸), and are in danger of self-deceit and lovelessness; nay, such deadly sin is possible as may not bear being prayed for (5¹⁶). This last almost certainly means apostasy from the faith. Obstinate disbelieving mankind make up 'the world'—a hostile system confronting God and His people which is undivine in origin and quality, though no effort is made to explain how it arose in a universe created by God. This world hates Christ because He does not belong to it (Jn 15^{18a}), as indeed it hates God, whom it has not known (15^{23a}). Sensuality and pride are characteristic of it (1 Jn 2¹⁵). This opposition of faith and worldly unbelief is primarily one of experience, but it hardens into something like a static or timeless and irreconcilable antagonism; the world cannot receive the Spirit (Jn 14¹⁷), and in nature is identical with the devil. Yet, on the whole, the Fourth Gospel leaves us faced by an antinomy; on the one hand, Jesus will not pray for the world (17⁹), on the other, the prospect of its being brought to faith in Christ's mission is left open (17²¹). Such a sentence as the last, or the great prophecy that Christ will draw all men to Himself (12³²), could hardly have been written by one whose mind finally rested in a metaphysical or gnostic dualism.

2. History of doctrine.—Church teaching about sin is much less concerned than Scripture is with the meaning of sin in experience and under the light of Christ. Roughly, two-thirds of its interest has been given to original sin—i.e. the sin of Adam in its consequences for the spiritual condition and fate of mankind, this first sin having as its foil an alleged state of original righteousness on which Scripture has little to say. Yet what most troubles the Christian conscience is neither sin committed by the first human pair nor the sin with which we are born, but the actual sinfulness of our acts and persons. Abstracting so far as possible from original sin, we shall seek to indicate the main trend of thought in the Church with regard to sin as found in normal adult experience.

(a) Among the more important questions canvassed in the 2nd cent. were the persistence of sin in the Christian life, and the rigoristic demand that lapse into grave sin should be viewed as involving the loss of salvation—a demand eventually rejected by the great Church even in face of Tertullian's unwillingness to readmit those who had been guilty of mortal sins (fornication, idolatry, murder). East and West conceived of sin differently, though at first both held that moral evil springs out of freedom, and that freedom cannot be lost. To the Greek mind not guilt but sensuality and decay were the essential features of the misery entailed by Adam's fall. The idea of original sin was largely foreign to the East as late as the 5th century. Not even the universality of sin was a fixed point, though Origen affirmed it speculatively; Athanasius distinctly says that there were many sinless lives before and after Christ. It was universally held that baptism remits all previous sin, but the terms on which later sins were pardoned caused much difficulty.

(b) The greatest of all controversies over sin is that between Augustine and Pelagius. In opposition to the Manichaeans, Augustine insisted on the voluntary nature of sin, which is not a natural (i.e. automatic) but a moral fact. An act is not sin at all if it be not voluntary. But he was the first Church teacher to declare that none the less

¹ J. Denney, in *Exp.* 6th ser., III. [1901] 290.

² *AJT* xx. [1916] 595.

it is due to a pitiful necessity. Man, cut off from God the source of all good, is impotent to do good actions. As a psychological indeterminist Augustine conceded that man may freely prefer a less evil to a greater; as a theological necessitarian he denied that without grace any right act is possible. It is sheer frivolity to talk, as Pelagius did, of pure freedom of choice as man's inalienable prerogative; the sinner's will is in the last resort the will of a slave. Not merely particular acts, but the nature, disposition, and affections of man are sinful and guilty throughout, incapable of any good. No terms can be made with Pelagius's doctrine that sin consists of individual actions only and leaves the will and nature unaffected, or that children are born sinless, or that the universality of sin (if a fact) is due to bad example or defective education, or that divine grace is requisite only in the form of instruction and the example of Christ. All this was gathered up in Augustine's religiously profound and logically rigorous doctrine of original sin together with its implications.

Sin he defines as *spontaneus defectus a bono*,¹ but (apparently in answer to the Manichean doctrine, which made sin a substance) he describes it further as merely negative in the sense that it is a *privatio boni*. Good is being, evil is not something positive but a loss or lack of being, which needs no efficient but only a deficient cause. This privative conception of sin, never really accepted by the Church, was probably meant by Augustine to guard against the mistake of viewing sin as essential to human nature and *eo ipso* created by God. God, like one who strikes an untuned harp, is the cause of man's activity, but not of its discord with the law of righteousness. Sin at bottom is pride, while the form which the perverted will takes in every human being is concupiscence or lust. Any sin is 'mortal' in which the will turns away from God. Men are born not merely sinful but guilty, subject to God's wrath, and meriting eternal damnation. The thought of inherited guilt is no longer convincing, and must tend to evacuate guilt of its proper sense, but the religious power of Augustine's teaching as to the solidarity of mankind in sin will always make its own impression. The Church settled thereafter for centuries in a semi-Pelagianism, or, from another point of view, a semi-Augustinianism, which left the sinner with a capacity to assent to grace.

(c) In the following centuries also the emphasis moved by degrees from act to disposition, and mortal sin became equivalent to love of the creature instead of God. In the 9th cent., while venial sins were atoned for by a paternoster, mortal sins were changed to venial by the satisfactions of penance. Anselm made an advance of great moment by bringing out indisputably the guilt of sin, previously obscured by a tendency to construe sin as a defect and in large measure to overlook its personal relation to God; and yet even Anselm's view of guilt leans to the negative side. It is our failure to perform a duty, and the full spiritual relationship of the sinner to God is not made clear; a deficient thought of God so far concealed the full blameworthiness of sin. The older idea of sin as formally a *carentia*, or lack, persists in scholastic theology; it is what we have lost in comparison with Adam; materially it is concupiscence, though, according to Duns Scotus, this, as but the *fomes peccati*, is not itself sin.

(d) The Reformers strove most of all to accentuate the religious and personal character of sin as interpreted by the light of revelation. As for content, sin is want of faith, the failure to fear

and love and trust God. Luther never tires of saying that mistrust of God is the gravest manifestation of our corrupt nature. He marked his opposition to the externalized doctrine of scholasticism by thus identifying sin with the 'faithless heart.' Thus the personal significance of sin was forced in upon conscience, despite the fact that in most ways the Augustinian tradition, which made original sin primary, still persisted. How inherited guilt can be reconciled with the new sense of moral responsibility is left dark; Zwingli alone protests that we cannot speak of sin (which for him embraces guilt) except when the individual will has appropriated the corrupt heritage. In the Protestant scholasticism of the 17th cent. much is said of the consequences of sin, viz. guilt (*reatus culpæ*) and punishability (*reatus pænæ*). The penalty is death in the most comprehensive sense: (1) *mors spiritualis*, or the loss of the divine image; (2) *mors corporalis*, including sickness and outward evils as well as actual dissolution; (3) *mors æterna*, or exclusion from everlasting life with God.

The preoccupation of orthodoxy with Adam's transgression and its fruits led to undue neglect of the social power of sin. Modern thought, instead of linking our inborn evil constitution to our first parents, speaks rather of a sinful race or community in whose evil we share, and insists that in this field the idea of inheritance means that we infect those who come after as well as receive infection from our ancestors. Not only so; it is rightly held that sin spreads in other ways than by heredity, viz. through bad training, unworthy example, and tempting provocations. We must advance to the conception of the whole complex sin of humanity, in which inherited sin is only an element. The traditional idea of total depravity, while no doubt indicative of the fact that no part of our nature is unstained and that we cannot of ourselves do what is in the highest sense good, is nevertheless unscriptural and untrue to life if taken to mean that non-Christians are 'utterly indisposed, disabled, and made opposite to all good, and wholly inclined to all evil.'¹

(e) Socinian and Arminian criticism of a tradition so deeply influenced by Augustine bears chiefly on original sin, but from the Socinian definition of the essence of sin as voluntary transgression of the law it is clear that sin as such is for the Socinians a narrower idea than for orthodoxy. The later supranaturalists held that sin is imputable only when free will has failed to fight and overcome the difficulties of a nature disordered by sensuous impulse. At a wider remove from orthodoxy, 18th cent. Rationalism taught that man is characterized by a certain weakness of the will to good and a certain disposition to evil, while at the same time, though in consequence of his finitude only by degrees, he is perfectible, i.e. can develop the feeble inborn germ of good and rise above the tyranny of desire into true liberty of spirit. The interest and importance of Kant in this field largely rest on his efforts to supply what may be called a philosophic analogue to the Church doctrine of original sin—that radical evil in man as man the timeless origin of which is symbolized by the Biblical story of the Fall. But this we must pass over. Schelling gives his own philosophic form to the antinomies of tradition, holding that, in spite of a universal necessity rooted in the dark bases of God, evil is man's choice, and every creature falls by its own guilt. To Hegel the Adamitic fall is a mythic representation of an eternally necessary process; for man, good by nature (i.e. ideally spirit or rationality), must, in order to realize the life of

¹ A fuller definition is this (*de duab. Anim.*): 'Peccatum est voluntas retinendi vel consequendi quod iustitia vetat, et unde liberum est abstinere.'

¹ Westminster Confession, vi. 4.

spirit, pass by a dialectically inevitable movement from innocence to sin and from sin to virtue. The transition from innocence to sin is due to the necessity of transcending mere nature, which, *qua* absence of will, is bad; the transition from sin to virtue is mediated by retribution and amendment. This, as McTaggart points out,¹ means that sin is not only a necessary concomitant of virtue, but a necessary element in it. Sin must lead to virtue, and there is no virtue which is not based on sin. But it will naturally be asked whether this point of view is not more æsthetic than moral, and wrong even so; whether it can be taken seriously in moments of self-scrutiny and penitence; whether, provided the actual evil of life is part of its perfection, to replace vice by virtue is not simply a blunder; and whether the conception of goodness as rooted in badness has any relevance to Jesus, His personal holiness, and His revelation of the Father against whom all sin is done.

Modern theologians have determined the concept of sin variously, yet with an all but unanimous rejection of Pelagian tenets. Schleiermacher, reporting, as he held, on the Christian consciousness, defined sin as the positive struggle of the flesh against the spirit. Man's sensuous development gets ahead of his spiritual development, and, this being God's ordinance, we can avoid making Him the author of sin only by concluding that the consciousness of guilt, which we trace to sin but God does not, has been given us to stimulate the desire of redemption. Schleiermacher vacillates between the view that sin is non-existent for God and that it is caused by Him; he grounds it in human nature and finds this an enhancement of its gravity, yet he is tempted to explain it as a necessary outcome of our sensuous nature. Sin, he declares, is a social fact, being 'in each the work of all, and in all the work of each.' In contrast to this conception of sin as sensuality may be placed the view, notably exemplified in Julius Müller, that it is selfishness, though in Müller's case this was supported by a curious speculation, reminiscent of Origen and Kant, according to which finite selves have not so much pre-temporally as timelessly and primordially torn themselves loose from God and made self the principle of life. This theory of sin as being in principle selfishness has had great vogue, not in conservative quarters only. Ritschl too subscribed to it, but is chiefly meritorious for his insistence on the religious character of sin. Its real nature, range, and evil are only revealed fully by the Gospel; religiously it is the lack of reverence and trust towards God, while in a moral aspect it is antagonism to His Kingdom. His contention that all forgivable sin is in God's eye sin of ignorance has been severely criticized as abolishing guilt, though Ritschl's own main charge against original sin is that such sin could not be reckoned guilty. But it has been rightly felt that, as sin is not *all* ignorance, Ritschl's formula is misleading, and gives encouragement to the notion that deliberate open-eyed transgression is too great for God to pardon. Another of his valuable ideas is that of a 'kingdom of sin,' which is not in the least a futile effort to account for sin by the universality of sin, but a clear indication of the fact that the wrongly used freedom of the individual is relative to an environment—co-extensive in the last resort with human life—in which sin already prevails.

The most important English discussion of sin in recent years is that of F. R. Tennant,² who argues that we ought to substitute a plurality of concepts, developmental not static, for the rigid idea of sin with which theology has usually operated.

Sin is one thing, imperfection another; and imperfection is sin only when at the same time it is volitional. 'Man is conscious before he is self-conscious, impulsively appetitive before he is volitional, and volitional before he is moral,'³ so that natural and organic propensities provide the raw material out of which the will constructs sin. Sin and guilt are correlative and co-extensive. Penetrating and illuminative as Tennant's work is, it may be doubted whether his 'logically perfect' concept of sin will be approved by those who hold with St. Paul and Augustine, not to speak of numerous modern students of society, that men are ethically as well as physically involved in the unity of the race, and that we desert experience if we ignore either aspect of sin, the voluntary or the constitutional.

3. The doctrinal interpretation of sin.—Certain points, such as the universality of sin, have been sufficiently treated of above, but we may now consider from a theoretic point of view some larger topics which have been referred to only incidentally.

(a) Sin may be defined as indifference or opposition to the will of God, the refusal of faith and love. And, if the will of God be fully revealed in Jesus, it follows that the Christian estimate of sin is a new and creative one. For it declares that sin is what it is in virtue of its relation to holy love. Elsewhere sin is folly, ugliness, or sickness, not mistrust or rebellion against a love measured by the Cross. The difference is not superficial, but radical, inasmuch as it results from a new thought of God. Sin, then, is the explicit or implicit claim to live independently of God, to put something else, be it the world or self, in His place. In a moral aspect this fundamental godlessness or God-forgetfulness appears as selfishness and sensuality.

At bottom sin is a religious idea, which for that reason cannot be properly defined otherwise than by putting it expressly in relation to God. In a formal point of view the same consideration disqualifies the proposal to define it as selfishness. All selfishness is of course sin, but neither logic nor (the present writer would hold) experience justifies us in converting this proposition *simpliciter*. It is indeed very questionable whether some sins are not quite disinterested, involving no pursuit of egoistic ends at the cost of others. Thus the family affection which produces the family vendetta, or suicide committed to save the reputation of a friend, or the most odious forms of religious persecution are not obviously selfish and may actually demand true loyalty and unlimited self-sacrifice.

To define sin as sensuality is even more inaccurate. Many of the worst sins—hate, cruelty, lying, irreverence—have no close connexion with the senses; they run their course within the mind. It is of course recognized by those who prefer this definition that deliberate surrender to the force of bodily craving is not *per se* sinful; no man sins merely by taking food to satisfy hunger or by going to sleep; sensuality is the wrong gratification of bodily impulse, in contravention of higher demands. At the same time, to identify sin with sensuality, to make the two an equation, is more or less to extenuate its badness by deducing it from the natural conditions of human life. An illegitimate interpretation of the theory of evolution has probably rendered this view of sin more popular to-day than ever. Sin, it is held, is just the brute-inheritance; we move upwards by working out the beast. But every biologist who thinks clearly will grant the necessity of distinguishing two things that differ—the enlargement of faculty

¹ *Studies in Hegelian Cosmology*, Cambridge, 1896, p. 151 ff.

² See his *Origin and Propagation of Sin*² and *Concept of Sin*.

³ *Concept of Sin*, p. 165.

whereby man becomes more than an animal, and the voluntary commission of evil known to be such. But it is the first, not the second, that constitutes a rise in the scale of being. In other words, the willed commission of sin is an anti-evolutionary fact. Sin and the consequent disorder cannot be exhibited as the consistent prolongation of natural processes of development or as progressive adaptation to environment. As well might we call poverty a result of good trade, or error an example of compliance with the rules of logic. Doctrines of human development can in some real degree construct for us the probable situation—whether of race or of individual—in which sin is first committed; they can do nothing to explain its actual emergence or its religious or moral meaning once it has emerged. The argument of a few evolutionary writers, on quasi-Hegelian lines, that experience of moral evil is necessary to prepare men to appreciate good may sound imposing as a generalization, but breaks down completely when applied to definite persons and definite sins.

Men become aware of sin, first of all, as an episode, a definite evil act in which a higher will is thrust aside. As it has been put, 'it is a sin of which man accuses himself—a disobedience which he can isolate in his life, regarding it as a blot, a stain, an exceptional phenomenon to be dealt with by itself.'¹ But behind this is next discovered a motive or disposition which gives the act meaning and out of which the act rises; and, by His condemnation of the murderous thought and lustful desire, Jesus made an end of the conventional idea that the sinner is merely one who commits so many wrong acts. Still deeper reflexion points to a permanent character or state of personal life affording unity and basis to varied acts and dispositions or attitudes. The falsest of all heresies is Pelagianism; if life is built on atomic lines, nothing like religion or morality is thinkable. No spiritual significance can be predicated of an act if it is a bare, accidental, unrelated point, but only if it carries with it a theory of its own origin in a certain articulated character from which it springs and on which it reacts. Nor is it true to say that this is but to use a collective name for the sum of our particular sins. Character is more than its past manifestations: in scholastic phrase, *peccatum actuale* does go back and down to *peccatum habituale*. Finally it is realized that the sinful individual life is part of a wider context of vitiated social life. The sins and sinfulness of a man require for full valuation this reference to the sin of the whole race.

(b) Christian theology must operate with an idea of guilt which is drawn from fully conscious moral experience. The idea is not confined to individual experience, but individual experience supplies our point of departure. Guilt is personal accountability and blameworthiness attaching either to a voluntary infringement of the will of God, in so far as that will is known to us or might have been known except for previous sin, or to a condition of personal life directly or indirectly consequent on such infringements. In strictness guilt is predicable not of acts, but of persons. No act, *qua* occurrence in space and time, is in itself wrong; ultimately moral quality belongs solely to the agent and his motives. Not only so, but acts pass, while persons remain somehow identical with their own past.

In this field we must first distinguish between guilt and sin in the sense of imperfection or badness. A young child may have acquired habits of lying or dishonesty through evil training in years prior to the normal awakening of full moral consciousness; in so far it is bad or imperfect, and

it would be paradoxical to describe the child as without sin, for sin is whatever contradicts God's revealed will for human life. But the child's guilt may be small.¹ There can be no sin without guilt, but in such a case by far the greater portion of guilt attaches to others. In other words, guilt does not vary directly with sinfulness, except when we contemplate the race as a whole; collective human guilt is co-extensive and co-terminous with collective human sin. When the distinction just insisted on is wholly overlooked, guilt loses meaning and gravity; though it is undeniable that the religious mind does retrospectively predicate 'unworthiness' or the quality of being displeasing to God of acts or states which at the time, from lack of enlightenment, could not have been other than they were. A second needful distinction is that between guilt as a feeling and as a fact. The consciousness of guilt cannot be taken as an exact or trustworthy index of actual guiltiness, for many wicked men have no bad conscience to speak of, and the worst and most hardened of men, feeling his guilt the least, and hardly conscious of the reproach of God or of his personal ill-desert, might otherwise be reckoned the least guilty. Our sense of guilt ought to be proportioned to our guiltiness; we cannot assert that in fact it is so.

To be guilty, a man must have moral knowledge or appreciation of right and wrong as they concern his action; where this pre-condition is lacking, as in imbecile or infant, guilt cannot be. But the knowledge in question need not be in the present consciousness of the sinner, for we should not cease to call a man guilty whose moral perceptions had been darkened by persistent wrong-doing. Further, guilt presupposes power in the moral agent to have acted otherwise. The sin must have been avoidable. If the liar had no option but to lie, because the constitution of things forced the lie from his lips, self-reproach is out of place. In all probability the modern habit of rightly bringing action into the closest possible connexion with character tends to obscure this real avoidability of guilty sin. How, it is asked, can we be responsible for what is the necessary outcome of character? Conscience imputes guilt to me on the ground that my character, being bad, inevitably expressed itself in just this way. But this appears to be out of harmony with the utterances of the moral consciousness. What I feel in moments of penitence is not that I am bad because I could act only in this sinful fashion, but that the badness of my disposition is revealed by the fact that I could do, and did, this evil thing. My sin is not an inevitable manifestation of me, but it is an actual manifestation of those elements in me which I might have suppressed and did not. No form of determinism can consistently assign to guilt the significance it has for specifically Christian thought. Whether it be physical determinism, as in Lucretius, which makes the soul one kind of mechanical force working along with and in the midst of other forces of the same kind; or psychical determinism, as in Mill, for whom the self forms an organic mental unity, reacting according to law, like other organic unities, on the stimuli of the environment; or idealistic determinism, as it may be called, which ascribes to the self, besides this vital reaction, the logical capacity to co-ordinate and combine the motives present in consciousness—in every case the *sui generis* quality of personal action is lost sight of. Choice is confused with what is not choice at all—be it a physical event or a judgment of the understanding—whereas in fact it is the experience in which,

¹ And in principle this is the case of all; there is no young life which sinful infection has not touched long before the attainment of true moral personality.

by distribution of attention, we take up a selective attitude to the moral alternatives before us. We will take this attitude when we sin; it is not taken for us by any interior psychical clockwork. Moral freedom is expressed in the valuation of motives, and in the last issue guilt is a word with only legal but no ethical sense unless the will produces actions without being itself produced. This is not to say that freedom is unconditioned. On the contrary, as it has been put, in all life there is involved a 'synthesis of two moments which it is wrong to take as real in themselves, the moment of necessity or acceptance of the situation and the moment of freedom or free action in the situation.'¹ Freedom, that is, is the correlative of data provided in part by our temperament and circumstances, in part by our previous moral history. We are candidates for freedom rather than completely free, but moral liberty in some real though varying measure is an essential presupposition of that culpable responsibility to God which religion names guilt. That, in spite of this real liberty, men sin so habitually is due to the accumulated power of evil impulses which they have nourished or failed to eradicate and to the incessant pressure of sin-charged social forces.

(c) The genesis of sin within the individual life is a problem so intricate that we must bear well in mind that no conclusion or lack of conclusion regarding the origin of sin can in the least affect our actual consciousness of its nature. Sin is on the ground, but we cannot watch it rising out of hypothetical antecedent conditions. Yet if, as we have seen, it is our own moral act, or a moral condition of our being which apart from our moral act would have no existence, the origin of sin must lie in the abuse of freedom. As it has been expressed, 'in the secret places of the human spirit takes place that strange change by which the non-moral is transformed into the immoral. We face here a mystery which we cannot explain, yet may not deny.'² Such abuse of freedom, however, does not occur *in vacuo*. The spontaneity of consciousness is a spontaneity of response to given factors in the world of presentation. What these factors are in this case may in part be understood if we recollect that our moral life has roots in animal nature, and is at first unformed—the process of our becoming being suffused from the very outset with a naive egoism operating in the midst of a chaotic strife between higher and lower impulses, a strife inseparable from each life's growth.³ This confused mass of impulse, shot through by incipient movements of self-creation, is played upon by tainted social influences. These are the occasions and provocations of sin, but when we ask how they are translated into actuality the only answer is, 'By free choice.' This will seem inadequate only to minds obsessed by the idea of mechanical causation, which explains every phenomenon by some other. The will is not caused. Yet to refer moral evil to the free activity of will is less an explanation in the proper sense (all true explanation being teleological) than an implicit admission that sin is radically unintelligible—the one thing in the universe rightly to be called 'irrational,' as not merely an irreducible fact but the negation of all rationality. But, if freedom is an ultimate, we can see that the pre-condition of disobedience is also the pre-condition of obedience and of redemption. If God is love, it was necessary that sin should be possible.

³ See especially the works of F. R. Tennant.

(d) Nothing in sin can be so important for the Christian mind as its relation to God. He assuredly is not the author of sin, in the sense either that it forms for Him a personal experience or that His will is equally fulfilled through human sin and human obedience. Otherwise we should need to be redeemed not by Him, but from Him. When sin, however, has once become real, like other real things it falls under the sweep of divine power and is made to serve the purpose of holy love. Thus it is permitted to expose itself in all its vileness and misery, pre-eminently at the Cross, this progressive self-revelation of evil being accompanied and more than impeded by a parallel disclosure of good. Again, sin is condemned by the divine holiness; on this subject the believing mind attains a certitude which admits of no dispute, including the insight that what religion calls the wrath of God—i.e. the reaction of His holiness against sin—is, in face of sin, a necessary aspect of love. This reaction takes shape in punishment; to ask whether God *must* punish sin is otiose, in view of the fact that He invariably does so. True, the old distinction of natural and positive divine penalties is unreal. Natural penalties, it was held, flow from sin by ordinary causation, habitual intemperance, e.g., leading to disease; positive penalties by their striking and unusual character compel the sufferer or onlookers to ascribe them to divine agency. But all divine penalties are positive in the sense that God's will imposes them, and the fact that their incidence may be mediated by ordinary finite causes does not alter this in the least. Sin's proper punishment lies, as it were, within sin itself. It consists in the self-stultification of the evil will (for, in McTaggart's vivid phrase, sin is like drinking sea-water to quench thirst), in the persistence of evil desire, in weakness of character, in the sense of guilt, above all and decisively in estrangement from God. And, if to lose communion with God be sin's worst penalty, it is no paradox to say that no one is punished for sin as the Christian is. The social consequences of sin, like lovelessness and dispeace, are directly proportioned to the moral evil prevailing in society as a whole. But we cannot fix a proportion between sin and suffering for the individual life (Jn 9⁹). Sin always brings pain, but the pain, as the experience of Jesus proves, may strike the most innocent of all. Not only so, but to the reconciled heart external evil, instead of being annihilating judgment, may be fatherly chastisement which opens the way for a fuller revelation of divine love and thereby for the blessing of others. To the experience of death, which literature in every age proves to have been felt as the greatest of all ills, sin imparts a new penal character, which in some solemnizing measure it may retain even for the Christian, despite his recognition of it as appointed by the Father's love.

Closer to the heart of faith lie the great divine counteractives to sin, of which life and history are full. All ethical institutions which minister to community in the largest sense, such as the family, law, and the State, are here to be reckoned in; still more the emergence of great prophetic souls, deepening and refining the moral insight of the race. Above all, Jesus Christ has been here, and in the light of His person the drift of divine redeeming activity has become apprehensible by faith. His sin-conquering power is still made ours in the Holy Spirit, ever available in prayer and energizing divinely in the will of the believer, so enabling him to overcome sin and transform it into its opposite. The cardinal truth about sin is that it can be so forgiven as to be replaced by Christian goodness, and that in His Son the Father has interposed to put it away by the sacrifice of Himself.

H. R. MACKINTOSH.

SIN (Egyptian).—I. Conceptions of sin.—An idea, by no means complete, of what the Egyptians regarded as sins is afforded us by the two 'As-sertions of Innocence' in ch. 125 of the *Book of the Dead*.¹ The acts and qualities therein repudiated by the deceased are murder, robbery, theft, oppression, impiety towards the gods and the dead,² lying, slander, dishonesty, avarice (*un-ib*), hasty temper, pride, loquacity, eavesdropping, adultery, and masturbation. From statements in moral treatises and other literary compositions, and in the biographical inscriptions of feudal lords and officials, we learn that to the sins enumerated in those two distinctly haphazard lists must be added injustice, partiality, disrespect for the aged and for parents, disobedience, contentiousness, rancour, ingratitude, selfishness, and drunkenness.

Some conception of the varying degree of reprobation in which the different sins were held—i.e. to what extent they were classed as greater or lesser offences against the gods or the community—can be gained from a study of the two artt. **ETHICS AND MORALITY (Egyptian)**, § 13, and **RIGHTEOUSNESS (Egyptian)**, §§ 2, 3, 4 (2), 5.

2. The origin of evil.—The Egyptians at a very early date seem to have had some conception of a Golden Age, when the sun-god ruled over the earth and when sin and evil did not yet exist.³

Already in the *Pyramid Texts* mention is made of 'those belonging to that first generation of the company of the righteous, that was born before anger arose, born before clamour arose, born before blasphemy arose, born before tumult arose, before the eye of Horus was wrenched out (?), before the testicles of Seth were torn away (?).'⁴

To explain the origin of evil in the world is perhaps one of the aims of the so-called *Destruction of Mankind*.⁵

According to this tale, the sun-god Rē (the god who was characterized by his righteousness and hatred of evil⁶) ruled at a remote age over gods and men. When he grew old, men thought blasphemously of him, so he sent down his eye in the form of the goddess Hathor to destroy them. After Hathor had for a whole day revelled in slaughter, Rē relented and saved men from total extermination. But he henceforth refused to dwell any longer on earth, and withdrew himself to the sky.

In this legend men themselves seem to be regarded as the originators of sin, for it was as the result of their folly that the earth ceased to be under the direct rule of the perfectly righteous god.

Possibly also the above-quoted passage from the *Pyramid Texts* refers, in its original form, to this

¹ See artt. **ETHICS AND MORALITY (Egyptian)**, § 8; **RIGHTEOUSNESS (Egyptian)**, § 3.

⁶ See art. **RIGHTEOUSNESS (Egyptian)**, § 6.

rebellion against the sun-god.¹ The reference to the quarrel between Horus and Seth is apparently a later addition. But he who inserted it evidently held the view that all the sin and misery that prevail in the world originated, not in the acts of men, but in Seth's murder of Osiris and his subsequent conflict with Horus.

3. The punishment of sin.—(1) *After death*.—The Egyptians had various conceptions of the punishments meted out to those who failed to obtain a favourable verdict at the posthumous trial.² The majority of these are sufficiently described in the art. **RIGHTEOUSNESS (Egyptian)**, § 9 (1) (i.), (iii.), (v.). According to the *Second Tale of Khamuas*, the unrighteous dead were tortured.

'Setme saw . . . one man in whose right eye the pivot (?) of the door of the fifth hall (of Amenti) was fixed, while he prayed and uttered loud lamentation.'³

The man in question had been great and wealthy during his life, but after his death 'his evil deeds were found more numerous than his good deeds that he did upon earth.'⁴ We read in the same tale that those who were improvident⁵ during their lives suffered the pangs of hunger, while those who had led stupid, aimless existences—'the kind of men on earth whose life is before them, but God diggett a pit at their feet to prevent them finding it'—had food, water, and bread hung over them, but as 'they were hastening to take it down . . . others dug pits at their feet to prevent their reaching it.'⁶

A point overlooked in the art. **RIGHTEOUSNESS (Egyptian)**, § 9 (1), may here be noted. According to the above-quoted *Second Tale of Khamuas*, the actively virtuous are granted a higher award than the moderately good:

'As for him of whom it shall be found that his good deeds are more numerous than his evil deeds, he is taken among the gods of the council of the Lord of Amenti, his soul going to heaven with the noble spirits. And he of whom it shall be found that his good deeds are equal to his evil deeds, he is taken amongst the excellent spirits that serve Sokari-Osiris.'⁷

The high ethical tone of this tale (the existing version dates from the latter half of the 1st cent. A.D.)⁸ is most remarkable.⁹ We find no trace in it of the idea that justification after death could be attained by means of spells and ceremonial ablutions;¹⁰ on the contrary, a man's fate in the hereafter is represented as entirely dependent upon how his life on earth had been spent. It may be pointed out at the same time that an equally high ethical standard is displayed in the description of the posthumous judgment in a composition of the feudal age, quoted in the art. **RIGHTEOUSNESS (Egyptian)**, § 9 (1), (iii.), and also in the well-known passage occurring in one of that special group of hymns discussed below in § 6:

'Amun-Rē who judgeth the earth with his finger . . . He assigneth him that sinneth against him to the fire, and the just to the West.'¹¹

(2) *In this world*.—The Egyptian moralists warn the evil-doer that his sins will bring misfortune upon him or an untimely death.¹² The gods 'who will not ignore the deed of any person' are often represented as directly responsible for the sinner's doom.¹³ A very ancient philosophical treatise informs us that the tongue of Ptah 'gives life to the peaceful, death to the guilty.'¹⁴

¹ Cf. its phraseology with that of certain passages in A. H. Gardiner, *The Admonitions of an Egyptian Sage*, Leipzig, 1909, pp. 44, 78, 84, the whole aim of the sage here being to contrast the prosperous rule of the righteous sun-god with the disastrous rule of the weak Pharaoh whom he is addressing.

¹⁴ A. Erman, 'Ein Denkmal memphitischer Theologie,' in *SBAW* xliiii. [1911] 940.

4. The necessity for being sinless.—As has already been stated in the art. **RIGHTEOUSNESS** (Egyptian), §§ 5, 9, the attainment of bliss by the dead depended upon the verdict which they obtained at their posthumous trial. The judge of the dead, whether Rē or Osiris, was characterized by his righteousness and hatred of wrong, as were also the members of the assistant judicial council. The deceased, in order to find favour in the sight of these gods and so obtain the verdict upon which his happiness depended, had also to be righteous, i.e. be able to show that he had led an absolutely sinless life on earth. Even an Egyptian would have regarded that as an achievement beyond the power of most men. Accordingly several ways were found of overcoming what must have appeared a very serious obstacle to salvation.¹ These were: (a) ceremonial ablutions, which, whether performed by or on behalf of a man during life or after death, cleansed him from his sin and made him righteous; (b) going on pilgrimage to Abydos or otherwise participating in the Osirian mysteries; (c) the recitation of magical formulae, by means of which things alleged (e.g., that the speaker was free from sin or had performed or participated in this or that ceremony), however untrue they might be, became actualities.²

5. The unwillingness of the Egyptian to acknowledge himself a sinner.—The nobles, officials, and private persons of the Old and Middle Kingdoms and early New Empire never seem to weary of asserting in their biographical inscriptions that, in respect of their character and conduct, they were models of perfection. To own that they were sinners or even imperfect never seems to have occurred to them. In fact they mention a fault only in order to deny that they were ever guilty of committing it.³

What looks like the most amazing spiritual pride may possibly be accounted for by the prevailing belief in the magical efficacy of formulae, written or recited.⁴ This belief, coupled with the idea that ceremonial purity and freedom from sin were their sole passports to posthumous happiness, naturally deterred the Egyptians from owning themselves sinners in any documents, particularly in ones so closely connected with their existence after death as were inscriptions on their tomb-chapel walls or on their funerary stelæ.⁵ To allow there that they were anything but absolute perfection would be to jeopardize their chances of salvation. Indeed, if a man felt that he could not attain happiness in the hereafter unless by some means or other he convinced his divine judges that he was free from all moral and ceremonial defects, he might well have shrunk from admitting that he had any such defects even to himself.

(1) The claim of the Egyptian to moral perfection was also prompted by his desire to win the goodwill of visitors to his tomb-chapel, so that they might be ready to present him with food and drink-offerings or in lieu of these recite certain spells.⁶

(2) Those who accuse the Egyptians of unexampled spiritual pride must bear in mind that,

¹ See Griffith, p. 46, note on I. 6.

² For details see art. **PURIFICATION** (Egyptian), § 2, 2, 8 (b), **RIGHTEOUSNESS** (Egyptian), § 20, **SALVATION** (Egyptian), § 2.

³ See art. **RIGHTEOUSNESS** (Egyptian), § 2.

⁴ See § 4 (c) above, and Griffith, *loc. cit.*

⁵ See Breasted, p. 167 ff., and esp. p. 169 f. It should be pointed out in this connexion that similar statements to those that follow the second 'Assertion of Innocence' in ch. 125 of the *Book of the Dead* (i.e. 'I have done what men command and that wherewith the gods are pleased . . . I have given bread to the hungry, water to the thirsty, clothes to the naked, a ferry-boat to the boatless. I have made offerings to the gods, and ablutions to the blessed dead') frequently occur in the tomb-inscriptions and on stelæ of the feudal age; see, e.g., art. **RIGHTEOUSNESS** (Egyptian), §§ 2 (1), 3, 9 (c).

⁶ See art. **RIGHTEOUSNESS** (Egyptian), § 9 (c); Breasted, p. 169.

though in accordance with custom the narrative containing these self-adulatory assertions is put into the mouth of the deceased, it was often composed under the direction of a pious son or some other surviving relative.¹

(3) Such assertions in process of time became a convention, the stereotyped way of describing a deceased² or living³ person's character, or even one's own.⁴

6. Acknowledgment of sin.—As has been pointed out, it was characteristic of the Egyptian to deny that he was guilty of sin. But certain hymns of the XIXth dynasty,⁵ written on papyri or inscribed on votive stelæ, display a religious sentiment hitherto unknown in Egypt and not met with again until Christian times. The persons who wrote the hymns, or for whom the hymns were written, speak of themselves as 'humble'⁶ folk, 'afflicted',⁷ 'distressed',⁸ 'in bondage',⁹ 'wearied'.¹⁰ They confess that they are sinners deserving punishment at the hands of this or that divinity;¹¹ but they throw themselves on the mercy of the divinity, pleading that they are 'ignorant and foolish, not knowing good from bad',¹² and 'disposed to commit sin'.¹³

'Punish me not for my many sins,' exclaims a suppliant of the god Amūn, 'I am a witless man. I am a man without understanding. All day I follow after my own dictates, as the ox after the fodder'.¹⁴

The divinities addressed are represented as chastising men for their sins.

A certain Nekhtamūn, we learn, 'lay sick unto death,' and was '[under] the might of Amūn by reason of his sin'.¹⁵ Nefer-'abu' was a just man upon earth, but he 'wrought the transgression' against the Peak of the West (a Theban goddess) and she chastised him. This goddess, we are told, 'smites with the smiting of a savage lion, she pursues after him that transgresseth against her'.¹⁶ The moon-god Thōth is said in one hymn to have punished a man for swearing falsely by him.¹⁷ According to another, a man was smitten with blindness for a similar offence against Ptah.¹⁸

But these divinities are always addressed as compassionate and ready to forgive.

'Be merciful to me!' cries a suppliant of Ptah, 'look upon me, that thou mayest be merciful'.¹⁹ Another suppliant appeals to Thōth as 'Merciful one, who art able to take this [punishment in the form of sickness] away'.²⁰ Amūn-Rē, we are told, 'comes at the voice of the distressed humble one'.²¹ He is as 'disposed to mercy' as is his petitioner to sin.²² In answer to the prayer of a friend, this god heals a man whom he had smitten with sickness; for 'he passeth not a whole day wroth. His wrath is finished in a moment and nought is left'.²³ Similarly the Peak of the West is merciful to him who transgressed against her, when he turned to her in penitence.²⁴

LITERATURE.—See the works cited in the text and footnotes.

1. *Early conceptions.*—(1) *Sin and crime.*—We are accustomed to draw a distinction between sin and crime.

'All crimes,' says Hobbes,¹ 'are indeed sins, but not all sins crimes. A sin may be in the thought or secret purpose of a man, of which neither a judge, nor a witness, nor any man can take notice.'

Hobbes thus founds his distinction entirely on the difference between the overt act and the inner meaning. But it would be more in accordance with usage to define crime as an offence against the law of the State and sin as an offence against the law of God. Now in an early stage of society, when the sanction of the laws of the State is mainly their inherent validity as the ordinances of the Deity, however conceived, such a distinction could hardly emerge. But, when it does emerge, we shall find that it is by no means the case that all crimes are sins.

Thus, when Antigone buries her brother Polyneikes in defiance of the prohibition of the State, she sharply contrasts the law of man, which makes it a crime to bury her brother, and the law of God, which makes it a sin to leave him unburied. She deliberately makes her choice: she makes herself amenable to the penalty of death by committing a 'sinless crime'² on the ground that she owes a longer allegiance to the dead than to the living, and that the human law which she breaks is of inferior validity to the 'unwritten and unshakable laws of heaven.'³

And this distinction between the laws of man, which society has made for its own preservation, and the 'unwritten laws' (*νόμοι ἀγραφοί*) of heaven is one of much importance in the Greek doctrine of sin. The contrast is discussed in the *Memorabilia* of Xenophon, iv. 4, where we find that they differ in several ways. The 'unwritten laws' are of universal validity and their enactment must therefore be ascribed not to men but to the gods; they concern the fundamental facts of social life; they carry their own punishment with them and the penalties of their violation cannot be avoided, as the penalties established for the violation of human laws may be and are; in them that which is 'lawful' (*νομικόν*) is invariably also 'just' (*δίκαιον*). Mr. Bumble's immortal dictum applies only to man-made law.

(2) *Objective conception.*—To modern ideas the decisive criterion of sin is the consciousness of wrongdoing. An act may be foolish and mistaken, disastrous in its results to the doer and to others; but, if the doer acted with right intention and according to his best judgment, then, however we may characterize him or his act, we should certainly not employ, seriously, the terms 'sin' and 'sinner.' But from the earlier point of view the act alone is regarded. The sinner is in the position of a man who has incurred a debt. His sinfulness is not a matter of inner meaning, but an objective relation. Given the deed, the doer is a sinner, and a sinner he remains until the sin is expiated or condoned—precisely as the debtor remains a debtor until his debt is either discharged or remitted.

From this point of view it becomes even irrelevant to inquire whether the sin was incurred voluntarily or involuntarily, knowingly or unknowingly, with the best intentions or the worst.

This point of view is familiar to us in the OT. Thus, though 'Jonathan heard not when his father charged the people with the oath' (1 S 14²⁷), yet, because he did taste a little honey with 'the end of the rod that was in his hand,' he was condemned to die. So 2 S 6⁶: 'Uzzah put forth his hand to the ark of God, and took hold of it; for the oxen stumbled. And the anger of the Lord was kindled against Uzzah; and God smote him there for his error; and there he died by the ark of God.'

We meet the same type of thought in Greek mythology. Thus Oineus sinned against Artemis by neglecting to perform sacrifice to her,⁴ and the poet leaves it an open question

whether his neglect was due to mere forgetfulness or was intentional:

ἢ λάβει', ἢ οὐκ ἐνόησεν' ἄσφατο δὲ μέγα θυμῷ.

(3) *Sin and punishment.*—Closely connected with this objective conception of sin and the absence of conscious wrongdoing is the fact that the inference of sin is drawn from the punishment which sin is assumed to have evoked. As sin is inevitably punished, and punished according to early ideas directly and materially here and now, so the primitive mind easily infers that, if a man suffers signal misfortune, he must have sinned; whether knowingly or unknowingly, he must by omission or by commission have offended the Deity.

This type, again, is well known in the OT. In 1 S 14^{30ff.}, when Saul asked counsel of God and God refused to answer him, Saul at once inferred that a sin had been committed: 'Draw nigh hither, all ye chiefs of the people: and know and see wherein this sin hath been this day.'

Precisely so in Homer, when Lycaon falls into the hands of Achilles, he says: 'Now again hath deadly fate delivered me into thy hands: surely I must be hateful to father Zeus, since he hath given me a second time to thee!'¹ So Odysseus attributes his detention to some sin that he had unwittingly committed: 'Not willingly am I detained, but I must have sinned against the deathless gods.'²

Just as material prosperity implies that a man is well-pleasing to the gods, so material adversity—poverty, childlessness, physical affliction—implies that he has offended them.

(4) *Collective guilt.*—Again, the guilt of the sinner is not, according to early ideas, a merely individual matter. The burden of the sinner's guilt may involve an innocent community in the wrath of heaven. Unexpiated sin cries for expiation. It may be that, only when the penalty of sin—plague or famine or both—falls upon the community, it first becomes aware of the guilt, or first has its attention called to it. Just as we read in 2 S 21¹ 'There was a famine in the days of David three years, year after year; and David sought the face of the Lord. And the Lord said, It is for Saul, and for his bloody house, because he put to death the Gibeonites,' so in Greek literature we find repeatedly that, when some signal affliction falls upon a city, it is immediately interpreted as a judgment of an angry heaven, and it is inferred that some sin has been committed which demands expiation, and an oracle is consulted as to the nature of the unknown sin and the manner of its expiation.

The story of Oedipus may serve as an illustration. Son of Laios, king of Thebes, and Jokasta, he is exposed in infancy, is adopted and reared as son of Polybos, king of Corinth. Doubts having been cast upon his parentage, he goes to Delphi to consult the oracle. Learning that, if he returns to his home, he is doomed to slay his father and to marry his mother, he resolves not to go back to Corinth but to become a wanderer. Precisely this resolve leads him to meet his real father Laios on the road. Him he slays in ignorance, and, going on to Thebes, he marries the widowed queen, his mother, and by her has children. All this is done in ignorance. Yet the vengeance of outraged heaven visits the city with plague and barrenness of earth and beast and man. Oedipus sends to consult the oracle at Delphi and learns that the unknown murderer of Laios is in the land, and that it is the blood of Laios which occasions their affliction, and that the city must be purified either by banishing the murderer or by slaying him.³ Thereupon Oedipus pronounces solemn sentence of outlawry upon the unknown murderer. As we shall have to recur to this point, the words in which Sophocles puts the denunciation of Oedipus, and which follow the actual formula employed in such cases, may be here quoted: 'This man, whoever he be—I forbid that any in this land whereof I hold the throne and sovereignty, either entertain or speak to him or make him a partner in prayers to the gods or in sacrifices or give him of the holy water (*χέρνυψ*) but all shall drive him from their homes, as he is our pollution (*μίασμα*)⁴ . . . and I pray that he who did the deed, whether the unknown be one or hath accomplices, may evilly as he is evil (*κακὸν κακῶς*) wear out his hapless life. And I pray that, if with my knowledge he should share my hearth, I myself may suffer the curses which I have now invoked on these.'⁵

From the modern point of view Oedipus, inas-

² *Od.* iv. 377 f.

⁵ *Ib.* 236 ff.

much as he acted unwittingly, is guiltless. It was his very endeavour to avoid his awful doom that led him into it. But to the earlier conception of sin that does not at all alter the position. His acts have placed him in the position of a guilty person, and the innocent community which unwittingly harbours him shares his guilt and his punishment. The vengeance of heaven requires his expulsion (*ἐλαύνειν*) from the community whose gods he has offended.

It is important here to raise the question, Is the guilt which rests upon the people merely their failure to expel the guilty person, or is the community actually regarded as polluted by his presence? Obviously the answer must affect the whole conception of sin which is implied in the procedure. Now, however the matter may have been conceived in later times, there seems to be no doubt that at one period the people were regarded as actually polluted by the presence of the murderer. He is regarded as a plague-spot, a centre of contagion. He cannot take part in the worship of the gods, cannot enter the homes of the citizens without bringing contamination. If this were not already implied by such expressions as *μῆλασμα*, *καθαρμός*, etc., it seems to be clearly shown by such procedure as was adopted, e.g., by the Athenians in the case of the murderers of Kylon.

Kylon, an Athenian noble, attempted to make himself tyrant of Athens. He seized the acropolis, where he was besieged. He and his brother made their escape. His followers were forced to capitulate. They sought sanctuary in the temple of Athena Pollas, which they left only when the archons guaranteed their lives. At the instigation of Megakles they were nevertheless put to death. This brought a curse upon the city, and, in order to remove it, *αὐτοὶ μὲν ἐκ τῶν τάφων ἐξέβληθσαν, τὸ δὲ γένος αὐτῶν ἐφυγεν ἀειφυγίαν*. *Ἐπιμενίδης δ' ὁ Κρήσι ἐπὶ τούτοις ἐκάθαρσεν τὴν πόλιν*—i.e., those of the actual murderers who were already dead were exhumed and cast beyond the borders of Attica; the family (*γένος*) of the Alkmaeonids was banished in perpetuity; and after that Epimenides of Crete purified the city. Thus clearly the innocent community was regarded as being itself polluted by the presence of the accursed (*ἀναιεῖς*).¹

(5) *Procedure in cases of murder*.—The same sort of conception lies at the root of the Greek procedure in the case of murder and homicide. Our information is naturally fullest about that of Athens, which may be taken as typical. The legislation of Draco (c. 621 B.C.) appears to have amounted in general to a codifying of customary law, and his enactments appear to have possessed a quasi-religious sanction, as is already implied in the term applied to them—*θεσμοί*.² His laws relating to murder (the effect of which seems to have been to discriminate definitely between intentional and unintentional murder, and to emphasize the right of the State to exact punishment³ instead of leaving it to the aggrieved individual) were not abrogated by the legislation of Solon (594 B.C.), who abolished his other enactments.⁴ Severe as his regulations seemed to a later age—their severity Aristotle⁵ considers to be their one notable feature⁶—they survived many revolutions and are the foundation of the ideal legislation in the *Laws* of Plato. It is, of course, beyond the scope of this article to examine these regulations in detail. But the significant point is that alike in Athenian law and in Plato all shedding of blood, whether voluntary or involuntary, requires, where the death penalty is not exacted, exile for a longer or shorter term, together with the performance of a ceremony of purification.

A curious procedure is that adopted in the case of a person who, being already exiled for involuntary homicide, is charged with committing another murder or with wounding with intent. Being a polluted person, he was not allowed to set foot in the land, but pleaded his case from a boat, lying off shore: *ἐκ τῆς*

φύλης φύγην ὡν ἀρεστίς ἐστιν, αἰτίαν ἔχη ἀποκτείνει ἢ τρώει τινα, τούτῳ δ' ἐν φρεάτων δικάζουσιν, ὃ δ' ἀπολογεῖται προσορμισσάμενος ἐν πλοίῳ.¹

A similar procedure is enjoined by Plato in the case of an involuntary homicide who is driven to land by stress of weather: 'if he be wrecked and driven on the coast against his will, he shall encamp, wetting his feet in the sea, and wait for an opportunity to sail.'²

The procedure in the case of murder committed by a person or persons unknown is of interest as affording a comparison with Hebrew practice. The reader will remember the regulations laid down for such a case in Dt 21¹²:

'If one be found slain in the land which the Lord thy God giveth thee to possess it, lying in the field, and it be not known who hath smitten him: then thy elders and thy judges shall come forth, and they shall measure unto the cities which are round about him that is slain: and it shall be, that the city which is nearest unto the slain man, even the elders of that city shall take an heifer of the herd, which hath not been wrought with, and which hath not drawn in the yoke; and the elders of that city shall bring down the heifer unto a valley with running water, which is neither plowed nor sown, and shall break the heifer's neck there in the valley: and the priests the sons of Levi shall come near . . . and all the elders of that city, who are nearest unto the slain man, shall wash their hands over the heifer whose neck was broken in the valley: and they shall answer and say, Our hands have not shed this blood, neither have our eyes seen it. Forgive, O Lord, thy people Israel, whom thou hast redeemed, and suffer not innocent blood to remain in the midst of thy people Israel. And the blood shall be forgiven them.'

It seems an adequate explanation to say that the measuring 'unto the cities which are round about' had for its object merely to determine which community was to bear the expense of the purification. All analogy indicates that the nearest city was regarded as being actually contaminated by the murder.

Now let us compare the Greek procedure in a similar case. Aristotle, describing the duties of the archon basileus, says:

'If the actual offender is unknown, the writ runs against the doer of the deed' (*οἷαν δὲ μὴ εἶδῃ τὸν ποιήσαντα, τῷ δράσαντι λαγχάνει*).³

The same sort of procedure is instituted by Plato:

'If a man is found dead, and his murderer be unknown, and after a diligent search cannot be discovered, the same proclamations shall be made as in the other cases, the death sentence shall be passed on the guilty person (*τῷ δράσαντι*) and proclamation shall be made in the market-place that he who has slain so and so and is guilty of murder, shall not set foot in the temples or at all in the country of the slain man, under penalty of being put to death if he appear and is known and being cast unburied beyond the borders of the country of the slain man.'⁴

The Hebrew rite is to be performed 'in a valley which is neither plowed nor sown'—i.e., the guilt is to be transferred from the community to a no man's land.

Precisely so suicides are 'to be buried alone, and none shall be laid by their side; they shall be buried ingloriously in the borders of the twelve portions of the land'—as in this country they used to be buried at the crossways—'in such places as are uncultivated and nameless, and no column or inscription shall mark the place of their burial.'⁵

(6) *Guilt of animals and things*.—Guilt, again, may attach, according to early ideas, to the lower animals and even to inanimate things. To the case of the lower animals we cannot do more than allude here, as it is not very prominent in Greek records and is susceptible, perhaps, of more than one explanation. That such guilt was recognized in Greece and that animals which had caused a person's death were solemnly tried is a well-attested fact:

'And if a beast of burden or other animal cause the death of any one, except in the case of anything of that kind happening in the public games, the kinsmen of the deceased shall prosecute the slayer for murder, and the wardens of the country, such and so many as the kinsmen appoint, shall try the cause, and

³ *Const. of Athens*, 57; cf. Pollux, VIII. 120: τὸ ἐπὶ Πρυτανείῳ δικάζει δὲ περὶ τῶν ἀποκτείναντων καὶ ὧσιν ἀφαιρεῖται.

⁴ *Laws*, IX. 874.

⁵ *Ib.* 873.

let the beast, when condemned, be slain by them and cast beyond the borders.¹

And we know that elsewhere similar prosecution and punishment of animals was common in the Middle Ages.² But, as such punishment is capable of being explained as a mere exhibition of revenge or retaliation, it may be left out of account here.

Even more striking is the procedure against inanimate objects which had caused a man's death:

'The king and the tribe-kings also hear the cases in which the guilt rests on inanimate objects and the lower animals.'³ 'And if any lifeless thing deprive a man of life, except in the case of a thunderbolt or other fatal dart sent from the gods—whether a man is killed by lifeless objects falling upon him, or by his falling upon them, the nearest of kin shall appoint the nearest neighbour to be a judge, and thereby acquit himself and the whole family of guilt. And he shall cast forth the guilty thing beyond the border.'⁴

The same, so to say, mechanical conception of guilt or impurity meets us repeatedly in the OT.⁵ And precisely the same conception underlies the old English legal usage of *deadand*—the statutes of which were abolished only in 1846—whereby chattels such as carts and wheels which had caused the death of a man were forfeited to God, i.e. to the king, God's lieutenant on earth, to be distributed in works of charity for the appeasing of God's wrath.

(7) *Contamination by contact*.—Similar ideas lie at the root of many other well-attested Greek practices. The contamination incurred by contact with death or with birth is well known. Thucydides describes how the holy island of Delos was purified by the Athenians in the winter of 426 B.C. in conformity with the injunction of an oracle:

'The same winter the Athenians purified (*ἐκάθαρσαν*) Delos in accordance with a certain oracle. Pisistratus had purified it previously—not all of it, but so much of the island as was visible from the temple. But on this occasion the whole was purified in the manner following. They took up all the graves of the dead that were in Delos and made proclamation that in future no one should die in the island or give birth in it, but they must be conveyed across to Rheneia.'⁶

(8) *Unconscious communal sin*.—A further illustration of unconscious sin, which becomes known only when attention is directed to it by the affliction occasioned by it, is one of a type which is very common in Greek literature. A city is visited by a plague or famine or similar calamity. It is at once inferred that the city has somehow incurred the anger of heaven. Oracles are consulted and it is discovered that some hero belonging to the city lies dead in an alien land where his spirit cannot rest: his bones are to be brought home for burial in his own city, when all will be well.

Thus in Pindar⁷ the motive which Pelias gives for the Argonautic expedition is that the soul of Phrixos cannot rest in the alien land of Colchis; he says to Jason: 'Thou canst take away the anger of the Chthonians. For Phrixos bids us go to the halls of Aietes to bring home his soul' (*ψυχὰν κομίσαι*). We have a historical example of this type in the case of Theseus. According to tradition, Theseus died in Skyros at the hands of Lycomedes, king of that island. When in 474–473 B.C. the island was conquered by Kimon, son of Miltiades, what were supposed to be the bones of Theseus were discovered there, and were solemnly conveyed to Athens for burial. 'The bones being conveyed home by Kimon on a ship of war, the delighted Athenians received them with splendid processions and sacrifices as if it were Theseus himself returning to the city.'⁸

(9) *The scapegoat*.—The same physical or mechanical conception of sin is implied in the wide-spread custom of the scapegoat. Just as the

guilty individual, according to primitive notions, pollutes the innocent community, so the sin of the community may be put upon an individual, who then becomes excommunicate, no longer entitled to the rights and the security which belong to other members of the community. The position of the scapegoat is in most respects analogous to that of the banished murderer; only he suffers not for his own individual sin but for the sins of the community as a whole. This conception is, of course, familiar in the OT. In Lv 16 we have the ritual of atonement, in which two goats are selected and assigned by lot, one to Jahweh and one *לַיהוָה*. The orthodox modern interpretation makes this mean 'to Azazel,' a devil or spirit of the waste. There does not appear to be any convincing evidence, linguistic or other, for rejecting the LXX version *τῷ ἀποπομπῶν*. Doubtless those 'outcasts' belonged to the spirits of 'the wild.' But such a dualism as the modern interpretation assumes, by which the individual Azazel could be balanced against Jahweh, seems foreign to the Pentateuch. The Greek *φαρμακός* is led 'beyond the borders,' and just this is the lot of the Hebrew scapegoat: *הַכֹּהֵן יִשְׁלַח אֹתוֹ לְמִדְבָּר*. If the mysterious Azazel was thus early capable of being opposed as an individual to Jahweh, it is strange that no reference is made to him in Lv 14 or 17.

In Greece, anyhow, there is no question in the case of the *φαρμακός* of anything of the nature of a sacrifice or offering to devils. The ritual, as we know it in the case of the Thargelia, is that two men—in later times two malefactors—are solemnly 'led forth' (*ἐξάγονται*), i.e. expelled from the community.¹

2. Homer.—So far we have been dealing with certain early conceptions which, stereotyped and formalized in ritual and custom, continue to be, as it were, the substratum or the background of far more advanced ideas. When we turn to the literature of Greece, we find already in Homer a conception of sin which is, on the whole, remarkably advanced; and this is only another way of saying that the conception of divinity which is implied in the Homeric poem is a relatively high one. It need scarcely be emphasized that here, as elsewhere, we must distinguish between the account of the gods which is given in mythology, or their behaviour as mere *dramatis personæ*, and that conception of them which is implied in their relation to the conduct of the individual or of the community. The mythology or theogony will always preserve fossil and formal elements which reflect an earlier stage of belief. And the general history of religion shows abundantly how easily such primitive elements maintain themselves alongside of far more advanced ideas. They are not formally rejected or repealed: for many minds they do not appear to demand rejection or repeal; but in relation to the ordinary business of life they no longer correspond to the living beliefs, inasmuch as they no longer constitute the determining motives of human conduct.

(1) *Standards of duty and right*.—Duty or right action is in Homer expressed chiefly by two terms: *θεῖος* and *δίκη*. These terms are not mutually exclusive, nor are they even very sharply distinguished. It is true of both words that they, sometimes have no deeper significance than 'way,' 'custom,' 'use,' 'wont.'² But it is an easy step to the notion of 'right way,' righteousness, or duty. If we had to state broadly the difference between *δίκη* and *θεῖος*, we should say with reasonable accuracy that *δίκη* sums up man's duty to his fellows, *θεῖος* man's duty to the gods; or, to put it

¹ See art. SCAPEGOAT (Greek).

² Thus *δίκη* in *Od.* iv. 691, xl. 218, xiv. 59, xix. 43, 163, xxiv. 255; *θεῖος* in *Il.* ix. 134, etc.

¹ Arist. *loc. cit.*; Plato, *Laws*, ix. 873 E.

³ Arist. *loc. cit.*

⁴ Plato, *Laws*, ix. 873 E; cf. Demosth. xxiii. 76; Æschin. iii. 244; Paus. i. xxviii. 10; Suid., Harpocr., etc., ἐνὶ Ἱππρανείῳ; *Etymologicum Magnum*, 362. 55; I. Bekker, *Anecdota græca*, Berlin, 1814–21, 311. 15; Plutarch, *Pericles*, 36.

⁵ Cf. Lv 24, Ex 29:26, 29:29, Lv 5:14, 11:33–35 15:12; cf., in NT, Mk 7:4.

⁶ *Il.* 104; cf. Callimachus, *Hymn to Zeus*, 11 ff. (the place in Arkadia where Zeus was born is holy: ἐνδὲ δ' ὅς τις ἱερός, οὐδὲ τι μὴ κεχρημένον Εἰλαϊδίας | ἐπεὶ οὐδὲ γυνὴ ἐπινοήσεται); for the same idea cf. Aristoph. *Lys.* 742: ὦ πόρνε Εἰλαϊδί, ἐπίτοχος τοῦ τόκου. So Æschylus in the *Frogs* of Aristophanes (1080 f.) is made to reproach Euripides with introducing τικτούσας ἐν τοῖς ἱεροῖς, who are put on the same level with those who are guilty of incest.

⁷ *Pyth.* iv. 168 ff.

⁸ Cf. Plutarch, *Thes.* 36.

in other words, *θέμις* is at most the religious aspect of *δίκη*. The individual judgments which constitute *θέμις* are called *θέμιστες*, which are regarded as being of immemorial antiquity and as, indeed, deriving their sanction ultimately from Zeus, whose ordinances they are. Thus the *Διὸς θέμιστες* of *Od.* xvi. 403 are exactly the *Διὸς ἐφετμα* of *Il.* xviii. 569 f., and the same term is applied to the divine will as revealed in oracles.¹ In a special sense the king is the guardian of these *θέμιστες*.²

The *θέμιστες* are regarded as of universal validity and as regulating the conduct of all civilized men. They may be crookedly interpreted by the unjust judges,³ but they are recognized by all men who are not beyond the pale of civilization.

Thus it is characteristic that the *Kyklopes*, who are otherwise outside civilization, are described as *ὑπερφίαλοι, ἀθεμίστοι*,⁴ are in fact savages.⁵ And precisely so 'wild War, who breaks the converse of the wise,' is described as a doer of *κατὰ ἔργα*—the works of Might, not of Right—and a fool or madman *ὅς οὐτινα οἶδε θέμιστα*.⁶

The transgression of these *θέμιστες* is in Homer described by the terms *ἀπεισθαί, ἀμαρτάνειν*.

(2) *Offences against the gods and men*.—We have now to consider what offences are regarded in Homer as sins, i.e. as offensive to and exciting the anger of the gods. These, we find, may be broadly classified as follows.

(a) Man owes certain specific duties towards the gods—certain duties which do not concern his relations to his fellow-men—the neglect of which is sin. (a) He must offer prayer and sacrifice. Neglect of this duty excites the anger of heaven.⁷ To commence any important undertaking without due sacrifice is to court disaster.⁸ (β) But, apart from the specific duties of prayer and sacrifice, man owes to the gods the general homage of deference and humility. Man must not seek to overstep the boundary which separates gods and men. Disregard of this boundary, encroachment on the prerogatives of heaven, is sin.

Thus *Thamiris* boasted that he could defeat the *Muses* in song and was punished by blindness.⁹ So *Lycurgus* suffered for his insolence to *Dionysos*,¹⁰ *Bellerophon* for his attempt to fly to heaven,¹¹ *Ajax* the *Loerian* because he defied *Athene*.¹²

(γ) Deliberate disobedience to the will of heaven as revealed by signs and portents is sin.¹³ (δ) Lastly, the gods must be approached with due purity.¹⁴

(b) There are offences which are not primarily direct offences against the gods but are a violation of social duties. Briefly enumerated, these are the following: (1) the conduct of the wooers in devouring the substance of *Odysseus* in his absence,¹⁵ (2) reckless or indiscriminate slaughter in war,¹⁶ (3) use of poisoned arrows,¹⁷ (4) adultery,¹⁸ (5) breach of the law of host and guest,¹⁹ (6) neglect of suppliant,²⁰ (7) unfilial conduct,²¹ (8) insulting

the dead by maltreatment¹ or by boasting over them,² (9) murder,³ (10) perjury.⁴

(3) *The ethical standpoint*.—In considering the Homeric conception of sin the first feature which strikes one is the prominence of the ethical as opposed to the specifically religious standpoint. The grounds on which certain conduct is regarded as displeasing to the gods are in the main such as appeal to the general conscience of men, not any mysterious or, so to say, magical reasons which are understood only by the priest or other possessor of esoteric knowledge. Just this feature constitutes the healthy-mindedness of the Homeric religion. Nothing could less suggest the religion of a priest-ridden people. When *Hector* declares to *Polydamas* his confession of faith,

'Thou biddest me to put my trust in winged birds, which I heed not at all nor care whether to the right they fly toward the morning and the sun or whether to the left toward the misty dark. Let us put our trust in the counsel of mighty Zeus, who rules over all mortals and immortals. One bird [omen] is best—to fight for fatherland!'

he is speaking in a spirit which is hardly other than the prevailing spirit in Homer.

Entirely consonant with this is the Homeric view of the nature and origin of sin. Here again the prevailing note is ethical. Sin is, indeed, a mystery, but only as evil in general is a mystery; and the genesis of sin in nations and individuals is clearly enough conceived. Put in the simplest terms, the Homeric conception of the genesis of sin is this. There is developed in man a spirit of reckless self-confidence or wantonness, *ἔβρις*, which may be the outcome of sudden or excessive prosperity or the mere rashness and impetuosity of youth and strength. This *ἔβρις* is at all points the antithesis to *αἰδώς*: *αἰδώς* is the spirit of reverence which in conduct respects the rights of others, which looks before and after and considers not what is best at the immediate moment but what is best in the end; *ἔβρις* is the spirit of irreverence, pride, wantonness, which disregards the rights of others and grasps the lust of the moment in the scorn of consequence. Hence *αἰδώς* is the spirit of *εὐνομία*, of law and order; *ἔβρις* the spirit of *ἀνομία*, anarchy. The consequence of this spirit is an obscuring of moral values, a blindness of soul, *ἄρη*, which directly leads to the commission of sin.

We need not examine in detail the use of *ἔβρις* and synonymous or associated words in Homer. It will be sufficient to say that the whole conduct of the wooers in the absence of *Odysseus* is denoted by this term;⁵ so *Agamemnon's* taking away of *Briséis* from *Achilles*;⁶ so the conduct of the comrades of *Odysseus*.⁷ It is coupled with *βιή*, might or violence, in *Od.* xv. 329, xvii. 585; and this characteristic of *ἔβρις* furnishes the standing epithet *ὑπέρβριος* applied to it in *Od.* i. 303, iv. 321, xvi. 410, etc. The phrase which occurs in *Od.* xiv. 262, xvii. 431, of *δ' ἔβρις εἴσαντες, ἐπισπόμενοι μὲν σφῶ*, well illustrates the Greek conception of *ἔβρις* as passion uncontrolled by reason or reflexion. Hence *ἔβρις* is opposed to *εὐνομία*, or the reign of law.⁸ Other terms of similar connotation are *ἀτάσθαλος, ἀτασθαλίας, ὑπερβολία, ὑπεργονίαν, ὑπερρηνάν, ὑπερφίαλος*. *ἄρη* is rather moral blindness or infatuation than mere intellectual ignorance. It is a misjudging of moral values induced by *ἔβρις*. Thus in *Il.* i. 412 *Agamemnon* is to be made by suffering to realize his 'blindness' in dealing unfairly with *Achilles*. It is in fact the characteristic of *ἄρη* that it is not so much ignorance as heedlessness (*ἀφραδία*), and, when the sinner's eyes are opened, remorse comes, as with *Bellerophon*.⁹ So it is sometimes termed 'foolishness,' *ἀφροσύνη*—thus of the wooers.¹⁰ *Ares* is called *ἀφρονα τούτων* . . . *ὅς οὐτινα οἶδε θέμιστα*.¹¹ That it is not mere intellectual ignorance is illustrated by *Od.* xxii. 237 ff.: *μήποτε πάμπαν | εἰκὼν ἀφραδὴς μέγα εἴπειν, ἀλλὰ θεοῖσιν | μῦθον ἐπιτρέψαι*—'εἴπειν πολὺ φέρτερόν ἐστιν, and xxiv. 457 ff.: *ὑμτέρους παῖδας καταπαύμεν ἀφροσυνάν' | οἱ μέγα ἔργον ἔρεξαν ἀτασθαλίῃσι κακῇσιν*.

²¹ *Il.* ix. 451, xv. 204, xxi. 412, *Od.* ii. 135.

The remark must be interpolated here that the doctrine of ὕβρις and ἀτῆ, as we have stated it, appears to give a one-sided view of the origin of sin as arising from excessive prosperity, sudden success, youth and strength and beauty—in a word, the goods of this life—and takes no account of the sin which springs from the ills of life. Now it must be said at once that the sins arising from prosperity are far more emphasized in Greek literature than those which arise from adversity. And the reason, we imagine, is that they struck the imagination more as being illustrated in the fortunes of great and noble houses and thus formed a more natural theme for the poet or the moralist. The sins to which ὕβρις leads have as a rule a certain splendour of audacity or magnificence of disaster which makes them memorable. Hence Aristotle, while he notes that the wealthy tend to be 'ὕβρισται καὶ ὑπερήφανοι, being affected by the acquisition of wealth; for they feel as if they possessed all good things,' says that their crimes are not those of the malefactor, 'but crimes of wantonness or licence, as, e.g., assault and adultery.'¹ He notes, too, that, while εὐτυχία, or success, tends, like wealth, to make men ὑπερηφανώτεροι καὶ ἄλογιστότεροι, it has one excellent effect in that it tends to make men religious,² since they attribute to the providence of heaven what is really an accident of fortune. But the effect of what we call the force of circumstances in causing sin was not ignored by the Greek moralist, and the rôle of what the Greeks call ἀνάγκη in the sphere of ethics has not had the attention paid to it which it deserves.³

In his *Greece and Babylon* L. R. Farnell writes:

'Both [Greece and Babylon] reveal the phenomenon that marks an early stage of social morality: as the tribe of the family are one flesh, one corporate unit of life, so the members are collectively responsible, and the "sins of the fathers are visited on the children." This was the familiar law of old Hellas, and we may say of the ancient Mediterranean society: the first to make the momentous protest against it, and to proclaim the responsibility of the individual conscience, was Theognis for the Greeks and Ezekiel for the Hebrews.'

This statement is capable of misleading if it were taken to imply (1) that Theognis maintained that the children do *not* suffer for the sins of the children; on the contrary, he insists most strongly that they do; he deploras it, but he insists that it is a fact; (2) that Homer does not recognize personal responsibility. This of course is not the case. In Homer the punishment of the innocent for the guilty hardly amounts to more than that the slighted goddesses, Hera and Athene, wreak or attempt to wreak their vengeance for the judgment of Paris upon the innocent Trojans,⁴ and the sin of Agamemnon in taking the daughter of Apollo's priest is visited by a plague upon the Greek army. In Homer it is always the individual sinner who is primarily responsible for his sin and only quite secondarily, if at all, his family or clan or country. There is more to be said for the vicarious doctrine, perhaps, in the case of the Hebrews. But it must be pointed out that long before the eloquent protest of Ezekiel⁶ the individual sinner was primarily responsible,⁷ and only in the case of the immediate sinner being unavailable does the punishment fall upon his descendants.⁸ And to explain this much of family solidarity we do not need to invoke the social theories of Durkheim. The point of view is explicitly recognized by Aristotle in the much misunderstood passage in *Nicomachean Ethics*, i. 10, where he says that it would be absurd to

discount the fortunes of his posterity in estimating the fortunes of the individual.¹ When Homer says of the violators of an oath,

'Even if the Olympian fulfil it not immediately, yet late he fulfils, and they pay with a heavy price, with their own heads and their wives and their children,'²

there is no immediate reference to the posthumous punishment of the sinner's children. And, if there were, it has to be pointed out that the leading feature of an oath was the invocation of a curse by the oath-taker upon himself and his family, and the belief in the efficacy of the curse by a blood-relation on his relatives was valid down to the latest times of which we shall here take cognizance, and it remained part of the regular formula of oath-taking.³ Nor is there anything more surprising in this than the inclusion of innocent children in the sentence of disfranchisement on a father.⁴ The special potency which belongs to the curses—and the blessings—of parents was always recognized.⁵

It is true that we have in Homer certain passages which appear to disclaim personal responsibility. In *Il.* xix. 86ff. Agamemnon says:

ἐγὼ δ' οὐκ αἰτίος εἰμι,
ἀλλὰ Ζεὺς καὶ Μοῖρα καὶ ἡεροφύοιτις Ἐρινός,
οἵ μοι εἰν ἀγορή φρεσὶν ἐμβαλον ἄγριον ἀτῆν,
ἤματι τῷ, ὅτ' Ἀχιλλεύος γέρας αὐτὸς ἀπύρην.
ἀλλὰ τί κεν ρέξαιμι; θεὸς διὰ πάντα τέλευσέ.
And then follows the well-known personification of Ate, πρόσβα Διδὸς θυγάτηρ Ἀτῆς, ἡ πάντα δάταί, οὐλομένη· τῆς μὲν β' ἀπαλοὶ πόδες· οὐ γὰρ ἐπ' οὐδὲ πῖλινται, ἀλλ' ἄρα ἤγε κατ' ἀνδρῶν κράατα βαίνειν. βλάπτουσι ἀνθρώπους· κατὰ δ' οὐν ἑτερόν γε πείθουσιν, which, however, adds nothing whatever to our conception of Ate, since the account of Zeus as being the victim of Ate, when Hera deceives him,⁶ is a mere bit of mythology. Again, in *Il.* iii. 164, Priam chivalrously excuses Helen and blames the gods—οὔτι μοι αἰτρία ἐσσι θεοὶ νῦ μοι αἰτιοὶ εἰσιν—but that does not deliver her from the bitterness of self-reproach,⁷ any more than her own ascription of her infatuation to Aphrodite saves her from remorse—

ἀτῆν δὲ μετέστενον, ἣν Ἀφροδίτη
δῶχ', ὅτε μ' ἔγγαγε κείσε φίλῃσι πατρίδος αἰγῇ.⁸
Such pleas are, at most, pleas for the weakness of mortality. There is no thought of really repudiating personal responsibility or personal guilt. If in the OT (Ex. 9:12) we read 'the Lord hardened the heart of Pharaoh,' we also read (v. 34) that 'Pharaoh . . . sinned yet more and hardened his heart,' and the guilt implied in the one formula is no greater and no less than that implied in the other. So Xanthos, the horse of Achilles, says:

ἀλλὰ τοι ἐγγύθεν ἤμαρ ἐλθέριον· οὐδὲ τοι ἡμεῖς
αἰτιοί, ἀλλὰ θεὸς τε μέγας καὶ Μοῖρα κραταίη,
οὐδὲ γὰρ ἡμετέρῃ βραδυνήτι τε νοχελίῃ τε, κτλ.,⁹
which merely means that the horses have done their best and better was not to be. If there were no question of personal responsibility, what point would there be in the protest of the river Xanthos in *Il.* xxi. 370 that he is not so guilty as the other rivers which assist the Trojans?

(4) *Punishment of sin.*—The penalties for sin, like the rewards for virtue, are normally conceived as material and are consummated here and now. Normally the good prosper, the wicked perish. The vengeance of the gods may linger, but it is sure,¹⁰ and temporary prosperity does not shake men's confidence in the justice of heaven, though the signal punishment of the wicked is hailed as a welcome evidence of the activity of the gods.¹¹

The purpose of punishment, according to Homer, is retributive and deterrent. The retributive intention is sufficiently attested by the verb which is regularly employed in reference to punishment—τινῶ (ἀποτινῶ), 'pay,' of the sinner; τίνυμαι of the avenger.¹² The deterrent intention is illus-

¹ See art. LIFE AND DEATH (Greek and Roman).

² *Il.* iv. 160 ff.

³ E.g., Andoc. i. 128: λαβόμενος τοῦ βωμοῦ ὤμοσεν ἡ μὴν μὴ εἶναι . . . ἡ ἐλώλην εἶναι καὶ αὐτὸν καὶ τὴν οἰκίαν; Antiphon, v. 11; Demosth. xxiii. 67: διομεῖται κατ' ἐξωλείας αὐτοῦ καὶ γένους καὶ οἰκίας, κτλ.

⁶ *Il.* xix. 146, i. K 23. 31 ff.

⁷ 14127. 18.

⁸ 2 S 211 ff.

trated by *Il.* iii. 351 ff., where Menelaus prays to Zeus:

'O Lord Zeus, grant me to take vengeance (*τίσασθαι*) on him who hath first done me evil, even Alexandros, and overcome him by my hands, so that another, even among men of after time, may shudder to do evil to the host that hath shewn him kindness.'

Nägelsbach¹ compares Dt 19¹⁸:

'Then shall ye do unto him, as he had thought to do unto his brother: so shalt thou put away the evil from the midst of thee. And those which remain shall hear, and fear, and shall henceforth commit no more any such evil in the midst of thee. And thine eye shall not pity; life shall go for life, eye for eye, tooth for tooth, hand for hand, foot for foot.'²

Here, as in Homer, we have the retributive and deterrent intentions combined.

(5) *Retribution in a life to come.*—But, while normally sin is punished by material affliction in this life and virtue rewarded by material benefits, it is clear that the Homeric poet was familiar also with the conception that punishment or reward awaits men on the other side of the grave. The Homeric attitude to immortality does not appear to be quite fairly represented in much modern writing. But the fact is that for Homer there is no question of immortality. The survival of the soul after death is a certainty for Homer, just as much as this present life. And, if the picture of the after life which he presents is a ghostly one, that is only because the after life cannot be imagined but in one of two ways: either (1) as a duplicate of the present life, only that pain and conflict, parting and renunciation, are done away and transience has given place to permanence, or (2) in terms of the immaterial. And, precisely as we cannot visualize an immaterial existence, our picture must be a mere suggestion of a realm of shadows.

Now, when Homer says 'hurled to the house of Hades many valiant souls (*ψυχάς*) of heroes and made themselves (*αὐτοῖς*) to be the prey of dogs,'³ or when he says that the ghost of Patroklos, as it appeared to Achilles,⁴ was 'altogether like himself in stature and beautiful eyes and voice,' it is actually argued, and apparently quite seriously, by some scholars that for Homer the real man, the man himself, was the living material body, of which the soul was a mere faint *Doppelgänger*. On the same principle we could easily prove precisely the same conception for even the most orthodox of Christian writers. The man we know and love is doubtless the living human presence, the immortal soul inseparable from its mortal bravery; and doubtless we cannot imagine the man himself except in the garment of mortality. Even the sincerest Christian cannot easily conceive his dead, if the dead came back, as other than disturbers and intruders on the banquet of life, as uncanny presences with whom he could not hold comfortable and familiar converse. And it is no paradox to say that the poet above all, by the very conditions of his art, is necessarily driven back upon the realm of material things, disguise it how he may, and, in exact proportion as he seeks to give to the ideal the semblance of reality and of life, he is compelled to render the ideal by the images of sense. And the society of Homer, beyond all others, is a society which seeks to avert its eyes from the unseen and mysterious dominions of the dead, and to turn them to the familiar scenes of human life and activity. But not the less the Homeric age knew that the grave is not the end—'sunt aliquid manes: letum non omnia finit'—and that, so far from the body being the man himself, it becomes, so soon as the soul leaves it, mere 'dumb dust' (*κωφὴ γαῖα*)⁵ which must be reverently dealt with, not for what it is, but even because it was once the tenement of a beloved soul.

But, of course, the relation which the after life as conceived by Homer bears to the present life was wholly different from that which Christian teaching conceives to exist. For the Christian this life is but a preparation, whether propædæutic or probational, for a better and fuller life to come; this life is transient and mortal; the reality is the eternity which lies beyond. For the Homeric Greek they are both alike realities, and they differ only in that this life is certainly transitory, that may possibly be eternal; this life certainly holds within it many things desirable, what the after life holds can only be a dim conjecture.

Within these limits the belief in the soul's survival after death could scarcely fail to have some bearing on the doctrine of sin. Where a man had refrained from all signal wickedness, he had nothing to fear from the world of the dead nor in it. Where he had distinguished himself beyond his fellows, whether for good or for evil, he might hope for a correspondingly exceptional felicity or woe beyond the grave. Our literature naturally says little of the hopes of the common man, and the 'tiresomeness of an over-peopled heaven'⁶ would have been felt with more than ordinary force by the Homeric heroes. But that the terrors of the unseen world were a very real thing in the Homeric age is abundantly clear. The evidence can be neither ignored nor explained away.

Take the case of perjury. This, like other sins, may bring its punishment immediately. The violation of the truce by the Trojans is conceived as bound to lead to their defeat in battle.⁷ Yet we have an unmistakable reference to the punishment of perjury after death in the under world.⁸ But, we are told, the idea of posthumous punishment is non-Homeric. The examples of Tityos, Tantalos, and Sisypheos, in *Od.* xi. 576-600, occur in a late interpolation. Heroic endeavours are made to explain away the *Iliad* passages as meaning that the powers under earth punish men *in this life*, or the passages are simply excised as spurious. This is a proceeding as misleading and unscientific as it is on linguistic or other grounds unjustifiable. The truth is rather that, while in general the living have no occasion to fear any evil either from the dead or in death, yet, whenever they come into collision with the great sanctities of life—when they commit murder or sin against the fundamental ties of family—then they have to fear punishment not only in this life but also in the life to come. And in taking an oath, which is an essential and basal feature of any early system of law, the gods of the under world are directly and solemnly challenged, and it would be indeed strange if their jurisdiction were limited to this world. Surely it is not an accident that Pindar takes as the type of the happy dead those who *ἐχαίρον εὐορκίαις*,⁹ or that Hesiod says *ἀνδρὸς δ' εὐόρκου γεγενη μετόπισθεν ἀμεινων*.⁵

(6) *Atonement for sin.*—We have next to consider the mode in which atonement is made for sin in the Homeric age. The first essential feature is that the wrong conduct is intermitted, and where possible restoration or reparation is made to the aggrieved party.

Thus the daughter of Apollo's priest is restored to him.⁶ Odysseus staves the anger of the gods by performing a neglected sacrifice.⁷ So Agamemnon makes amends to Achilles by gifts of tripods, female slaves, etc.⁸

The next essential thing is prayer and sacrifice to the offended deity.⁹ The intention of the sacrifice is purely propitiatory, and precisely the same

procedure is followed to avert impending evil.¹ Hence, too, the sacrifice may be substituted by a vow,² and accompanied or rather followed by hymns.³

The usual term for 'propitiate' is *ἰλάσκειν*, i.e. to render the god *ἡσυχῆς*, 'well-pleased' or 'at peace' with the worshipper. The same idea is expressed by *ἀρεῖσαι*,⁴ *ἀρέσσασθαι*.⁵ The propitiatory prayer is especially called *λιτή*; to pray is *λιτῆσθαι*.⁶

(7) *Ceremonial purification*.—It is sometimes said that the ceremonial or symbolic ritual of purification, which in forms more or less repulsive we know to have been practised in later Greece and which is attested all over the world, was unknown to the Homeric age. No one, however, can maintain such a doctrine who does not approach the question with eyes wilfully shut to the obvious meaning of several Homeric passages. These are noticed in art. PURIFICATION (Greek) and need not be repeated here. But even had there been no actual reference to such practices in Homer, we should have been abundantly justified on *a priori* grounds in assuming that they existed.

The case of Theoklymenos in *Od.* xv. 223 ff. is constantly quoted as supporting the opposite opinion. This appears to be a misunderstanding of the position of a suppliant. So far as the present writer knows, the blood-guiltiness of a suppliant was inoperative outside his own country. If this were not so, how could the guilty man ever begin the process of recovering his status? The very first step in that process is usually for the suppliant to seat himself at the hearth of some person beyond the borders of his own country. If his blood-guiltiness were operative, how could he approach the holy of holies, i.e. the hearth of his host?⁷ Usually the suppliant does not even reveal his identity before he has been a guest for some time. If his presence carried pollution beyond his own borders, could this have been tolerated? Once beyond his own land, he becomes, so far as concerns outsiders, possessed of all the rights of the suppliant; in his own land to slay him is the duty of his victim's kindred; outside his own land for an alien to slay him is a crime which brings down the vengeance of Zeus *ἱκετήριος*.

The well-known case of Orestes might, of course, be quoted. The festival of the *Anthesteria* which formed part of the *Anthesteria* drank his pitcher of wine. When Orestes had, when Orestes with his mother's blood upon him came to Athens during the festival, the Athenian king, not wishing to be inhospitable but unwilling to contaminate the worshippers, ordered separate pitchers of wine to be given to each.⁸ But that is a quite peculiar case. It is precisely to the *Semnai Theai* at Athens that Orestes is sent by Apollo to make his peace with them.

The banishment of the suppliant, moreover, does not prevent him from offering prayer and sacrifice even to the Deity, whose sanctuaries in his own land he may no longer enter. But he must make himself an outcast, and then from beyond the pale solicit re-admission.

So we would interpret the curious instructions given to Odysseus.⁹ He has offended Poseidon. He must therefore seek a land where men know not the sea nor eat food mixed with salt, who mistake the farmer's shovel (scull) for the seaman's oar (scull)—i.e. he is to travel beyond the sphere of the sea-god, and there he is to make his propitiatory offering to Poseidon.

3. Hesiod.—The general framework of ideas which we have sketched in Homer is to be presumed in our study of the conception of sin in

the later Greek authors. For in the history of religious ideas each new development does not cancel or repeal all that went before. Custom, with the force of an almost religious sanction,¹ is nowhere more powerful than here. The old and the new tend to persist side by side, each acting and re-acting upon the other. The present article can only aim at noting the more important points of departure and illustrating the leading tendencies.

The terminology of Hesiod is similar to that of Homer. Righteousness is *δικη*,² and means that conduct which is in conformity with a divinely established order, which is careful of the rights of others, whether God or man. Unrighteousness is *ὑβρις*, *ὑπερβασία*, *σχέτλια ἔργα*, and is the conduct which ignores the rights of others and transgresses the laws of the divinely established order. The generally sober colouring of the poet's creed is redeemed from pessimism by his firm conviction that the Judge of all the earth is righteous and will not suffer unrighteousness to prevail finally.

'Now may neither I nor son of mine be righteous among men: for it is an ill thing to be righteous if the unrighteous shall have the greater right. But that I deem not that Zeus the hurler of the thunder will bring to pass.'³

Punishment of unrighteousness may not follow immediately after the unrighteous act, and the wicked may prosper for a time, but in the end the moral order of the world triumphs:

'It is better to pass by unrighteousness and to pursue righteousness. Righteousness in the end is better than unrighteousness, and the fool learneth it by suffering.'⁴

Dike is the daughter of Zeus, honoured and revered by the gods who keep Olympos,⁵ and the observance of *δικη* is the sovereign distinction whereby the race of men is divinely marked off from the lower animals, for whom the law of might (*βία*) is the only law.⁶

When we compare the specific sins which Hesiod enumerates with those of Homer, we are struck by the greater prominence of those which have no obvious ethical significance and are more of the nature of unreasoning tabus. On the one hand, we have the Homeric sins: perjury,⁷ falsehood,⁸ theft,⁹ covetousness,¹⁰ dishonouring parents,¹¹ unjust judgments,¹² injury to the fatherless,¹³ injury to suppliant or the stranger within the gates,¹⁴ taunting the poor with his poverty,¹⁵ lying with brother's wife,¹⁶ neglect of prayer and sacrifice,¹⁷ praying with unwashed hands,¹⁸ to which we may add idleness.¹⁹ On the other hand, we have a whole catalogue of 'sins' which, if not severely reprobated, are at least 'unlucky', which have no parallel in Homer—cutting the nails at a festival of the gods,²⁰ sitting on tombstones or other 'unmovables' (*ἀκίνητα*),²¹ contact with water which has been used by a woman,²² muttering at a sacrifice,²³ placing a ladle across the mixing bowl,²⁴ leaving the wood of a house unplanned,²⁵ eating from unconsecrated vessels,²⁶ performing certain private operations indiscreetly,²⁷ bringing the contagion of death into contact with birth.²⁸ To find in these prohibitions traces of Orphic and Pythagorean teaching, as Pick does, seems wholly mistaken. These ideas are of a type universally attested in early thought, and, if they do not appear in Homer, it is not so

uch that they are unknown as that they are nored.

The specific duties which Hesiod recognizes are mainly those of Homer: oath-keeping and honesty, worship of the gods by prayer and libation and sacrifice.¹ We need only notice the new dignity which he gives to work as a duty which wins the approbation of the gods,² who have appointed work as the lot of humanity.³ The practice of righteousness is, moreover, given a practical or accidental intention which is less obvious in Homer:

Work, foolish Perses, the works which the gods have pointed unto men, lest one day with children and wife thou shalt beg thy bread among the neighbours and they heed thee not.⁴

According to thy power do sacrifice unto the deathless gods . . . that they may have a gracious heart and mind toward thee, that thou mayst buy another's estate, not another line.⁵

Take just measure from thy neighbour and give him just turn, with the same measure or yet better if thou canst, than even so afterward in thy need thou mayst find him a sure lip.⁶

the scarlet woman⁷ is to be avoided for prudential reasons.

The punishment of sin is by way of temporal affliction in this life:

Whoso ensue evil insolence and froward works, for them the Zeus decree justice. . . . On them doth the Son of Kronos bring from heaven a grievous visitation, even famine and plague together, and the people perish. Their women bear no children: their houses decay by devising of Olympian Zeus: or on he destroyeth a great host of them within a wall if may, or the Son of Kronos taketh vengeance on their ships at last.⁸

the righteous are rewarded by temporal prosperity:

Their city flourisheth and the people prosper therein. And there is in their land peace, the nurse of children, and Zeus thence never decree war for them. Neither doth famine ever consort with men who deal straight judgments, nor doom, but mirth they tend the works that are their care. For them the earth beareth abundant livelihood, and on the hills the oak's sap beareth acorns, the oak's midst bees: their fleecy sheep are busy with wool: their wives bear children like unto their parents: they flourish with good things continually, neither go away on ships, but bounteous earth beareth fruit for them.⁹

The punishment of the wicked may, of course, involve the innocent:

Oftentimes a whole city reapeeth the recompense of the evil man who sinneth and worketh the works of foolishness.¹⁰

We have seen in Homer how the vengeance of Zeus may involve the sinner's wife and children.¹¹ In Hesiod:

Whoso of his will sweareth false witness and lieth, and wrongeth justice and sinneth beyond redemption, his race is sinner in the after days; but the race of him that keepeth his oath is better in the time to come.¹²

but this does not seem to mean much more than is already necessarily implied in the solidarity of the family, and is at any rate no such explicit doctrine of the hereditary curse as we shall find in Theognis.

As to the special agency by which retribution is effected, we have Horkos, who attends on crooked judgments (*Rechtsbeugung*)¹³ and punishes perjury;¹⁴ the Erinyes as avenging spirits;¹⁵ Dike, who informs Zeus of the wickedness of men:

Whenever an injureth her with crooked slighting, straightaway she sitteth by Zeus the father and telleth of the unrighteous mind of men till the people pay for the folly of their kings who with ill thoughts wrest aside judgments, declaring falsely.¹⁶

But we have a specially interesting development of the idea of a sort of spirits intermediate between men and gods whose function is to act as watchers (*φύλακες*) of mortal men:

The immortals are nigh among men and remark them that with crooked judgments oppress one another, taking no heed

of the anger of the gods. Yea, thrice ten thousand immortals are there on the bounteous earth, who keep watch over mortal men: who watch over judgments and froward works: clad in mist, faring everywhere over the earth.¹⁷

In Homer it is the gods themselves who 'in the likeness of strangers from another land visit in divers guises the cities of men and watch the unrighteousness (*ὀβρις*) and righteousness (*εὐνομίη*) of men.'¹⁸

Historically these Hesiodic *φύλακες* seem—but this is matter of opinion—to reappear in the *φύλακες* of Plato's *Republic*.¹⁹ They seem to be rightly equated with the spirits of the golden race who, in Hesiod's account of the fall, in the form of *δαίμονες*,²⁰ exercise just this supervision over men.

The reader who turns from Homer to Hesiod is conscious of a change of atmosphere. The radiant gaiety of the Homeric world has given place to a world of most sober colouring, where the lights burn low and the shadows deepen. There is but a hint in Homer of an earlier age, a lusty spring-time of the world when men were mightier than their degenerate descendants. 'As men are now'²¹—so the poet contrasts his own with the earlier age. But the contrast is merely of physical prowess. In Hesiod, on the other hand, we find a fully developed doctrine of a lost Golden Age from which men have through their folly and sin declined.²²

4. Solon, Theognis, etc.—In the Greek poets of the period between Hesiod and the end of the 6th cent. B.C. the general conception of the nature and consequences of sin remains much as we have described it in Homer and Hesiod; *κόρος*, satiety, begets *ὀβρις*, wantonness, whence springs *ἀπην*, moral blindness, sin, or the consequences of sin:

τίκτει γὰρ κόρος ὀβριν, ὅταν πολὺς ὄλεος ἔπηται ἀνθρώποισιν ὁσοῖς μὴ νόος ἄριστος ᾖ.²³

Or, again, as in Homer, *ὀβρις* may arise from the mere thoughtlessness of youth:

ῥῆθ καὶ νεότης ἐπικουφίζει νόον ἀνδρός, πολλὰν δ' ἐξάγει θυμὸν ἐς ἀμπλακίην.²⁴

There is the same profound conviction of the moral order of the universe:

'O Zeus, father Zeus, thine is the dominion of heaven, and thou dost watch the works of men, lawless and lawful, and takest heed of the righteousness and unrighteousness of beasts' (*σοὶ δὲ θηρίων ὀβρις τε καὶ δίκη μέλει*).²⁵

There is the same certainty that sin must be followed by punishment:

'Unrighteous is the mind of the rulers of the people: for them there is prepared much suffering by reason of their great insolence. For they know not to restrain satiety (lust) . . . They wax wealthy by unrighteous deeds: they spare neither holy things nor public things; they steal and rob here and there; they tell of foundations of justice, and that who, though were afore, an ever wronged of the immortals. . . . The end is woe, and the counsel of the gods prevails.'²⁶

The punishment of the guilty, we have seen in Homer and Hesiod, may involve the affliction of the sinner's connexions, his wife, his children, his city: the people pay for the sins of their rulers.²⁷ But now we find it explicitly stated that the sins of the fathers are visited upon the children. And this is, indeed, but the natural corollary of the conception that sin is inevitably followed by affliction. Since it appears that in this life the sinner frequently escapes punishment, while there was no lively conviction that there is any punishment after death, it was natural to conclude that the punishment must fall upon his descendants.

Otherwise the doctrine of the eternal and infallible justice of heaven becomes vain. God, it is inferred, takes long views. He bides His time until the cup of iniquity is full. The sword of justice may linger, but it will surely fall, if not upon the sinner himself, then upon the heads of his children or descendants.

'Not long abide for men the works of unrighteousness. Zeus beholdeth the issue of all things, and sudden as the wind that scatters the clouds in spring . . . is the vengeance of Zeus. He is not swift to anger at each thing like a mortal man, yet he who has a sinful heart escapes not his notice for ever, but is surely revealed in the end. One pays the penalty immediately, another after. And if they escape themselves and the doom of the gods overtake them not, yet surely it cometh afterward: the innocent pay for their deeds, their children or their descendants after them.'¹

'These things [the apparent escape of the sinner from retribution] deceive the mind of men; for not at the moment of each act do the gods punish sins, but one pays the ill debt himself nor hangs woe over his dear children in the aftertime: another justice overtaketh not: ere that relentless death alights upon his eyes, bringing doom.'²

The doctrine seemed to be the natural issue of the doctrine of the inflexible justice of heaven. And genuine examples of the unrighteous prosperity of one generation being succeeded by signal calamity in another were common enough. Popular fancy would manufacture others, and by an easy paralogism infer a general principle. How deeply ingrained in Greek belief it was is shown by the fact that in a formal curse—e.g., that pronounced by the herald at the opening of the Ecclesia and the Boule—the descendants and family of the transgressor were included:

ὃν ἐκείνους εἰχσεῖθ' ἐξώλη ποιεῖν αὐτὸν, καὶ γένος, καὶ οἰκίαν.³
And Aristotle⁴ implicitly justifies the doctrine, if regard be had only to the individual's reckoning with heaven. But, from the point of view of the innocent sufferer, it is manifestly unfair that he should pay the penalty for sins in which he had no part. The injustice of it was bound to strike every serious man.

As David cried: 'Lo, I have sinned, and I have done perversely: but these sheep, what have they done? let thine hand, I pray thee, be against me, and against my father's house,'⁵ so Theognis cries: 'O Father Zeus, would that it might please the gods that he . . . who works the works of foolishness and taketh no heed of the gods might himself pay for his evil doing and that the sins of the father should not afterward be an evil for his children: that the children of an unjust father who do righteously, reverencing thine anger, who among their townsmen have loved justice from the beginning, should not pay for any transgression of their fathers. Would that this were well-pleasing to the gods: but now the doer escapes, and another afterwards bears the evil';⁶ and again: 'O Zeus, I wonder at thee: thou art lord of all: . . . how can thy heart count the sinner and the unrighteous alike? . . . There is no sure sign given to men by the gods nor any certain way wherein one may walk and be well-pleasing to the gods. The sinners enjoy untroubled prosperity, while those who refrain their hearts from wickedness have poverty for their lot.'⁷

It must be emphasized that Theognis is not questioning the fact, nor is he impugning the justice of heaven, which indeed he is concerned to maintain—precisely as Jeremiah⁸ makes the righteousness of God his justification for reasoning with Him:

'Righteous art thou, O Lord, when I plead with thee: yet would I reason the cause with thee: wherefore doth the way of the wicked prosper? wherefore are all they at ease that deal very treacherously?'

There in fact is the difficulty. If God is a just God, why does the sinner not pay for his sins immediately so that the anger of God should be unmistakably revealed? Why, if God is just, does the sinner sometimes escape punishment in this life altogether? If it be answered that God visits the sins of the fathers upon the children, then God is again unjust, in that He visits the guilt of the sinner upon the innocent. From this dilemma there could be no escape without a new

conception of the meaning of life—that is to say, a new conception of the destiny of the soul.

That new conception of the soul, which for convenience we may call the mystic or Orphic conception, profoundly influenced the Greek doctrine of sin from the 6th cent. onwards, and the remainder of this article is chiefly concerned to illustrate the traces of that influence to be found in Greek writers of the 5th and 4th centuries before Christ.¹

5. Pindar.—The genesis of sin is in Pindar conceived on familiar lines. Great prosperity (δλβος) is a temptation or incentive to sin. The effect is likened to that of overfeeding: satiety (κόρος) breeds insolence (ὑβρις). When ὑβρις finds expression in action, it leads to woe (ἄτη).

Thus Ixion:

εὐμενέσσι γὰρ παρὰ Κρονίδαις
γλῶκον ἔλῶν βίοντον, μακρὸν οὐχ ὑπέμεινεν ὄλβον, μαινομέναις
φρασίν
'Ἦρας ὅτ' ἐράσσατο, . . .
. . . ἀλλὰ νιν ὑβρις εἰς ἀνάταν ὑπεράφανον
ᾤρσεν.²

So Tantalos:

καταπέφαι
μέγαν ὄλβον οὐκ ἐδυνάσθη, κόρῳ δ' ἔλεν
ἅπαν ὑπερόπλον.³

It may be noted that κόρος and ὑβρις come to have practically identical meanings, so that Hybris appears as mother of Koros,⁴ thus reversing the Solon-Theognis version, which makes Hybris daughter of Koros.

No Greek poet lays more emphasis than Pindar does upon heredity.⁵ And nowhere do we find the solidarity of the family, whether for weal or for woe, more vividly realized. The family is like a field which is fruitful or fallow in alternate generations.⁶ The 'family fortune' is of great moment always.⁷ Hence it is natural for Pindar to think of the destiny of a given generation as conditioned by the conduct of earlier generations—to conceive, in fact, the sin or the righteousness of the fathers being visited upon the children. But now, in several remarkable passages of Pindar, we have the nature and destiny of the soul presented in a light which alters the relative values of life and death. Unfortunately the fragmentary character of some of these passages makes their interpretation a matter of the utmost difficulty. Yet the general outlines seem sufficiently clear.

In frag. 131⁸ we find a definite contrast between the destiny of the 'body (σῶμα) which followeth overmighty death' and the 'likeness of life' (αἰῶνος εἰδωλον) which 'remaineth yet alive: for it alone is from the gods. It sleepeth when the members are active, but to them that sleep in many a dream it revealeth the coming judgment for weal or woe.'

The soul, then, and the soul alone, is divine in its origin. It is a 'likeness of life,' that is to say, it is conceived as resembling the living man in such a way as to preserve its identity: it can be known among other souls as being the soul of such and such a person. It is a prisoner in the body, which hampers and impedes its activity. Its still small voice cannot be heard amid the thunder of fleshly energies; only in sleep, when these energies are hushed and stilled, it regains for a season its full efficiency. Life, this present life, is less a boon than a thorn: 'Man is well done with it soon as he's born.' Only by death can the temporary release of sleep become a permanent emancipation.

And, if one incarnation, why not many? It is an easy step to conceive the soul as undergoing a series of probationary incarnations, until it has again become worthy to be united with the divine, to return to heaven, which is its home. The

number and the nature of its incarnations must depend upon its previous conduct:

'From whomsoever Persephone accepts atonement of ancient sorrow, the souls of these she sends again in the ninth year into the upper sun: from these spring glorious kings, and men excellent in strength and mightiest in wisdom: who in future time are called by men holy heroes.'¹

How, then, can the individual best assist the emancipation of his soul? In two ways: (1) he must endeavour to abstain from unrighteousness; (2) he must be initiated in the mysteries which not merely teach him what lies beyond, but actually show him the *φῶς λερόν*,² the holy light, the light that never was on land or sea. Then he shall know that the same heaven from which the soul came at first shall also be her final home. He sees the light and whence it flows.

'Happy is he who has seen these things ere he goes beneath the earth: he knows that the end of life is with God, even as from God was its beginning.'³

What now is the bearing of this doctrine of the soul upon the conception of hereditary guilt? Pindar seems to answer this question in the *2nd Olympian*.

The victor whom he celebrates is Theron of Acragas, who as one of the Emmenidai is a descendant of the sinful house of Laios, king of Thebes. Now, even from the time that Laios was slain by his fatal son (*μόρμος νιός*), Fate (*Μοῖρα*) has so guided the family fortune, on the whole a happy fortune,⁴ that together with heaven-sent prosperity they have also endured 'woeful reverse at other times.' But 'wealth adorned with deeds of excellence . . . is a most sure light,'⁵ if the possessor 'knoweth that which is to be: that the helpless souls⁶ of the dead pay the penalty immediately here, while the sins done in this realm of Zeus one judges under earth, pronouncing doom by hateful constraint.' 'But equally by night as by day'—the same emphasis and order as we have noted above—'the good receive a life more free from trouble,'⁷ vexing not the earth with the might of their hands nor the waters of the sea, in that ghostly life. But with the honoured of the gods, even those who rejoiced in keeping their oaths, they live a tearless life, while those others endure trouble beyond beholding. But whoso have endured unto three times on either side to refrain their souls utterly from iniquity, rise by the way of Zeus unto the tower of Kronos; where round the planets of the blest the ocean breezes blow, and flowers of gold are glowing,' etc.⁸

Thus God is not unjust: if He seems so, it is 'because we see not to the end.' Sin, in the end, must be punished. The sins of the fathers affect the destiny of the children. But it is not without hope that each generation travels. And the path which each must thus hopefully travel is the same—to do justice, to love mercy, and to walk humbly with their God.

6. *Æschylus*.—Æschylus is much occupied with the hereditary curse, as illustrated especially in the royal house of Atreus, in which one murder is avenged by a new murder, and the new murder by yet another, and so on, seemingly without end. At times the ineluctability of fate becomes overpowering.

'Taunt answers taunt, and things are hard to read. The spoiler is spoiled, the slayer pays, and it abides, as Zeus abides upon his throne, that he who does must suffer; for so it is ordained. Who shall cast forth from the house the bread of curses? The race is glued to woe.'⁹

Indeed, if punishment is viewed in its merely retributive aspect, and if we take short views of justice, there is no seeing where the process is to stop. The last sufferer must in any case be un-avenged. It is only when she is weary of the

unending play of tit-for-tat¹ that Klytemnestra is fain to conclude an amnesty with the *δαίμων*, or ancestral spirit, of the Pleisthenidai, upon the basis of the *status quo*.²

But the retributive aspect of sin is to Æschylus merely an incident in the larger motive, which is educative. He is never tired of insisting that the end of suffering is to teach men *σωφροσύνη*, which is precisely the antithesis of *ὑβρις*.

'It is good to learn wisdom by sorrow.'³ 'Zeus who guides men to be wise, Zeus who hath established it as valid law that by suffering men shall learn.'⁴

We have seen that Pindar conceives the soul as most active in sleep. So the Psalmist⁵ says: 'My reins instruct me in the night seasons.' So Æschylus conceives that it is in the watches of the night, when the bodily energies are hushed, that the still small voice of conscience is heard, or, as he expresses it in the physiological language of his time,

'There droppeth before the heart (*καρδία*) sad memory's pain, and wisdom (*σωφροσύνη*) cometh to men against their will.'⁶

This he describes as a *δαίμωνων χάρις βίαιως*, a favour which the gods force upon men.⁷ He conceives then that the gods 'will not that any should perish,' and, so conceiving, he rejects quite definitely the old notion that mere prosperity excites the anger and the vengeance of heaven. He proclaims his 'lonely faith' (*μονόθεων*) in memorable words:

'It is the impious deed that gives birth to other deeds after it in the likeness of its kind, but the house of the righteous is blessed in its children for ever.'⁸

Prosperity is doubtless a temptation; it is no less hard a task to 'thole'⁹ prosperity than to 'thole' adversity. But the good man wins through. So the ancestral curse is not a compelling cause of crime; it may aid and abet,¹⁰ but it does not render sin unavoidable or excuse the sinner.

Æschylus is familiar with the larger faith which regarded the present life as only the gateway to a fuller life beyond. Preoccupied as he was with the problem of sin and suffering, he dwells on the unseen world mostly as a place of retribution.

'The gods are not heedless of them whose hands are steeped in blood. The dark Erinyes in time, when a man has prospered without righteousness, with reversal of his life's lot make him dim, and when he is among the unseen there is no avail.'¹¹ 'Not even in the house of Hades when he dies shall he who doeth these things escape the guilt of his sin. There too, it is said, another Zeus judges among the dead men's sins in a last judgment.'¹²

7. *Conclusion*.—Here we must end our study. Henceforth the Greek doctrine of sin develops in two main directions. On the one hand, sin becomes identical with ignorance, righteousness with knowledge: *οὐδὲς ἐκὼν κακός*.¹³ And this, indeed, may not unfairly be described as the characteristically philosophic doctrine. Conceiving moral rightness as essentially a matter of right knowledge, they held it to be unthinkable that a man should know the better and yet deliberately choose the worse. And, if this theory proved manifestly out of harmony with the facts, as Aristotle says,¹⁴ that was because right knowledge was wholly or temporarily obscured by vicious appetite, and none the less the ideal to be pursued was knowledge. It did not greatly trouble the philosopher that on this view the gates of heaven were barred to the general mass of toiling mortality and that no weight was given to the great non-intellectual virtues of patience and humility and charity, all

that we sum up as 'otherworldliness.' But to others it seemed as if this doctrine could lead at best only to a practical or 'political' righteousness. If the soul is indeed a wanderer from God who is her home, if her final destiny is indeed reunion with God, then knowledge such as is attainable by ordinary means seemed insufficient. The finer spirits yearned, as Plato yearned, for an *εχημα βεβαύτερον*, a λόγος θεός, in which to make the voyage of life, in place of the poor raft (*σχεδια*) of merely 'human' knowledge.¹ If the soul alone is divine, if this tenement of clay be in truth a prison, as the mysteries taught, then man must wean the soul from association with the body, must accustom her to be, so far as is now possible, 'alone with herself,' must accustom her to contemplate the things beyond, so that, when she leaves the body and arrives there, she will not gape and be dizzy,² but will feel at home in her surroundings.³ If it be only in moments of exaltation and ecstasy that the embodied spirit can obtain even a glimpse of disembodied felicity, the seeker after truth cries: *ὦ Μαρία, ξύλλαβε*.⁴ The foolishness of men may be wisdom with God.

SIN (Hebrew and Jewish).—1. Terms.—We need not concern ourselves here with the numerous words denoting particular vices or with words of such wide significance as *רָעָא*, and its cognates (used for every variety of vice or misfortune, of moral or material evil). We confine ourselves to the ordinary, general words for 'sin.'

There is a group of terms from the root *חָטָה*—*חָטָה*, *חָטָה*, usually translated 'sin.' The verb is also used in the purely secular sense of 'missing one's way (or aim)' (Job 52⁴, RV, Pr 8³⁶, RVm, Job 41²⁵ (Heb. 17), RV). *חָטָה* and *חָטָה* are usually translated 'transgress,' 'transgression.' The verb is also used in the secular sense of 'rebel.' *חָטָה*, *חָטָה*, *חָטָה*, and *חָטָה*, are all translated 'iniquity.' The usage of similar roots in cognate languages suggests that *חָטָה* and *חָטָה* may have had originally the concrete sense of 'going astray.' The concrete sense of *חָטָה*, 'sorrow,' 'trouble,' is still in use in the OT. *חָטָה*, *חָטָה*, and *חָטָה* are usually translated 'wicked,' 'wickedness.' The original meaning of the root is doubtful; but these words and the corresponding denominative verb are regularly used in the forensic sense of 'being guilty of a crime,' 'being in the wrong in a lawsuit' (Ex 23¹). The use of these terms in the ethical and religious sense, 'wicked,' is an extension of the forensic usage. In LXX derivatives of *חָטָה* are rendered *inter alia* in various passages by *ἀδικία*, *ἀμαρτία*, *ἀνομία*, or the verbs, nouns, adjectives, etc., corresponding to these words. The same is true of derivatives of *פָּשָׁה* and of *רָשָׁה*, and of the words *חָטָה*, *חָטָה*, and *חָטָה* themselves, except that *חָטָה* and *חָטָה* are not rendered by *ἀμαρτία* or its cognates. The derivatives of *חָטָה*, however, are usually rendered by *ἀμαρτία* and its cognates. *חָטָה* is translated in roughly equal proportions by *ἀδικία*, etc., *ἀμαρτία*, etc., *ἀνομία*, etc., and seldom by anything else. *חָטָה* is usually rendered by *ἀδικία* and, less frequently, *ἀνομία*. *חָטָה*, on the other hand, is usually rendered by *ἀνομία* and, much less often, by *ἀδικία*, when understood in ethical and religious senses, otherwise by words denoting 'toil,' 'trouble,' etc. The derivatives of *פָּשָׁה* are rendered usually by either *ἀμαρτία*, etc., *ἀδικία*, etc., *ἀνομία*, etc., or *ἀρεβία*, etc., or *ἀρεβία*. The derivatives of *רָשָׁה* are most often rendered by *ἀρεβία* and its cognates, but also frequently by *ἀμαρτία* and cognates, occasionally by *ἀδικία*, etc. The Latin renderings of the Vg. are also very varied. The most common rendering for the *חָטָה* terms is *peccatum*; for *פָּשָׁה* and *חָטָה*, *iniquitas*, but sometimes *scelus* for *פָּשָׁה*; for *רָשָׁה* terms, *impius*, etc. The Vg. renderings have been influenced by those of the LXX. It is noteworthy that *חָטָה*, *חָטָה*, *חָטָה*, and *פָּשָׁה* are, each of

them, used alike for 'sin,' 'guilt,' and 'punishment,' and that *חָטָה* and *פָּשָׁה* are also used for 'sin-offering.' Although the *חָטָה* terms are mostly used of sin against God, they occasionally denote wrong done to man; *חָטָה* and the *פָּשָׁה* terms are used of conduct, etc., either to God or to man.

A somewhat different feature is the frequent use in connexion with sin and sinners of *nābhāl*, *nebhāl*, EV 'fool,' 'folly,' LXX mostly *ἀφρων*, *ἀφροσύνη*, Vg. various; and other words of similar meaning.

Other terms for 'sin' peculiar to particular writers or periods will be noticed below.

2. General considerations suggested by the terminology.—We do not learn much from the etymology; it is often uncertain. When a word is fairly launched on its career, its meaning in actual usage is little influenced by its original etymology unless this is conspicuously obvious, and not always then. Sometimes, however, an original concrete usage persists side by side with the abstract sense derived from it, as in the cases of *חָטָה*, and the roots *פָּשָׁה*, *רָשָׁה*, and probably *חָטָה*. In these cases the concrete usage might continue to determine in some measure the sense of the abstract terms; e.g., it would be tempting to suppose that the *חָטָה* words implied that sin was a futile blunder, the *פָּשָׁה* words that it was rebellion against God, and the *רָשָׁה* words that the sinner put himself in the wrong, and to some extent this may have been the case. The fact that the LXX almost invariably renders the *חָטָה* words by *ἀμαρτία* and its cognates shows that these terms were regarded as specially denoting sin *qua* sin. Otherwise the facts in § 1 indicate that by the time the LXX was made there was no sense of any marked difference between the leading terms for sin.

It should be noticed that both the etymology and the LXX renderings indicate that sin was regarded as negative. Both *חָטָה* and *ἀμαρτία* are failure to reach an ideal standard—it is suggested that the *א* in *ἀμαρτία*, though aspirated, is privative. *רָשָׁה* and *ἀδικία* are divergence from a legal standard. Both the *חָטָה* and the *רָשָׁה* terms are contrasted with the *יָרָא* ('righteous') terms (Pr 10² 13²¹).¹ *פָּשָׁה* is rebellion against a lawful authority; *חָטָה* and *חָטָה* are divergence from the straight course; *חָטָה* is the absence of what is worthy or desirable.

Another feature is the use of the same terms for sin, guilt, punishment, and sin-offering. The usage arises out of a primitive psychology as to which it is dangerous to be dogmatic. It seems natural, however, to see in these facts an indication that sin was thought of as automatically including and working out its own fatal sequel. The terms might be extended to sin-offering as a kind of penalty. 'For the Jews sin is a power which brings ruin to sinners, because it is fundamentally identical with punishment.'² Sin is personified in the literature, which probably as a person, a ki like a wild bea familiar phrase 'ne'um YHWH,' 'oracle of Jahweh,' we have in Ps 36¹ 'ne'um pesha,' 'oracle of sin.' In Zec 5^{3ff} wickedness (*rišā*) appears as a woman.³ In Sir 27¹⁰ a lion lies in wait for prey as sin (*ἀμαρτία*) for evil-doers.

3. Primitive ideas.—Obviously many of the Israelite ideas as to sin were held by them in common with other peoples, especially other Semitic peoples. This is most of all the case in the earlier period, before the time of Amos, c. 750 B.C. In this period the ideas suggested by the etymology of the terms and their concrete use would be prominent—e.g., that of sin as a power automatically working out punishment. Closely connected with this is the view that suffering and misfortune, especially exceptional misfortune, are indications that the sufferer has been guilty of heinous sin. Thus in 2 S 21¹ a grievous famine leads David to ask of what sin it is the punishment.

Further, we must bear in mind that the idea of sin in its earliest form is neither moral nor spiritual; sin is simply that of which the deity or deities disapprove. It is, indeed, often said that sin, at a primitive stage, is merely the violation of national or tribal custom.

² Gorgias, 527 A.

³ οὐκ ἀνγρεῖ τὰ παρὸντα (Phædo, 108 A).

⁴ Aristoph. *Frogs*, 1345.

'In the earliest parts of the Old Testament, sin is almost invariably presented to us as nothing more than disobedience to the statutes regulating religious, social, and civil life in Israel, and a violation of the good customs in vogue among this people.'¹

There is a large measure of truth in this view, but it is not inconsistent with what was said above. At this stage of religious development there is a very close organic connexion between deity and people; the customs and rules of national life are under religious sanction; they are the will of the deity. Men's ideas of sin depend upon their thoughts of God; for primitive peoples the deity has largely the character of an arbitrary, self-willed tyrant. There is no knowing what may please or anger Him, or what He may think fit to demand, what He may approve as piety, or what He may condemn as sin. Man may only discover that he has sinned through the punishment that crushes him.

Thus Moses is on his way to Egypt to fulfil the mission with which Jahweh has entrusted him; he is unconscious of anything that should rouse the divine anger against him. Yet Jahweh makes an onslaught on him and seeks to kill him, because he had not circumcised his son, although there is no previous command to circumcise in the document J, to which the passage belongs (Ex 424ff.). David, when persecuted by Saul, thought it possible that, for some unknown reason, he had incurred the ill-will of Jahweh, that Jahweh had stirred up Saul against him, but might be appeased by a gift (1 S 2612).²

Again, in the early period, the idea of sin is objective; sin consists in the performance or neglect of certain external acts.

'No occasion is taken to inquire more deeply into the nature of sin as affecting man's inner life.'³ 'Sin is action antagonistic to God (*gottwidrig*) without any reference whatever to the question whether the actor is conscious of this quality of his action. A man does not become a sinner through the purpose of his act but through his objective doings.'⁴

The conditions of satisfactory relations with God are largely material and physical—various rites, regulations as to food and 'cleanness and uncleanness' generally, all sorts of tabus. Although most of the Levitical ordinances come to us from a later period, they probably represent very fairly the conditions of earlier times. This is implied, *inter alia*, by the prophetic denunciations of ritual. If we could compare the system of the Priestly Code with the practices in early Israel, the advantage would be with the Code. Thus the distinction with which we meet later between 'secret' sins, or 'errors' (חַטֹּאת), and 'presumptuous' sins (מִזְבֵּחַ) [Ps 191st], or sins 'with a high hand' (נֶגַח) [Nu 1530]—i.e. between unconscious, unintentional sins and those which were conscious and deliberate—is, as we have seen in examples already referred to, ancient and primitive. The exact interpretation of ordinances as to ritual, etc., would often be known to the priests alone; moreover, the ordinances as to what was clean or unclean might easily be broken unwittingly.

In early times the principle of the solidarity of the family, tribe, or nation was strongly held; guilt attached to the kindred and fellow-tribesmen of an offender—as in the case of Achan (Jos 71. 23f.) and of Saul and the Gibeonites (2 S 21). The guilt of fathers and ancestors attaches to children and descendants.

The punishment of sin may involve the death of the offender—e.g., the sons of Eli (1 S 23^d)—or some minor misfortune, as in the case of David (2 S 1213^d). Sacrifice (*q.v.*) played a large part in establishing, maintaining, and restoring right relations between God and man, but the cancelling of sin might also be effected by a suitable punish-

ment, and partly by the spontaneous forgiveness of God.¹

Moreover, in early times, religion was largely a matter of the tribe or nation; accordingly, as the nation incurred divine displeasure through the sin of one of its members, it could also be purged of guilt by his punishment—e.g., the incident of Achan.

It is natural to see in the story of the Fall (Gn 3) an account of the origin of sin, but sin is present in the serpent before it arises in Adam and Eve; the story rather gives the first sin as the origin of suffering. The first sin is typical of the primitive idea: it is an external act, the violation of an arbitrary command. Moreover, the story of the Fall was probably borrowed from a non-Israelite source, though no very close parallel to it has yet been found. It does not seem to have had much influence on early Israelite thought, which does not assert the corruption of human nature or the alienation from God that NT and later theology attribute to the Fall.²

The question as to what in the way of commission or omission was reckoned sin is too large to be dealt with here; it rather belongs to OT ethics.

'This ethical ideal of the ancient Israelites is far from perfect. The patriarchs use deception toward the stranger, as if it were a lawful practice. Polygamy is not considered an evil, nor intemperance in eating and drinking a vice. Great licence in morals is tolerated. Barbarity is practised in war, and generally towards adversaries, as the case of David himself proves. Suicide does not appear culpable.'³

4. The period from c. 750 B.C. to c. 586 B.C., with special reference to the prophets of the 8th cent., to Deuteronomy, and to Jeremiah and (in part) Ezekiel. — The various ideas as to sin already mentioned persisted in this period; and in cases where nothing is said about them in this section it may be understood that they were held by the prophets, etc., of this period.

Probably there is little in the prophets that was absolutely new; even ideas which appear for the first time in the literature of this period may not have been new to the hearers of the prophets. The most important novelty was a change of emphasis arising out of an advance in the doctrine of God. Sin is still that which God disapproves, but the ethical nature of God is much more clearly and fully held. He is no longer concerned chiefly with material gifts and external homage—the strict observance of the etiquette of His divine court. He desires sincere loyalty and heartfelt affection from His people. He is concerned for their material, moral, and spiritual well-being, and desires that His worshippers should further His purposes by mutual goodwill and beneficence. This is summed up in Hos 6⁶: 'I will have benevolence (*hesedh*) rather than sacrifice, and the knowledge of God rather than burnt offerings.' Sin has now come to mean failure as to these matters. The prophets may not actually condemn ritual, but, if they do not, they regard it as altogether subordinate. One cardinal sin is social wrong-doing, the corrupt administration of justice, the exploiting of the resources of the community in the interests of a privileged few (Am 2⁶, Hos 4¹, Is 110-17, Mic 2³, 8¹). Deut., indeed, has regulations as to ritual, clean and unclean things, etc., but its main interest is to provide for the needs of the poor.

Hosen's phrase, 'the knowledge of God' (41. 6⁶; cf. Is 51³), includes what we should call fellowship and religious experience; the primitive view, as we have seen, held that sin arose from the ignorance of external ritual. Hosea and Isaiah

³ O. Piepenbring, *Theology of the OT*, Eng. tr., New York, 1893, p. 36.

hold that sin arises from ignorance of the character of God and His ethical demands. Isaiah uses the old ritualistic language and speaks of that which is unclean (*āmē'*) as sin, but the term is no longer merely physical, and now denotes what is morally and spiritually unsatisfactory. He also emphasizes the idea that sin is rebellion against God (*12³*).¹

As regards punishment, these prophets are concerned chiefly with the judgment on the nation, though occasionally they deal with specific individuals (*Am 7¹⁷*, *Hos 1-3*, unless those chapters are entirely figurative [*Is 22^{22ff.}*]). Isaiah also discriminates between classes within the nation: it is well with the righteous, but woe to the wicked (*31¹⁰*); the nation is doomed, but a remnant will escape (*10²⁰*).

These prophets are for the most part so absorbed in the guilt and punishment of Israel that they mostly say nothing as to forgiveness or treat it as impossible (*Jer 13²³*). The great exception is Hosea; according to him, Jahweh pleads with His people to repent, and offers them a free forgiveness (*11^{6f.}*). There is no reference to sacrifice or any ritual conditions of forgiveness.

Ezk 18 repudiates the doctrine that children suffer for the sins of their parents.² Both Jeremiah and Ezekiel insist on the total and universal depravity of their fellow-countrymen in their own time, and Ezekiel extends this to Israel throughout its history (*Jer 5¹⁻⁵ 8⁸*, *Ezk 16, 20*).

These prophets also deal with the sins of Gentile nations. We have already mentioned the emphasis which they laid on social wrong-doing; they also denounce idolatry and other superstitions, whether connected with the worship of Jahweh or with that of foreign deities.

5. Exilic and post-Exilic Judaism.—(a) *Biblical, together with the Wisdom literature of the Apocrypha (in part).*—The Priestly Code and the later prophets are by no means indifferent to the ethical and spiritual aspects of sin, but we find in this literature a special interest in sins against the ritual laws (*Ezk 40-48*, *Hag 1²*, *Zec 6¹² 14¹⁶⁻²¹*, *Jl 1⁹*, *Mal 1⁸ 3⁸⁻¹⁰*).

It is often said that the special attention given to sin-offerings in the Priestly Code is due to the deepened sense of sin in this period, but this is doubtful. In all times the idea that sacrifice atoned for sin was common; what was new in the Priestly Code was the limitation of atoning value to special sacrifices and of the efficacy of these sacrifices to sins that were not conscious or deliberate (*Lv 5*).

The sense of sin, of the unhappy alienation from God arising out of sin, together with the feeling of penitence, finds fuller expression in the confessions and aspirations of the Psalter, etc., than in the earlier literature—e.g., *Ps 51*, *Neh 1*. On the other hand, some of the Psalms breathe a spirit of self-righteousness which seems to argue a defective sense of sin (*Ps 18²⁰⁻²⁴*). Probably, however, in such passages the writer is thinking of Israel as the loyal servant of Jahweh, in contrast to the idolatrous heathen, and is not claiming absolute righteousness for himself.

The literature of this period shows in many ways a raising of the moral and spiritual standard. A comparison of the narratives in the Priestly Code and in Chronicles with the corresponding narratives in the earlier literature, *J, E, Samuel, Kings*, shows that after the Exile the Jews regarded as sinful much that was not condemned in earlier times; e.g., *1 K 11¹⁻⁸* does not seem to see anything amiss in the populousness of Solomon's harem; what was wrong was that many of the

women were foreigners; but the Chronicler has suppressed this account of the harem; as far as he is concerned, one might suppose that Solomon had only one wife, Pharaoh's daughter. A high ethical standard is set in *Ezk 18*, *Job 29, 31*.

The universality of sin is asserted (*Ps 14*, *Pr 20⁹*), though *Ezk 14¹⁴* suggests that exceptionally righteous men, like Noah, Daniel, and Job, might be saved by their own righteousness.¹

The OT does not develop any formal doctrine of the origin of sin, but explains sins variously according to the circumstances of individual cases. Human nature is such that man sins through the influence of different motives and causes—the pride engendered by prosperity, the distress arising from poverty (*Pr 30⁹*), indolence (*26^{13ff.}*), lust (*27²⁰*), persuasion by men (*1¹⁰*), etc. Sometimes, indeed, God Himself is spoken of as causing men to sin (*Is 44¹³ 63¹⁷*, *Ezk 20²³*); but probably this is a rhetorical way of saying that God has ordained that indulgence in sin should make men more prone to sin—to put the idea in modern terms. Whether there is any real difference between the two forms of expression may be doubtful.

The literature of this period is much occupied with the relation between sin and suffering. In *Dt 30*, etc., *Ezk 18*, etc., *Ps 1*, etc., the doctrine is taught that a man's external circumstances correspond to his character and conduct: the righteous prospers, the sinner is unfortunate; accordingly, suffering and misfortune are indications of sin. Many of the Psalms suggest that suffering had awakened a sense of guilt in the writers—e.g., *32⁴*, *119⁶⁷*. On the other hand, the book of Job, *Ps 73, 37*, etc., repudiate the view of close correspondence between a man's conduct and his external fortunes. Isaiah 53 represents the sufferings of the righteous as providing salvation for sinners, and as borne willingly—teaching on a much higher level than the old idea that the guilt of the sinner was shared by his kin and his fellow-countrymen, but yet in a way a development from it, involving the principle of the vicarious efficacy of suffering.

It is a natural characteristic of the Wisdom literature that it should lay stress on the moral and spiritual value of 'wisdom,' and speak of sin as 'folly.'²

(b) *Apocrypha (in part) and Apocalyptic literature.*—In spite of Job, the doctrine of inherited guilt persisted; Tobit prays that he may not be punished for the sins of his fathers.³

As regards the origin and causes of sin, there is as little formal theory and as great a variety of treatment as in the literature dealt with in the last section. Sin is due to the wilfulness and evil self-will of man (*Sir 15¹¹⁻²⁰*, a passage which expressly controverts the teaching found elsewhere [*2 Es 3²⁰*], that it is due to God); it is an inheritance from Eve (*Sir 25²⁴*), from Adam (*2 Es 3²¹⁻²³*)—a suggestion of the doctrine of original sin; it is due to fallen angels and demons (*En. 9⁶ 15¹¹*); the wide-spread belief in demonic possession inevitably led to the ascription of much wrong-doing to this cause. The idea of the tendency to sin being inherited from Adam—i.e. of original sin (*2 Es 4²⁰*) as distinguished from the later Augustinian doctrine, which is really one of original guilt—regards this inborn tendency as the cause of sin, and inclines to limit the responsibility of the individual. On the other hand, the doctrine of transmigration (*Wis 8^{19f.}*) maintains responsibility, even though the tendency to sin is held to be inborn.

As to its nature, sin is still regarded as rebellion against God (*Wis 3¹⁰*), as that which is contrary to the will of God; since God had made known His

¹ Cf. Smend, p. 206; O. C. Whitehouse, *Isaiah I.-XXXIX. (Century Bible)*, Edinburgh, 1905, p. 56.

² Cf. *Jer 31^{26f.}*, but, on the other hand, see *154*.

¹ Cf. Schultz, ii. 295 f.

² See Prov., Ec., Wis., Sir., etc., *passim*; cf. also above, § 2.

³ To *32-5*; cf. *13⁹*, *Jth 7²*, *Dn 9^{4f.}*, *Bar 1¹²⁻³⁰*.

will to the Jews in the Pentateuchal law, sin for them consisted largely in breaking that law (Sir., Prologue, 41⁸ 49⁴, Mac., *passim*). Wisdom, following Hosea on the one hand and Plato on the other, sees salvation in wisdom (9¹⁸) and sin in ignorance and folly (22¹¹, 31¹ 54⁶). The Apocalyptic literature, again, implies that a special sinfulness attaches to men of power and wealth, kings, nobles, princes (En. 38² 54² 67⁸⁻¹³ 94²).

The idea of the universality of sin is found in 2 Es 3 7⁴⁵⁻⁵⁶ 8³⁵:

'For in truth there is no man among them that be born, but he hath dealt wickedly.' In 38⁶, however, there is a qualification: 'Thou shalt find that men who may be reckoned by name have kept thy precepts, but nations thou shalt not find.'

Similarly, in the Prayer of Manasses:

'Thou therefore, O Lord, that art the God of the just, hast not appointed repentance to the just, as to Abraham, and Isaac, and Jacob, which have not sinned against thee.'

Further, we find frequently in Sir. (e.g., 7¹⁶ 8¹⁰) the contrast between 'sinner' and 'righteous', which is common in Psalms and Proverbs, implying that, however universal sin may be, practically men differ so much in this respect that some may be styled righteous and others sinners. But a closer investigation shows that the distinction is often what we should call sectarian rather than moral or spiritual: the professed worshipper of Jahweh is righteous; others are sinners. Sin becomes merely the lack of external adherence to certain sectarian views and practices.

The growing belief during this period in a future life, in resurrection, and in a judgment after death gave a larger importance to the consequences of sin, extended its punishment to an indefinite period, if not to eternity, and invested it with all the terrors of supernatural torture (Jth 16¹⁷, 2 En. 10⁶, 4 Mac 12¹⁹).

By this time sin was largely regarded as concerning the individual, but the idea of national sin, sometimes arising from wrong-doing by only a part of the people, still survives (Ps. Sol. 2).

According to 4 Mac 5²⁰, all transgressions of the law, whether small or great, are equally sinful; but Jub. 7²¹ mentions three sins as the special cause of the Flood: fornication, uncleanness, and all iniquity; there is a general tendency in this literature to lay special stress on sexual sins. This may be seen in the various lists of vices and crimes which summarize the ethical position (Wis 14²⁵, Gr. Bar. 8, 13, Test. Jud. 16-19; cf. Test. Reub. 3).

6. Pharisaic, Sadducaic, and Rabbinic Judaism. —It seems impossible to avoid the conclusion that Orthodox Judaism, at all times and even now, has laid undue stress on external observances; sin has largely consisted in the neglect or breaking of external laws, often concerned with matters of mere ritual. Witness the supreme importance attached to the Pentateuch and the Talmud, and the extent to which these, especially the latter, are preoccupied with the details of the ceremonial law. Naturally this tendency is exaggerated among the less advanced Jewish communities —e.g., in Russia and Poland. Yet such a tendency is not necessarily incompatible with a high morality; there is an advanced ethical standard in the law and the Talmud, if only it can maintain itself side by side with zeal for ritual. Moreover, these works do not ignore the inner and spiritual side of religion. C. G. Montefiore is justified in saying:

'The Law was not a mere external law, fulfilled from fear of punishment and for hope of reward. It was the Law of the all-wise and all-righteous God, given to Israel as a sign of supreme grace. It was a token of divine affection, and in its fulfilment was the highest human joy.'¹

This statement could be supported by quotations from Jewish writers of every period. Thus

¹ *The Synoptic Gospels*, London, 1899, ii. 503.

I. Abrahams tells us, 'Sin is uncleanness.'¹ Doubtless physical, ceremonial uncleanness was often thought of as sin; but, on the other hand, uncleanness is often a figure for spiritual corruption. There is a similar combination of the ritual and ethical in *Abhôth*, v. 10 f., which names as the seven main transgressions neglect in the matter of tithes, of the offering of the dough-cake, and of the seventh-years fruits; corrupt administration of justice; profanation of the NAME; idolatry; incest; murder; and failure to observe the Sabbatical year. Heretical exegesis of the Pentateuch is apparently included under the corrupt administration of justice. Again, we find in *Abhôth*, iv. 5, the pregnant saying:

'The reward of precept is precept, and the reward of transgression is transgression.'

So far we have been speaking of orthodox Judaism; such sects as the Hasidim and the various bodies of Reformed Jews lay less emphasis on the ritual law and more on the ethical and spiritual features of Judaism.

As regards the origin and causes of sin, later Judaism has inevitably been influenced by general speculative thought. Already in Job 9 f. it is suggested that God is responsible for injustice and wrong-doing. Later writers are often occupied with the problems which we connect with the terms 'free will' and 'divine sovereignty.'

According to Josephus, the Sadducees emphasized man's control over his actions: 'God is not concerned in our doing or not doing what is evil . . . to act what is good or evil is at men's own choice.'² The Essenes, on the other hand, asserted that 'fate governs all things,'³ or that 'all things are best ascribed to God.'⁴ The Pharisees occupied an intermediate position; thus, 'when they determine that all things are done by fate, they do not take away the freedom from men of acting as they think fit; since their notion is, that it hath pleased God to make a temperament (*κατάστασις*, rather 'combination') whereby what He wills is done, but so that the will of man can act virtuously or viciously.'⁵ Or, as *Abhôth*, iii. 24, puts it: 'Everything is foreseen (*יָדוּעַ*), and freewill (*חֵפְז*) is given. And the world is judged by grace; and everything is according to work.'⁶

Later Judaism, with the exception of a measure of antinomianism in some of the Jewish mystics, has always asserted responsibility and ethical obligation, but there has also been a tendency to lay some of the responsibility for human sin upon God. Sin is partly due to the *Yetser hara'*, יֵצֶר הָרָע, the evil nature in man; and this was implanted in him by God. The phrase is often rendered 'evil impulse' (or 'tendency'), and this is according to its usage.

'The extraordinary thing about this theory of the origin of sin is that, in the last instance, God is the cause of Sin; for, as Creator of all things, He created the *Yetser hara'* in Adam, the existence of which made the Fall possible (*Beresith rabbah*, c. 27). . . . The Almighty is made to say: . . . "It repenteth me that I created the *Yetser hara'* in man, for had I not done this he would not have rebelled against me (*Yalkut Shim. Beresh. 61*)."⁷

A similar view was held by Baalshem, the founder of the Hasidim: 'We should thus regard all things in the light of so many manifestations of the Divinity.'⁸ In the Kabbala, too, God is the author of evil, seeing that He created both the just and the unjust, and formed man of a spirit of good and a spirit of evil.⁹ Such teaching implies the universality of sin; the Talmudic statement that children of a year old are free from sin need not be taken literally.¹⁰

As Abrahams tells us, 'Rabbinic Judaism took over from the Old Testament a belief that disease was a consequence of sin.'¹¹

Both Philo and the Rabbis follow the OT in teaching that God's desire to forgive and the divine provision for forgiveness anticipate and stimulate

man's repentance.¹ The conditions of forgiveness are confession, repentance, amendment or good works. Since the final destruction of the Temple there has been no question of sacrifice, but to some extent, especially with the less enlightened, the ceremonies of the Day of Atonement have been credited with atoning value.² On the other hand, the prayers for forgiveness in the liturgy of the Day of Atonement illustrate the ethical and spiritual character of the Jewish doctrine of sin.

SIN (Hindu).—1. Vedic.—As in the *Rigveda* is found the most developed expression in Vedic literature of the concept of righteousness, so that *Saṁhitā* contains the most elevated expression of the sense of sin and the desire to be set free from it. Varuna is the god to whom the sinner addresses himself, as Varuna is the god who is omniscient, and who of himself or by his spies knows the thoughts of men. In the hymn VII. lxxxvi. the poet with unusual earnestness asserts his anxiety to be at peace with Varuna, of whose anger with him he is convinced by the testimony of his friends. He assures the god that the sin which he has committed, whether his own or inherited from his father, is not deliberate; heedlessness, drunkenness, dicing, passion, and thoughtlessness are pleaded as excuses; even sleep may produce wrong-doing, and the older may be involved in the sin of the younger. The god is therefore invoked to set free the sinner from his bonds, as the calf is released from the rope which fetters it. The hymn itself does not reveal the cause of the poet's appeal, and it is most probable that the sense of sin must be considered to have been brought home to him by disease, as is admitted freely in the later hymn VII. lxxxix., but even on this assumption the hymn is not without moral value. It confesses sin, even if it seeks to explain it; it assumes the justice of the divine anger, which it seeks to remove by supplication, probably accompanied by offering, though the hymn does not expressly say so. On the other hand, it is impossible to find in it any great depth of moral feeling, and it is certainly unnecessary to see in it proof of the influence of Semitic religion on early Indian belief.³

Beside this comparatively elevated conception of sin as an offence against the divine majesty there appears, freely enough in the *Rigveda* and predominantly in the *Atharvaveda*, the more primitive conception of sin as a pollution which can be removed by physical means. It is not difficult to trace remains of this earlier view in the hymns to Varuna: from VII. lxxxix. it is plain that the sinner was afflicted by dropsy, and the watery nature of the disease can hardly have failed to suggest connexion with Varuna, who is even in the *Rigveda* closely connected with the waters. Nor is it unlikely that Varuna's power to loosen the bonds of sin is derived ultimately from the cleansing power of the waters. In another hymn the waters themselves as goddesses⁴ are entreated to carry away the sin and untruth of the poet.

So Agni is asked to loosen the bonds of the sinner,⁵ for fire by itself is potent to destroy, by burning, evil. In place of the more complicated conception of fetters imposed by a god, the sin itself is regarded as the fetter.⁶ The same conception of sin as a kind of disease is implicit in the view of inherited sin or sin which comes from contagion: sin can be obtained not merely from the father, but from the mother and other close kindred.⁷ In other cases the kinship of sin to a pollution is more evident: the black bird, the harbinger of Nirrti, the goddess of misfortune, by its excrement creates guilt on the person affected; the wailing of the women in the house of the dead creates a pollution on the kin; the lowing of the victim at the sacrifice lays on the sacrificer the burden of a sin which he must expiate.⁸ Even the sins of other men may pass over to a guiltless man,⁹ and in this category perhaps must be reckoned the mysterious sins caused by the gods which appear in the *Yajurveda*.⁶ Sin, therefore, it is legitimate to suppose, was to the Vedic Indian primarily the actual pollution of disease present in his body, and only by a gradual process of moral development was the disease interpreted as the punishment inflicted for an act, or thought, or word, displeasing to gods who exacted obedience to moral laws.

In the methods prescribed for the removal of sin, of which the later *Saṁhitās* give full details, the material character of sin and its spiritual nature are constantly recognized in close union. The former aspect is prominent in the simple process of sin-transfer, which is one mode of removing guilt: the gods themselves set the example by transferring the guilt of the blood of the sacrifice to one man after another until it rested finally with the slayer of an embryo, the most guilty of sinners.⁷ So a man seeks to transfer his own sins to others.⁸ At the end of the *āsvamedha* the sins of the sacrificer are removed by an offering made on the head of a bald repulsive-looking man who stands in the water of the concluding bath; this man at the end of the whole rite is driven away into the forest, bearing with him the sins of the village out-castes.⁹ Another version¹⁰ attributes to the water of the bath, after the sacrificer has bathed in it, the power to drive away sin from those who have offended, although they themselves have taken no part in the sacrifice. Even more elaborate is the scheme of the *varuṇapraghāṣas*,¹¹ one of the four-monthly sacrifices. The wife of the householder is enjoined to confess to the priest what lovers she has had, the declaration serving as a mode of expiation; cakes in platter form are baked, one for each member of the household, and offered in the fire, thus removing the sins of the members of the house, which are deemed to be transferred to the cakes; the ceremony is closed by a bath in which husband and wife wash each other, clearly as a species of purification, while the moral side is brought out in a prayer to Varuna for forgiveness for any sin committed by the sacrificer and his household, in public or in private. In the ritual of the *soma*-sacrifice there is a curious rite: the priest offers in the fire splinters of the post to which the animal victim has been tied, and with each he utters a formula asking remission

of the sin which has emanated from the gods, from men, from the fathers, and from one's self.¹ But cases occur also in which an ordinary sacrifice is offered to remove sin, without recourse to magic, such as the expiation of a false oath by an offering to Agni Vaiśvanara prescribed in the *Taittiriya Samhitā*.²

This external view of sin, which clearly was the most prevalent in Vedic thought, explains the failure to rise to any distinction between neglect of ceremonial duties, natural defects, and real offences against the moral law. The only difference which is ever recognized in the texts of this period is in the relative gravity of crimes: in the *Yajurveda*³ we find a list (varying in detail in the different *Samhitās*) which exhibits a scale of offenders ascending in heinousness, from the man who has allowed the sun to rise before he has performed a ritual duty, or to set before he has completed such a duty, through the man with black teeth or bad nails, the man who has married before his elder brother and the latter (ranked, however, as the more guilty), the slayer of a man, and the slayer of a Brāhman, to the slayer of an embryo. In accord with this the *Grhya* and *Dharmasūtras* reveal no trace of distinction between ceremonial and moral duties, though they differ for the better from the ritual of the Avesta by observing, as a rule, some degree of moderation in the penalties which they impose on sins of either kind. Naturally the tendency to invent remedies for every form of sin was developed by the priest, who found profit in these performances, and already in the Vedic period in such works as the *Sāmavidhāna Brāhmaṇa* appears a literature of *prāyaścitta* rites intended to avert the evil consequences of error, moral, social, and ritual, by processes which in the main are those of magic, eked out with prayers and confession of fault.

It would be natural to expect to find in the *Upaniṣads*, which on the whole represent a decided reaction against the ritualism of the *Brāhmaṇas*, a careful examination of the real nature of sin and a distinction between ceremonial and morality. But the outlook of the *Upaniṣads* is almost wholly intellectual; the problem of conduct is not raised as the starting-point of discussion and inquiry, which is instead the question of the relation between the individual and the absolute, and the fundamental doctrine of the *Upaniṣads*, which merges the individual at death in the absolute, renders it difficult to find a place for considerations of moral action in the seeker of true knowledge with its resulting release from the bonds of transmigration. In contrast to knowledge, all action is of inferior worth, since it leads to rebirth. To the older view, which rewarded good deeds with heaven and punished evil with hell, there is now added the doctrine that all actions lead to their deserved fruits in the form of rebirth on earth, with or without an interval; but the moral value of this principle is greatly diminished, not merely by the fact that all action is ultimately regarded as evil, but also inasmuch as no criterion is proposed by which a man may discriminate between acts good and evil, the distinction being left to the ordinary views of men. Moreover, there does appear, though in an isolated passage,⁴ the dangerous and immoral doctrine that the most evil deeds are annulled by the possession of true knowledge.

2. Post-Vedic.—In its attitude to sin Jainism is a faithful exponent of the prevailing view among the ascetics of the Brāhman community at the

time when the system of Mahāvira took definite shape. The ideal aimed at by the ascetic is to suppress all natural desire, and to Mahāvira belongs the distinction of carrying the principle to its most complete extent. Such a doctrine, however, clearly precludes in theory the development of a sound ethical system, since it rests on the twofold basis of pure egoism and of a conception of the Ego which regards all its desires as evil and its true aim as the negation of all earthly interests. Thus Jainism has accumulated an extraordinary system of complicated restrictions, violation of any of which is a sin to be expiated; these restrictions so cover the field of human action that a layman bent on following the path of salvation must not practise agriculture or make a living by military service, a trade, crafts, teaching, singing, or music; and the avoidance of taking insect life is carried to an excess which is burdensome and irrational. But Jainism avoids the possibility inherent in the view of the *Upaniṣads* which allows knowledge to outweigh sin; its restrictions on conduct are an essential part of the system, and obedience to them is an integral element of the effort to attain enlightenment and freedom from transmigration.

In early Hinduism, as expressed in the *Mahābhārata* and the earlier *Dharmasāstras*, such as those of Manu and Yājñavalkya, the principle is accepted that each deed brings its recompense, sometimes on earth, but more normally in a future birth; but no effort is made to set out a rationale for the distinction between meritorious and evil acts. Nor is the doctrine of *karma* without exception; there are traces of the old belief in sin-transfer: the evil king must bear responsibility for the sins of his subjects;¹ the priestly guest who meets with scant hospitality transfers to his host his evil *karma*.² More important is the doctrine of the effects of parental sin: it is expressly asserted that a deed may not bear fruit at once, but may defer its effect until it bears fruit in a son, grandson, or other descendant,³ and a modification of this idea ascribes to the child a character derived from father or mother or both.⁴ A wife too absorbs *karma* from her husband, and does not stand necessarily on her own merits—a doctrine expressly asserted in the *Rāmāyaṇa*⁵ and implied in Manu.⁶ Moreover, the epic mentions cases where the justice of the rule of retribution is assailed. Thus Kṛṣṇa asserts⁷ that her misfortunes are due to the grace (*prasāda*) of the creator, who has thus recompensed an error against the gods committed by her in childhood, in a way clearly out of all proportion to the sin, while the sage Māṇḍavya⁸ is so incensed by the action of Dharma, the personification of justice, in causing him to be impaled by the king as retribution for his ill-treatment of an insect in his childish days that he curses Dharma to be reborn as a Śūdra. In strict accord with this imperfectly ethical view of sin is the multitude of means by which it can be atoned for. All the sin of a king's conquest of the earth can be wiped out by sacrifices, if accompanied by large gifts to the priests such as cows and villages; and presents to a sacred bull expiate a king's breach of his oath.⁹ Confession and penance avail to remove sins, even intentional crimes, but the same effect is accomplished even more simply by gifts to the priest and resort to places of pilgrimage.¹⁰

A further conception of the destruction of sin is

⁴ *Kauṣītaki Upaniṣad*, iii. 1.

developed in the *Bhagavad-Gītā* (q.v.), from which it passes over into the sectarian religions as a common property. The *Gītā* in effect enunciates the doctrine that the grace (*prasāda*) of the lord, coupled with the antecedent loving faith (*bhakti*) of the devotee, has power to cancel the results of actions committed in a previous birth. This doctrine attained favour through Rāmānuja (11th cent. A.D.), but he left the question of the exact relation between the devotion of the worshipper and the grace of god to become the basis of the distinction between the Tēngalai sect and the Vādagalais. To the latter the process must begin with the act of the man who seeks liberation, while the former make grace proceed spontaneously from the god. The latter view is clearly the more common opinion of the sectarian cults generally, but, even when effort is demanded from the devotee, in no case is there an attempt to devise a moral code binding on the devotee as an essential preliminary to the exercise of grace, and the doctrine of grace in effect overthrows the whole rationale of the *karma* theory, without substituting for it any basis of a moral system.

The defect in the religious systems is not remedied by the philosophies, which in their intellectualism approach the doctrine of the *Kauṣītaki Upaniṣad*, that knowledge avails to counter-balance any and every crime. To Sāṅkara the recognition of the identity of the self with the absolute and the unreality of the whole empirical universe from the *Īśvara* downwards is essentially an action which cannot be explained by causal categories above which it stands, and all action alike, good or bad, is therefore in no essential relation to this knowledge. The empirical world remains, indeed, and Sāṅkara accepts it fully as real for conventional purposes, but the fact that its reality was conventional was doubtless sufficient to prevent him from seeking to examine the nature of moral judgments as actually formed by men. The other systems were equally indifferent to questions of conduct.¹

The result of this negative attitude on the part of religion and philosophy alike can be clearly seen in the later Hinduism of the *Purāṇas* and the law digests which devote their energies to multiplying the number of sins, ceremonial, social, and moral, between which they make no distinction, but at the same time regard all these offences, of whatever degree, as capable of expiation by *prāyaścittas*, of which doubtless the most important point was often the profit to be derived by the priest by whom the penance was enjoined and under whose direction it was carried out, or by the saving grace of a sectarian deity whose favour can be won by acts of pilgrimage or devotion of purely formal character—doctrines wholly incompatible with the development of any deep moral sense of the heinousness of wrong-doing in itself. Characteristic of this period is the glorification of all manner of sacred places, mere presence within whose limits is enough to remove all sin; there is practically no limit to the creation of *māhātmyas*, legendary accounts of the origin of the sanctity of these places and celebration of their powers, though few of them have attained such wide celebrity as the Ganges, which has sanctity above all other rivers. The mere reading of *Purāṇas* and hearing them read destroys sin—a doctrine which brings from Kabīr the indignant protest² that a man cannot be freed from the guilt of killing by hearing scores of *Purāṇas*. Equally efficacious, and less troublesome than pilgrimage, is the repetition of the names of the

god, and, *Aṣṭottaraśatanāmans* and *Sahasranāmans*, claiming to be parts of *Purāṇas*, exist for all the greater and even some of the minor deities. Nor is it merely a man's own evil deeds that can thus be undone: prayer and offerings avail to rescue ancestors and descendants from the effects of their own actions. A true Vaiṣṇava, according to the doctrine of the *Brahmavaivarta-Purāṇa*,¹ who is thoroughly devoted to Kṛṣṇa, not merely acquires all knowledge and virtue, enjoys on earth superhuman powers, and goes to the world of Kṛṣṇa on death, but liberates from rebirth seven generations before and after himself. Any person who meets him on the road is cleansed by the mere fact from all the sins committed in seven previous existences, and to attain this position no course of religious exercises or devout penances is necessary; all that is requisite is the love of Hari or Kṛṣṇa and constant thought of him, subject, however, to the condition that the necessary initiatory *mantra* has been acquired from the teacher, whose profit is thus adequately secured.

SIN (Iranian). — I. Introductory. — Speaking generally, it is chiefly in the matter of the respective teaching about sin (though also in some other momentous points of doctrine) that the Iranian stands in marked contrast to the Indian religious systems and approaches near to the general Christian idea. In the last we find certain well-defined elements as necessary constituents of the theory of sin. These are: (1) the idea of a Supreme Being, endowed with a will, which will requires certain acts to be performed on our part and other acts to be refrained from; (2) consequently, the idea of a moral law, which is the expression of this divine will, formulated and delivered to us as a complete system by which we, as creatures, are bound; (3) the idea of a creature having also a will, endowed with freedom of choice, i.e. having the power to choose between willing obedience to the moral law (or divine will) and its opposite.

Sin is nothing but a refusal, on the part of the free choice of the human will, to conform to the divine will. If one or other of these conditions is wanting, we cannot be said to have the Christian acceptance of the term 'sin.'

Here it must be noted that the moral law and the will of God are taken as identical terms. To express the idea in a familiar way, we may say that a thing is good because God wills it, and God wills it because it is good. In other words, God could not will a thing unless it were good in itself, and no thing could be good unless it were in accordance with the will of God.

It is evident that some of the Oriental systems recognize one or other of the elements of this conception of sin. But, on the other hand, we find that there are some in which the fundamental idea is a supreme law, though one that is impersonal—a blind force—yet eternal and unconscious, a kind of *fatum* or *moipa* over-ruling the gods themselves, to which these divinities, even those in the highest rank, are subservient, and only agents. This law, influencing alike the physical and the moral order of things in the universe, evidently cannot be taken as the equivalent of the supreme and conscious will of a God who is the creator and governor of the worlds. Being unconscious, this law does not presuppose a personal will.

It will be readily understood that all such religious systems, in fact, are either entirely founded on a basis of pantheism or incline towards pantheism. It is precisely in pantheism that the

¹ See A. B. Keith, *The Sāṅkhya System*, London, 1919, pp. 371, 381.

² *Sākhī*, ii. 209.

¹ See H. H. Wilson, *Works*, London, 1861-77, iii. 107 f.

'order' of things—physical and moral alike—the constant march of nature, or of the great All, to which belong and from which proceed the gods and lesser beings, perforce becomes a 'law,' a 'wheel,' an impersonal and unconscious 'way of life.'

Again, no system which fails to recognize the free choice of the human will as a necessary basis of morality can be said to possess such a conception of the idea of sin as Christians have. Such religions are nothing but systems of fatalism or systems with the tendency towards fatalism.

These remarks are true of all the Indian religions from the Vedic downwards. The striking exception is the very limited and early-forgotten system connected with the Vedic deity Varuṇa, essentially the deity of the moral law, whose *dharma* (decree) and *vrātāni* (vills or laws) are the foundations of the moral (as of the physical) law. Sin is the breaking of these laws; 'we men daily do violence to thy will.'²

All this is singularly like the Iranian moral doctrine in both its more ancient and its more recent forms, and has been the main reason leading many scholars, from Darmesteter onwards, to equate, if not to identify, the Vedic Varuṇa with the Iranian Auramazda—Ahura Mazda.³ But, whether the deities themselves be identified or not, it is clear that their ethical systems, especially as regards the doctrine of sin, are practically the same.⁴

Passing now to consider the Iranian system, we remark that the doctrine of sin in all its aspects plays a very large, we may say—at least with regard to the later epochs of its history—a preponderating, part in the Mazdayasnian or Mazdean religion and philosophy. We may consider this doctrine in three presentments: (1) in the Old Persian inscriptions of the Achæmenian kings, (2) in the sacred books of the Avesta—*Gāthās* and later Avesta, (3) in the Pahlavi exegetic and theological literatures.

2. The religion of the Achæmenian kings.—Extremely limited in extent and brief in expression as are the religious beliefs preserved in the rock-cut inscriptions of the great Darius and his successors (532–336 B.C., approximately), they yet clearly contain the notion of sin, i.e. of evil as a transgression of the will of the supreme deity, the creator Auramazda.

'Oh man!', says Darius, 'despise not the commands of Auramazda. Turn not away from the right path. Sin not.' The last sentence, *ma starava*,⁵ contains the verb *star*, meaning 'to sin,' which occurs frequently also in the Avesta.

Of all the sins condemned by the morality of the Achæmenids the most serious is undoubtedly the lie (*drauga*). On this point the truths expressed in the inscriptions are in wonderful accordance with the notions on the subject given by Greek historians, and also with Iranian tradition itself.

E.g., Darius cries out: 'O thou who shalt be king after me, keep thou from lying! Should a man be found to be a liar, deal thou with him severely, if thou desirest to keep thy kingdom whole.'⁶ All evils are attributed to lying. Darius

tells us that during Cambyzes' absence in Egypt 'the people became hostile and lying became widespread in the land.'¹ In another verse the same king, relating how a rebellion had taken place in many of the provinces of his vast empire, states that 'these provinces had broken into rebellion; it was lying that had made them rebellious.'² Therefore the king prays to Auramazda to guard his kingdom from lying, as it was one of the three chief scourges of a people: 'May A. protect this land from the hostile inroads, from bad harvests, and from lying.'³

Indeed the importance attached to this evil of the lie led J. H. Moulton to the belief that we may regard Drauga as a proper name and as representing the Angra Mainyu, or Evil Spirit, of the Avesta, whose absence from the royal inscriptions has been urged as one of the objections to the identification of the Achæmenian with the Zoroastrian faith.⁴

The other sins condemned by the kings are, on the one hand, rebellion of the subject against authority, on the other, despotism or cruelty on the part of the ruler.

Thus does Darius break forth with pride and say: 'A. has been my help . . . for I have neither been a liar nor a tyrant.'⁵

3. The Avesta.—Whether the form of Mazdeism preserved in the Avesta was a religion exactly identical with that of the Achæmenian kings or a different one, it is certain that the worship of the god Ahura Mazda is its most essential feature, and that Zoroaster and his followers have as good a right as the Persian kings to boast of being 'Ahuramazdeans.' This Avestic religion—especially in its most ancient form, as preserved in the *Gāthās*—is essentially a religion founded on a basis of morality, in the sense which we apply to the term. In spite of the dualism which is its most notable characteristic, the Avestic system of morality differs but little from what we term the Christian conception. Evil, it is true, is conceived as produced, in the moral and physical order alike, by an independent principle, an evil creator, eternal, and independent of the good God, and termed Angra Mainyu. But the good law is that of Ahura Mazda, as revealed by him to man. The Avesta contains the whole of this code, in both its moral and its ritual aspect. Besides, there is a special and technical term continually used to describe moral good, holiness, purity, conformity to the good law (*vanuhi daēnā*); the term is *asha*, which, according to phonetical rules, is etymologically identical with the *rta* of the Vedas.⁶ The opposite term *anasha* gives the adjective *anashavan*, as in the Vedic *anṛta*.

The Avesta treats the whole life of man, and the whole history of the world, as a 'spiritual combat.' Man is born endowed with free will, and at the start finds himself in the presence of two hostile armies, one of which is that of the good God, the other that of the Spirit of Evil. He must choose which of these he will serve, precisely as St. Ignatius Loyola pictures the Christian placed between the 'two camps,' or 'two standards,' of Christ and Satan. The whole life of man is a warfare, a perpetual struggle in the choice between good and evil. The Spirit of Evil may even tempt man, as he tempted the prophet Zarathustra himself, by calling upon him to renounce the good Mazdayasnian law, and promising him a great reward, even the sovereignty of the world:⁷

'No,' the Prophet replies, 'I will not renounce the good law, not even if soul and body and life shall part.'⁸

Here we have clearly the picture of the free will

⁸ *Ib.* 25, 26 (7 in *SBE* iv. 212).

making a choice between the divine law and sin. In fact, the whole of the Avesta bears witness to this doctrine.

The Vedic names for sin (*ṇas*, 23 times in the *Rigveda*, *āgas*, 18 times) in the Varuna cycle scarcely appear at all in the Avesta: *aenanh*,¹ *aghem* (only in derivatives, perhaps in *aghem vimanōhim*, 'sin of unbelief').² But the more recent Iranian languages (see below) lead us to conjecture also the existence of a term **vināsa*. The verb *star*, 'to sin,' which occurs in the inscription of Darius quoted above, is frequent in the Avesta, whilst a substantive *stara*, 'sin,' seems to have existed.³

Throughout the Avesta we find specific sins enumerated with the punishment which they involve and (in the later Avesta) the temporal penances which can expiate them.

It must be noted that the moral law of the Avesta extends not only to external acts and words, but also to thoughts. This is very rarely the case in ethnical religions. It is also the reason why it is so frequently expressed in the sacred texts by the well-known formula: *humata, hukhta, huvaršta* ('good thought, good word, good deed'). Sin, on the other hand, is described by the three opposite terms: *dūzhmata, dūzhukhta, dūzhvaršta* ('bad thought, bad word, bad deed').

Certain sins which are reckoned as of peculiar heinousness in the Avesta are said to render the one who commits them *peshōtanus*, or *peretōtanus*—a term variously explained as signifying 'whose body (*tanu*) is steeped in iniquity or has morally perished' (de Harlez), 'one who pays with his own body' (Darmesteter), or 'one whose body is forfeit, i.e. guilty of a sin for which there is no atonement' (Bartholomae, Moulton). The word reappears in Pahlavi in the inverted form *tanāpuhar*. What kind of sin is this, for which, be it noted, the maximum penalty is 200 stripes? In *Vendīdād*, xv. 1-8, we are told that there are five sins which, unconfessed and unatoned for, make one *peshōtanu*. It is a strange list indeed: teaching one of the faithful another religion; giving bones too hard or food too hot to a dog; striking, frightening, or kicking a bitch with young; having intercourse with a woman during menstruation; having intercourse with a pregnant woman. But, heinous as these sins are, they can be expiated; whilst the *anāperatha* sins are inexpiable:

'For such there is no punishment, no expiation, no purification; for these acts are inexpiable for ever, for eternity.'⁴

As such are reckoned both burning and burying dead bodies, eating of the carcass of a man or a dog, unnatural sin, self-pollution. Probably these sins, at least in the beginning, were punishable with immediate death here and eternal punishment hereafter. Otherwise it seems strange that capital punishment seems indicated for a very few sins, such as throwing a corpse into the water, carrying a corpse alone, illegally attempting to carry out a ritual purification. The guilt of other sins is reckoned in terms of the number of stripes by the *aspahē ashtara* (horse-goad) or *sraoshō-carana* ('obedience-maker') arranged in ascending scale from five for a simple *āgerepta* (act of violence) through graver assaults up to 200; breaches of contract (*mithrō dryu*), up to 1000; violations of mortuary rites, up to 1000; sexual sins, 30 to 1000; ill-treatment and killing of animals, 50 to 1000; and, most astounding of all,⁵ killing an otter, 10,000.⁶ Whether these 'stripes' were ever inflicted or not, they had become little more than

the degrees on the thermometer, indicating the comparative guilt of various sins.¹

4. The Sasanian religion.—Instead of becoming weaker, as might have been expected, by the lapse of time, the moral system of post-Avestic Mazdeism developed further. The principal points are these:

(1) The basis of all morality is to be sought for in man's intellectual nature, and consequently in his free will. This is why children who have not yet come to the use of reason and adults bereft of reason are irresponsible. The age of reason varies from seven to eight years, inasmuch as before that time of life 'sin does not take root.'²

(2) All which is not according to the will of Ahura Mazda is sin.³

(3) Man is naturally created good, but Aharman (the Spirit of Evil) blinds him, hiding from his sight future retribution.

(4) It is owing to the fact of the soul being in the body during life that, not seeing future retribution, it commits sin; otherwise it would not commit it for any earthly consideration.⁴

(5) Aharman deceived the first human couple, *Māshya* and *Māshyōi*, and led them to commit sin by persuading them to eat the flesh of animals. So with every sinner. Thus the life of man is a spiritual conflict, an unceasing warfare.⁵

A system of moral theology and casuistic science grew up in the Sasanian schools. Here were compiled long lists of virtues including a code of duties for every state of life, as well as classified lists of sins.

For sin the generic term is *vanas*, from which is derived *vanaskar*, 'sinner,' words which have passed into the Armenian language, as *vnas*, *vnasakar*. In modern Persian and in Kurdish the word *vanas* appears, according to phonetic law, in the form *gunāh*, borrowed in the Arabic of the Qur'an as *junāh*.⁶

The summary of the contents of the original *Nasks*, or parts of the Avesta now lost,⁷ shows that some of the *Nasks* were veritable treatises of moral theology and of criminal jurisprudence, for in the Mazdean, as in other Oriental religions, no distinction is made between sin and misdemeanours of even purely civil or ceremonial nature. Hence endless chapters containing enumerations of such transgressions, their effects, and their appropriate chastisements, whether of a spiritual or of a civil nature. The enumerations of sins of all kinds are so constant and of such great length in the various Pahlavi writings that it would be tedious to repeat or even summarize them. A few examples must suffice.

One list of 30 sins is found in the *Mainōg-i Kīrāt*, xxxvi., as follows:

(1) Sodomy, (2) pederasty, (3) murder of a just man, (4) the destruction of *khvētūk-das* (next-of-kin marriage), (5) unfaithfulness towards an adopted son, (6) destruction of the sacred fire, (7) destruction of the otter, (8) idolatry, (9) religious indifferentism, (10) violation of trust, (11) support of wickedness, (12) laziness, (13) heresy, (14) witchcraft, (15) apostasy, (16) demon-worship, (17) theft and abetting thieves, (18) violation of promises, (19) maliciousness, (20) oppression in order to obtain another's goods, (21) persecution of the righteous, (22) slander, (23) arrogance, (24) adultery, (25) ingratitude, (26) falsehood, (27) persecution of the helpless (or the dead?), (28) pleasure in distressing the good, (29) abetment of sin and hindering of good work, (30) regret at having done good to others.

A shorter and somewhat more intelligible list is that of *Dinkart*, III. cix. 3:

Avarice, fraud, ingratitude, discontent, disobedience, violence,

³ See C. Bartholomae, *Altiran. Wörterbuch*, Strassburg, 1904, s.v.

⁴ *Vend.* III. 39.

⁵ *Id.* xiv.

⁶ This seems inexplicable—'de haute fantaisie,' says Darmesteter. The only explanation (surely an improbable one) we have seen suggested is that of V. Henry (*Le Parsisme*, p. 104) that perhaps the ancient Iranians tamed the otter and used it to catch fish! See also *Vend.* IV., xlii., xvi., xviii., etc.

mercilessness, tyranny, heresy, spiritual blindness (*kikih*), spiritual deafness (*karafih*), opposition to the law (*adatih*), 'and other faults.'

The *Mainōg-i Khrāt*, lix., has an interesting division of predominant sins according to the four primitive 'castes' or classes of the population.

Thus the characteristic sins (1) of the *priests* are hypocrisy, negligence, idleness, attention to trifles, religious indifference; (2) of *warriors*, oppression, violence, unfaithfulness to promises, encouragement of evil, ostentation, arrogance, insolence; (3) of *agriculturists*, ignorance, envy, ill-will, malice; lastly (4) of *artisans*, unbelief, ingratitude, improper talk, moroseness, abusiveness.

Certain sins specially condemned are pride and contempt of others, adulteration of food-stuffs, unjust weights and measures, cruelty to animals, useless destruction of cattle. Intemperance and drunkenness are condemned, curiously enough, because excess in drink causes excess in eating, and the latter hinders the recitation of the *Gāthas*.¹

Two mysterious sins or faults often mentioned in the last-quoted book and other treatises are *farābūt* and *aibūt*. It is not clear what these are, though great importance is evidently attached to them. According to the *Dinkart*, the former is intellectual pride ('I know no one superior to myself'), the latter contempt of others ('This other person knows nothing, he is backward and infirm,'² which recalls the Pharisee of Lk 18¹²). Quite different explanations are given by other writers. Attempts are made at other classifications of sins; thus two classes are distinguished, one of sins which injure one's neighbour (entitled *hamēmālān*) and one of sins which injure only one's own soul (*rūbānik*);³ or, again, 'antecedent vices,' such as concupiscence and anger, and 'consequent vices,' such as idleness and murder—apparently what we may term internal and external sins.

5. Trend of Mazdean teaching.—Glancing over the whole mass of Mazdean teaching, Avestan and post-Avestan, concerning sin, we cannot fail to notice that, whilst that ethical system condemns practically all those forms of moral evil which we and, we may say, mankind generally hold to be deserving of reprobation, there are other acts which to us seem strangely out of place. Of course some of them are violations of religious or ritual precepts, to which the Avesta and the Mazdean priesthood attach great importance. Under this head we can easily understand why it is sinful to let the sun shine on the fire.⁴ Other apparently grotesque or at least puerile condemnations of actions as sinful are those of walking with only one boot,⁵ or barefooted,⁶ or, still stranger, 'uno pede stando mingere'⁷—for which crimes Artā-i Virāf, the 'Persian Dante,' saw a man suffering atrocious torment in hell,⁸ as well as another tortured for eating whilst talking.⁹ Of these it may be said that possibly they were originally condemned for hygienic reasons. But the most astounding condemnation as of one of 33 most heinous sins, second only to unnatural lust and murder, is that of 'breaking off a *khvētūk-das*,' i.e. a next-of-kin (to us incestuous) marriage.¹⁰ This of course is only in strict accordance with the exaltation of that abominable practice, at least in post-Avestan times, to the rank of one of the most meritorious good works.¹¹

(a) *Merit and responsibility*.—Exact ideas were

¹¹ See art. MARRIAGE (Iranian), § 2.

held as to merit and demerit and the responsibility of the sinner. Good deeds done unconsciously or on the spur of the moment have little if any merit. The sacrifices offered in divine worship are always productive of merit (*kerfak*). Should the minister, by reason of want of attention, fail to receive any merit, the merit finds its way into a treasury of merits (*ganj*), placed in the hands of the spirits (*yazdān*), who have the power to bestow the contents on the souls of the just. The merit of good deeds, lost by sin, can be born anew in the soul after the confession, contrition, and good resolutions of the sinner. Parents are responsible for their conduct towards their children, husbands for their wives, superiors for those under them, in the event of their failing to instruct and correct them. A just man is also bound to instruct his fellow-man who is a sinner; otherwise he shares the latter's guilt and will incur great shame at the judgment;¹ similarly the husband who does not correct his wife.²

Proper fasting is fasting from sin, not from food³—a maxim in thorough agreement with Mazdean views on mortification and asceticism.

In cases of doubt as to sin the high-priest is to be consulted.⁴ Elsewhere, when one is in doubt whether an act is a sin or not, the act must not be done.⁵

(b) *Effects of sin*.—Sin produces demons. 'Various new demons arise from the various new sins the creatures may commit,' and apparently these demons even introduce confusion into the heavenly bodies and here on earth.⁶ All ruin and misery among mankind and animals come from man's sinfulness.⁷ It would even appear that grievous sin could actually turn men into actual demons; a case in point was that of the wicked Afrāsyāb (the Avestan Frarasyan, the great Turanian foe of Irān), who thus became a *dēv* and will not be saved at the end of creation.⁸ Very wicked men, who have only the name of humanity and whose lives are all sinful, are called 'demi-dēvs.'⁹

(c) *Punishment in hell*.—After death the unrepentant sinner is punished in hell (Av. *daožakhva*, from *duz-*, 'evil,' *ahu*, 'being,' 'life'; Pahl. *dūšahū*). Whether this hell was considered as eternal is doubtful; certainly many of the later schools contemplated its final destruction at the end of all things, and apparently the purification of those suffering in it. But in the earlier Avesta such epithets are used—especially *yavōi vispāi*,¹⁰ *utayūiti*—of both heaven and hell as seem to leave little doubt that the original idea was that of a real eternity of misery.¹¹

In the post-Avestan literature it is the celebrated 'Inferno' of Artā-i Virāf, with its minute and crude description of the gruesome sufferings of the damned in hell and its enumeration of the sins for which they are tortured, that supplies the most complete summary of late Mazdean teaching about sin and its chastisement.¹²

(d) *Contrition and confession*.—The means by which sin and its fatal consequences can be got rid of are contrition, purpose of amendment, and confession. True repentance (*paṭītiḥ*) is necessarily both internal and external. External duty, it is said, requires that the sin which the penitent knows that he has committed should be specifically confessed in words (*barā gūbishnō*); mental duty

⁴ *Ib.* 27 (*SBE* xxiv. 290).

consists 'in his renouncing it': 'in future I will sin no more.'¹ There are two formulæ of confession, called *patêts*; one is the great *patêt*, the other the little *patêt*. Sins must be confessed in detail, according to the manner in which they have been committed, whether 'by thought, by word, or by deed' (*minishnik*, *gûbishnik*, *kûnishnik*).²

LITERATURE.—The ideas connected with sin permeate so widely the whole Mazdean system, Avestan and post-Avestan, that it suffices to indicate all the translations of the scriptures and the commentaries upon them, and especially the *Pahlavi Texts* of E. W. West, in *SBE* v. [1880], xviii. [1882], xxiv. [1885], xxxvii. [1892], xlvii. [1897]. A useful brief summary of the chief points is V. Henry, *Le Parsisme*, Paris, 1905 (esp. ch. vi.); see also L. C. Casartelli, *La Philosophie religieuse du Mazdéisme sous les Sassanides*, Louvain, 1884, and Eng. tr. by Firoz Jamsajji, Bombay, 1889, as quoted in text, esp. chs. vi. and vii.

L. C. CASARTELLI.

SIN (Japanese). — 1. Definition. — The old Japanese word expressing the idea of sin is *tsumi*. But *tsumi* is both less and more comprehensive than our word 'sin': on the one hand, the deeds which the most ancient Shintô enumerates as *tsumi* form only a short list, which does not cover the vast field of the actions which we regard as sins; on the other hand, the notion of *tsumi* includes three distinct categories, viz. *kegare*, 'uncleanness,' *ashiki waza*, 'ill deeds,' and *wazawai*, 'calamities.' The *ashiki waza* category corresponds in a certain degree to our idea of sin. But from the mere fact of the combination of those three things under the single word *tsumi* we see that the ancient Japanese drew no clear distinction between ritual impurities, moral faults, and certain calamities. Ritual impurity—e.g., being dirty in body and clothing—was a want of respect for the gods; and calamities were regarded as signs of the displeasure of the gods for some offence, conscious or unconscious. Thus impurities and calamities became combined under the same title as actual sins, for the psychological reason that they were equally displeasing to the gods.

2. Different kinds of *tsumi*.—The chief sins of the oldest Shintô are enumerated in the following passage of the *Oho-harai no Kotoba* ('Words of the Great Purification'):

'As for the various sorts of offences which may be committed either inadvertently or deliberately by the heaven's increasing population, that shall come into being in the country, a number of offences are distinguished as heavenly offences: (viz.) breaking down the divisions of the rice-fields, filling up the irrigating channels, opening the flood-gates of sluices, sowing seed over again, planting wands, flaying alive and flaying backwards, evacuating excrements; these are distinguished as heavenly offences. As for earthly offences, there will be forthcoming a number of offences: (viz.) cutting the living skin, cutting the dead skin, white men, excrescences, the offence of (a son's) cohabitation with his own mother, the offence of (a father's) cohabitation with his own child, the offence of (a father's) cohabitation with his step-daughter, the offence of (a man's) cohabitation with his mother-in-law, the offence of cohabitation with animals, calamity through crawling worms, calamity through the gods on high, calamity through birds on high, killing the animals, the offence of performing witchcraft.'³

According to this text, the sins that might be committed by 'the heaven's increasing population' (*ame no masu hito-ra*, 'heavenly-surplus population,' a very old expression meaning the Japanese people, the origin of which appears in one of the most ancient myths of the *Kojiki*)⁴ are divided into two large classes, viz. *ama tsu tsumi*, 'heavenly sins,' and *kuni tsu tsumi*, 'earthly sins.'

The seven *ama tsu tsumi* here enumerated are grouped under this generic title because they are

the crimes which, in the mythology, were committed in heaven by the wicked god Susa-no-wo against the sun-goddess. This is easily seen from a simple comparison with the accounts in the *Kojiki* and the *Nihongi*, which, although differing in some minor details from each other and from the list in the Ritual of the Great Purification, are none the less essentially in agreement with this list. Breaking up the narrow embankments which separated the rice-fields and at the same time served as dams for keeping back the water, filling up the channels which conducted the water (indispensable to native cultivation), opening the ponds where it was most carefully preserved till the proper time—those were the most execrable crimes for a population of agriculturists; and that is why they put those crimes at the head of their list. No less hateful is the sowing, on a field already sown, of bad seed which will ruin the harvest.¹ The planting of wands (in the rice-fields) has already been explained.² As to the crime of flaying an animal alive, from the tail to the head, it is no doubt condemned not on account of its cruelty, but because of some magical reason which remains obscure, perhaps because of the evil use which might be made in sorcery of the skins thus obtained. However that may be, this crime, as well as that of evacuating excrements (i.e. in places not meant for the purpose) appears also in the number of wicked deeds committed by Susa-no-wo against his sister.

'He broke down the divisions of the rice-fields laid out by the Heaven-Shining-Great-August Deity, filled up the ditches, and moreover strewed excrements in the palace where she partook of the great food.' And again: 'As the Heaven-Shining-Great-August Deity sat in her awful weaving-hall seeing to the weaving of the august garments of the Deities, he broke a hole in the top of the weaving-hall, and through it let fall a heavenly plumed horse which he had flayed with a backward flaying.'³

The *kuni tsu tsumi*, according to the Japanese commentators, are those which have been committed since the time of Jimmu Tennô, the first legendary emperor; and it is almost certain that the difference between them and the *ama tsu tsumi* rests on a mythological basis. This explanation, if we interpret it historically, may be connected in a very real way with the diversity of races that appear successively at the origin of the Japanese people.⁴ In any case we cannot agree with the simple explanation of W. G. Aston, who did away with the difficulty by attributing to the author of the Ritual a rhetorical device, viz. the breaking up of 'the long list of offences into two balanced sentences.'⁵

The list of sins in this second category comprises, first of all, 'cutting the living skin' (*iki-hada-tachi*), which includes murder and wounding; it should be noticed also that every effusion of blood meant pollution, even for the victim. The sin of 'cutting the dead skin' (*shini-hada-tachi*) is easily understood when it is remembered that, according to primitive ideas, it was particularly impure to touch a dead body, and much more so to cut it up. The next two offences concern two diseases which are repulsive and therefore displeasing to the gods: 'white men' (*shira hito*), i.e. doubtless men afflicted with white spots on their skin, like lepers, and also albinos; and 'excrescences' (*kokumi*, 'superfluous flesh,' 'proud flesh'), a disease which we cannot specify more definitely from the text—unless we accept the interpretation of a Japanese commentator, who combines the two crimes into one, *shira-hi toko-kumi*, 'cohabitation in broad daylight' (*shira*, 'white'; *hi*, 'day'; *toko*, 'bed'; *kumu*, 'to unite,' 'to interlace');

⁴ See *Kojiki*, tr. B. H. Chamberlain, Tôkyô, 1906, p. 40; and cf. art. COSMOGONY AND COSMOLOGY (Japanese), vol. iv. p. 166b, and Revon, p. 41.

this view gains support when it is recalled that even the emperor could not have sexual intercourse except in the depth of night, before the first glimmer of dawn had appeared. The obscurity of the writing of those texts, in which the Chinese characters may be taken sometimes in their ideographic meaning and sometimes phonetically to represent Japanese words, prevents any elucidation of this point. There follow various kinds of incest and the sin of bestiality.¹ Then come several 'calamities,' viz. 'through crawling worms' (*hafu mushi*), i.e. the bite of serpents, millepedes, and other venomous creatures, all the more to be feared as the primitive hut had no floor; 'through the gods on high' (*taka-tsu-kami*), i.e. especially being struck by lightning; and 'through birds on high' (*taka-tsu-tori*), because, entering by the holes which every house had for the escape of the smoke from the fire, they could defile the food.² Next there is mentioned 'killing the animals' (*kemono tafushi*), i.e. not animals in general, as in Buddhism, but only the domestic animals of one's neighbourhood, perhaps by means of evil spells; and lastly comes witchcraft (*maji-mono seru tsumi*)³—a prohibition which becomes particularly clear when we think of the story in the *Kojiki* which shows that the casting of spells was known in the most ancient Japanese magic.⁴

Those are the essential sins according to the primitive Japanese conception. Obviously this list does not include all possible crimes; e.g., in the case of heavenly sins, if the *Kojiki*⁵ is not so complete as the Ritual, on the other hand we notice some additional sins of the same kind in the mythical accounts of the crimes of Susa-no-wo, as they are given in the *Nihongi*.⁶ But the list in the Ritual is the one which authentically represents the real tradition, as is sufficiently proved by the fact that it corresponds exactly with the list of heavenly sins given in a third important book of mythology, the *Kogoshūi* (A.D. 807), a work compiled by Hironari, a Shintōist priest belonging to the old sacerdotal family of the Imibe. On the other hand, it is obvious also that Japanese morality did not condemn these few crimes only; the study of the oldest criminal law shows that its field was much wider;⁷ and there is a sure proof that, besides the old religious offences, the social conscience prohibited numerous deeds not mentioned in the Ritual, viz. the fact that a single individual who at the same time had violated both the divine law and the human law was logically condemned both to a ritual expiation and to a civil punishment.⁸ But, lastly, in this necessarily vague domain of morality it is the text of the Ritual explained above that gives us the most original and at the same time most correct idea of the notion of sin in pure Shintō.

3. Avoidance of sin.—*Tsumi* may be avoided by the means corresponding to the notion of *imi*, antagonistic to that of *tsumi*. This conception of *imi*, 'avoidance,' 'abstinence,' and the various religious practices connected with it, have already been explained.⁹

4. Deliverance from sin.—When once *tsumi* had been committed, deliverance from it could be obtained by the magical proceedings indicated in

the Ritual of the Great Purification itself.¹ And, in fact, since the *tsumi* were regarded as infractions which must be expiated whether there was any evil intention or not (see the beginning of the text cited above), the Japanese thought that such sins must be cleansed, not by inward repentance, but by external rites, i.e. magical rites.

The notion of purely moral sin, as we conceive it, did not gain supremacy in Japan until Buddhism was introduced, which, along with the mystic doctrines of a superior religion, brought to the distant archipelago a new morality founded no longer on ancient magic, but on the discriminations of conscience, and thus revealed the true idea of sin, which consists not in actions but in intentions, which man avoids by virtue and atones for by repentance.

LITERATURE.—The references are given in the footnotes.

MICHEL REVON.

SIN (Muslim).—There are various words used in the Qur'an to express the ideas of fault, crime, sin. The shades of meaning with which they are used seem to vary with the context. Thus, *sayyāt* means evils which may happen to a man.

'So God preserved him from the evils they had planned.'²

It expresses the evils which God's punishment brings.³ It also expresses moral guilt.

'Whoso doeth evil and is encompassed with his iniquity, they shall be the companions of hell fire.'⁴

The word *dhanb* expresses all forms of unbelief and wrong actions proceeding from such unbelief. The commission of a *dhanb* constitutes one a *khāfi*, or sinner.⁵ The word *ithm* seems to imply a wrong attitude to others and so injustice.

'Avoid frequent suspicion, for some suspicions are a crime.'⁶

It denotes a wrong attitude towards God.

'He who united the gods with God hath devised a great wickedness.'⁷

The Qur'anic idea of sin seems to be that it is pride and opposition to God. Thus Satan (Iblis), who refused to obey the command to prostrate himself before Adam, is described as swelling with pride and becoming an unbeliever.⁸

The punishment of this rebellious pride is that those who possess it must remain in it.

'The unjustly proud ones of the earth, will I turn aside from my signs, for even if they see every sign they will not believe them.'⁹

This opposition to God may lead a man to be an atheist, a polytheist, or a simply careless irreligious person. Man does not inherit a sinful nature, but simply a weak one. Sin is not so much a disposition as a habit which men acquire because of their weakness. The willing desire of the natural heart to sin is referred to in what Joseph says of himself:

'Yet I hold not myself clear, for the heart is prone to evil, save those on whom the Lord hath mercy.'¹⁰

The Qur'an marvels at the sin of man, his obstinate disobedience, and calls upon him to exercise faith and repentance, but it is deficient in its call for a broken and contrite heart.

'All through the Qur'an, the message is that while repentance must be sincere, it is a very easy matter, while forgiveness is a question scarcely worth troubling about, so simple is its attainment. Muhammad nowhere displays anguish of heart and contrition in the sight of a pure and holy God, and therefore does not demand that others should experience that of which he himself had no knowledge.'¹¹

According to Muslim theologians, sins are of two kinds, little (*saghira*) and great (*kabira*). This distinction is based on the text:

'To those who avoid the great sins and scandals, but commit

¹¹ W. R. W. Gardner, *The Qur'anic Doctrine of Sin*, p. 40.

only the lighter faults, verily the Lord will be diffuse of mercy.¹

Lesser sins, mere faults and imperfections such as are inherent in human nature, are all forgiven, if some good act is done.

'Observe prayer at early morning, at the close of day and at the approach of night: for the good deeds drive away the evil deeds.'²

Opinions vary as to the number of greater sins, but in all lists there occur: infidelity or the ascribing of partners to God, murder, theft, adultery, unnatural crimes, neglect of the Ramadān fast and of the Friday prayers, magic, gambling, drunkenness, perjury, usury, disobedience to parents, false witness, defrauding orphans, despair of God's mercy, continued commission of little sins, and cowardice on the field of battle before an infidel enemy. The last, however, is said not to be a sin if the enemy outnumber the Muslims by more than two to one. It is said, further, that the number of great sins has not been definitely laid down, so that men may exercise the greater caution.

If a learned man commits a little sin and thereby misleads those whom he should guide, it becomes great. If small sins are repeated inadvertently, they do not become great; but, if knowingly, they change into great sins. The greatest of all sins is the associating of another with God (*shirk*). Other sins may be pardoned, but not this. A Muslim, although he commits sins small and great, will not be left in hell for ever, provided he does not commit this sin, or declare lawful what God has forbidden.

Sins require no atonement; repentance immediately after the commission of the sin is enough.

'They who, after they have done a base deed or committed wrong against their own selves, remember God and implore forgiveness of their sins—and who will forgive sins but God only?—and persevere not in what they have willingly done amiss: as for these, pardon from their Lord shall be their recompense.'³

True repentance implies sorrow for sin, full purpose of amendment and restitution if wrong has been done to another. If, after repentance, a man again sins, the repentance is not lost, for sins repented of are no longer reckoned. Some deny the validity of repentance at death; others say that God accepts it even then. Infidels may be forgiven:

'Say to the infidels, if they desist [from their unbelief], what is now past shall be forgiven them; but, if they return to it, they have already before them the doom of the ancients.'⁴

With some theologians, when an infidel becomes a Muslim, the act of conversion is equal to repentance. Others say that repentance is a separate action and must be separately and definitely made. A believer who commits a mortal sin does not, in the opinion of the orthodox, become an infidel.⁵

An interesting question arises with regard to the sinlessness of prophets. The orthodox belief is that they are free from sin. The Ash'arites hold that even the power of sinning does not exist in them; the Hashāmiyyah, a sub-section of the Shī'ahs, in order to exalt the *imāms*, hold that prophets can sin: 'The prophets sin, but the Imāms are pure.'⁶ The Mu'tazilites deny this, but admit that they possess some quality which keeps them from sin. All are unanimous that prophets do not commit the greater sins. As regards the lesser, some say that they may commit these before inspiration (*wahy*) comes upon them; others that they may do so even after inspiration has come, but that such little sins in them are mere frailties and slight imperfections not really amounting to sin. To a Muslim this disposes of a difficulty in the Qur'an

itself, for there the greater prophets are spoken of as sinning. Adam's fall is referred to thus:

'And we said, O Adam, dwell thou and thy wife in the garden, and eat ye plentifully therefrom wherever ye list, but to this tree come not nigh lest ye become of the transgressors; and Satan made them slip from it, and caused their banishment from the place in which they were.'¹

But it is said that Adam did not really sin; he only committed a slight fault, which after all proved beneficial to mankind; for, had he remained in paradise, the world would not have been peopled, and the will of God, 'I have not created men and *jinn* except for worship,' would not have been fulfilled.² Further, Adam and Eve, on being convicted of sin, said:

'O our Lord, with ourselves have we dealt unjustly: if thou forgive us not and have not pity on us, we shall surely be of those who perish.'³ Noah said: 'Unless thou forgive me and be merciful to me, I shall be one of the lost.'⁴ Abraham said: 'When I am sick, He healeth me, and who will cause me to die and quicken me, and who, I hope, will forgive me my sins in the day of reckoning!'⁵ Moses killed a man—an act described as a work of Satan. He repented and said: 'O my Lord, I have sinned to my own heart, forgive me.'⁶

The references to sins committed by Muhammad are numerous:

'Be thou steadfast and patient, for true is the promise of God; and seek pardon for thy sin.'⁷

Various explanations are given of this verse. Some say that it refers to remissness in the propagation of Islām; others to neglect in rendering thanks to God; but one popular explanation is that the Prophet was to seek pardon for sin merely as an act of worship and as an example of that confession of sin which was to be a portion of the worship rendered by his followers.⁸ If this explanation is not enough, then it is said that the word for sin (*dhanb*) conveys the idea of a fault only, or what is technically called a little sin. The objection is that this word (*dhanb*) is used to describe the sin of ordinary people.⁹ It is quite clear, in general, that the word used to describe the sin of Muhammad does not denote a mere trivial offence, but a great sin. Again, 'Ask pardon for thy sin and for believers both men and women'¹⁰ is similarly explained. The Prophet was ordered by God to ask pardon for his sin, not because he really had committed any sin which needed pardon, but because, if he thus asked, then, in accordance with the principle that his actions form the *sunnah*, or rule of faith and practice, it would become the duty of all Muslims to confess their sins and seek pardon.¹¹ Another passage is:

'Verily, we have won for thee an undoubted victory, in order that God might forgive thee that which went before of thy fault and what followed after.'¹²

This reference to an earlier and to a later fault has led to many ingenious explanations, such as the fault before and after the descent of inspiration (*wahy*); before and after the taking of Mecca; before and after the revelation of this verse. But all these still leave the fault with Muhammad; so a further explanation is given. The 'former sin' refers to the sin of Adam when Muhammad was yet in the loins of his great ancestor and the 'later sin' refers to the sin of the followers of Muhammad. Both are connected with the Prophet, as Adam was forgiven by the blessing of Muhammad and Muslims will be pardoned through his intercession. The traditions also record the fact that Muhammad prayed for the pardon of his sins. On the authority of 'A'isha it is said that Muhammad used often to say: 'By thy praise O God, pardon me'; 'O God,

I ask pardon of thee for my offence, and I ask of thee thy mercy.' On the authority of Abū Huraira it is recorded that Muhammad said: 'I ask pardon of God and repent (return) towards Him more than seventy times a day.'¹ It is said that Muhammad felt such remorse when he had committed slight faults that he called them sins when they were not really such. The reply to this is obvious. From a Muhammadan standpoint, the Qur'ān is the word of God and not of man; so it is God and not Muhammad who speaks of the Prophet's sin. Whilst, however, the Qur'ān lends no countenance to the idea that prophets cannot sin and indeed refers to their sins, there is no mention whatever of sin in connexion with Jesus Christ. He is the one sinless prophet of Islām.

The Muhammadan view of sin looks upon it as the neglect of the arbitrary decrees of an absolute Ruler rather than as an offence against an immutable moral law of right or wrong. This is the real defence for many of the actions of the Prophet. In other men they would have been sin, but they are not to be considered so in him, as God commanded him to perform them. This also accounts for the absence of any moral gradation of the great sins. Adultery is a great sin, but so is flight from a field of battle; murder is a great sin, but so is the neglect of a fast. All this shows how the Muhammadan conception of God as a despotic ruler, who lays down laws for no apparent reason but that He wills so to do, has led to a false notion about the real nature of sin. *E.g.*, associating others with God in worship is the first and greatest of the great sins, yet the angels were ordered to worship Adam. Iblis (Satan) refused and was, in consequence, driven out of paradise.² The sin here did not consist in the breach of the eternal law that worship belongs to God alone, but in disobedience to a command, arbitrary in its nature and contrary to the great law of man's relation to God. Again, sin is looked upon as a weakness of human nature. The sinner is not much to blame, and God is merciful. The spirit of fatalism also deadens the conscience and makes a man accept even his failings as decreed for him. The sensual descriptions of paradise, looked upon by a few purer-minded Muslims only as allegorical, deaden the moral sense. It is difficult for the man inclined to give way to his passions to see that what is right in heaven is wrong on earth. Sin, also, is too often regarded as an external pollution which the performance of certain good actions and attention to the prescribed religious ritual can cleanse. The giving of alms is said to 'do away sins.'³ The ceremonial ablution before the stated prayers is such a meritorious ceremony that the Prophet said: 'When the Muslim performs his ablutions, all his sins will be forgiven him.' The *hajj*, or pilgrimage to Mecca, 'cleanses the hearts of men and makes them innocent like new-born babes.'⁴ There are numerous traditions⁵ on the subject of sin, the result of belief in which has been to lessen the idea of its evil nature and to make the means for its removal very mechanical. Doubtless there are Muslims who have a deeper sense of sin and who believe in repentance and amendment of life, men who place little faith in all the puerile stories handed down by tradition; but the tendency of the whole system of belief and practice, of the dogmatic statements and of the alleged usage of the Prophet, is to make the Muslim attitude to sin mechanical, with outward formalism as the

general rule and inward spiritual experience the rare exception.

Macdonald, *Muslim Theology*, do. 1903, Appendix 1, *The Religious Life and Attitude in Islām*, Chicago, 1903, lect. x. EDWARD SELL.

SIN (Roman).—Sin, in the Christian world, implies a personal and moral relation between man and the divine power which was never realized in anything like the same degree in ancient Roman life. The sinner is to moderns not only a breaker of superhuman law, but a contemner of the majesty of a divine person. The sense of being at enmity with superhuman forces was of course conspicuous in primitive Roman religion, as in primitive religions of all ages and all lands. The condition of hostility is declared by the god against the human being for some offence which may have been given by him quite unwittingly; but the punishment which he suffers is not the less believed to be merited. Although the tragic conception of the Greek *ἄτη* is foreign to native Italic and Roman beliefs, yet they included the persuasion that divine vengeance often falls on a human being for some merely mechanical error apart from blameworthiness of a moral character. In the Roman *ius diuinum* of early days, as in the secular law, a casual slip in ceremonial action or utterance might entail dire consequences, comparable to those assigned to arrogant defiance or neglect of the deity. The rigidity of the religious formula was parallel to that of the legal formula, and the maxim of the Twelve Tables, 'ut lingua nuncupasset, ita ius esto,' applied in both spheres. In the field of early ancient civilization deities were realized as essentially civic, and as concerned only with the members of particular communities. It was natural therefore that offences against them should be on the same level with the offences against secular law. Each man was related to the divinities of his city rather as a citizen than as a mere person. When deities came to be conceived as non-local, the idea of offences against them grew to be larger and more refined. The old civic cults were felt by the most cultivated spirits to be crampingly formal and narrow, and men turned away from them, finding satisfaction for their needs in those more emotional and spontaneous forms of worship which spread from East to West and to a large extent supplanted immemorial civic usage. In Italy the new influences were first felt among the Greek settlements, but they had so far affected the Italic peoples that in 186 B.C. the Roman senate, as the supreme religious authority in Italy, felt constrained to suppress those 'Bacchic' brotherhoods which were regarded as constituting a 'conspiracy' against society and the State. The decrees then issued are contained in the famous extant inscription.¹

It may be said, however, that to certain offences of special enormity the notion of sinfulness did attach in very early days among Romans, as among Greeks. An offender guilty of a crime to which the vague but awful penalty 'Sacer esto' was assigned was outlawed and might lawfully be slain, as odious to the gods, by any man's hand.²

The consciousness of personal defilement, as caused by the perpetration of acts forbidden by the deities, was stimulated in Italy by the Græco-Oriental worship, which became ever more popular. A feeling spread that for the welfare of the soul it was needful to seek reconciliation with heaven and deliverance from the bondage of error, by

special services and practices which would ensure divine pardon and relief from the stains contracted by the soul. The mysteries, as a special means of escape, never held the same importance in Roman culture as they acquired for the Greeks.¹ In the West the conception of sin was vivified in a high degree by the prevalence in late antiquity of the Stoic philosophy, which drew much of its spiritual effectiveness from the mystical religions of the East, transmitted through a Greek atmosphere. The ethical aspects of philosophy became dominant over the speculative teaching in the Stoic as in all the late schools of Hellas. The idea of sin was especially developed by the Stoics (*q.v.*), whose ethical doctrines took a strong hold of the later culture of Rome as of Greece. These philosophers, paying little heed to many insuperable antinomies, contrived to combine a pantheism which was technically materialistic with the conception of a personal relation to a Supreme Being, and to tinge with emotion an intellectualism which in some of its aspects remained as dry and barren as it could well be. The Stoic law of life for the individual was summed up in unswerving loyalty to a divine order of the universe, and in the composure of the will to perfect harmony with the will of God. A healthy state of the will, according to the Stoics, ensures happiness, while a recalcitrance against the divine purposes, as expressed in the ordered universe, brings misery. The Stoics brought into general use the terms for 'sin' which established themselves in the Greek world, viz. *ἀμαρτία* and *ἁμαρτία*, and these were rendered in Latin by *peccatio* and *peccatum*, which passed into the language of Latin Christian theology. The whole duty of man was declared by the Stoics to lie in self-discipline, to the end that the will might be brought into complete accord with the will of God. A religious fervour was thus infused into the pursuit of virtue, which was a new influence in culture, and the sway of Stoic religious and moral teaching over the civilization of the Roman Empire, with its action on early Christian thought, was incalculably powerful. This was achieved in the paradoxical manner of the Stoics, in spite of their theoretic doctrine that sin has its origin in erroneous intellectual judgment. The whole field of education in imperial Roman times was permeated by a Stoic colouring, which entered deeply into early Christian literature and into all the later developments of philosophy, in which the corruption of the human soul and the need for a divine deliverance were accepted as axiomatic. This great practical achievement of Stoicism in the Roman world was accomplished in spite of some doctrines which might have been expected to work against general acceptance. Opponents of the school ridiculed their admission that the appearance in the world of the perfect man had been rarer than that of the phoenix. Again, the Stoic thesis that 'all sins are equal' (*i.e.* are of the same heinousness) was difficult to accommodate to ordinary life, and indeed it was more or less ignored in Stoic literature, as may be seen in the writings of Seneca (*q.v.*). The attractiveness of man's proper aim, in the Stoic view, was great enough to overcome the weight of the paradoxes which encumbered it. Many utterances are to be found in the later classical literature, above all in the Stoic, relating to the subject of sin, which have an almost Christian ring. The idea of 'salvation' from sin is often found in connexion with the different divinities who were customarily designated as 'saviours' (*σωτήρες*). The notion of a 'new birth,' so eminently Christian, is encountered in connexion with the ceremony of the *taurobolium*

¹ See artt. MYSTERIES (Greek, Phrygian, etc.), MYSTERIES (Roman).

(*q.v.*), whereby, as one inscription records, a man was 'reborn for everlasting life' ('renatus in aeternum').

LITERATURE.—Information on this subject is widely scattered in works bearing on ancient philosophy and religion. Specially may be mentioned E. Zeller, *Die Philosophie der Griechen*, iii., 'Nacharistotelische Philosophie 4,' Leipzig, 1903-09, and E. V. Arnold, *Roman Stoicism*, Cambridge, 1911, ch. xiv, 'Sin and Weakness.'

J. S. REID.

SIN (Teutonic).—In the old Teutonic languages, especially in the Gothic, there is no clear concept of sin as a conscious nonconformity to, or transgression of, an ideal standard of right or duty as revealed in conscience or divine law.¹ The word *syn* entered the North from western Germany. It was a derivative from *sun*, a root of several compounds with the implicated idea of a denial or an apology. Its meaning when used in cognate languages was rather uncertain. In the Salic Law² it was used in establishing a plea of 'Not guilty' before the court, while later it came to stand as a technical and abstract expression for the matter of the accusation itself, as we notice in *Heliana*, the Old Saxon epic of the Saviour from about 825. In the Northern languages this usage also became established by way of accommodation as Christianity was introduced. The word generally used for sin in Ulfilas' translation of the New Testament, from about 350, was *fra-vaurhts*, 'misdeed'—an idea which was readily comprehended by the Gothic peoples among which he worked as a missionary.

Thus, while it must be granted that it is difficult exactly to make out the early Teutonic idea of sin in a manner which would meet the philosophical and religious requirements of our times, and even if we allow that Teutonic literature reveals character rather than principles of conduct, this does not mean that the Teutons were callous to moral requirements. Their convictions about right and wrong were very decided, at least on certain points. With them blasphemy, *e.g.*, was a great sin, as were also perjury and adultery. There is therefore evidently a moral value placed upon man's conduct as noticed in the *Völuspa* and other Eddic songs, in the *Gylfaginning*, and in the Northern and Icelandic sagas. In the *Nibelungenlied*, the great German epic from the Middle Ages, there are few traces of strictly moral sentiments, for, while this *Lied* in its subject-matter has much in common with the *Eddas*, it brings out less of the humane character and more of the valiant and heroic.

With the earlier Teuton, as known to Tacitus, the case was different. When treating of crimes and courts he says:

'The nature of the crime determines the punishment. Traitors and deserters they hang on trees. Cowards and those given to debauchery they smother in filthy bogs and fens, casting a hurdle over them. In these different punishments the point and spirit of the law is, that crimes which affect the political organization may be exposed to public notoriety, while the infamous vice and the debauchee cannot too soon be removed from the light of day.'³

The classification which is here brought out could be arrived at only from a moral point of view. That cowards were counted infamous is evident to every student of Teutonic life and literature. Cowardice was the sin of all sins, for which there was no pardon.⁴

The eschatological views which are abundant in the later songs of the *Edda*, in the *Gylfaginning*, and in the sagas agree entirely with the grouping of sins and punishments as obtaining in this life. In Saxo's *Danish History* the place where the condemned are kept and tortured is described in the most repulsive terms, while the

⁴ *Ib.* vi.

inmates are depicted accordingly.¹ In the *Gylfaginning* we have it set forth that the consequences of all misdeeds and crimes will follow the sinner after death, and that he will have to meet with due punishment in Nastrand, one of the dismal halls below Niflheim, where Hel rules.² Those who arrive at their dreadful destination are sinners of various descriptions and classes, of which nine or ten are enumerated in the *Song of the Sun*—if this poem, standing almost on the border-line between heathendom and Christianity, may be taken as a witness. From it as well as from many other records, some of undisputed heathen character, we learn that enemies of the gods, desecrators, the unmerciful, perjurers, murderers, adulterers, the covetous, the proud and the arrogant, violators of laws, and breakers of covenants are doomed to Niflhel for ever, or at least for a very long time.³

In the *Völuspá*⁴ Nastrand and its woeful prisoners are described as follows:

'She saw a hall standing,
far from the sun,
in Nastrand;
its doors are northward turned,
venom-drops fall in
through its apertures:
entwined is that hall
with serpents' backs.
She there saw wading
the sluggish streams
bloodthirsty men
and perjurers,
and him who the ear beguiles
of another's wife.
There Nidhögg sucks
the corpses of the dead;
the wolf tears men.
Understand ye yet, or what?'

From all this it seems perfectly clear that the concept of a coming retribution in another world was fostered and entertained by the Teutons and especially by those of the north. It also goes without saying that man's moral responsibility had to be reckoned with, even though the very idea of sin was not altogether like ours. It referred less to the religious life itself—something of which we know very little in regard to the Teuton—and more to the external behaviour. The reaction upon the sinner himself from the evil deed in the first place made him an outcast from his own people and an object of punishment, while in the second the doom will follow him after death and into the dismal regions of Hel, where he will be chastised according to his deserts. Sin as a condemnation will cleave to him for ever. In the light of this, those two well-known strophes from *Hávamál*⁵ may be easier of interpretation as presenting the Teutonic summing-up of the value of man's deeds and the result of his entire life:

'Cattle die, kindred die, we ourselves also die;
but the fair name never dies of him who has earned it.

Cattle die, kindred die, we ourselves also die;
but I know one thing that never dies,—
judgment on each one dead.'

SIND, SINDH.—The province of Sind forms the extreme north-west portion of the Bombay Presidency, consisting of the lower valley and delta of the Indus, with an area of 46,968 sq. m. and a population of 3,513,435.

1. Name.—It takes its name from Skr. *sindhu*, probably connected with the root *syand*, 'to flow,' 'the ocean,' afterwards specially applied to the river Indus.

'Sindhu in the Rîgvêda and the Atharvaveda often means "a stream" merely, but it has also the more exact sense of "the stream" *par excellence*, the Indus. The name is, however, rarely mentioned after the period of the Samhitās, always then occurring in such a way as to suggest distance.'¹

2. History.—Sind formed an early Aryan settlement and a seat of trade with E. Africa and the Persian Gulf (c. 1000 B.C.), was conquered by Darius Hystaspes (521-485 B.C.), by Alexander the Great (326 B.C.), formed part of the Mauryan empire, and was occupied by the Ephthalites or White Huns in the 7th cent. A.D. It was the first part of India occupied by the Muhammadans under the leadership of Muhammad ibn Qāsim (A.D. 712). Mahmūd of Ghazni occupied the valley (1024-26). After this it became the seat of a Hindu dynasty, that of the Sumras (1053), who were overthrown by Alā-ud-din Khilji about the end of the 13th century. They were followed by another Hindu dynasty, the Sammās. Finally (1592), the Mughal Akbar united the province to the empire at Delhi. Towards the end of the 17th cent. the Kalhorās rose to power in the lower Indus valley, and ruled it till the invasion of Nādir Shāh (1739). Subsequently it was held by local princes, the Tālpur Mīrs, who were defeated by Sir C. Napier at the battle of Mīāni in 1843, when the whole valley, with the exception of the Khairpur State, was annexed to the British dominions.²

3. Ethnology.—The province is distinguished from other parts of India by the great predominance of Muhammadans, who, at the census of 1911, amounted to 75·14 per cent of the total population, Hindus being 23·83 per cent, and the balance being made up of animists, Christians, Parsis, Jews, and the so-called Hindu-Muhammadans, who follow both creeds.³ The Sindis may be regarded as descendants of the original Hindu population, who were converted to Islām during the reign of the Umayyad *khalifās*. When the province was invaded by Muhammad ibn Qāsim, there was a large and flourishing Hindu kingdom, provided with an efficient army.⁴ The foreign elements are represented by Sayyids, Afghāns, Baloch, Jāt, Meman, Khwāja, and African slaves.⁵ The Hindus occupy a position analogous to that of the Musalmāns in the rest of the Presidency, being in a minority and greatly influenced by the former predominance of Musalmān ideas and culture. The Brāhmanas, consisting of Pokharnās (or Pushkarnās) from Rājputānā and Sāraswats from the Panjāb, are illiterate and depraved. There are no Kṣatriyās, those claiming that position being generally Banyās who have partly conformed to Sikhism, and are really heterodox.⁶ The most important Hindu caste is that of the Lohānās, of whom the 'Āmil section are clerks and writers, early immigrants from the Panjāb, as is shown by their language and its alphabet. They wear the Brāhmanical cord (*janeu*), worship the god of the Indus, Viṣṇu, or Śiva, or follow the faith of Nānak Shāh (*q.v.*). The other important Banyā caste is that of the Bhātīs, who are strong in Gujarāt and Cutch.⁷ There are few castes of the Sūdra group, those that exist wearing the Brāhmanical cord, applying the Hindu sectarian marks to their foreheads, and in all other respects imitating Banyās. They generally worship Śiva and his consort Devī, and employ Brāhman priests. The Sikhs include the Akālī Khālās, or pure Sikhs, and the Lohānās. The former imitate the Panjāb devotees—never cut their hair, eat various forbidden meats, such as the domestic fowl, have the usual tabu against tobacco, anoint their hair with butter instead of

oil, and eat flesh only when the animal has been killed according to the ritual (*jhatkā*).¹ The local Hinduism is thus of an impure type, only a few Brāhmaṇs studying Sanskrit, while the popular faith is mixed up with Islām and Sikhism.²

4. The fusion of Islām with Hinduism.—We find Islām and Hinduism amalgamated here in a more remarkable way, perhaps, than in any other part of India. The Hindu will often become the disciple (*murīd*) of a Muslim, and *vice versa*; not only are the same saints respected by members of both religions, but each faith uses a different name for the same holy man. The Hindus know the river-god under the name of Jind Pir (*zindah*, 'the living one'), while Muhammadans call him Khwājā Khidr; in the same way Uddhero Lāl of the Hindus becomes the Musalmān Shaikh Tahir and Lālā Jasrāj becomes Pir Mangho. The Hindus, probably with justice, claim these worthies as their own, and the Musalmāns have only applied new names to them.

5. Worship of saints.—The distinguishing feature of Islām in Sind is the wide-spread worship of saints (*pīr*, *walī*).³ This is largely due to the influence of Śaivism (*q.v.*), and is opposed to the original form of the faith. But, though they may have lost touch with orthodoxy, the Musalmāns are a religious people.

'The mass of the Sind peasantry, though they may be unacquainted with the cardinal articles of their faith, are careless or ignorant of its precepts; but, upon the whole, they strike a stranger as being more religious according to their lights than Musalmāns of almost any other part of India. They are also pre-eminent for abject devotion to Pirs and Sayads, living or dead.'⁴

The most eminent of these saints are Lāl Shāhbāz and Pir Mangho, or Mango.

Lāl Shāhbāz, the head of the Jalālī order, whose original name was 'Usmān-i-Merwandi, from his birthplace, was a qalandar and a rigid celibate who died at Sehwan in 1274. He was called Shāhbāz, 'the red falcon,' because, as in the legend of Abraham,⁵ his colour was changed to red by his penance of sitting in an iron pot over a broiling fire for a year.⁶ His tomb is much respected, and every year a girl of the Khonbatī, or weaver, caste is married to his tomb, with music, dancing, and other solemnities. She is never allowed to contract a real marriage. The rite of initiation into the order is made as humiliating as possible, in order to prepare the religious mendicant (*faqīr*) for the life which he is about to adopt. All hair on his person is removed; the tomb attendants blacken his face, hang a cord round his neck, show him a looking-glass, and ask him how he likes his appearance. He replies, 'Very much.' Then his shoulder is seared with a hot iron, his body is stripped and smeared with cowdung, and he is told to go forth into the world and beg his bread.⁷

The cult of Pir Mango at Magar Talāo, or the Crocodile Tank, near Karāchi, is more remarkable. In the tank a number of tame crocodiles (*Crocodilus palustris*) are kept, and goat's flesh is given to them by pilgrims. Here, about the middle of the 13th cent., a Musalmān hermit caused a stream to trickle out of the rock, and Lāl Shāhbāz in like manner produced a mineral spring. Pilgrims visit the tomb of Pir Mango, and Hindus venerate the place out of reverence for the warm water.⁸

6. Worship of the river Indus.—The cult of Khwājā Khidr, or Khizr,⁹ is common in Sind, where the saint is regarded as the *numen* of the Indus. His shrine at Rohri is said to have been built A.D. 925 by a Delhi merchant, whose daughter a wicked king tried to abduct; when she prayed to the saint, he changed the course of the river and saved her honour.¹⁰ He is known as Jendā, or Jindā, 'the living' (*zindah*) saint. Closely connected or identical with him is Uddhero Lāl, known as Vadherā Lāl in the Panjāb, said to be prime minister (*vazīr*) of the Khwājāh. A long tale is told how he saved the Hindus from persecution by a *qāzī*, or law officer, in the time of the emperor Aurangzib. He is also known as Shaikh Tahir, and is much respected by Musalmāns, who

deny that he has any connexion with the Hindus. In another story Uddhero Lāl was an incarnation of the river Indus who rose from the water in the form of a spearman, mounted on a white horse, and was then reborn from a Banyā, or merchant woman. He overcame the Musalmāns in a religious controversy and was honoured by an annual fair.¹ This saint, in his various manifestations, is worshipped by a sect of river-worshippers (Daryā-panthī) by means of water and lights; a lamp always burns at his shrine; and at the new moon he is worshipped at the river, canal, or any piece of water, with offerings of rice, sugar candy, spices, fruits, and lighted lamps.² Worship of this holy man is common among the Jhabēl, a Panjāb fishing caste, and among the Lohānās of Cutch, because he is said to have saved them when they fled from Multān.³

7. Magical powers of saints.—Saints in Sind are regarded as workers of miracles.

They cure barrenness and diseases usually incurable by ordinary means, the remedy being to give the patient a drop of water to drink, or to pass the hand over the part affected at the shrine; they cause prayers to be granted; protect mariners and traders; appear to a person at a distance to save him from some unseen danger; calm storms, especially those that are distant; change female into male children; convert sinners and infidels to the true faith; turn men's hearts by a look, thought, or word; compel inanimate objects to act as if they possessed life and volition; benefit friends and destroy foes; exercise dominion over beasts, birds, fishes; make youths' beards grow and restore vigour to aged men; raise the dead; put the fiend to flight, and summon angels and spirits; cause trees to produce butter and honey; refine sensual to spiritual love; know men's thoughts and plans; break chains, fetters, doors, and walls; live without food, drink, or sleep; cause a single pot of water to support a caravan without sensible diminution; commute the death of a person by providing a substitute; give learning to fools.⁴

The method of venerating a saint is as follows:

The votary comes to the sepulchre (*turbat*) and makes the invocation: 'O Qalandar! O thou with a great name, well-known in both worlds! Thou listener to thy friends! Only grant me my desire, and I propose to distribute a pot (*deg*) of rice-flour, cooked with sugar and butter, to the poor in thy honour!' He visits the shrine morning and evening, and, if his need be urgent, takes up his abode at the spot, because his only chance of success lies in his perseverance, and the saint needs to be reminded of the wants of the suppliant.

SIN-EATING.—Sin-eating was an ancient custom at funerals in Wales and the Welsh Marches. The earliest allusion to it is by John Aubrey in the reign of Charles II. He says:

'In the County of Hereford was an old Custome at funeralls to hire [have] poor people, who were to take upon them all the sinnes of the party deceased. One of them I remember lived in a cottage on Rosse-high way. (He was a long, leane, ugly, lamentable poor raskal.) The manner was that when the Corps was brought out of the house and layd on the Bier; a Loafe of bread was brought out and delivered to the Sinne-eater over the corps, as also a Mazar-bowle of maple (Gossips bowle) full of beer, wch he was to drinke up, and sixpence in money, in consideration whereof he tooke upon him (*ipso facto*) all the Sinnes of the Defunct, and freed him (or her) from walking after they were dead. . . . This Custome (though rarely used in our dayes) yet by some people was observed [continued] even in the strictest time of y^e Presbyterian government: as at Dynder, volens nolens the Parson of y^e Parish, the kined [relations] of a woman deceased there had this ceremonie punctually performed according to her Will: and also the like was donne at y^e City of Hereford in these times, when a woman kept many yeares before her death a Mazar-bowle for the Sinne-eater; and the like in other places in this Countie; as also in Brecon, e.g. at Llangors, where Mr. Gwin the minister

about 1640 could no hinder y^e performing or this ancient custome. I believe this custome was heretofore used over all Wales. . . . In North-Wales, the Sinne-eaters are frequently made use of; but there, insted of a Bowle of Beere, they have a bowle of Milke.¹

Again, writing of offertories at funerals, he says:

'These are mentioned in the Rubrick of y^e ch. of Engl. Coffon-Prayer-booke: but I never sawe it used, but once at Beaumaris, in Anglesey; but it is used over all the Counties of North-Wales. But before when the corps is brought out of Doores, there is Cake & Cheese, and a new Bowle of Beere, and another of Milke with y^e Anno Dni engraved on it, & y^e parties name deceased, w^{ch} one accepts of on the other side of y^e Corps; & this Custome is used to this day, 1686, in North Wales.'²

Aubrey is also related to have given to a Mr. Bagford the following account of the ceremony as practised in Shropshire:

'Within the memory of our Fathers, in Shropshire, in those villages adjoining to Wales, when a person dyed there was notice given to an old Sire, (for so they called him), who presently repaired to the place where the deceased lay, and stood before the door of the house, when some of the family came out and furnished him with a Cricket, on which he sat down facing the door. Then they gave him a Groat, which he put in his pocket; a Crust of Bread, which he eat; and a full bowle of Ale, which he drank off at a draught. After this he got up from the Cricket and pronounced, with a composed gesture, the ease and rest of the Soul departed, for which he would payen his own Soul.'³

In more recent times Matthew Moggridge of Swansea gave an account to the Cambrian Archaeological Association, at their meeting at Ludlow in 1852, of the custom as lately surviving in the neighbourhood of Llandeibie, about twelve or thirteen miles from Swansea.

He related that, 'when a person died, the friends sent for the Sin-eater of the district, who on his arrival placed a plate of salt on the breast of the defunct, and upon the salt a piece of bread. He then muttered an incantation over the bread, which he finally ate, thereby eating up all the sins of the deceased. This done, he received his fee of 2s. 6d., and vanished as quickly as possible from the general gaze; for as it was believed that he really appropriated to his own use and behoof the sins of all those over whom he performed the above ceremony, he was utterly detested in the neighbourhood—regarded as a mere Pariah—as one irredeemably lost.'⁴

Moggridge's account was afterwards challenged by Canon Silvan Evans and others. But, if we turn again to N. Wales, we find a ceremony there described corroborating Aubrey's account. In the *British Magazine*, vii. [1835] 399, there appeared a description said to be taken 'from a MS. book of a bishop of St. Asaph' written about a century earlier, which runs as follows:

'When the corpse is brought out of the house and laid upon the bier, and covered before it be taken up, the next of kin to the deceased—widow, mother, daughter or cousin (never done by a man)—gives cross over the corpse to one of the poorest neighbours two or three white loaves of bread and a cheese with a piece of money stuck in it, and then a new wooden cup of drink, which some will require the poor body that receives it immediately to drink a little of. When this is done, the minister (if present) saith the Lord's prayer, and then they set forward towards church.'

Pennant, writing about the year 1780, describes the same custom as practised in Carnarvonshire. He apparently uses the source used by the writer in the *British Magazine*, but adds details of his own.⁵ In 1820 Robert Jones, a Calvinistic Methodist minister of N. Wales, describes it also, adding that the poor man to whom the loaf, cheese, and beer had been given over the corpse 'in return blessed and prayed fervently and earnestly with [or for] the dead man's soul.'⁶ Twenty years earlier Bingley speaks of the custom, which he assigns to Carnarvonshire and some other parts of N. Wales, as having been diverted to a gift of money for procuring slips of yew, box, and

other evergreens to strew over and ornament the grave during a certain period after the interment.

But still the money was 'given to the person on a plate at the door of the house where the body is standing on a bier. The gift is called *Diodlys*, for formerly, instead of it, the person used to receive from the hand of the female relative a cheese with a piece of money stuck in it, and some white bread, and afterwards a cup of drink, but this practice is now entirely discontinued; the gift however still retains its old name.'¹

The word *diodlys* refers to the gift of the drink, as also do other Welsh words for the custom: *diawdlestr* or *diodlestr*, *diodliff* (which Sir J. Rhys conjectured to be partly English, meaning the drink lifted over the dead), and *cupan y meirw*, the cup of the dead.

What appear to be remains of the practice have lately been found in Herefordshire and Derbyshire.

A resident in the neighbourhood of Hay 'was invited to attend the funeral of the sister of a farmer near Crasswall [Herefordshire], and to his surprise was invited to go upstairs to the room where the body was lying. He went, with the brother and four bearers. At the bottom of the bed, at the foot of the coffin, was a little box with a white cloth covering it. On it were placed a bottle of port wine, opened, and six glasses arranged around it. The glasses were filled, and my informant was asked to drink. This he refused, saying that he never took wine. "But you must drink, sir," said the old farmer; "it is like the sacrament. It is to kill the sins of my sister." Traces of this custom are to be found at Walerstone; and near the Welsh border from Hay to Longtown port wine is drunk, exactly as described, by the bearers in the room where the body lies. Finger biscuits are provided.'² 'At a funeral in Derbyshire wine is first offered to the bearers who carry the corpse. This custom is strictly maintained, the guests not receiving any wine until the funeral party has returned from church.' Addy, who reports this, was told by the daughter of a farmer near Newark, formerly residing near Dronfield, 'When you drink wine at a funeral, every drop that you drink is a sin which the deceased has committed. You thereby take away the dead man's sins and bear them yourself.'³

In Yorkshire the custom was long preserved (and perhaps still is) of handing round wine and a special kind of sponge-cakes known as 'avril-bread' to friends attending the funeral, immediately before the procession starts from the house for the churchyard.⁴ The word *avril* is derived by Skeat from *arval*, 'succession-ale,' 'heir-ale,' the name of the feast given by an heir on succeeding to property in Iceland. The shape of the biscuits differed according to locality. They were often wrapped up, that the guests might take them home, in paper printed on the outside with coffins, cross-bones, skulls, and similar emblems of mortality,⁵ or (probably under the influence of the Evangelical Revival) with pious verses. The custom seems to have spread even as far afield as the island of Antigua, in the West Indies, where species of pastry called 'dye-bread' and 'biscuit-cakes' are said to have been formerly handed round at Negro funerals, enveloped in white paper and sealed with black wax.⁶ It is not known how or whence the custom was introduced. In Wales a custom is described of giving to the guests before proceeding to the churchyard spiced ale in pewter vessels somewhat larger than those used in the administration of the Lord's Supper. It was administered 'just as the Lord's Supper is administered and almost with the same reverence' to the company, all of whom took their hats off as soon as it made its appearance.⁷ The custom was also observed on the Shropshire border, and in addition cakes, wrapped up in black-edged paper as in Yorkshire, were handed round.⁸

oil, and eat flesh only when the animal has been killed according to the ritual (*jhatkā*).¹ The local Hinduism is thus of an impure type, only a few Brāhmins studying Sanskrit, while the popular faith is mixed up with Islām and Sikhism.²

4. The fusion of Islām with Hinduism.—We find Islām and Hinduism amalgamated here in a more remarkable way, perhaps, than in any other part of India. The Hindu will often become the disciple (*murīd*) of a Muslim, and *vice versa*; not only are the same saints respected by members of both religions, but each faith uses a different name for the same holy man. The Hindus know the river-god under the name of Jind Pir (*zindah*, 'the living one'), while Muhammadans call him Khwājā Khidr; in the same way Uddhero Lāl of the Hindus becomes the Musalmān Shaikh Tahir and Lālā Jusrāj becomes Pir Mangho. The Hindus, probably with justice, claim these worthies as their own, and the Musalmāns have only applied new names to them.

5. Worship of saints.—The distinguishing feature of Islām in Sind is the wide-spread worship of saints (*pīr*, *walī*).³ This is largely due to the influence of Ṣūfism (*q.v.*), and is opposed to the original form of the faith. But, though they may have lost touch with orthodoxy, the Musalmāns are a religious people.

'The mass of the Sind peasantry, though they may be unacquainted with the cardinal articles of their faith, are careless or ignorant of its precepts; but, upon the whole, they strike a stranger as being more religious according to their lights than Musalmāns of almost any other part of India. They are also pre-eminent for abject devotion to Pirs and Sayads, living or dead.'⁴

The most eminent of these saints are Lāl Shāhbāz and Pir Mangho, or Mango.

Lāl Shāhbāz, the head of the Jalālī order, whose original name was 'Usmān-i-Merwandī, from his birthplace, was a qalandar and a rigid celibate who died at Sehwan in 1274. He was called Shāhbāz, 'the red falcon,' because, as in the legend of Abraham,⁵ his colour was changed to red by his penance of sitting in an iron pot over a broiling fire for a year.⁶ His tomb is much respected, and every year a girl of the Khonbati, or weaver, caste is married to his tomb, with music, dancing, and other solemnities. She is never allowed to contract a real marriage. The rite of initiation into the order is made as humiliating as possible, in order to prepare the religious mendicant (*qāfir*) for the life which he is about to adopt. All hair on his person is removed; the tomb attendants blacken his face, hang a cord round his neck, show him a looking-glass, and ask him how he likes his appearance. He replies, 'Very much.' Then his shoulder is seared with a hot iron, his body is stripped and smeared with cowdung, and he is told to go forth into the world and beg his bread.⁷

The cult of Pir Mangho at Magar Talāo, or the Crocodile Tank, near Karāchi, is more remarkable. In the tank a number of tame crocodiles (*Crocodilus palustris*) are kept, and goat's flesh is given to them by pilgrims. Here, about the middle of the 13th cent., a Musalmān hermit caused a stream to trickle out of the rock, and Lāl Shāhbāz in like manner produced a mineral spring. Pilgrims visit the tomb of Pir Mangho, and Hindus venerate the place out of reverence for the warm water.⁸

6. Worship of the river Indus.—The cult of Khwājā Khidr, or Khizr,⁹ is common in Sind, where the saint is regarded as the *numen* of the Indus. His shrine at Rohri is said to have been built A.D. 925 by a Delhi merchant, whose daughter a wicked king tried to abduct; when she prayed to the saint, he changed the course of the river and saved her honour.¹⁰ He is known as Jendā, or Jindā, 'the living' (*zindah*) saint. Closely connected or identical with him is Uddhero Lāl, known as Vadherā Lāl in the Panjāb, said to be prime minister (*vazīr*) of the Khwājāh. A long tale is told how he saved the Hindus from persecution by a *qāzi*, or law officer, in the time of the emperor Aurangzib. He is also known as Shaikh Tahir, and is much respected by Musalmāns, who

deny that he has any connexion with the Hindus. In another story Uddhero Lāl was an incarnation of the river Indus who rose from the water in the form of a spearman, mounted on a white horse, and was then reborn from a Banyā, or merchant woman. He overcame the Musalmāns in a religious controversy and was honoured by an annual fair.¹ This saint, in his various manifestations, is worshipped by a sect of river-worshippers (Daryā-panthi) by means of water and lights; a lamp always burns at his shrine; and at the new moon he is worshipped at the river, canal, or any piece of water, with offerings of rice, sugar candy, spices, fruits, and lighted lamps.² Worship of this holy man is common among the Jhabēl, a Panjāb fishing caste, and among the Lohānis of Cutch, because he is said to have saved them when they fled from Multān.³

7. Magical powers of saints.—Saints in Sind are regarded as workers of miracles.

They cure barrenness and diseases usually incurable by ordinary means, the remedy being to give the patient a drop of water to drink, or to pass the hand over the part affected at the shrine; they cause prayers to be granted; protect mariners and traders; appear to a person at a distance to save him from some unseen danger; calm storms, especially those that are distant; change female into male children; convert sinners and infidels to the true faith; turn men's hearts by a look, thought, or word; compel inanimate objects to act as if they possessed life and volition; benefit friends and destroy foes; exercise dominion over beasts, birds, fishes; make youths' beards grow and restore vigour to aged men; raise the dead; put the fiend to flight, and summon angels and spirits; cause trees to produce butter and honey; refine sensual to spiritual love; know men's thoughts and plans; break chains, fetters, doors, and walls; live without food, drink, or sleep; cause a single pot of water to support a caravan without sensible diminution; commute the death of a person by providing a substitute; give learning to fools.⁴

The method of venerating a saint is as follows:

The votary comes to the sepulchre (*turbat*) and makes the invocation: 'O Qalandar! O thou with a great name, well-known in both worlds! Thou listener to thy friends! Only grant me my desire, and I propose to distribute a pot (*deg*) of rice-flour, cooked with sugar and butter, to the poor in thy honour!' He visits the shrine morning and evening, and, if his need be urgent, takes up his abode at the spot, because his only chance of success lies in his perseverance, and the saint needs to be reminded of the wants of the suppliant.

SIN-EATING.—Sin-eating was an ancient custom at funerals in Wales and the Welsh Marches. The earliest allusion to it is by John Aubrey in the reign of Charles II. He says:

'In the County of Hereford was an old Custome at funeralls to hire [have] poor people, who were to take upon them all the sinnes of the party deceased. One of them I remember lived in a cottage on Rosse-high way. (He was a long, leane, ugly, lamentable poor raskal.) The manner was that when the Corps was brought out of the house and layd on the Bier; a Loafe of bread was brought out and delivered to the Sinne-eater over the corps, as also a Mazar-bowle of maple (Gossips bowle) full of beer, wch he was to drinke up, and sixpence in money, in consideration whereof he tooke upon him (ipso facto) all the Sinnes of the Defunct, and freed him (or her) from walking after they were dead. . . . This Custome (though rarely used in our dayes) yet by some people was observed [continued] even in the strictest time of y^e Presbyterian government: as at Dynder, volens nolens the Parson of y^e Parish, the kined [relations] of a woman deceased there had this ceremonie punctually performed according to her Will: and also the like was donne at y^e City of Hereford in these times, when a woman kept many yeares before her death a Mazard-bowle for the Sinne-eater; and the like in other places in this Countie; as also in Brecon, e.g. at Llangors, where Mr. Gwin the minister

about 1640 could no longer perform or this ancient custom. I believe this custom was heretofore used over all Wales. . . . In North-Wales, the Sinne-eaters are frequently made use of; but there, instead of a Bowle of Beere, they have a bowle of Milke.¹

Again, writing of offertories at funerals, he says:

'These are mentioned in the Rubrick of y^e ch. of Engl. Comon-Prayer-booke: but I never sawe it used, but once at Beaumaris, in Anglesey; but it is used over all the Counties of North-Wales. But before when the corps is brought out of Doores, there is Cake & Cheese, and a new Bowle of Beere, and another of Milke with y^e Anno Dni engraved on it, & y^e parties name deceased, w^{ch} one accepts of on the other side of y^e Corps; & this Custome is used to this day, 1636, in North Wales.'²

Aubrey is also related to have given to a Mr. Bagford the following account of the ceremony as practised in Shropshire:

'Within the memory of our Fathers, in Shropshire, in those villages adjoining to Wales, when a person dyed there was notice given to an old Sire, (for so they called him), who presently repaired to the place where the deceased lay, and stood before the door of the house, when some of the family came out and furnished him with a Cricket, on which he sat down facing the door. Then they gave him a Groat, which he put in his pocket; a Crust of Bread, which he eat; and a full bowle of Ale, which he drank off at a draught. After this he got up from the Cricket and pronounced, with a composed gesture, the ease and rest of the Soul departed, for which he would payen his own Soul.'³

In more recent times Matthew Moggridge of Swansea gave an account to the Cambrian Archaeological Association, at their meeting at Ludlow in 1852, of the custom as lately surviving in the neighbourhood of Llandeibie, about twelve or thirteen miles from Swansea.

He related that, 'when a person died, the friends sent for the Sin-eater of the district, who on his arrival placed a plate of salt on the breast of the defunct, and upon the salt a piece of bread. He then muttered an incantation over the bread, which he finally ate, thereby eating up all the sins of the deceased. This done, he received his fee of 2s. 6d., and vanished as quickly as possible from the general gaze; for as it was believed that he really appropriated to his own use and behoof the sins of all those over whom he performed the above ceremony, he was utterly detested in the neighbourhood—regarded as a mere Pariah—as one irredeemably lost.'⁴

Moggridge's account was afterwards challenged by Canon Silvan Evans and others. But, if we turn again to N. Wales, we find a ceremony there described corroborating Aubrey's account. In the *British Magazine*, vii. [1835] 399, there appeared a description said to be taken 'from a MS. book of a bishop of St. Asaph' written about a century earlier, which runs as follows:

'When the corpse is brought out of the house and laid upon the bier, and covered before it be taken up, the next of kin to the deceased—widow, mother, daughter or cousin (never done by a man)—gives cross over the corpse to one of the poorest neighbours two or three white loaves of bread and a cheese with a piece of money stuck in it, and then a new wooden cup of drink, which some will require the poor body that receives it immediately to drink a little of. When this is done, the minister (if present) saith the Lord's prayer, and then they set forward towards church.'

Pennant, writing about the year 1780, describes the same custom as practised in Carnarvonshire. He apparently uses the source used by the writer in the *British Magazine*, but adds details of his own.⁵ In 1820 Robert Jones, a Calvinistic Methodist minister of N. Wales, describes it also, adding that the poor man to whom the loaf, cheese, and beer had been given over the corpse 'in return blessed and prayed fervently and earnestly with [or for] the dead man's soul.'⁶ Twenty years earlier Bingley speaks of the custom, which he assigns to Carnarvonshire and some other parts of N. Wales, as having been diverted to a gift of money for procuring slips of yew, box, and

other evergreens to strew over and ornament the grave during a certain period after the interment.

But still the money was 'given to the person on a plate at the door of the house where the body is standing on a bier. The gift is called *Diodlys*, for formerly, instead of it, the person used to receive from the hand of the female relative a cheese with a piece of money stuck in it, and some white bread, and afterwards a cup of drink, but this practice is now entirely discontinued; the gift however still retains its old name.'¹

The word *diodlys* refers to the gift of the drink, as also do other Welsh words for the custom: *diawdlestr* or *diodlestr*, *diodliff* (which Sir J. Rhys conjectured to be partly English, meaning the drink lifted over the dead), and *cwpan y meirw*, the cup of the dead.

What appear to be remains of the practice have lately been found in Herefordshire and Derbyshire.

A resident in the neighbourhood of Hay 'was invited to attend the funeral of the sister of a farmer near Crasswall [Herefordshire], and to his surprise was invited to go upstairs to the room where the body was lying. He went, with the brother and four bearers. At the bottom of the bed, at the foot of the coffin, was a little box with a white cloth covering it. On it were placed a bottle of port wine, opened, and six glasses arranged around it. The glasses were filled, and my informant was asked to drink. This he refused, saying that he never took wine. "But you must drink, sir," said the old farmer; "it is like the sacrament. It is to kill the sins of my sister." Traces of this custom are to be found at Walterstone; and near the Welsh border from Hay to Longtown port wine is drunk, exactly as described, by the bearers in the room where the body lies. Finger biscuits are provided.'² 'At a funeral in Derbyshire wine is first offered to the bearers who carry the corpse. This custom is strictly maintained, the guests not receiving any wine until the funeral party has returned from church.' Addy, who reports this, was told by the daughter of a farmer near Newark, formerly residing near Dronfield. 'When you drink wine at a funeral, every drop that you drink is a sin which the deceased has committed. You thereby take away the dead man's sins and bear them yourself.'³

In Yorkshire the custom was long preserved (and perhaps still is) of handing round wine and a special kind of sponge-cakes known as 'avril-bread' to friends attending the funeral, immediately before the procession starts from the house for the churchyard.⁴ The word *avril* is derived by Skeat from *arval*, 'succession-ale,' 'heir-ale,' the name of the feast given by an heir on succeeding to property in Iceland. The shape of the biscuits differed according to locality. They were often wrapped up, that the guests might take them home, in paper printed on the outside with coffins, cross-bones, skulls, and similar emblems of mortality,⁵ or (probably under the influence of the Evangelical Revival) with pious verses. The custom seems to have spread even as far afield as the island of Antigua, in the West Indies, where species of pastry called 'dye-bread' and 'biscuit-cakes' are said to have been formerly handed round at Negro funerals, enveloped in white paper and sealed with black wax.⁶ It is not known how or whence the custom was introduced. In Wales a custom is described of giving to the guests before proceeding to the churchyard spiced ale in pewter vessels somewhat larger than those used in the administration of the Lord's Supper. It was administered 'just as the Lord's Supper is administered and almost with the same reverence' to the company, all of whom took their hats off as soon as it made its appearance.⁷ The custom was also observed on the Shropshire border, and in addition cakes, wrapped up in black-edged paper as in Yorkshire, were handed round.⁸

A foreigner, describing a nobleman's obsequies which he witnessed at Shrewsbury in the early years of Charles II., states that the minister made a funeral oration in the chamber where the body lay, and 'during the Oration, there stood upon the Coffin a large Pot of Wine, out of which every one drank to the health of the deceased. This being finished, six Men took up the Corps, and carried it on their shoulders to the Church.'¹

At Cwm Yoy, in the Black Mountain, on the way to Llanthony, the people have at a funeral what they call 'the Last Sacrament.' The coffin is brought out and placed on trestles, and beer and cake are then partaken of by the guests and persons assembled (evidently in the immediate presence of the corpse), before the funeral procession starts.²

The interpretation of the custom has been much discussed. Analogues are found in other countries. In the Highlands of Bavaria, when the corpse had been ensnathed in a linen shroud and placed on the bier, the death-chamber was carefully washed out and cleaned. The housewife then used to prepare the corpse-cakes. Having kneaded the dough, she placed it on the dead body to rise. When it had risen, the cakes were baked for the expected guests. To the cakes so prepared the belief attached that they would contain the virtues and advantages of the dead man, and that thus his vital power was transferred to the kinsmen who consumed the corpse-cakes and so was preserved to the kin.³ Here the identification of the food with the dead man is not merely symbolic, as in the Welsh custom; the dough in rising is believed actually to absorb his qualities, which are transmitted to those of his kin who partake of the cakes. Moreover, the consumption of the food thus identified is not confined to one official; it is extended to the kinsmen who are present, and, as might be expected in such a case, it is held to be beneficial to them; they partake for their own advantage; they run no risk on behalf of the dead.

In India, however, the official practice of taking over the sins of another is well known.

When the king of Tanjore died in 1801, his corpse was cremated as usual, together with two of his wives chosen by the Brāhmins. A portion of his bones which had not been entirely consumed was reduced to powder, mixed with some boiled rice, and eaten by twelve Brāhmins. This act 'had for its object the expiation of the sins of the deceased—sins which, according to the popular opinion, were transmitted to the bodies of the persons who ate the ashes, and were tempted by money to overcome their repugnance for such disgusting food.'⁴ About the year 1884, when the funeral party of a *rani* of Chamba reached the burning ground some *ghi* and rice were placed in the hands of the corpse and consumed by a Brāhman on payment of a certain sum.⁵ A British official was informed by a Brāhman at a village near Raipur 'that he had eaten food out of the hand of the Raja of Bilāspūr after his death, and that in consequence he had for the space of one year been placed on the throne at Bilāspūr. At the end of the year he had been given presents, including a village, and then turned out of Bilāspūr territory, and forbidden apparently to return. Now he is an outcaste among his co-religionists, as he has eaten food out of a dead man's hand.'⁶

The object of eating food from the corpse's hand is not stated in these cases. In the latter the Brāhman seems to have been thought to have become possessed by the soul of the deceased, as in Bavaria the qualities of the deceased are transmitted to the kinsmen who eat the corpse-cakes.

Among the lower castes and tribes in India an offender against the ritual prescriptions of his people is expelled, but may be re-admitted on submission and the provision of a feast for his caste-fellows or fellow-tribesmen.

Among the Oraons of the Central Provinces the head of the

caste *panchayat*, or council, is called the *panua*. When an offender is reinstated, the *panua* first drinks water from his hand and takes upon himself the burden of the erring one's transgression.¹ A woman belonging to the wandering tribe of the Kaikāri, in the Central Provinces, who goes wrong with a man who is not a member of the tribe is excluded. But she may be re-admitted after being purified by a ceremony, part of which consists in being seated under a wooden shed having two doors. She enters by one of these, and the shed is then set on fire. She must remain seated until the whole shed is burning, when she may escape by the other door. A young boy of the caste then eats from her hand, and, thus purified, she is re-admitted to social intercourse.²

Usually the official or body re-admitting the offender eats and drinks with him. By so doing he or they take the burden of the sins of which the offender has been guilty.³

In Oudh, when female infanticide is practised, the infant is destroyed in the room where it was born, and there buried. The floor is then plastered over with cow-dung, and, on the thirteenth day after, the village or family priest must cook and eat his food in that room. This is considered as a *hom*, or burnt-offering, and by eating it in that place the priest is supposed to take the whole *hātia*, or sin, upon himself, and to cleanse the family from it.⁴

The ecclesiastical dominance of the Brāhmins in India has probably affected more or less all castes and tribes of the population, rendering prominent the idea of sin and practices for its removal. If we turn elsewhere, we find similar customs in reference to the dead explained as in Bavaria.

The savage tribes inhabiting the valley of the Uaupes, a tributary of the Amazon, bury their dead beneath the floor of the communal house. About a month later the survivors 'disinter the corpse, which is then much decomposed, and put it in a great pan, or oven, over the fire, till all the volatile parts are driven off with a most horrible odour, leaving only a black carbonaceous mass, which is pounded into a fine powder and mixed in several large *couches* (vats made of hollowed trees) of a fermented drink called *caziri*; this is drunk by the assembled company till all is finished; they believe that thus the virtues of the deceased will be transmitted to the drinkers.'⁵ The like practices are reported of other S. American tribes, either at the present day or up to quite recent times. Among these the Cobus are expressly said to observe the custom for the purpose of incorporating in their own persons all the energy of the deceased. The Caribs do so for a similar reason. Some of the Brazilian tribes hold that the soul dwells in the bones, and by means of this proceeding the departed live again in those who thus drink up the bones.⁶

So among the tribes of the Darling River, in Australia, in the course of the funeral ceremonies a piece of flesh is cut from a corpse, 'taken to the camp, and after being sun-dried is cut up into small pieces and distributed among relatives and friends of the deceased: some use the piece in making the charm called *Yountoo*; others suck it to get strength and courage, or throw it into the river to bring a flood and fish, when both are wanted.'⁷ A European informant in whom A. W. Howitt had full confidence told him 'that when a boy he saw two old men secretly roasting and eating fat taken from a dead blackfellow, and they observed to him that now they would have the strength of the other man.'⁸ Among the Melanesian population of the Banks Islands a morsel of a corpse would be stolen and eaten by one who desired communion with the ghost. Such an one would then become a *talamaur*; the ghost 'would join in a close friendship with' him and by its aid he could afflict any one whom he desired. 'The same name, *talamaur*, was given to one whose soul was supposed to go out and eat the soul or lingering life of a freshly-dead corpse.'⁹

In these cases the object seems to have been magical. The intention evidently was, by consuming a portion of the corpse, to appropriate some power or quality of the deceased and add it to that of the survivor. The belief in the possibility of acquiring qualities, mental as well as physical, by means of food is wide-spread in the lower culture.

Among the Kiwai at the mouth of the Fly River, New Guinea, sharks, because of their ferocity, are held to be the proper kind of food for warriors in war-time; other fish are 'too soft.'¹ When a youth is initiated, among the Thonga of S.E. Africa, as a diviner, a vulture's heart is cooked with other drugs and given to him, so that he 'will be able to dream of things which are far away and go straight to them.'² The Omaha give a boy a turtle's heart to make his heart strong (like the shell of a turtle?); the fat about a buffalo's heart was given to children that they might have strong hearts, i.e. be courageous; a buffalo's liver eaten raw was said to make a man courageous, and to give him a clear voice.³ The children of the Indians of the Paraguayan Chaco are forbidden milk, whether of the cow, goat, sheep, or mare, 'because it is supposed that the milk upon which they are nourished will influence them physically as well as in character, and the Indians have no desire that their children should in any way acquire the natures of such animals.'⁴ The Caribs eat neither hog nor turtle, though both are plentiful on their islands, lest their eyes become small like those of the former, or lest they themselves become clumsy and stupid like the latter.⁵ On the other hand, the Ekoi of S. Nigeria hold that the manatee's flesh confers magical properties on those who eat it.⁶ The Suk of the Highlands of British E. Africa sometimes give the fat and heart of a lion to children to eat, so that they may become strong.⁷ The men of various Dayak tribes eat no deer-flesh lest they thereby acquire the shy, timid character of the deer.⁸ On the contrary, among the Macassarese the blood of the deer is much drunk by hunters, with or without palm-wine, apparently with the object of becoming fleet as a deer. At all events it is expressly asserted of the Torajas that their chiefs always drink in war a little blood of the foe whom they have slain, in order to become valiant and strong.⁹

But the qualities desired can also be obtained by appropriating and wearing the spoils of the dead.

The Araucanos, we are told, 'imagine that any portion of the body is endowed with the qualities of the whole. Here we have the reason of their wearing the skins or heads of wild animals: that of the puma to give them strength and valour; of the fox for cunning; of the snake to enable them to crawl unseen among their enemies; eagles' feathers to make them rapid and fearless in attack. They believe that the wearing of these articles endows the wearer with the qualities they represent.'¹⁰ The belief is by no means confined to the Araucanos. It is probable that in the old Armenian Church the priests clothing themselves even at the altar in the hides of wolves, foxes, and other animals did so in order to invest themselves with the sanctity of the animals from which the hides were taken.¹¹ This seems to have been a continuation of an old heathen rite.¹²

The wearing of the spoils is, however, only one method of substitution for the more complete rite of eating the creature, whether human or non-human, in order to appropriate its qualities. Of all varieties of cannibalism (*q.v.*) the eating of dead relatives is likely to be the earliest discarded. In such a case various devices would be adopted for securing the aim of the practice.

On the island of Vate in the New Hebrides the aged were put to death by burying them alive. A hole was dug, and the victim placed within it in a sitting posture, a live pig tied to each arm. Before the grave was closed, the cords were cut, and the pigs thus liberated were killed and served up at the funeral feast. In this way they seem to be identified with the corpse.¹³ Among the Todas and the Kotas of the Nilgiri Hills, at a funeral, a buffalo is killed and brought into contact with the corpse. It is afterwards eaten at the feast.¹⁴ In Kanaur, on the Upper Sutlej, at the annual feast (*śrāddha*) in honour of the dead, a he-goat, reared in the dead man's name, is dressed in his clothes, sacrificed, and eaten by members of his kindred.¹⁵ The Dīhāngars and Basors of the United Provinces, after burying a corpse, return to the dead man's house, kill a

hog, and, after separating the limbs to be cooked for the funeral feast, bury the trunk in the courtyard of the house, making an invocation to it as the representative of the deceased, and ordering him to rest there in peace and not worry his descendants.¹ In the Balkan peninsula cakes, called by the Greeks *kolyva*, made of boiled wheat and other ingredients, are eaten at funerals. These are either carried, as in Albania, in the funeral procession and eaten on the tomb or, as elsewhere, eaten at the funeral feast immediately on the return to the house. In many places they bear the image of the dead stamped upon them. It is sinful to indulge in expressions of sorrow while eating them. As each mourner takes his share, he says: 'May he (or she) be forgiven!' or 'God rest him!' In Calymnos, among the Greeks, the *kolyva* cakes are carried the day after the funeral from the house of death to the tomb, on which they are set to be distributed. The eating of *kolyva* cakes is repeated with similar ceremonies on the third, ninth, and fortieth days and again at the end of three, six, and nine months and of one, two, and three years after death, when the death rites cease.² In Sicily annually, on the festival of All Souls, sweetmeats impressed with images of skulls, bones, skeletons, souls in purgatory, and the like, are eaten. This is called 'eating the dead.'³ There is a similar custom at Perugia and probably at other places in Italy.⁴ Elsewhere the intention is hardly less manifest. It is customary among the Letts to serve the relatives, on the grave itself, with bread and cheese, or with beans and peas, beer and brandy.⁵ In the government of Smolensk, White Russia, when the grave is filled, a white cloth is spread over it, on which a paste composed of flour, poppy, and honey is served, every one taking a spoonful.⁶ In Brunswick—where the funeral meal is regarded as a pious duty to which the departed has a right, the last honour that can be paid to him—the tables are laid by ancient custom on the very spot from which the coffin has just been removed.⁷ An Armenian custom, witnessed by Rendel Harris some years ago at the village of Archag, goes further, and reminds us of the Bavarian corpse-cakes. He saw there a corpse lying in the midst of the church, laid out for burial the following day. Two large flat loaves had been placed upon the body. On inquiry he learned, after some difficulty, 'that in former days the custom was to eat the bread, dividing it up amongst the friends of the deceased'—a custom which the people were apparently beginning to outgrow.⁸

The custom of sin-eating, therefore, would seem to be derived from that of eating the corpse. In all the customs just cited there is an attempt to identify the ritual food with the deceased. The same attempt is obviously made in both the British and the Bavarian customs, although the effect of consuming the food is differently interpreted. Under ecclesiastical influence, and specifically in Great Britain under influences derived from the Mosaic legislation, prominence has been given both in India and in this country to the idea of the scapegoat (*q.v.*), which is absent from the ritual elsewhere. There can be little doubt that this idea has been imported into the custom, which is probably represented much more nearly to its original form by the Bavarian rite. A funeral meal is a common incident everywhere. It is the reunion of the kin after the shock of the severance of one of its members. It does not everywhere suggest a primitive feast on the corpse itself; rather it takes the form in most cases of a feast at which the deceased is, though unseen, one of the convives—a feast given to speed the parting soul. Such may have been the feast in classic times provided at the tomb, and that at Argentière, in the department of the Hautes Alpes, France, where the table of the curé and the family is still placed in the cemetery upon the grave itself, and after the meal every one, led by the next of kin, drinks to the health of the departed.⁹ But where a special kind of food or drink is provided, and where it is brought into immediate connexion with the corpse, the case is different, and we may reasonably conclude that it represents the flesh of the dead, especially where it is expressly believed

⁹ Laisnel de la Salle, *Croyances et légendes du centre de la France*, Paris, 1875, ii. 81.

A foreigner, describing a nobleman's obsequies which he witnessed at Shrewsbury in the early years of Charles II., states that the minister made a funeral oration in the chamber where the body lay, and 'during the Oration, there stood upon the Coffin a large Pot of Wine, out of which every one drank to the health of the deceased. This being finished, six Men took up the Corps, and carried it on their shoulders to the Church.'¹

At Cwm Yoy, in the Black Mountain, on the way to Llanthony, the people have at a funeral what they call 'the Last Sacrament.' The coffin is brought out and placed on trestles, and beer and cake are then partaken of by the guests and persons assembled (evidently in the immediate presence of the corpse), before the funeral procession starts.²

The interpretation of the custom has been much discussed. Analogues are found in other countries. In the Highlands of Bavaria, when the corpse had been enswathed in a linen shroud and placed on the bier, the death-chamber was carefully washed out and cleaned. The housewife then used to prepare the corpse-cakes. Having kneaded the dough, she placed it on the dead body to rise. When it had risen, the cakes were baked for the expected guests. To the cakes so prepared the belief attached that they would contain the virtues and advantages of the dead man, and that thus his vital power was transferred to the kinsmen who consumed the corpse-cakes and so was preserved to the kin.³ Here the identification of the food with the dead man is not merely symbolic, as in the Welsh custom; the dough in rising is believed actually to absorb his qualities, which are transmitted to those of his kin who partake of the cakes. Moreover, the consumption of the food thus identified is not confined to one official; it is extended to the kinsmen who are present, and, as might be expected in such a case, it is held to be beneficial to them; they partake for their own advantage; they run no risk on behalf of the dead.

In India, however, the official practice of taking over the sins of another is well known.

When the king of Tanjore died in 1801, his corpse was cremated as usual, together with two of his wives chosen by the Brāhmins. A portion of his bones which had not been entirely consumed was reduced to powder, mixed with some boiled rice, and eaten by twelve Brāhmins. This act 'had for its object the expiation of the sins of the deceased—sins which, according to the popular opinion, were transmitted to the bodies of the persons who ate the ashes, and were tempted by money to overcome their repugnance for such disgusting food.'⁴ About the year 1884, when the funeral party of a *rani* of Chamba reached the burning ground some *ghi* and rice were placed in the hands of the corpse and consumed by a Brāhman on payment of a certain sum.⁵ A British official was informed by a Brāhman at a village near Raipur 'that he had eaten food out of the hand of the Raja of Bilāspūr after his death, and that in consequence he had for the space of one year been placed on the throne at Bilāspūr. At the end of the year he had been given presents, including a village, and then turned out of Bilāspūr territory, and forbidden apparently to return. Now he is an outcaste among his co-religionists, as he has eaten food out of a dead man's hand.'⁶

The object of eating food from the corpse's hand is not stated in these cases. In the latter the Brāhman seems to have been thought to have become possessed by the soul of the deceased, as in Bavaria the qualities of the deceased are transmitted to the kinsmen who eat the corpse-cakes.

Among the lower castes and tribes in India an offender against the ritual prescriptions of his people is expelled, but may be re-admitted on submission and the provision of a feast for his caste-fellows or fellow-tribesmen.

Among the Oraons of the Central Provinces the head of the

caste *panchayat*, or council, is called the *panua*. When an offender is reinstated, the *panua* first drinks water from his hand and takes upon himself the burden of the erring one's transgression.¹ A woman belonging to the wandering tribe of the Kalkāri, in the Central Provinces, who goes wrong with a man who is not a member of the tribe is excluded. But she may be re-admitted after being purified by a ceremony, part of which consists in being seated under a wooden shed having two doors. She enters by one of these, and the shed is then set on fire. She must remain seated until the whole shed is burning, when she may escape by the other door. A young boy of the caste then eats from her hand, and, thus purified, she is re-admitted to social intercourse.²

Usually the official or body re-admitting the offender eats and drinks with him. By so doing he or they take the burden of the sins of which the offender has been guilty.³

In Oudh, when female infanticide is practised, the infant is destroyed in the room where it was born, and there buried. The floor is then plastered over with cow-dung, and, on the thirteenth day after, the village or family priest must cook and eat his food in that room. This is considered as a *hom*, or burnt-offering, and by eating it in that place the priest is supposed to take the whole *katia*, or sin, upon himself, and to cleanse the family from it.⁴

The ecclesiastical dominance of the Brāhmins in India has probably affected more or less all castes and tribes of the population, rendering prominent the idea of sin and practices for its removal. If we turn elsewhere, we find similar customs in reference to the dead explained as in Bavaria.

The savage tribes inhabiting the valley of the Uaupes, a tributary of the Amazon, bury their dead beneath the floor of the communal house. About a month later the survivors 'disinter the corpse, which is then much decomposed, and put it in a great pan, or oven, over the fire, till all the volatile parts are driven off with a most horrible odour, leaving only a black carbonaceous mass, which is pounded into a fine powder and mixed in several large *couchés* (vats made of hollowed trees) of a fermented drink called *caciri*; this is drunk by the assembled company till all is finished; they believe that thus the virtues of the deceased will be transmitted to the drinkers.'⁵ The like practices are reported of other S. American tribes, either at the present day or up to quite recent times. Among these the Cobueus are expressly said to observe the custom for the purpose of incorporating in their own persons all the energy of the deceased. The Caribs do so for a similar reason. Some of the Brazilian tribes hold that the soul dwells in the bones, and by means of this proceeding the departed live again in those who thus drink up the bones.⁶

So among the tribes of the Darling River, in Australia, in the course of the funeral ceremonies a piece of flesh is cut from a corpse, 'taken to the camp, and after being sun-dried is cut up into small pieces and distributed among relatives and friends of the deceased: some use the piece in making the charm called *Yountoo*; others suck it to get strength and courage, or throw it into the river to bring a flood and fish, when both are wanted.'⁷ A European informant in whom A. W. Howitt had full confidence told him 'that when a boy he saw two old men secretly roasting and eating fat taken from a dead blackfellow, and they observed to him that now they would have the strength of the other man.'⁸ Among the Melanesian population of the Banks Islands a morsel of a corpse would be stolen and eaten by one who desired communion with the ghost. Such an one would then become a *talamaur*; the ghost 'would join in a close friendship with' him and by its aid he could afflict any one whom he desired. 'The same name, *talamaur*, was given to one whose soul was supposed to go out and eat the soul or lingering life of a freshly-dead corpse.'⁹

In these cases the object seems to have been magical. The intention evidently was, by consuming a portion of the corpse, to appropriate some power or quality of the deceased and add it to that of the survivor. The belief in the possibility of acquiring qualities, mental as well as physical, by means of food is wide-spread in the lower culture.

that some qualities, good or bad, of the deceased are transmitted to the eater.

Cannibalism of the kind referred to—namely, the eating of dead kinsmen—is reported from Asia, Africa, Australia, S. America, and the E. Indian Archipelago. In Europe it is reported by Strabo¹ of the ancient Irish, though he admits that his evidence is not wholly satisfactory. Nor was it always customary among peoples who practised it to await the convenience of the aged to die. They were slain and devoured. Herodotus² attributes this custom to the Massagetæ. Savages all over the world have been wont to put to death the aged and infirm. The traditions of the 'holy maul,' with which the son was said to knock on the head his old and useless father, point to this custom as once practised in Western Europe. There is no direct evidence to connect it with the eating of the dead. But there is a custom in Scandinavia, which was witnessed by Du Chaillu at Husum, whereby the son formally dispossesses his father and takes his place at the head of the table in spite of the father's pleas and protests. That the ceremony is performed at the table prior to partaking of a common meal is noteworthy in this connexion.³

LITERATURE.—In addition to the authorities cited in the footnotes reference may be made to a lengthy correspondence in *The Academy*, 9th Nov. 1895-23rd May 1896, in which the evidence on which the Welsh custom rests was fully considered; and E. S. Hartland, *The Legend of Perseus*, London, 1894-96, ii. ch. xiii. See also the art. CANNIBALISM, and the authorities there cited.

SIOUANS.—While the tribal units of the Siouan family of American Indians have many ethical and religious traits in common, yet each separate tribe possesses certain highly individualized characteristics, often not at all in keeping with the views of its nearest relatives and associates. For convenience we may divide the Siouans into three great cultural groups: (1) the Plains division, including the various sub-tribes of the Dakota, Assiniboin, and Crow; (2) the village Siouans, made up of the Mandan and Hidatsa; and (3) the Southern Siouans, the principal component tribes of which are the Omaha, Ponca, Osage, Iowa, Oto, and perhaps the Winnebago.

1. Ideas of deity.—Among all these groups there are found certain fundamental concepts, which indeed are not confined to the Siouans alone. While none of them, *e.g.*, have anything corresponding to the true European thought of God, yet all hold ideas of a great supernatural power or complex of powers which controls the universe. The Dakota believe in a celestial hierarchy made up of the sun, sky, earth, and rock, each of which is called *wakan tanka*, and each has control over certain things necessary to the existence of mankind. Among the Omaha, however, the cognate term *wakonda* has a different meaning. It is used with reference to all objects or phenomena which are regarded as supernatural, and at the same time this term is also applied to the sacred and mysterious omnipresent power which animates them. This power is not infrequently personified, and is addressed in prayer as the 'power that moves,' for movement and life are to the Omaha synonymous. There can be little doubt that these ideas permeate the religious beliefs of all the Southern Siouans, and are closely related to the Algonquian *manitu* concepts.

The various agents through which the American Indian believes mysterious power to be manifested are termed *wakanda*, or, among the Dakota, *wakan*. These include a host of beings of greater or less importance, chief among whom are the

Thunderbird, Whirlwind, Tree-dwelling elf, and the panther-like Water-monster. These beings are able to transfer their supernatural power to mankind, under certain conditions.

The method of approaching these deities is the same among all the Siouans. At the age of puberty the aspiring youth retires to some solitary spot, where he proceeds to fast, and in some cases, as among the Dakota, to mortify his flesh by undergoing self-torture and even mutilation accompanied by incessant prayer. This period of self-castigation is prolonged for several days, generally not ending until the supplicant has brought on a vision in which one of the *wakanda* appears to him and offers to grant him certain privileges, usually concerned with success in war and the chase. In return for this, the recipient is enjoined to observe certain tabus and always to carry about some memento of his guardian-spirit, such as the skin of the animal in whose form it appeared, or a small symbolic trinket. This object itself now becomes the seat of much, if not all, of its owner's *wakanda*, and its loss renders him helpless and no more than a common man. It also receives sacrifices and feasts and even the prayers of its owner, as being the abiding-place of his *wakanda* and the symbol of, if not the intermediary with, his dream-guardian.

It sometimes happens that an individual receives from his guardian instructions that affect the religious life of the whole tribe.

An Oto now (or very recently) living was ordered by a *wakanda* in a dream to make a shrine in which were to centre certain ceremonies that were to benefit the entire people. Accordingly, the shrine was made and the songs, prayers, and dances which this Siouan received from his mysterious source were introduced into the ceremonial and religious life, not only of his tribe, but among the Iowa and others as well. Thus have grown up societies and ceremonies of a religious nature throughout the entire Siouan stock.

2. Religious ceremonies.—Among the Siouan tribes forming the Prairie group the great religious ceremony is the Sun-dance. This function is divided into a secret and a public performance. The former takes place in a secluded *tipi*, where the priests gather for the holding of their rites, such as praying, fasting, and making ready the objects which are to form part of the paraphernalia of the participants in the public ceremony, or are to be used on the altar in the Sun-dance lodge.

On the last day of the secret observances a great ceremonial structure is erected in the centre of the camp circle; the obtaining and bringing in of the material is attended to by certain warrior societies of the tribe, the selection of the centre pole being peculiarly the task of the braves; and all is accomplished with many ritualistic observances. When completed, the structure is a huge roofless enclosure of circular form with a tall central pole. The priests now come out of their seclusion and enter the lodge, which is dedicated by elaborate rites, generally including parades by the societies of warriors. The next day the altar is set up on the west side of the lodge. Its construction differs from tribe to tribe. Among the Ponca it is a mere buffalo-skull placed with a pipe on a rectangle of clean earth from which the sod has been cut. Among the Mandan,

the Sun-dance ceremony it is a large symbolic structure. When the altar is complete the dancers with paint on the neck, waist, head, wrists, and ankles. The performers then dance in line, gazing at the sun and incessantly blowing on eagle-bone whistles, while the dance music is sung to the tune of a drum placed near the south side of the lodge. The dancers usually fast during the entire ceremony. They also submit to painful forms of self-torture. The commonest types of this ordeal consist of slitting the skin of the breasts and inserting skewers to which thongs are attached, the thongs being made fast to the central lodge pole, and the victim then endeavouring to tear himself loose. Others drag buffalo-skulls, fastened to their backs in the manner described. The Crow, in particular, chop off joints of their fingers as offerings to the sun. These practices reached their greatest development among the Mandan, who carried the torture to great lengths. Among them individuals were often suspended from the top of the lodge by thongs and skewers. Other less physically painful sacrifices were made—*e.g.*, throwing away blankets, clothing, and other goods.

The Crow Sun-dance, unlike that of the other

¹ iv. 5. 4.

² i. 216.

³ P. B. Du Chaillu, *Land of the Midnight Sun*, London, 1881, t. 393.

Siouans, was not a periodical ceremony. It was held only when a mourner was especially eager to avenge the murder of a close relative by the death of a member of a hostile tribe. He was first obliged to obtain a vision of a conquered foe, which was an implied promise of his success. He was able to have this vision only through the aid of a sacred doll, which was the most important object in the entire ceremony. The owner of one of these dolls (there were several in the tribe) was hired by the person desiring to hold the dance, to take charge of the ceremonies.

Among the Southern Siouans there are many esoteric religious societies. Of these the chief was the Medicine-dance society, as it is known among the Iowa, Oto, Winnebago, and Eastern Dakota. It corresponds closely to the Midé'wiwin of the Central Algonquians. The Omaha form of this society is called Wacicka, and is based on a ritual founded on a long secret origin-myth. The object of the society is to teach its members how to secure long life on earth through the knowledge of healing herbs and medicines, and to secure their safe arrival in the hereafter through ethical and religious teachings.

The tribal religious rites of the Omaha were called *wewacpe*, a term which had reference to bringing the people into thoughtful composure. These rites partook of the general nature of prayer, and were intended to be intermediaries between the Omaha and *wakan*. An error could be adjusted only after a ceremony of contrition and retribution, as they believed that any interruption of the prescribed order of a ceremony made the culprit liable to divine punishment. All *wewacpe* rites were considered institutional and were distinct from individual rites. They were both private and public. Except for the ceremonies of the *ho'be wateci*, or night-dance, the performances of the esoteric societies of the tribe were not looked upon as *wewacpe*. The *wewacpe* ceremonies included those for corn or maize, those pertaining to the yearly buffalo-chase, the introduction of a child to the supernatural powers, the consecrating of male children to the thunder, and the calumet ceremony.

3. Eschatology.—Siouan beliefs as to a future existence vary greatly. The Omaha have certain theories in common with the Central Algonquians. The Dakota think that each person has four spirits: one resides in the body, and dies with it; the second always remains near the body; the third accounts for the deeds of the body, and travels south after death; the fourth always lingers with the lock of hair which the mourners cut from the head of the deceased; this lock is kept until the opportunity offers itself to the mourners to throw the bundle away in the enemies' country, when the spirit becomes a wanderer sowing death and disease among the foe. From this theory arose the custom of wearing four eagle-plumes for each enemy killed in war, one for each spirit. There are some Dakota who claim the right to wear a fifth feather for another spirit which transmigrates to the body of a child or an animal. The Dakota seem to have no theory as to what is the final abode of the four spirits, except that they travel to the south.

The Hidatsa, on the other hand, believe that, when one of their people dies, his spirit stays four nights around the camp or settlement where he breathed his last, and then goes to the lodge of his departed relatives in the village of the dead. When he has arrived, he is rewarded for his conduct on earth with the same things as are valued in this life. The 'village of the dead' is located under the earth, but, in order to reach it, the soul must cross a broad swift river on a narrow

pathway. Those whose life has been evil slip off and are hurried into oblivion. In the other world the shades pursue and kill the shades of buffalo and other animals that have died.

With the Omaha the belief was held that spirits travelled over the Milky Way to the hereafter, which was a land where the environment resembles that of this world. The journey required four days and as many nights, so the mourners kept a fire burning on the grave for four nights after the interment of the deceased, that its light might cheer and guide the departing soul on its way. After a toilsome trip the spirit came to a fork in the road of the dead, where sat an old man closely wrapped in the folds of a buffalo-robe. If the deceased had been a righteous and peaceable person, the road-keeper directed him a short-cut to the hereafter. If, on the other hand, the soul was that of an evil-doer, it was sent over a rough and dreary road, where it wandered on for ever. By exception, however, the souls of the members of the two Omaha buffalo gentes were supposed to return to their eponymic ancestors.

4. Disposal of the dead and mourning customs.—While many of the Siouan tribes practised scaffold-burial, the Omaha buried their dead on hill-tops, placing the corpse in a flexed position on its side and erecting a mound over it. Some of the belongings of the deceased, such as the knife, tomahawk, or club, kettle, and the like, were placed in the tomb. In some cases a horse was strangled over the grave. Food was also placed near by. Often the male mourners met in a lodge near that of the deceased, and cut the flesh of their arms and thrust willow-twigs into the wounds. Then, with the blood dripping from their cuts, they went to the wake and sang certain funeral-songs. They then withdrew the twigs and threw them on the ground. Mourners often went on the war-path to obtain relief from grief. A man who had lost a child carried its little moccasins and placed them at the side of the body of a fallen foe, whom he had killed, in the belief that the soul of his slain enemy would guide the spirit of the dead babe to its relatives in the hereafter.

ALANSON SKINNER.

SIRENS.—The symbolism of the sirens, *Σειρῆνες*, in literature and art is of more significance for the history of moral ideas than the etymology of the name or the pre-historic origin of the myth would be, even if we could ascertain them. We cannot. The prevailing view is that they are primarily 'the stranglers,' 'würgende Totengeister,' akin to the Keres, Erinyes, and Harpies. This, like many prevailing views of the science of mythology, is confirmed by over-stressing the evidence of Greek vases and by the assumption that the fragmentary testimony of Alexandrian and Roman writers always preserves the genuine pre-Homeric popular belief.¹ Already at their first appearance² the two³ Sirens embody a conscious allegory,⁴ as Cicero⁵ and Horace⁶ perceived. Ruskin's explicit

¹ See G. Weicker, 'Die Seirenen,' in Roscher, where all the testimonia are collected.

² Homer, *Od.* xii. 39, 165 ff.

³ Dual in *Od.* xii. 167; for the three or more of later tradition, their transparent names, and varying genealogies, see A. C. Pearson on Sophocles' frag. 861; G. W. Mooney on Apollonius Rhodius, iv. 893 ff.; and Weicker, p. 602 f.

⁴ See F. M. Stawell, *Homer and the Iliad*, London, 1909, p. 150, where, however, the rendering 'a spirit had put the waves to rest' is fanciful.

⁵ *De Fin.* v. 18.

⁶ *Ep.* i. li. 23; cf. *Sat.* ii. iii. 14.

allegorization of their song as the lure of the thirst for unsanctified knowledge and the immodesty of science,¹ for all its modern sound, is merely a development of what Homer and Cicero tell us—that they promised Odysseus, not love or pleasure, but knowledge. The notion of the fatal songstress, the lurer, the temptress, the Lorelei,² arises naturally in the human mind, and we cannot now recover the particular association of ideas that first clothed it for the Greek imagination in the form of the Sirens. In the earliest Greek vases that represent the scene from the *Odyssey* they are portrayed with the wings and body of a bird and a woman's head.³

It was a plausible hypothesis, then, that they were originally birds, symbolizing either the widespread association of the fleeting soul with the wings of a bird or the magic of the bird's song,

‘that tells us
What life is, so clear.
—The secret they sang to Ulysses
When, ages ago,
He heard and he knew this life's secret
I hear and I know.’⁴

Or as singers they may signify the spell of all song and eloquence, and for this reason perhaps the image of a Siren was later placed on the monuments of poets and orators—e.g., Sophocles and Isocrates.⁵

Again, they are in a sense sea-nymphs inhabiting a lonely ocean isle, somewhere in the western fairyland of Odyssean adventure.⁶ And the treacherous lure or the magic spell of the smiling sea was a commonplace of Greek poetry and has been familiar to the human imagination from Lucretius'

‘Subdola cum ridet placidi pellacia ponti’
to Keats'

‘Magic casements, opening on the foam
Of perilous seas, in faery lands forlorn.’

Or, again, the Sirens may have blended in the Greek imagination with the wailing women who sang laments for the dead at funerals. Weicker confirms this connexion of ideas by the regret with which the souls of Homeric heroes leave ‘the warm precincts of the cheerful day.’⁷ It would be far more pertinent to Homer to quote Gray's *Elegy*, the last line of the *Aeneid*, Matthew Arnold's *Sohrab and Rustum*, and John Masefield's *August, 1914*. However that may be, the association with death opens up infinite possibilities for speculation and sentiment. ‘Before Plato could speak, the soul had wings in Homer,’ says Sir Thomas Browne.⁸ The primitive conception of the soul-bird is the theme of a modern monograph.⁹ The analogy of the Harpies has also been used in confirmation of this association.

None of these fancies admits of proof, but their suggestions for the poetic and the moral imagination can never pass away. The name of one of the Sirens on the British Museum amphora, *λυεόρα*, recalls Aleman's ‘maidens with voices that wake desire,’ and Dante's ‘siren of sensual pleasure’ repeats in verse of more than Greek loveliness the

¹ *The Eagle's Nest*, § 74.

inscription ΣΙΡΗΝΕΙΜΙ on the Tyrrhenian Hydria, Louvre E 803:

‘Io son cantava io son dolce sirena
Che i marinari in mezzo mar dismago.’

The Sirens are not mentioned except by modern inference in Hesiod, the Homeric hymns, Pindar, or Æschylus. In the Greek lyrics they are named only in Erinna's reference to the Sirens on the tomb of her companion Baucis, and in frag. 7 of Aleman, and a new fragment of Archilochus. Sophocles speaks of them as the ‘songstresses of death’ and ‘daughters of Phorkys.’¹ Euripides' *Helena* invokes them as ‘winged maidens, daughters of earth,’ to sing her sorrows.² And in his *Andromache*³ ‘Sirens’ speeches’ is rhetoric for the words of the women who lead Hermione astray.

In the fragments of Greek comedy (Epicharmus, Theopompus) it is perhaps they who tempt the famished Odysseus with descriptions of a Gargantuan feast, while he checks the eagerness of his companions by the remark that their flute-playing is rotten (*campé*).

In Plato's *Republic*⁴ the music of the spheres is produced by the concerted notes of eight Sirens, one on each circle. Plato's *Cratylus*⁵ allegorizes the myth in what Ruskin⁶ calls ‘the divine passage in the Cratylus of Plato about the place of the dead,’ which he renders exquisitely:

‘And none of those who dwell there desire to depart thence, —no, not even the Sirens; but even they, the seducers, are there themselves beguiled, and they who lulled all men, themselves laid to rest—they, and all others—such sweet songs doth death know how to sing to them.’

Ovid⁷ merely says that the Sirens were playmates of Proserpine, and that the gods granted them wings that they might continue their search for her over the sea also. In the legend of the Argonauts, as the mythographs Apollodorus⁸ and Hyginus⁹ tell us, Orpheus sang against the Sirens who, being defeated, cast themselves into the sea and were transformed into hidden rocks.¹⁰ This is the origin of the long modern literary tradition, from Samuel Daniel to William Morris's *Life and Death of Jason*, in which Orpheus (or Odysseus) sings the song of virtue against the allurements of the Sirens of temptation. In the language of the LXX (Job 30²³, Is 34¹³ 43²⁰, Jer 50³⁹) Siren is a synonym for the wild creatures and spirits that inhabit waste places. The AV renders it by ‘owls’ or ‘dragons.’ The Christian Fathers variously allegorized these passages, and also interpreted Odysseus lashed to the mast as a symbol of the Christian clinging to the Cross of Christ to resist the allurements of the world. Bacon pronounces Orpheus' remedy of song better than Ulysses' device of stopping the ears of his crew with wax:

‘For meditations upon things divine excell the pleasures of the sense, not in power only but also in sweetness.’ Light and conscienceless literature aims ‘at taking the wings away from the Muses' crowns and giving them back to the Sirens.’¹¹

In Daniel's *Ulysses and the Siren Ulysses* answers the Siren in this edifying strain:

‘Fair Nymph, if fame or honour were
To be attain'd with ease,
Then would I come and rest me there
And leave such toils as these.’

Though not expressly named, the Sirens are clearly meant in the *Faerie Queene*¹² by the mermaids who

‘fondly striv'd
With th' Heliconian maidens for mastery,’
and who invite Sir Guyon to find his ‘Port of rest’ in

‘The worlds sweet In, from paine and wearisome turmoyle.’

This is a favourite motive of Renaissance epics, recurring in various forms in Ariosto, Camoëns, and Tasso. The *Sea-Fairies* of Tennyson is a lyric development of the same theme with touches taken from Catullus' *epyllium* of Peleus and Thetis. The appeal of Matthew Arnold's *New Sirens* is to scepticism and emotionalism—

'Only, what we feel, we know.'

Lowell's *Sirens* echo Tennyson's sea-fairies and his lotos-eaters, and their lure is

'To be at rest for evermore!'

SIVA.—See ŚAIVISM, DRAVIDIANS (North India).

SIVA NĀRĀYANIS.—The Śiva Nārāyanis, or Sio Nārānis, are a monotheistic sect of N. India, having their centre in the Districts of Ghāzipur and Balliā. They profess unqualified monotheism, have no formal ritual, and pay no regard to the objects of Hindu and Musalmān veneration. Their worship consists in the members gathering at a *dhām*, or monastery, where one of their *Granth*s, or sacred books, is read. Adoration is then offered to the Para Brahma, or the Supreme, and offerings are made, which are devoted to the upkeep of the establishment.

They accept converts from all classes of the community—Hindus, Muslims, or Christians—and many of these adhere outwardly to the forms of their original beliefs. It is specially reported that some Indian Christians of the District of Shāhābād belong to the sect. At the present day most of the members are low-caste Hindus, but the chief *sants*, or leaders, are generally Rājputs or Brāhmins. According to Risley,¹ the large majority of Bengali Chamārs belong to it.

The acceptance of a convert is a matter of small ceremony. No *guru*, or spiritual guide, is required. A few Śiva Nārāyanis assemble to meet the postulant, sweetmeats which have previously been deposited on one of their holy books are distributed, a few passages are read from the book, and the ceremony is complete.

The sect was founded in the reign of the emperor Muhammad Shāh (A.D. 1719–48) by one Śiva Nārāyana, a Narauni Rājput of the village of Chandravār in the present Balliā District. He is said to have written sixteen Hindi works,² viz. *Lava Granth*, *Sānt-vilās*, *Sant ō jān Granth*, *Sānt-sundar*, *Guru-nyās*, *Sānt-āchār*, *Sāntpādēs*, *Sabdāvali*, *Sānt-parvāna*, *Sānt-mahimā*, *Sānt-sāgar*, *Barā stōtra*, *Barā parvāna*, *Patī parvāna*, and *Barhō Bānī*. The most important of these are the *Guru-nyās* and the *Sānt-vilās*. The former, compiled from the Sanskrit *Purānas*, gives an account of the ten incarnations of Viṣṇu, and is subdivided into fourteen chapters, of which the first six treat of the author, of faith, of the punishment of sinners, of virtue, of a future state, and of discipline. The latter is a treatise on moral sentiments. The opening lines are: 'The love of God and His knowledge are the only true understanding.'³ In addition to these fifteen there is one more, sealing the whole, which has not yet been divulged, and which remains in the exclusive charge of the head of the sect.

The unitarianism of this sect is of the strictest kind. They acknowledge one Supreme Deity, the creator (*kartā*), whom they call the Nirāṅkā Par Brahm (i.e. *nirākāraṁ param Brāhma*) and the Sant Purn (Sānt-puruṣa), on whose nature 'light was thrown by Śiva Nārāyana.' The moral virtues of truth, temperance, and mercy are inculcated,

¹ *Tribes and Castes of Bengal*, i. 178.

² Wilson says twelve. In the above list the last four are not mentioned by him. He calls the *Sant ō jān Granth* the *Fajan Granth*.

³ Risley, l. 178.

polygamy is prohibited, and sectarian marks are not used.

They claim that the emperor Muḥammad Shāh was one of Śiva Nārāyana's converts and that he gave him a seal. This is still possessed by the sect, and used on *parvānas*, or precepts, issued by the heads to the faithful.

Crooke¹ and Risley² identify the Śiva Nārāyanis with the Rai Dāsīs (q.v.), but this is not borne out by inquiries made by the present writer. The Rai Dāsīs are all Chamārs, but among the Śiva Nārāyanis all sects are admitted. Quite possibly the Rai Dāsīs, whose tenets are not dissimilar, claim to be Śiva Nārāyanis, but they by no means form the whole sect.

LITERATURE.—Except the articles of Risley and Crooke above mentioned, the only published account of this sect which has been seen by the present writer is that contained in H. H. Wilson, *Sketch of the Religious Sects of the Hindus* (vol. i. of *Select Works*, ed. R. Rost), London, 1861, p. 8581. The present art. is based on this, but his statements are corrected and supplemented by inquiries specially made from the head of the sect at Ghāzipur; see *JRAS*, 1918, p. 114 ff. H. H. Risley, *The Tribes and Castes of Bengal*, Calcutta, 1891, i. 178, and W. Crooke, *The Tribes and Castes of the N.W. Provinces and Oudh*, do. 1896, ii. 185 ff., describe at length the Śiva Nārāyanī customs, as those of the Chamār Rai Dāsīs. The practices described differ in a few details from those given above.

G. A. GRIERSON.

SKIN.—The significance of the skin for the history of religion springs from three principal sources: (a) its natural pigmentation, (b) tattooing, etc., (c) sacrificial rites.

(a) The colour of the skin affords one of the most obvious tests of racial difference. Three recognizable pigments are found in the mucous layer between the dermis and the epidermis, viz. yellow, reddish-brown, and black.¹ But any classification of the many varieties of skin-colouration must be more or less arbitrary. A typical scheme is that of Paul Topinard,² who enumerates ten varieties, by dividing the white into pale, florid, olive-white, the yellow into clear, olive, and dark, the dark into coppery-red, chocolate-brown, sooty-black, and coal-black. In some countries the colour-distinction is still of great social and political importance; this may help us to realize the religious influence of colour in earlier periods.

The Sanskrit word for caste is *varṇa*, that is "colour"; and this shows how their distinction of high and low caste arose.³

As a precise morphological distinction, the colour of the skin is of secondary value.

'Used alone . . . the test of colour will lead to serious misapprehension of the real relations of various races.'⁴

(b) The alteration of the appearance of the skin by tattooed marks and patterns is a very wide-spread custom. Lubbock⁵ collects a number of examples, ranging from simple ornament to serious mutilation. He remarks that 'ornamentation of the skin is almost universal among the lower races of men.' Some would regard all these customs as springing primarily from a desire for ornamentation. Thus Westernmark says:

'We have seen how savage men and women in various ways endeavour to make themselves attractive to the opposite sex:—by ornamenting, mutilating, painting, and tattooing themselves. That these practices essentially subserve this end appears chiefly from the fact that the time selected for them is the age of puberty.'⁶

The motive to which he refers is certainly contributory, but hardly primary. It is safer to agree with Achelis, who says:⁷

⁷ *Hist. of Human Marriage*, London, 1901, p. 541.

⁸ P. D. Chantepie de la Saussaye, in *Lehrbuch der Religionsgeschichte*, Tübingen, 1905, i. 46.

'There is no doubt that the operation has a religious significance; it is performed by the priests during the chanting of religious songs, and its origin is ascribed to the gods. . . . The custom stands in close relation to Totemism, especially since the incised figures so often represent animals: snakes, lizards, fishes, birds.'

We may also note that 'the marks or scars left on legs or arms from which blood had been drawn were probably the origin of tattooing.'

(c) With totemism (g.v.) we may also connect the various sacrificial ceremonies in the ritual of which some use is made of the skin of the slain animal. A typical case is that reported by Herodotus in his account of the festival of Zeus at Thebes. He gives the current legend of an appearance of Zeus to Herakles in the disguise of a ram's fleece, with the ram's head held in front, and proceeds:

'The Thebans then do not sacrifice rams but hold them sacred for this reason; on one day however in the year, on the feast of Zeus, they cut up in the same manner and flay one single ram and cover with its skin the image of Zeus, and then they bring up to it another image of Heracles. This done, all who are in the temple beat themselves in lamentation for the ram, and then they bury it in a sacred tomb.'

Here the legend has obviously sprung from the annual institution of killing the animal totem, or (if we doubt, with Frazer, the totemistic stage in this case) from the institution of killing the divine animal.³ Frazer compares with the example given by Herodotus a custom once existing among the Indians of California of preserving the entire skin and feathers of their sacred bird, the great buzzard, when one was slain annually, to make a festal garment, also a W. African custom (Fernando Po) of hanging the skin of the sacred cobra-capella on a tree to be touched by all the children born during the previous year. It has been suggested that the OT reference to 'the horns of the altar,' in connexion with the application of the blood and the right of asylum, should be traced back to the custom of spreading the skin of the victim, with the horns still attached to it, over the altar.⁴ In these and many similar practices⁵ we can trace two principles of primitive thought: (1) the sacred animal is conceived as standing in the most intimate relation to the life and prosperity of the worshippers; (2) the skin is thought to contain within itself a portion of the life of the animal even after separation from the body. With such premisses, it is quite natural to reason that closer communion with the animal-god can be gained by the priest or the worshipper putting on the skin of the flayed animal as a sacred garment.⁶ Robertson Smith⁷ traces a survival of this in the coming of Jacob to his father in the skins of kids. Frazer⁸ points out a similar use of human skin in the Mexican ritual. The chorus of the Greek tragedy were originally called 'goats' (τράγοι), and wore goat-skins to show their close relation with the goat-god,⁹ whilst it was the custom even of certain Christian catechumens to stand bare-footed upon a goat-skin.¹⁰ We may see the same circle of ideas extended to divine inspiration and divination; thus the god Faunus was supposed to reveal the future through dreams to such of his votaries as slept within his precincts upon the fleeces of sacrificed lambs.¹¹ A further extension of these ideas may be seen in the

outstanding institutions of marriage and burial, so closely and universally linked with religion. In the Roman marriage ceremony known as *confarreatio* the skin of the slain victim was stretched over two seats, on which the bride and bridegroom had to sit;¹ Hartland² refers to cohabitation upon a cow-hide in connexion with a Transylvanian gipsy tribe. In ancient Palestine burial in a sheep-skin seems to have been customary.³

In recent years, when the king of the Shankalla tribes (Abyssinia) died, 'he was sewn up in a green hide bag in a sitting position. . . . One tribe had a custom of sewing chance strangers up in green hides and leaving them to be killed by the contraction of the skins.'⁴

The original idea of such practices is clearly to secure a closer union with the deity represented by the skin, whether for protection or for the more efficient offering of a victim. A late survival of these primitive customs among civilized peoples may be seen in the harvest custom of slaying a goat and wearing the skin to cure pains in the back;⁵ this may be paralleled with the making of the skin of the totem-animal into a medicine-bag among the Mosquito Indians.⁶

Frazer suggests that the use of images may have arisen through the habit of preserving the skin of the sacred animal.

'The skin in fact was kept as a token or memorial of the god, or rather as containing in it a part of the divine life, and it had only to be stuffed or stretched upon a frame to become a regular image of him.'

An example of this may be seen in the manufacture of an image in human form from the skin of some animal by the hands of the Samoyed shaman.⁸ Another interesting transitional case, which seems to support Frazer's suggestion, is seen in the practice of the pearl-fishers of the Persian Gulf:

'Each boat has a sort of figure-head, called the *kubatt*, generally covered with a skin of a sheep or goat which was sacrificed when the boat was first launched.'

There can be little doubt that the belief in the psychical qualities of the skin, which forms the connecting link in the religious customs exemplified, has operated in many instances less easy to detect, such as the shining of the skin of the face of Moses (Ex 34²⁹), and the general attitude to skin diseases such as leprosy, in ancient times.

LITERATURE.—See the works cited in the footnotes.

H. WHEELER ROBINSON.

SKY AND SKY-GODS.—I. Universality and antiquity.—Through endless transformations and disfigurements (mythological or functional) the sky-god is found to be at the base of all the systems of the great civilized religions of the classical Mediterranean and Oriental worlds. He occupies the same place in the great systems of Asia and in the semi-civilized religions of pre-Columbian America. As we find him in all the groups of so-called non-civilized religions without exception, we may safely presume that the concept of sky-god belongs to the most ancient period in the history of religious feeling, and that it is at least as ancient as primitive naturism and animistic fetishism. Whether it is even pre-animistic in its fundamental aspect is a question which must be reserved in the meantime.

The nature, rôle, and characteristics of this

universal sky-god may be concealed under the most diverse forms, but he is always more or less clearly recognizable to the historian of religions and always identical in essential definition. America shows him in the mythologies of the Toltecs, the Mayas, and the Incas,¹ as well as in Brazil, in the Andes, among the Caribs, in Tierra del Fuego, and at the extreme north among the Eskimo. The shamanist groups of N. Asia and the cosmogony and dualism of the Ainu show him (Pase-Kamui) similar to the sky-god (much more distinct) of the religions of China (Ti-en) and of primitive Japanese Shintō. He is related to the ancient Puluga of the Andamans, to the Varuna of primitive India, and, towards the west, to all the pantheons of the ancient classical East. Towards the south, Australia, Polynesia, and Melanesia sometimes present deformed characteristics, as in the myths of N. America, but comparative study soon disentangles his fundamental characteristics, which are those found long ago in Chaldaea and in the Semitic and proto-Semitic world. But nowhere does his physiognomy appear more distinctly than in Africa—whether in the pantheons of ancient Egypt or in the many savage religions of the black continent. From the great Kilima of the Bantu groups to the Negritian Mahu we recognize him as always the same under a hundred different names: Ibantzu of the Congo among the Bangala, Fidi Mukulu ('the supreme being') of the sky among the Basonga, Kalaga among the Warega, Uletit among the Kuku, Kabedya Mpungu and Vilye Mukulu among the Baholos and the Balubas, etc. Dzakuta, the 'thrower of celestial stones,' of the Yorubas is only another aspect of the same sky-god; so also Waka of the Gallas is the thunder aspect of the sky-god; and Lubari is the rain aspect of the sky-god, just like Dengdit among the Dinkas, Iankupong among the Aquapins, Ropi on the Gold Coast, Oloron in Benin, Ngangmo on the Ivory Coast, and hundreds of others (Ituri in Kilimanjaro, the Bumba of the Bushongo, the great Kongola of E. Africa, the Mutabani of the Batutsi, the Kafir Inhu-Ankulu, the M'ba of the Ababua, etc.). If we ascend to the cold regions of the Finnish races, we find him again under the names of Yumala (Lapps), Yuma (Cheremiss), Yubmel (Samoyed), Tengri (Mongol), Bonga (Tunguses), and Uklo (Esthonian).

The sky-god has reigned everywhere; his kingdom still covers the whole of the uncivilized world. No historical or proto-historical motive can be assigned as the cause, and neither the migrations of races nor the diffusion of myths and folk-lore affords the slightest justification of this fact. The universality of the sky-god and the uniformity of his essential characteristics² are the logical consequence of the constant uniformity of the primitive systems of cosmogony. The sky-god is connected with the most ancient ideas on the composition of the world and its forces (not the universe, which is too vast for the mind of the savage, but the corner of earth which is for him the whole world). Now, everywhere we find the sky conceived in the same way—as a huge liquid mass, supported above the earth by a solid transparent substance, below which are the air, the winds, and then the terrestrial plane. Frequently this liquid mass is thought to surround the solid earth also and to form another liquid abyss below it. It is not within the scope of this article to enumerate the secondary varieties of this general structure, such as 'upper and lower abysses, vaulted skies, with superimposed compartments, divided into quarters,' etc. But, in order to understand the subject, we must emphasize the constant bond that materially united

the waters of the sky either to the sea or to the fabled sources of the great rivers; so that finally all water, as well as the liquid masses which fall from the clouds, is a product of the celestial plane. The function of rain-god and water-god (sea or river) and of so many sky-gods is thus explained. The essential rôle of water in the general life of nature justifies the attributing to the sky-god of all the great natural phenomena. The power and the remarkable characteristics of the various meteorological phenomena of which the sky is the theatre are a secondary, though not less efficient, cause of the pre-eminent part assigned to it by all primitive religions.

There is such close resemblance between the sky-god and the vital manifestations of the sky that, according to the various peoples, we find the same linguistic root meaning simultaneously the material sky, the rain, the clouds, and the sky-god (or meteorological phenomena and the sky-god), or, again, the storm, the thunder, and the sky-god (cf. Jupiter Pluvius and Ζεύς Κεραυνός in classical mythology).

Alongside of the single sky-god we find in several systems two or more gods—e.g., a god of the upper sky and a god of the lower sky (i.e. on the terrestrial plane); or four (or more) sky-gods in charge of quarters or geometrical divisions of celestial space; or several sky-gods, each having one of the superimposed skies as his kingdom. The study of these different systems shows that they are not primitive. Some are the product of astrological speculations or very refined astral myths; others are the result of historical circumstances having agglomerated into a single political civilization religious groups which were at one time distinct (e.g., Chaldaea, Egypt, Mexico). In such cases syncretism tends to amalgamate these gods into a single being (e.g., Hathor-Maut-Nut-Neith-Isis for Egypt); or theology attributes distinct characteristics and functions to each of them. Thus, among the Aztecs the sky-god Tezcatlipoca, Tlaloc, the Quetzalcoatl of Cholotlan, and the Huitzilopochtli (blue sky) of the Temochcas were originally single sky-gods, peculiar to the peoples subdued by and incorporated in the empire of the conquerors.

2. Nature and personality.—If the importance and antiquity of the concept of the sky-god are explained by the importance of the material sky, is the conception of sky-god itself explained by an exclusive application of the processes of pure and simple animism or by the usual mechanism of naturism? Neither animism nor naturism entirely explains the particular nature of the sky-god. Animism may bestow a personality on the most varied natural phenomena or on any inanimate object in nature, from hunger, plague, or a mountain-peak to a spring, a water-spout, a cyclone, or an artificially manufactured object. The sky is something more than simple matter personified.¹ Naturism in itself would only partly explain the nature of the sky-god. It has long been observed that the personal beings emanating from naturism have often a special aspect quite distinct and different from the objects or phenomena of which they are the personifications (e.g., the waters, winds, sun, etc.). Personification, in its fundamental *processus*, starts from the idea that under the appearance and within or behind the material exterior there exists a being or, rather, a personal force (of course it cannot yet be conceived as immaterial), closely bound to the substance of which it is the energy and the life, unable to exist without this substance, but distinct from it and, if necessary, separable from it—at least momentarily. The sky-god is therefore radically different from the substance which forms the material sky. He lives in it; he lives by it; he is mingled with it; the physical sky is not merely his habitat—it is his very substance; but the personification of a substance is distinct and separable from the substance which it animates; it is superior to it, and yet the substance is indispensable to its existence, for without it it would return to the vortex of the impersonal forces of chaos. Does this imply that

¹ See below, § 6.

² See below, § 5.

¹ See art. PERSONIFICATION (Introductory and Primitive).

primitive man imagines a time when, as the sky was not yet in existence, the sky-god could not exist? This vital question cannot be definitely answered in the present state of ethnological information. Numerous myths of savage and semi-civilized races seem to show a sky-god existing even in primordial matter and releasing the sky by his effort. But are those myths primitive? Can primitive reasoning reach the problem of the origin of the sky? Provisionally and with great reserve, we may suggest the following solution: in the formless mass of impersonal forces there spontaneously appeared forces endowed with personal consciousness; the most efficient of these released the liquid mass from the universal chaos and formed the material sky, which has ever since been its vital substance and its special property. Such an outline, however, must be subject to constant revision, for no savage tribe has formulated the theory in explicit abstract terms; and it requires for basis the exposition of a great mass of myths, folk-lore, theogony, cosmology, and even traditional ceremonial.

3. *Rôle and functions.*—It is much easier to draw up an inventory of the functions and attributes of the sky-god. The essential characteristics are constant throughout, and this identity, both in characteristics and in evolution, is one of the points most firmly established by the comparative method in the study of religions.

The data of primitive man's actual experience and the exercise of rational (or pseudo-rational) search for its causes logically led to the series of functional attributes of the sky-god. The physical phenomena of the sky and their ascription to the personality living in the material sky were always and everywhere the starting-point, the only variations resulting from local geography and climatology.

Rain and its effects on the terrestrial surface are naturally in the first rank. As a logical result, the rôle of giving the rain, and with it the storm, thunder, lightning, and their consequences, led men to conclude that the sky-god was the author of a certain number of manifestations of life and death. Several mythologies, civilized and savage, ascribe the ownership of life (regarded as breath or as a force) to the sky-god. Sometimes they even reach the stage of regarding him as the source of every vital principle, although frequently also he shares this ownership with the earth-god. The question of death is more obscure. Primitive man does not imagine *one* death; to him there are as many kinds of death as there are material manifestations of the destruction of living things. We may say, briefly, that death as a rule is not the work of the sky-god. It is an impersonal force, superior to him, like fate; and he often seems even to oppose it. As an almost absolute rule, only death by lightning is his direct action.¹ Beyond this, the rôle of the sky-god in ordinary life approximates to the type of 'the otiose supreme being.' As a matter of fact, to his activity as first cause is ascribed all that is inexplicable, beyond the capacity of such-and-such a special spirit, all that is abnormal or specially impressive. But in practice the constant search of the human spirit for the explanation of the unknown and the infinite always tends gradually to strip the sky-god of his prerogatives or special qualities in favour of more definite and more accessible beings of secondary rank. A universal result of this is the paucity of definite worship and the almost complete absence of liturgy, sacrifices, and sacerdotal organizations connected with him,

because the religious systems which have reached this stage of organization address themselves to deities already more specialized in definite functions.

Nevertheless, by the contrary phenomenon, which, however, is very logical in its consequences, the same progressive human reflexion results in attributing more and more the origin of the sensible world (or rather the organization of animate matter) to the old sky-god. By this means the conception of the creator sky-god was reached, who, once his task is finished, seems to lose interest in it and leave to other beings the duty of governing and controlling the struggling mass of living beings and the whole world of nature.

The word 'create,' of course, must here be understood in a simple and unphilosophical sense. The very idea of this restricted 'creation,' understood in the sense of modelling, making, and vivifying matter, is not a primitive speculation. It developed slowly, by the gradual addition to the original stock of the sky-god's powers of a series of new acts as reasoning and the growing search for the principle of causality established new connexions and made new deductions therefrom. The creation of the sky-god never appears as complete or absolute. He is the oldest demiurge, but he is neither anterior to nor the author of all life.

The nucleus around which has gradually accumulated the mass of facts which combine to constitute a creation seems, in the majority of cosmogonies, to be the double operation of (1) separating the luminous mass from the dark mass, light and darkness being henceforth distinct and opposed, and (2) releasing the solid elements from the liquid mass—these two operations being, in a sense, quite naturally suggested by the material appearance of the sky and the successive luminous phenomena observed by man in it, and by the universal belief in the liquid consistency of the sky resting on the transparent but solid vault of the firmament. This first series of acts of creation has a paramount influence afterwards on the appearance of the first dualistic systems.¹

A list of the sky-gods regarded as the authors of the creation (quasi-complete or partial) of the universe would involve an enumeration of all known mythologies. To give an idea of them as briefly as possible we shall adopt the following classification.

(a) *Systems in which the sky-god is regarded as the sole agent in creation.*²—These systems may be conveniently divided into three chief groups. (1) Those in which the sky-god is asexual and has, simply on account of grammatical termination, a tendency to be conceived as a male principle. To this group belong the most elementary cosmogonies, in which living beings are supposed to be the direct product of some portion of the physical substance of the sky-god. The myths of savages all over the world, both at the present time and in the past (*e.g.*, Egypt), give us all varieties of the supposed processes: the beings are the product of the sweat of the god, of his tears, of his humours, of his vomit, etc. We have to come fairly high up to find systems that conceive the sky-god as creating by means of action, forming matter, and communicating to it by his material breath a portion of his vital substance.

(2) Those in which the sky-god is positively regarded as being of the male sex. In such cases the isolation of the god leads to the necessity of imagining that the 'creation' issues from his substance, either by drops of blood or, more frequently, by the effusion of the seminal fluid (*e.g.*, the Egyptian Tum and the Bumba of the Bushongo).

(3) Those, much more developed, in which living beings (in whole or in part) are derived by childbirth from the womb of the sky-deity—which presupposes the deity to be female. Sometimes this birth takes place directly for all (*e.g.*, the myths of the Upper White Nile); sometimes it takes place in two stages, the goddess giving birth to a

¹ See artt. DUALISM, and below, § 5.

² It must be noted, of course, that 'to create' always means essentially to organize and vivify or fashion already existing substances. Creation *ex nihilo* is unknown to the intellect of primitive and semi-civilized man and even of civilized man at the stage of the ancient religions of the classical East.

¹ Sometimes death by drowning is assimilated to death by celestial fire, chiefly in the systems in which the sea or the river is regarded as a dependent of the material sky.

certain number of agents, who, in their turn, couple and reproduce the chief classes of beings (e.g., the Egyptian sky-goddess Hathor). This seems to be the most frequent type. We must mention that in every case the sky-goddess conceives of her own accord, without the help of a male principle (cf., e.g., the most ancient Sumerian conception). Her animal or human form¹ has nothing to do with the question.

This initial position leads, in advanced religions, to the most subtle theological theories when the work of the sky-goddess has to be reconciled with the necessity of a vivifying principle anterior to her and fecundating her. The inextricable difficulties of the sacerdotal account of Theban Egypt, with Ra, the bull-god, as husband of his mother, borne by her and continually fecundating her, give a sufficient idea of these systems, whose outlines we find in more than twenty known religions.²

(b) *Systems in which the sky-god is associated with another god in the work of creation.*—Without examining the question of simultaneity or later appearance, we find a second important series of religions, in which the sky-god, in order to accomplish his work as demiurge, has associated his activity with that of another being, usually the earth-deity. We may distinguish two chief groups.

(1) The first (and the most numerous) includes cases in which the sky is a god and the earth a goddess. The world is born from their union. This is the type of the Polynesian myths of Rangi and Pêpê, that of Tangaroa, and that of the Greek Gaia and Ouranos.

(2) In the second group the sky is regarded as the matrix in which beings are formed, and the earth is the fecundating principle—a sky-goddess and an earth-god (e.g., Seb and Nut of the Egyptian myth, etc.).

A great number of secondary types suggest the demiurge sharing his task with several companions. He himself is sometimes relegated to the very beginning of the work in the most vague rôle (e.g., in N. American cosmologies, in which the elaboration of the world seems to belong specially to certain animals, often of low species; these systems require careful study and often appear on analysis to be composite and deformed products of earlier mythologies).

We must pass over the cosmogonies in which the sky-god creates or organizes the world without producing it directly from his substance, fashioning its various substances by means of his word alone, which seizes and models the different formless energies vibrating and trembling in the universe (e.g., creation by the words of the Egyptian Thôth). Those belong to a period when the sky-god no longer possesses his specially celestial characteristics and is rather a supreme god.

In order to understand the sky-god, we must notice a result of the constant confusion of the primordial celestial water with the water of the sea. In a great number of religious systems, both savage and advanced, the sky-god is confused with the sea-god, whether he takes up his abode in the sky or the sea indifferently, or whether he unites in his person sky-myths and sea-myths. This phenomenon is very marked, e.g., in the Indian mythology of Varupa and, among savage races, in the aquatic sky-god of the Ainu (g.v.) and in the dogfish-god of the Benin; it is conjectured also in the Chaldean Oannes and in the various fish-deities of the E. Mediterranean (e.g., Aphrodite, mother of the world). The sea is in every case regarded as bound to the celestial mass. The latter is separated from it only above the terrestrial plane by the vault of the firmament (the 'firmament' of Genesis). The same reasoning leads uncivilized man in the interior of the continents to believe that certain large expanses of water, lakes and rivers, are derived from the celestial water (e.g., the Egyptian Nile, the Congo, the Welle, the Zambesi). The sky-god, the creator of the world, often therefore dwells in the bed of their waters. In the extreme west of Africa we find the sky-god living in the lagoons on the coast, and the Ibanza of the Bangala living at one and the same time in the sky and in the depths of the river; so also Kilima in the Welle of the Monbuttu or the Ababua, etc. Such

were the crocodile Sebek of ancient Egypt and the crocodile of the Shilluks or Dinkas of the present-day White Nile.

The confusion of the sky-god with the chthonian gods, which is rarer, is more difficult to explain and would require too long treatment. It is traceable in New Zealand and Polynesian myths, but its mechanism appears more clearly in Africa—e.g., Kalaga of the Warega and the sky-god (at the same time the volcano-god) of the Ituri, according to the (distorted) myth of the Imandwa secret society. To put it briefly, the bond between the celestial world and the chthonian world is due to water (deep sources), fire (volcanoes), and celestial metal (iron).

4. *Specific aspect and representations.*—(a) *Natural phenomena.*—The most remarkable visible manifestations of the activity or power of the sky-god seem everywhere to have been chosen for the material expression of the god (we must say 'material expression' and not 'image'). Exceptional manifestations have naturally been in the first rank. As a matter of fact, we find lightning (all known religions), thunder (*passim*), the rainbow (e.g., the Ababua), the *aurora borealis* (Eskimo), St. Elmo's fire (classical Mediterranean), the zodiacal light (eastern Egyptian delta), etc. These natural manifestations have gradually tended to become 'aspects' of the sky-god, and are the starting-point of fetishistic representations, in which the object, sometimes natural, sometimes of human manufacture, is not yet regarded as the image of the god, but as his habitat, or rather as a material covering sympathetically bound to the essential force of the 'spirit.' Such objects naturally are of infinite variety, according to the human group and the geographical position. In general, we may say that in the choice of fetishes the reasoning has been the same all the world over: the principle of material expression, e.g., may be the representation of the effect to express the cause (or *vice versa*), or perhaps the part for the whole (or *vice versa*), either in time or in space. It is a curious fact that fetishistic expression has almost everywhere obeyed the same laws which separated the magic ideogram from simple pictography and thus created all over the world the first written characters based on magical value.

The most important class of natural phenomena is found in the supposed effects of the material action of the sky-god. Thus the sacred fire, the emblem of this god, is supposed to be lighted by him; detached rocks and sharp mountain-peaks are supposed to be caused by the thunder in direct relation with the force of the sky-god; and translucent stones, rock crystals, and precious stones are regarded as fragments of the celestial vault (the same principle later connected gold and silver with the solar and lunar gods). Hence also—and this throughout the whole world—the cult of the sky-god as manifest in meteorites, 'thunder-stones,' fragments of shooting-stars, 'eagle-stones,' in the meteorite fire supposed to be detached from the sky, and, by extension, in stones supposed to have fallen from the sky, standing-stones, etc. (e.g., menhirs). Belief in the presence of celestial fire (and consequently of the sky-god) in flint, combined with the notions about aerolites or meteorites, gives rise later to the world-wide cult of palæolithic or neolithic tools, weapons, and instruments which are worshipped as having fallen from the sky and which become emblems of the sky-god. Two equally interesting developments are the stones on mountain-summits becoming the first altars for sacrifice to the sky-god and the worship of sacred trees regarded as celestial trees.

(b) *Idolotrous representations.*—(a) *Aniconic.*—We now pass to the representations of the sky-god by modelled or drawn imitations of his activity—e.g., mimetic signs meant to reproduce the zigzags of the lightning, the contours of the sky, the triangular projection of the zodiacal light, etc. In

¹ See below, § 4.

² Some Polynesian mythologies avoid the problem by imagining that the single deity tears from his sides the first matter necessary for making beings.

the same connexion we find strings with curls, knots, twists, etc., and gradually there develop the thousand different forms of aniconic representations of the sky-god by magical symbolism. The fetishes formed by combinations of substances connected with celestial forces vary infinitely. Among representations of a higher character we may cite the axe, the emblem of the sky-god (e.g., Minoan Crete), and the mirror, image of the sky-goddess (Japan).

(β) *Iconic*.—The representation of the sky-god tends in this way gradually to become the reproduction of characteristics regarded as those of the material spirit (if we may be allowed to use such an expression). But iconic representation began, in every place where it can be verified, by a process of pictographic expression (the term 'symbolic' is beyond the conception of primitive man) of his power or his nature, embodied in an animal figure. We cannot trace here the evolution of the zoolatrical cults. But, as far as the sky-god is concerned, we may state that his zoomorphic representation has always been the product of conventional speculation and not of a crude idea that he bore the special form of such-and-such an animal. We may suggest, with great reserve, the possibility that this god may have been invested momentarily and under certain circumstances with the aspect of the animal. But this is never his absolute and permanent material form.

It is impossible to give the animal representations of the sky-god *in extenso* here. The chief groups may be conveniently classified according to the supposed sex of the world-creator sky-god.¹ We find (i.) the great inhabitants of the celestial heights—e.g., the vulture (conceived in Egypt as exclusively female and bearing without the help of a male), the female eagle (classical Mediterranean), the condor (S. America), etc.; (ii.) the females of domestic animals, and in the first place, universally adored, the celestial cow; (iii.) in the domain of sea, lake, or river (i.e. the aquatic region) the female shark or crocodile, the female serpent, and especially the fish. All these representations ended in hybrid forms, the best-known types of which, in the advanced religions of the classical world, are the Chaldaean Gannes, half-man and half-fish, and the Asiatic Aphrodite, Derceto, etc.

The sky-god regarded as of the male sex has given rise to identical series, also too long to enumerate. Among the most wide-spread we may mention the hawk or eagle (Egypt, classical Greece and Italy, Asia Minor, Central America, etc.), and the goat or ram (Egypt, Sudan, N. India, Dahomey, etc.). The constant association of the eagle or the ram with thunder, lightning, etc., is one of the religious phenomena most generally found in iconography.

In the composite forms the symbolic animal form remains necessary as the plastic means of expressing the rôle and power of the sky-god, but it is combined with the human aspect. The well-known series of the classical East (Egypt, Chaldaea, Assyria, Asia Minor, Greece) recur among savage and semi-civilized races all over the world. According to the usual process, all merge in two series of representations: (a) those in which the sky-god is gradually confused with the solar, lunar, and astral forms;² (b) the anthropomorphic pure and simple, which corresponds to an already high type of religious civilization. The sky-god, purely male or female in form, is, however, rare, precisely because one of the effects of this development of religious civilization is to relegate him to second or third rank in the divine hierarchy.³

5. *Characteristics*.—The comparative study of savage races proves that the characteristics of the sky-god (as they appear to-day among semi-civilized or as they crop up sporadically in advanced religions) are everywhere identical.

Naturally the question whether he is uncreated or self-created is beyond the scope of savage thought. It is the same with the conception of eternity. 'Indefinitely renewable duration' seems the extreme limit of the primitive mind. Even Egypt, saying of Atum Kheperā 'I am yesterday; I am to-morrow,' did not reach the theoretical definition of eternity.

Nor by definition is the sky-god anterior to any other god, spirit, or demon. The creation, partial or complete, of the material universe does not in any way imply that of the forces embodied in the

names of gods, spirits, genii, demons, etc. He is neither omnipotent nor omniscient, but simply stronger or cleverer in certain special spheres. Certain gods or spirits may fight against him, and often successfully. His victory in the event of a struggle does not preclude future defeat. The most remarkable characteristic of such a sky-god is that, in all the cases that have been examined, he is manifestly weaker than a certain mysterious, impersonal, diffuse force, which among primitive races often has a name analogous to what we mean by destiny.¹

In principle the sky-god has no moral characteristics; by definition he is indifferent. Nevertheless his constant association with the rain and the light has the universal result of giving him a beneficent aspect. At first disinterested and inaccessible or deaf to all prayer, he sometimes becomes susceptible of intervention in human affairs, and man strives to develop and define this intervention. Dualism, organizing the strife of darkness and light, of drought (or death) and fertilizing water (or life), gives him a much more definite character in more advanced religions. Nevertheless, as a general rule, the sky-god takes no interest in the material world produced by his activity and never controls the progress of this earth's various elements or the struggles of its inhabitants. Again, the development of dualism frequently results in giving him a gradually more precise activity. At this stage, however, in the progress of knowledge of the forces of the world and the principles of causality the sky-god tends to be robbed of his activity or to be divided up into new beings.

6. *Evolution*.—If we carefully consider the nature and character of the primitive sky-god, we find that, on the whole, he is the incarnation of the sum of primitive man's ignorance and inexperience, combined with his knowledge that the other material beings (whether they are called genii, gods, spirits, or any other name) are not powerful enough to govern the world, to have formed it, or to direct its great forces (celestial, meteorological, and hydrological phenomena, death, etc.).

The study of magic and of primitive rites leads to more definite knowledge of the forces retained by the sky-god and of the rudiments of cosmogonies explaining the mechanism of creation, and gives everywhere identical results: (a) the acts of the sky-god become separate personalities and gradually dismember his personality, which was originally formed of vague elements; the clearest example occurs in the series of thunder-gods taking the place of the sky-god in the rôle of 'father of beings' (e.g., the Ζεύς Κεραυρός of Hellenic myths, the Mahu of Dahomey, etc.); (b) the beings produced by the celestial energy—sun, moon, stars—tend to take the place and the rôle of light (conceived originally as something quite independent of them, and the direct product of the sky-god) and relegate to the background the beneficent rôle of the sky; (c) on the terrestrial plane the activities of various spirits and of their representations (fetishistic or iconic) take a more and more conspicuous part in the world's struggles. Their actions and the relations of cause and effect belong to the domains of water, air, earth, and under-earth rather than to the sky. But by these activities they grow in importance; their cults and magic tend to be established; organized polytheisms become possible, and they capture a portion of the vague attributes belonging as yet to the old sky-god. (Two good examples may be given: (1) among primitive races the system of

¹ See § 3 (α) (3), above.

² Cf. below, § 6.

³ Cf. below, § 6.

¹ The terms *mana* and *orenda*, largely employed by ethnological sociology, cover only a part of this conception.

the Bushongo in Africa, (2) in advanced religions the system of the Toltecs.)

The result of these three elements is that, at different rates according to the different peoples and according to the proportion in which the elements are found, there is a constant tendency to the suppression and gradual disappearance of what constituted the very distinct physiognomy of the primitive sky-god. The most striking proof of this weakening or gradual dispossession is seen in the cosmogonic and creator rôle. The progress of the religious system almost always results in substituting for creation by the sky-god the organization of the world by the sun-god, the moon-god, or one of the stellar gods. Sometimes in fact the sun-god is supreme creator. Ancient Egypt presents a very complete schema of this type of evolution. It tends to substitute Rā (the sun) for the sky-gods (such as Atum, Hor, Nut, Hathor, Anhur, Sebek, etc.); but it does not completely realize this evolution, and consigns to the more or less vague beginning the primitive activity of the sky-god. The general process in the various religious systems is from the rôle of light, the direct emanation of the sky-god, to that of the stellar groups, substituted for the initial force of this god, then to that of the separate stars, and finally to the sun, the last arrival in the series of author-gods of the world and of life.¹

The same evolution, with the same effects, recurs when there appears, with dualism, the first representation of a moral or quasi-moral world. The sky-god, stripped of his definite beneficent activities, is superseded in the struggle against evil by the sun or by an anthropomorphic aspect of himself (usually his son—e.g., the Osirian myth). The details of this evolution would require a whole volume. One of the most remarkable examples of it is the myth of Heitsi-Eibib of the Khoi-Khoi, of whom we have accounts by ethnologists as early as the year 1655. We find in him all the characteristics of the primordial sky-god rôle of rain-god, aniconic worship of rude stones, fetishism of a lithic kind, etc. Then he becomes associated with the dawn; and mythology invents a terrestrial incarnation for him. Similarly we can follow the confusion of the sky-god with the lunar cults. We find, as in the case of the Osirian myth, a later confusion with the parallel myth of Tsuni-Goab. Just as we see the dualist myth developing in Egypt under the double form Rā-Āpēpi and Horus-Set, so we see the sky-god Heitsi-Eibib struggling with Gaunab, who has become the principle of darkness and evil, while Heitsi-Eibib becomes the light which dies each day and is reborn in the east. He finally incarnates the good principles struggling against evil. This parallelism with ancient Egypt proves decisively the general direction which the evolution of the concept of the sky-god is bound to take in similar cases all over the world.

On the other hand, where circumstances have hindered this higher transformation, the rôle of the sky-god has gradually disappeared. His primordial creative activity has become as vague and fluid as the pale distant figures of Saturn, Ouranos, or Chronos in classical mythology.

In a word, after having united in himself the attributes of a supreme being, of an elementary kind, the sky-god had two chief fates—either, transformed and brought nearer to us under other names, he became the main resort of the divine activity of this world or he retained his primitive physiognomy, and his importance and his worship have been in inverse proportion to the progress of man's conceptions of the sensible world.

¹ Cf., e.g., the Peruvian system and the evolution of the Chaldean system

LITERATURE.—There is no monograph on the subject. Observations of a general character in ancient ethnological and anthropological literature should be examined—e.g., A. Bastian, *Beiträge zur vergleichenden Psychologie*, Berlin, 1863; E. B. Tylor, *PC*⁴, 2 vols., London, 1903; and A. Lang, *Myth, Ritual, and Religion*, 2 vols., do. 1887. For details the reader should consult the articles in the present Encyclopedia under the names of the different nations and races.

GEORGE FOUCART.

SLANDER.—Slander has been defined as 'the utterance or dissemination of false statements or reports concerning a person, or malicious misrepresentation of his actions, in order to defame or injure him,'¹ the term being used to denote not only the act itself, but also the statement circulated, and even the consequential discredit suffered. The last meaning is, however, now commonly conveyed by the word 'scandal,' of which 'slander' is etymologically² only a variant form, though in modern usage 'the word [scandal] differs from the etymologically identical "slander" in not implying the falsity of the imputations made.'³ With slander as a technical term in law we are not concerned; we shall consider only its ethical use and import.

Instances of the word are found in English books as early as A.D. 1270. In the *Lay Folks Catechism* (1375) we read of 'Sklande for to fordo a mannes gode fame,' and in Chaucer's *House of Fame* of 'His other clarioun [That]ight sklaundre in every toun.' The term has substantially the same meaning in Shakespeare, *Much Ado*, n. i. 143: 'His gift is in devising impossible slanders'; the corresponding verb occurs in *The Two Gentlemen of Verona*, iii. ii. 31: 'The best way is to slander Valentine [With] falsehood, cowardice, and poor descent'; while of the derived adjective a forcible example is found in Milton, *Par. Lost*, xii. 536: 'Truth shall retire [Bestuck with slanderous darts].' Jeremy Taylor (1613-67), who in *The Great Exemplar* speaks of 'killing a man's reputation by calumnies or slander or open reviling; elsewhere (*Serm.* xxii.-xxiv.) defines slander, properly so called, as 'the inventing evil things, falsely imputing crimes to our neighbour.' This he co-ordinates, as one form (d) of calumny, with (a) tale-bearing, (b) detraction proper, (c) railing or reviling, and (e) cursing; calumny, or slanderous and detracting speech in general, being in his view one species (ii.), co-ordinate with (i.) idle speech, and (iii.) flattery, of that 'corrupt communication' which, as reproached by St. Paul (Eph 4²⁹), forms the text of his trilogy of sermons 'On the Good and Evil Tongue.'

These quotations will suffice to indicate how slander, as understood by classical English authors, stands related to, and how far it can be distinguished in meaning from, such terms as 'calumny,' 'detraction,' and 'evil-speaking.' While no two of these terms are exactly synonymous, it is hardly possible to mark off their several denotations by any fast line. They are to a large extent interchangeable, especially 'calumny' and 'slander,' which, as distinguished from 'evil-speaking' and 'detraction,' imply falsehood in addition to more or less of either positive malevolence or reckless indifference to the injurious effect of defamatory words. Even to slander and calumny it is perhaps not essential that the allegations made should be definitely known by the speaker or writer to be false. A man is none the less a slanderer if he utters and disseminates regarding his neighbour injurious matter which he has no reason whatever, or no approximately sufficient reason, for believing to be true. If, on the other hand, it is true, he is not a slanderer, though the utterance, if superfluous and unprovoked, may still be fitly accounted 'evil-speaking,' and reprehensible as such. And it nearly always is superfluous, if it is not likely to do any positive good, or if no third party would be wronged or discredited by silence. The latter condition is, indeed, apt to be overlooked; and denunciation of indefensible conduct is often improperly censured as evil-speaking, when in reality reticence or disbelief regarding it would be grossly unfair to some wholly innocent, and perhaps actively beneficent, and deeply injured, person.

¹ OED, s.v.

² Skeat, *Etymol. Dict.*⁴, Oxford, 1910, s.v., and OED.

³ OED, s.v. 'Scandal.'

Thus, on the whole, disclosure of ascertained truth is morally safer than a timid reticence, though often legally perilous. While, however, the actual truth of a statement is (on the whole and subject to important exceptions) a good reason morally for not withholding it on occasion, a mere belief on the part of the speaker that it is true is, if it be in fact untrue, a very poor defence. There is indeed a measure of malevolence, if not of dishonesty, in all readiness lightly to believe what is evil concerning one's neighbour, though there is scarcely less in perversely disbelieving palpable evidence of grievous wrong inflicted upon an inoffensive, or clearly well-intentioned, neighbour by another who is manifestly unscrupulous. In practice the false belief and the perverse disbelief are apt to go together. The same person, *i.e.*, who readily slanders a good man will often be stolidly blind to the atrocious deeds of the evil-minded. It is of the essence of slander to call good evil; and this normally finds its complement in calling evil good.

The act, or habit of thought and speech, denoted in English by 'slander' was in the languages and literatures of Græco-Roman antiquity, which were so large a factor in the constitution of European morals, represented most completely by the Greek word *δισβολή*. This word, in the sense of false charge or slanderous imputation, was used by the historians Herodotus and Thucydides, by the poet Euripides, by Isocrates and other orators, and somewhat scantily by the philosophers Plato,¹ Aristotle,² and Cleanthes the Stoic. The corresponding verb-form had a similar range. In no instance would the term seem to be technical. For purposes of ethical study the most interesting occurrences of the word are the few cited from the philosophers, and more particularly that from Cleanthes, who wrote:

'There is nothing, that ever was, more mischievous than slander (*κακοῦργότερον οὐδὲν δισβολῆς ἐστὶ πῶς*); secretly deceiving the man whose ear it has won, it works up odium against the guiltless.'³

A more trenchant epitome of the vice could hardly be given. Three centuries later Plutarch⁴ writes of the fellow-countrymen of an exiled, but prosperous, statesman as 'from envy' (*διὰ τὸ φθονεῖν*) readily accepting the various 'slanders' (*δισβολάς*) circulated concerning him, thus incidentally marking what has been perhaps the most frequent, though by no means the universal, motive of calumnious allegation.

Meanwhile the term *δισβολή* had been employed by Greek translators of the Hebrew Scriptures and other Hellenistic writers to represent a type of speech and intention which, though not covered by any one Hebrew name, is recognized in the OT as eminently sinful, and which might be described as meditated and systematic violation of the spirit of the Ninth Commandment. The noun occurs in Nu 14³⁷ (Aq.), Ps 31¹³ (Sym.), where Eng. AV gives 'slander' (PBV 'blasphemy,' RV 'defaming'), 2 Mac 14²⁷, and six times in Sir (19¹⁵ 26⁵ 28⁹ 38¹⁷ 51^{2,6}), the verb (*δισβάλλειν*) in Dn 3⁸ 6²⁴. The noun, which is thus fairly frequent in the Greek OT and in the English versions is often (Sir 19¹⁵ 26⁵ 51⁶), though not uniformly, rendered 'slander,' is not found in the NT. The corresponding adjective (*διδόλος*) is, however, used thrice in the Pastoral Epistles (1 Ti 3¹¹, 2 Ti 3³, Tit 2³), where RV, following the precedent of Wyclif in the last passage, rightly restores 'slanders' for the less exact 'false accusers' of AV and most previous versions, while the same word, with the article prefixed, is of frequent occurrence and appears in the English versions as 'the devil.' It is probable that we may safely connect with this fact the

exceptionally stern warning of Mt 5²², and the still more tremendous language (Mk 3²⁹ = Mt 12³¹ = Lk 12¹⁰) touching 'blasphemy of the Holy Spirit'—an extreme form of wickedness, which, it would appear, consists in a set and wilful determination to call good evil, in despite of evidence that to any heart not utterly depraved from honesty is overwhelming. For 'blasphemy' (*βλασφημία*), though not identical with, is nearly akin to, 'slander.' Actually it is the more general term, signifying generically 'evil-speaking.' It becomes theological blasphemy when it has as its object God or the manifestations of His will and beneficence. And this occurs whenever works of love and mercy, due to the agency of His Holy Spirit, are perversely and malignantly attributed to the agency of the powers of evil. If, then, slander be regarded as evil-speaking envenomed by falsehood, the worst conceivable slanderer will be a personality uniting consummate ability in falsehood with unlimited readiness to speak evil of the Holy Spirit of God. While it does not fall within the scope of this article to discuss the personality of the devil, it is relevant to note that 'the devil' of the NT is before all things a 'slanderer,' an intensely malevolent perverter of truth and fabricator of untruth.

It follows that in any system of ethics claiming to be distinctively Christian no form of evil practice can be thought graver or more deadly than that of habitually traducing and slandering the guiltless and the beneficent. Nevertheless it found no place among the 'seven deadly sins' of mediæval theology, and so apparently escaped being denounced either by the scholastic doctors of Latin Christendom or even by Dante. All the more is it to the credit of English moral insight that in the last of Chaucer's *Canterbury Tales* 'the Parson' brings in 'backbiting or detraction' as a specific sin bred by the recognized 'deadly sin' of envy, and sets forth tersely and with perspicuity the several shapes that it may assume. But, notwithstanding the efforts of individual moralists, it has at no time either officially or in popular estimation ranked, as it should, with breaches of the sixth, seventh, and eighth Commandments as sin of the first magnitude. Theory apart, experience of life, justly interpreted, might warn us that, as civilization becomes more complex and more highly equipped, the slanderer's capacity for evil becomes more terrible. It may be true that modern institutions have improved the means of combating and disproving calumny. But the rapid multiplication of opportunities for censorious and derogatory comment outside the peril of the law has more than counterbalanced that advantage. And there has certainly in the last 200 years been no amelioration of the virulence either of envy or of other passions prompting to calumny. On the contrary, in the 18th cent. we find Butler, a singularly cautious observer, in his sermon 'Upon the Government of the Tongue,'¹ holding that a main source of much 'evil-speaking' was nothing more than 'unrestrained volubility and wantonness of speech,' which, however, 'is often of as bad effect upon the good name of others, as deep envy or malice.' And a century later Thomas Brown († 1820) taught that 'defamation' and slanderous talk arise less often from envy and malice than from 'mere flippancy' and 'the necessity of filling up with amusement of some sort a conversation that' else 'would flag.'² This was probably true of his own, as of Butler's, age—an age of 'conversation.' But in the present age of relentless competition and equally relentless pleasure-seeking slander has once again become, as of old, a serious

business, now often elaborately organized, needing therefore to be vigilantly detected and refuted, alike in public and in private life, by all lovers of truth and justice. From the individual heart the vice, or vicious propensity, whether originating in envy or, as not seldom, in contempt, or in the mere pleasure of saying pungent things, calculated to attract attention or amuse, can be extirpated only by the counteracting presence and prevalence of a love which honours one's neighbour as oneself, and, in the words of St. Paul, 'rejoiceth not in unrighteousness, but rejoiceth with the truth' (1 Co 13⁶).

J. M. VAIZEY HOPE.

SLAVS.—I. DEFINITION OF THE TERM.—The term Slav, Slavic, Slavonic, does not correspond to the term German, which denotes a group of people united by cultural and national ties, but to the term Germanic or Teutonic, which is applied to all people speaking Germanic tongues, irrespective of nationality or culture. Comparative study of the Slavic peoples and their neighbours shows that neither in physical type nor in culture and religion have the Slavs, either in modern days or in the earliest times, formed a unit or shown a greater likeness than that which is manifested by any neighbours living under the same geographical and historical conditions.

The name Slav is derived by Western writers from *slavi*, 'slave.' This derivation, however, does not hold good in Slavic languages, and the Slavic name for Slav, *slavianin* (Russian) or *slowianin* (Polish), is more obviously derived from *slowo*—a word meaning all people who use the same words.¹ Still another derivation is suggested from *slava*, 'glory.' The first historical mention of the Slavs does not call them Slavi, but Vinithi, Veneti, Venethæ; the south-eastern Slavs were known as Antæ, Antes; not till the 6th cent. A.D. do we meet the name Slavini. It is difficult to decide whether the Romans imposed the name Slavini on the Slavs or whether the Slavic name coincided with the Roman, in sound if not in meaning. There are no proofs that the Slavs were ever subjected to the slave-trade to the extent that the Greeks or the people of Asia Minor were, and the fact that, as T. Peisker² explains, some Slavic tribes were ruled by the Scandinavian vikings (Slavicized into *vitez*, *vitiáz*) or Turkic leaders (*zupan*) does not necessarily imply that they were slaves to their kings, any more than any other subjects were slaves of their king at the beginning of European history.

II. HISTORY.—Historical mention of the Slavs, as of other European nations outside the Mediterranean area, is not found much before the Christian era, but the archaeological evidence reaches much farther back. Still, it is very doubtful whether we have remnants of any Neolithic culture among the Slavs, or much evidence even of the Hallstatt period. We find the first historical reference to the Slavs in the *Naturalis Historia* of Pliny the Elder (1st cent. A.D.), who mentions the Venedæ or Venedi, who were undoubtedly Slavs; but it must be remembered that there are also theories connecting the Scythians with the Slavs, as well as the Neuri, Budini, and Sauromatæ of Herodotus, which, if accepted, will take the historical Slavs back to the 5th cent. B.C. But what we know about these races will not stand scrutiny by the searchlight of modern ethnological study, so we shall count the whole period before Pliny as forming part of the archaeological era. In this way the history of the Slavs, or rather the history of the people speaking Slavic tongues, will be subdivided into the following periods: (1) the archaeological period, to the 1st cent. A.D.; (2)

¹ After the great migration of the Slavs in the 7th cent. we find the name Slav in almost the same form near Novgorod (Slovjense), in N. Hungary (Slovatsu), in Pomerania (Slovinsu), and in the Balkans (Slovjenu).

² 'The Expansion of the Slavs' (*The Cambridge Medieval History*, Cambridge, 1911–13, vol. II. ch. xiv.).

the classical period, from Pliny to the 6th cent.; (3) the Byzantine period, from Procopius to the 7th cent.; (4) the period of independent Christian Slavic states, from the 7th to the 13th cent.; (5) the period of political dependency, from the Turk-Mongol invasions and the subjugation of the Eastern and Southern Slavs by the Turks to the middle of the 19th cent.; (6) the period of the realization of various Slavic-speaking peoples, from the national revivals to the present day.

For the purposes of this article we need consider only the four first periods, when the Slavs had more than mere linguistic community through their early religious beliefs and customs. In the last two periods the history of the Slavic peoples runs in separate national channels which became racially less Slavic, and politically and culturally farther apart, if we take the successive Pan-Slavist movements as springing entirely from the imperialistic propaganda of the various governments. Without going into the history of the last two periods, we shall, however, deal with the folk-lore of the Slavic people to the present day.

1. The archaeological period (to the 1st cent. A.D.).—In 1837 appeared the monumental work of P. J. Safarik on *Slavonic Antiquities*,¹ in which he gives a picture of the Slavs of the archaeological period. This work marks the beginning of scientific investigation of the early history of the Slavs, as all former works on the subject were full of serious misinterpretations. It is still a subject of discussion which of the old tumuli in Central and Eastern Europe can be ascribed to the Slavs. None of the Stone Age tumuli have any peculiarly Slav characteristics, least of all the dolichocephalic skulls found in them. The so-called Slav period of these tumuli begins in the 9th century. According to Pytheas, in the beginning of the 3rd cent. B.C. Germanic tribes were already round the Baltic, so it may be assumed that the Slavic branch of the Aryan linguistic family had then already separated from the Germanic branch, and their separation from the Iranian branch of this family must have occurred even earlier, at least before the Scythian period (5th–3rd cent. B.C.). While the Slavic archaeology of this period has not been sufficiently investigated to allow us to draw conclusions from it, and is bound up with the early archaeology of the Aryans in general, the historical evidence of the period is only one degree better.

(a) *The Scythian problem.*—We find no mention of the Slavs as such in B.C. times, and can only conjecture their existence under the name of various tribes belonging to the Scythian or Sarmatian political units. Hence the early history of the Slavs is closely connected with the Scythian problem. The somewhat debatable assumption that the Scythians or Sarmatians must have left some descendants or other, and that 'there was no more obvious ancestry for the Slavs to be discerned among nations mentioned by ancient writers,'² is the chief ground on which the Scytho-Slavic theory is based. On the other hand, as Minns justly observes, 'this theory naturally appealed to the tendency of chroniclers to push the ancestry of their own nation back as far as possible.'³

Broadly speaking, the following solutions have been suggested for the Scythian problem:

(1) That all the Scyths were Turanian.—Suggested first by B. G. Niebuhr, *Kleine Schriften*, Bonn, 1828–43, I. 352 ff.; supported by K. Neumann, *Die Hellenen im Skythenlande*, Berlin, 1855; George Grote, *History of Greece*, London, 1851, iii. 216–243.

¹ *Slovanské Starežitnosti*, 2 vols., Prague, 1837, Germ. tr., *Slavische Alterthümer*, Leipzig, 1843–44.

² E. H. Minns, *Scythians and Greeks*, Cambridge, 1913, p. 98.

³ *Ib.*; see also art. SCYTHIANE.

(2) That the Scythic nation was an artificial product evolved from the nomads of the steppes.—R. W. Macan, *Herodotus*, London, 1895, ii. 12.

(3) That all the Scyths were Iranian.—Originated by K. Zeuss, *Die Deutschen und die Nachbarstämme*, Munich, 1837; supported by A. Schiefner, 'Sprachliche Bedeutungen gegen das Mongolentum der Skythen,' *Mélanges Asiatiques*, ii. [St. Petersburg, 1856] 531 ff.; K. Müllenhoff, 'Ueber die Herkunft und Sprache der pontischen Scythen und Sarmaten,' *MBAW*, 1866, p. 549 ff., reprinted in *Deutsche Altertumskunde*, Berlin, 1870-1900, iii. 101 ff.; M. Duncker, *Hist. of Antiquity*, Eng. tr., London, 1877-82, iii. 228-246; W. Tomaschek, 'Kritik der ältesten Nachrichten über den skythischen Norden,' i. 'Ueber das arimasische Gedicht des Aristes,' *SWAW* (Phil. hist. Classe), cxvi. [1893] 715-780, ii. 'Die Nachrichten Herodots über den skythischen Karawanenweg nach Innerasien,' ib. cxvii. [1899] 1-70; A. von Gutschmid, 'Die Skythen,' in *Kleine Schriften*, Leipzig, 1889-94, iii. 421 ff. (his art. 'Scythia, Scythians' in *EBR* is an epitome of this).

(4) That the Scyths were an Aryan people who have now disappeared.—G. Rawlinson, *Hist. of Herodotus*, London, 1862, iii. 157 ff.

(5) That the Scyths were Germans.—L. Wilset, *Internat. Centralblatt für Anthropologie*, vii. [1902] vi. 353, and 'Skythen und Perser,' in *Asien: Organ der deutschen asiatischen Gesellschaft*, ii. [1902]; J. Freßl, *Die Skythen-Saken die Urväter der Germanen*, Munich, 1886.

(6) That the Scyths were Slavs.—J. G. Cuno, *Forschungen im Gebiete der alten Völkerkunde*, Berlin, 1871; J. E. Zabyelin, *Hist. of Russian Life* (Russ.), Moscow, 1871, i. 243; D. J. Samokvasov, *Hist. of Russian Law* (Russ.), Warsaw, 1884, pt. ii. pp. 1-69.

(7) That the Eastern Scyths were Mongolian and the Western Scyths Iranian and possibly ancestors of the Slavs.—Y. T. Miller, 'Epigraphic Traces of Iranian Population on the North Coast of the Euxine,' *Journ. Min. Educ.*, St. Petersburg, 1886, p. 232; T. I. Mischenko, 'Concerning the Geography and Ethnology of Herodotean Scythia,' ib., 1888.

(8) That the Eastern Scyths between the Dnieper and the Don were Iranian, while the Western Scyths between the Dnieper and the Carpathians and the Lower Danube were Slavs.—P. J. Safarik, *Slavonic Antiquities*.

Recent study of Scythian archaeology and customs makes it more and more clear that the Scyths were a political unit composed of various ethnical elements. The distinction of three different kinds of Scythians had already been made by Herodotus, besides which he distinguishes various other tribes which he considered non-Scythian. Recognizing his distinctions, and assuming that the W. Scythians were Slavs, we find it impossible to class as Slavic the non-Scythian tribes of Herodotus, as, e.g., the Neuri. In this case the Neuri must be considered as one of the neighbours of the Slavs, probably the Letto-Lithuanians. This, however, is not realized by Safarik, who considers the W. Scythians and Neuri, as well as others, to be Slavs. Such inconsistencies deprive his Scytho-Slavic theory of any profound historic or ethnological value. Another argument against identifying the Slavs and W. Scythians is brought forward by T. G. Braun.¹ He says that the first historical mention of the Slavs in Pliny, Tacitus (1st cent. A.D.), and Ptolemy shows them far away from the Lower Danube. Pliny says that they live east of the Vistula.² Tacitus places them somewhere between the Valdai hills near Novgorod and the Vistula,³ Ptolemy (2nd cent.) places them on the Vistula, in Sarmatia, and along the shores of the Venedic gulf (the Gulf of Danzig); but he also speaks of the Venedic mountains, probably meaning the N. Carpathians.⁴ Further, if we bear in mind that the territory of the W. Scythians was the battleground of every tribe migrating southwards, we can see that it would not be a very good nursery for a rapidly increasing race which was to overrun half Europe by the 6th century.

But, if we are not to find ancestors of the Slavs among the Scythians, we have still to consider whether they are to be found among the non-Scythian tribes described by Herodotus, such as the Neuri and Budini.

(b) *The Neuri*.—Herodotus (5th cent. B.C.) tells

us that the Neuri live along the rivers Hypanis (Bug) and Tyras (Dniester), north of the Scythian Aroteres;¹ and that they had been driven from their land a generation before by a plague of snakes, and had taken refuge with the Budini.² In the same place he tells us that once a year they became wolves for a short season. Of the land which lay beyond them he confesses his ignorance, but believes it to be desolate. Ephorus of Cyme³ (2nd cent. B.C.), quoted by Scymnus Chius,⁴ follows Herodotus, saying that they live beyond the Aroteres, and that the country beyond them is desolate. Pomponius Mela⁵ (1st cent. A.D.) mentions the Neuri as living on the Tyras. He also relates the wolf-story. Claudius Ptolemy⁶ (2nd cent. A.D.) speaks of the *Ναύβαροι* or *Ναύαροι* as inhabiting S. Podolia. Ammianus Marcellinus⁷ (4th cent. A.D.) says that they live in the mountains north of the land of the Borysthenes (i.e. near Kiev).

Safarik was the first to propose the identification of the Neuri with the Slavs.⁸ He considers that their territory was just where the Wends (Slavs) originally settled. He is supported by L. Niederle,⁹ Braun,¹⁰ Tomaschek,¹¹ and Minns.¹²

(c) *The Budini*.—In iv. 21 Herodotus tells us that the Budini are living in the great country north of the Sauromatæ, east of the Tanais (Don); in iv. 108 that they are a powerful nation, with blue eyes and red hair. With them live a people called the Geloni, whom Herodotus believes to be fugitive Greeks. These people have built for themselves a town of wood called Gelonus, with temples and shrines in which they worship gods whom Herodotus believes to be Greek. Pomponius Mela¹³ also mentions this wooden town of Gelonus in the land of the Budini. Rawlinson¹⁴ gathers from the data given by Herodotus that the Budini inhabited the region round about Zadonsk and Woronetz (Saratov).

Many theories are suggested concerning the ethnology of the Budini. Rawlinson¹⁵ holds that the Budini were either the ancestors of the Germans or else a remnant of the Cimmerians, whom he believes to be Celts. F. Lenormant¹⁶ considers the town Gelonus to be the Asgar. Ritter¹⁷ goes so far as to say that the Budini were Buddi, were probably Finns of the branch now represented by the Votiaks and Permiaks. Of course Safarik¹⁸ regards the Budini and Geloni as both Slav peoples, and derives their name from *voda*, 'water' ('waterfolk'). Grote¹⁹ supports this view. E. H. Bunbury²⁰ suggests that Herodotus' informant may have confused Greek and Slavic methods of worship in his account of Gelonus. Niederle²¹ is also inclined to think that the Budini were a Slavic people. It is certainly more likely that the Budini were Slavic.

(d) *The Sauromatæ, Sarmatæ, etc.*—Herodotus²² says that the Sauromatæ were living on the east bank of the Tanais (Don), which divided their land from that of the Scythians. They stretched northwards from Lake Mæotis (Sea of Azov) to the forest land belonging to the Budini. He relates the legend that they were descendants of Amazons conquered by the Greeks on the Thermodon, who, having been embarked for Greece, slew their

captors, and drifted to Kremni on the shores of Lake Mæotis, whence they advanced up the Tanais. Hippocrates¹ (468 B.C.) places them on the shores of Lake Mæotis. The *Periplus* of Scylax, dated by K. Müller about 338 B.C., mentions in § 69² a tribe of 'Syrmatæ' in Europe close to the Tanais; but in § 70³ the Sauromatæ are still in Asia on the eastern side of the river. In connexion with this we may note that Stephanus Byzantius cites this rare form 'Syrmatæ' from Eudoxus of Cnidos (4th cent. B.C.), and says that it is identical with 'Sauromatæ,' 'Surmatæ,' etc. The first definite mention of the Sauromatæ as in Europe is that of Polybius⁴ (210 B.C.), where Γράλος ὁ Σαυρομάτης joins a great league of states in Asia Minor on the shores of the Euxine. This is the first occasion on which the term Σαυρομάτης takes the place of the form Σαυρομάτης. Ephorus (2nd cent. B.C.), quoted by Scymnus Chius,⁵ says that they live on the shores of Lake Mæotis. Strabo (2nd cent. B.C.)⁶ has the Iazyges Sarmatæ on the Ister (Danube). His Sarmatian tribes are Iazyges-Sarmatæ, Royal Sarmatæ, and Uirgi, and the Rhoxolani, Aorsi, and Siraci beyond the Tanais. Ovid (1st cent. B.C.)⁷ places the Iazyges on the Danube and the Sauromatæ in W. Sarmatia. Diodorus Siculus (1st cent. B.C.)⁸ says that the Sauromatæ are still on the Don, and that they come from Media.

Before going on to the notices in writers of the Christian era, it is well to remark that it is not clear exactly when the Sauromatæ crossed the Don. In the 4th cent. B.C. the Sauromatæ were either east of the Don or just crossing. After that we get no definite information for a century and a half. Mians⁹ suggests that the reason of this is that the Scyths were then fighting a losing struggle with the Sauromatæ. The Scyths, contrary to the opinion of Herodotus,¹⁰ were good neighbours to the Pontic Greeks, but it was not safe to travel near the Euxine when the Sauromatæ were first in the ascendant. We may also notice two main divisions of Sauromatæ by the 1st cent. B.C.—the Iazyges-Sauromatæ, Royal Sauromatæ, and Uirgi on the Danube, and the other division, Sauromatæ, Rhoxolani, Aorsi, and Siraci, on the Don and the shores of the Sea of Azov and in the Caucasus.

In the 1st cent. A.D. Pomponius Mela¹¹ places Sarmatia between the Vistula and the Danube. Pliny the Elder¹² has the Hamaxobii (or Aorsi) and Rhoxolani on the Danube and Herceynthian Marsh, and the Iazyges in Dacia, having previously driven out the Dacians. This is confirmed by Tacitus, who tells, in *Hist.* i. 79, how the Rhoxolani, having occupied W. Sarmatia, which had been left vacant by the Iazyges, made an unsuccessful raid into Mœsia in A.D. 70.¹³ In *Ann.* xii. 29 he has the Iazyges-Sarmatæ in Pannonia.¹⁴ In *Germ.* 1 the Iazyges-Sarmatæ are between the Danube and Theiss, having driven out the Dacians,¹⁵ and in *Germ.* 43 we find the Sarmatæ imposing tribute on the Osi in Pannonia.¹⁶ In the 2nd cent. A.D. Ptolemy¹⁷ has the Sarmati along the coast of Lake Mæotis, and the Iazyges Metanastæ between the Theiss and the Danube, but this is probably, as Minns points out,¹⁸ the result of combining information of two different dates. Another 2nd cent. historian, Polyænus,¹⁹ tells the story of Amage, queen of the Sarmatians, who reigned on the shores of the Pontus. She allied with the Cher-

sonesians against their neighbours the Scythians. In the 4th cent. A.D. the *Hist. August. Scriptores* tells us of war waged against the Sauromatæ by Hadrian, Marcus, Maximus Regalianus, and others.¹ The 4th cent. historian Olympiodorus² shows that the Sarmatæ have overrun Thrace and Illyricum. Jordanes³ (6th cent. A.D.) says that Dacia was formerly bounded on the east by the Rhoxolani, on the west by the Iazyges, on the south by the Sarmatæ and Bastarnæ, and on the north by the streams of the Danube. In the *de Get.* xxxvi. we find the Sarmatians on the side of the Byzantine Romans against Valentinian, emperor of Rome.⁴ Procopius, however, in the 6th cent. A.D., merely mentions the Sauromatæ as a tribe of Scythians.⁵

Of the customs of the Sauromatæ Herodotus has a good deal to say. In iv. 110 ff. he tells us that the Sauromatian women hunted, went to war, and wore the same clothes as the men. Every woman had to kill a man in battle before she could marry. They spoke a language which Herodotus believed to be broken Scythian. These customs put together amply account for the myth of Amazonian origin.

Hippocrates⁶ notes the difference between the Sauromatæ and the other 'Scythian' tribes around them. He gives the same account of the activities of the Sauromatian women as Herodotus, adding that they were not allowed to take part in religious ceremonies till they were married, and that they had no right breasts, since it was the custom of their mothers to cut these off in early childhood, to make their right shoulder and arm stronger by concentrating the strength there. When married, they gave up riding in general, but were still liable to be called up when a crisis necessitated universal tribal service. This is interesting, since these two accounts must have come from independent sources.

Ephorus⁷ gives the same account of the Sauromatæ as Herodotus, from whom, most probably, he got his information.

Strabo gives a very full account of their customs. In *Geog.* §. 2, 8 he says that they are a mare-milking, milk-drinking, simple people, who have mixed with the Thracians and Bastarnæ beyond the Ister. In *Geog.* §. 17⁸ he says that they are mostly nomads, though some practise agriculture, and he gives a detailed account of the Rhoxolani. They wear very little armour, and are almost naked. Their helmets and breastplates are made of ox-hide, their shields of wicker-work. They also use spears, bows, and swords. On the top of their waggon wheels are fastened felt tents. They eat milk, cheese, and meat. They winter in the marshes round Lake Mæotis, and move up to the steppes in summer.

Diodorus Siculus¹⁰ says that women ruled among the Sauromatæ, and he gives the usual account of their habits.

Tacitus¹¹ gives an account of the Rhoxolani: they use swords and poles of an extraordinary length, and wear coats of mail made of steel plates and ox-hide; they are almost impregnable to a charge, but, if knocked over, they cannot get up again. In *Germ.* 17 he says that the Sarmatæ have flowing garments like the Parthians; in *Germ.* 46 that they live in waggon wheels and are dirty and lazy.

Pomponius Mela says that the Sarmatians are rather like Parthians, their greater roughness being accounted for by the greater harshness of their climate; they are nomads and very fierce. He also mentions the strange habits of their women.

Nicolaus Damascenus¹² (1st cent. A.D.) tells that the Sauromatæ have a habit of eating hard for three days till they are full up.

Pausanias¹³ (late 2nd cent. A.D.) gives an account of the Sarmatian breastplate, which was made of pieces of horses' hoofs. He says that the Sauromatæ, though the most isolated of the barbarians, were skillful craftsmen. They had no iron in their country and did not import any, so they used bone for the tips of their arrows and spears. They used to lasso their enemies in battle. They were nomads, and had many horses, which they used to eat and sacrifice to the local gods. In viii. xliii. 6¹⁴ he says that they were warlike and wicked and relates how Antonius II. punished them for wantonly breaking the peace.

Many scholars, including Šafarik and Rawlinson, have believed the Sauromatæ to be Slavs; but this theory seems weakened by the ample evidence as to the Turanian character of the Sarmatian people.

Moreover—a fact which Šafarik ignores—it is impossible to regard both Scythians and Sauromatæ as Slavic, since Herodotus most definitely distinguishes the Sauromatæ from the Scythians. They have all the characteristics of the Turkic nomads of the steppes, milking mares, living on meat, milk, and cheese, wearing flowing garments, living in waggons, and using felt tents. On the other hand, that important characteristic of the Turkic people, the use of iron, is lacking.

2. The classical period (1st–6th cent. A.D.).—We have very little information about the Slavs from the classical authors. Pliny mentions them under the name of Venedi or Venedæ.¹ He only says vaguely that they, among other tribes, are reported to live east of the Vistula. He also mentions the Sirbi (Serbs), who, he says, live with the Cimmerians.² Tacitus³ mentions the Venedi as living near what H. Furneaux⁴ considers to be between the Valdai hills near Novgorod and the east bank of the Vistula. He hesitates whether to call them Germans or Sarmatians, but is inclined to class them with the former, because they have fixed houses, use shields, and are swift of foot—all very un-Sarmatian characteristics. He also says that they are dirty and sluggish by nature. We must remember, however, that in this case the reading of the MS is 'Veneti.' In the 2nd cent. A.D. Ptolemy⁵ places the Venedæ on the Vistula, in Sarmatia, and along the shores of the Venedic gulf, which seems to have been the Gulf of Danzig. He also mentions the Veltæ on the Baltic, the Sudini and Saboci in Prussia, which tribes Minns⁶ considers Slavic. Minns suggests that Ptolemy's 'Stavani,' which he places in Prussia, might be read 'Slavani.' Ptolemy⁷ also mentions the Serbi, whom he places in Asiatic Sarmatia between the Ceraunian mountains and the river Rha.

3. The Byzantine period.—The first definite use of the word Slavini is to be found in the pseudo-Cæsarius dialogue⁸ early in the 6th cent. A.D. The first account of the Slavs under the name of Slavini is given by Jordanes.⁹ He says that the Winidæ, Slavini, and Antes live in Dacia, from the town of Noviodunum and Lake Mursianus to the Danaster (Dniester), and northwards to the Vistula. They dwell in woods and marshes instead of houses. The Antes are the bravest tribe, and live round the shore of the Pontus from the Danaster to the Danaper (Dnieper). Farther on he says that the Winidæ, Antes, and Slavini formed part of the subjects of Hermanreich; they were very warlike tribes, who were then subdued, 'but now range wheresoever they will through our neglect.'¹⁰

The most useful of the authorities is Procopius (6th cent.). His important remarks on 5th and 6th cent. Slavic institutions are worth quoting.

'For these tribes, the Antes and Slavini, are not ruled by one man, but have lived from olden times under democratic rule, and for this reason they deliberate in public all that concerns their weal and ill. Both these peoples have the same laws and customs. . . . They live in miserable hovels very far apart from one another and often change their abode. They go to battle on foot and charge the enemy with small shields and javelins in their hands. Some wear neither tunic nor cloak when going to battle, but merely short breeches. They all speak the same barbarous language, and are very like one another to look at. Their mode of living is hard and uncultured like that of the Massagetæ; they are always dirty. They are not malicious or deceitful, but have something of the simplicity of the Huns. At one time the Slavini and Antes had only one name, for they were called the Spori in ancient days, because, I take it, they were scattered so sporadically over the land they lived in; indeed they inhabit the greater

part of the banks of the Danube. That is all I have to say about these people.'¹

Procopius also gives a good deal about the history of the Slavs.

The Slavs during the 5th and 6th centuries are constantly trying to cross the Danube, and becoming more and more successful each time: the Slavs cross the Danube, and overrun Illyricum as far as Dyrrhachium;² Slavs again cross the Danube and Eurus. They divide into two bands, one of which ravages Illyria and the other Thrace. The latter take the town of Toperos on the Thracian coast, and commit horrible atrocities there.³ A number of Slavs larger than had been seen before cross the Danube and attack Naissos with the intention of invading Thessalonica. Through fear of the Germans, however, they leave Thessalonica untouched, going through the Illyrian mountains to Dalmatia.⁴ As time goes on, the Romans are less able to repel them. In iii. 14⁵ Justinian offers the Antes the town of Tourris and land on the Danube, if they will protect the empire from the advance of the Huns. In iii. 40,⁶ however, they are in the pay of Totila, the Hun leader, and attacking the empire. Towards the end of the 6th cent. they have overrun the whole of Greece, and are in such numbers that the Romans can make no way against them.⁷ In fact, in iii. 14 Procopius admits that since the death of Chilbudinus (5th cent. A.D.) nothing has been able to protect the empire from the barbarians.

Towards the end of the 6th cent. Menander tells us that the Slavs made a raid into Thrace.⁸ The next year (A.D. 578) they were ravaging the whole of Greece. Tiberius, the Roman, not having sufficient forces to meet them, persuaded Baianus, leader of the Avars, to attack them in their own country, and so force them to go back and defend it. Baianus accordingly crossed the Danube and burnt the Slav villages there, whose inhabitants had fled to the caves and woods. Baianus was the more ready to attack the Slavs since he had a private grudge against them; for they had refused to pay him tribute and killed his ambassadors shortly before.

Mauricius⁹ (6th cent.) has much to say on the characteristics of the Slavs. Physically they are strong, well able and accustomed to endure cold and lack of clothing and food. They have great reverence for the laws of hospitality, and are very kind to strangers and prisoners. They are armed with two javelins, wooden bows, and small poisoned arrows; some use shields. Their method of attack is by sudden raids and incursions; they rarely fight a pitched battle. They are supreme in the art of defence; when pursued by enemies or suddenly attacked, they dive under the water, and, lying on their backs at the bottom, breathe through a long reed, and so escape destruction. They live in a continuous state of defence, having several exits to their houses and burying all their superfluous goods.

Thus, in the 6th cent., we have the Slavs definitely settled in large numbers north of the Danube. There were also Slavs in the Mark of Brandenburg.¹⁰

There were Serbo-Croats in Dalmatia and Pannonia, invited there by the emperor Heraclius (610–640) to protect them from the Avars.¹¹ The Danube Slavs were making constant raids into Greece, and had practically conquered N. Illyricum.

Nicephorus Patriarchus (8th cent. A.D.) is our chief authority for the fate of the Slavs in the 7th and 8th centuries. In 626 the Avars, with large numbers of Slav auxiliaries, attacked Blachernæ in Thrace. A number of Slav women were found to be in the forces.¹² In 679 the Boyars subdued the Slavs living in Mœsia and Thrace,¹³ and in 688 the Slavs who had conquered parts of

Thessalonica submitted to the power of the Romans.¹ The same author tells us that in 763 a large number of Slavs crossed the Euxine and settled at the mouth of the river Artanes.²

Fredegar tells us of the foundation of a Slav state in Thuringia under Samo, a Frank, in the early 7th century.³

The period called Byzantine, because the chief authorities for it are the Byzantines, is the most important in Slavic history; in fact, it is the only period in which we can treat the Slavs as one race, though already varying according to locality and having different names in different places. It is certain that the rapid spread of the Slavs over the Eastern Empire was facilitated by its weakness, resulting from the incursions of bearded invaders from the north under Alaric and Odovacer, and beardless hordes from the east under Attila. Whatever region it was in which the Slavs first broke away from the Aryan stock, they must have been somewhere in the forest region of the western part of E. Europe outside the route of the Asiatic steppe invaders immediately before their invasion of the Roman Empire. About the 5th cent. they had spread over the lands of the W. Scythians, Sarmatians, and Celts, and so encroached upon the territories of the Eastern Roman Empire, and later upon the Frankish Empire. In the west they crossed the Rhine and got as far as Spain; in the south-east they reached Asia Minor a century and a half later. In the north-east they were on the northern shores of the Baltic in the 1st cent., and on the Dnieper in the 6th cent. (the Antes).

Pending further archaeological discoveries, there is no exact information as to the date when the Slavs began to spread westwards. This lack of information has given certain Slavic scholars the opportunity of advancing a theory that the Slavs of the Elbe region were autochthonous.⁴ The views of the most prominent German scholar may be summed up by the following quotation:

... From the beginning of the fifth, and indeed for the greater part from the end of the third century, A.D., the country westward to the Oder and southward to the Riesengebirge was abandoned by its old German inhabitants. . . . It must be admitted that the Slavs found everywhere scattered remnants of the Germans, because they merely adapted the German names, *Oder, Elbe (Albi), Moldau (Walth alva)*, etc., to their own mouths (*Odra, Laba, Vltava*). For certain times and in certain districts there was a mixed population, and it is to be particularly noticed that even in the sixth century the Germans, who had long withdrawn to the South, did not admit that the East as far as the Vistula had definitely passed to the Slavs. It had not been conquered by them—only occupied by loose bands of settlers.⁵

Since Peisker gives us a great deal of valuable historical information in this chapter on the expansion of the Slavs, it is the more important to point out where his preconceived ideas have vitiated his facts.

The axioms on which he bases his theory are: (1) that the rapid Slav conquest was due to either a Germanic or a Turanian (Avar) admixture, since the Slavs were merely the passive party; (2) that the organization of the early Slavic states was due to these two elements.

(1) His first argument is based on a quotation from Theophylactus' 'spy story': 'Three captives were brought before the Emperor Maurice having neither swords nor any other weapon, but only citharas with them. Being questioned they answered that they were Slavs from the coast of the northern ocean (Baltic Sea), whither the Khagan sent envoys with presents to ask for auxiliaries. They brought back an answer to the Khagan that he could expect no help from such a distance—they themselves had been fifteen months on the journey—and their people were absolutely peaceable. They played on the zither because they were unacquainted with weapons, their land produced no iron and therefore they lived there still and peacefully, and as the war trumpet was not understood there they played on the zither. These were

obviously spies, but the fiction of their entire harmlessness could only deceive the Emperor when the story of the Khagan's embassy to the Baltic Slavs appeared natural. The whole mystification produced the widespread story of the *dove-like nature of the Slavs*.¹

Since Theophylactus himself considers the Slavs not so blameless as they seemed, this will hardly support his theory. Against it we have the testimony of almost all the other writers that the Slavs are good warriors, especially in defensive warfare. Nor are they lacking in savagery. Peisker ignores this evidence, however, and, when he deals with the pre-Avar conquests of the Slavs in the west, he says that the Germans for some unknown reason voluntarily abandoned their territories. Again, when he tells of the Rügen Slavs predominating over the Danes, he ascribes it² to the 'remarkable fusion of the viking pirates, Altaian herdsmen and Slav peasants on the island of Rügen' in 1168.

(2) As to the founding of Slavic states which took place at the end of the Byzantine period, it is true that Samo, the founder of a Slavic state bordering on Thuringia, at the beginning of the 7th cent., was a Frank, but the 'empire' was a short-lived adventure, which played no rôle in Slavic history. Peisker ascribes to it the deeper significance of a rebellion of Slavic peasants against their foreign masters, but it was equally a rebellion of the Frank chief against his own king, Dagobert. All the Slavic states which were at all permanent—as the Carinthian (7th cent.), the Croatian, Serbian, Bohemian (Lemusi), and Polish (Lakhy)—were states developed from purely local origins, and could scarcely owe much in that direction to the Avars, who, like all other Asiatic invaders, were better fighters than statesmen. The Bulgarian-Asiatic element among the Slavs who adopted this name must have been very insignificant.

Scandinavian element in the Kiev state, for in the third generation it amounted to the foreign dynasty, which, as is known from modern history, usually adopts the nationality of its subjects. Still Scandinavian influence in the formation of the Novgorod and Kiev states had been undoubtedly great, but its strength was due to the fact that the first Scandinavian Russ soon became Slavized.

In the one case where Germanic influence was not sporadic, but permanent, it does not seem to have had the effect of forming a centralized state. This was the case of the most westerly Slavs, neighbours of the Germans, who lived between the Danube and Mecklenburg—such as the Sorbs of the Saale and Elbe, and the Lyutitsi and Obodritsi farther north—who never formed a state of any importance. Considering the constant disturbances coming from the steppe, we cannot but wonder how the Slavs succeeded in organizing their states, and providing at such an early period such large collections of native law based on legal proceedings rather than force.

It may be questioned whether the Avar invasion made a cleavage between the Slavs, dividing them into Northern and Southern, or whether it helped to accentuate a division already there.

4. The period of independent Christian Slavic states (7th-13th cent. A.D.).—There are two sources of evidence for the period—historical and archaeological. The history of the Slavs during this period can be gleaned from local authorities of the 10th cent. or later. Among these are the Germans, Thietmar of Merseburg (10th cent.), Adam of Bremen (11th cent.), Helmold (12th cent.), and Otto of Bamberg (12th cent.), and the Danish Saxo Grammaticus (12th cent.), Fredegar, and the *Knytlinga Saga*. Others are Slavic, such as the S. Russian chronicler Nestor (12th cent.), the Bohemian Cosmas, bishop of Prague (12th cent.), the Polish-Latin *Homilies* (12th cent.), and the Polish chroniclers, Marciannus Gallus (11th-12th cent.), Vincentius Kadlubek of Cracow (13th cent.), Yanko of Czarnkov (14th cent.), and Dlugosz (15th cent.). The chroniclers, though of a later date, deal with the period which we are now considering. Besides these local sources, the Arabian travellers, al-Mas'udi (10th cent.) and Ibrāhīm ibn Vāsifshāh (12th cent.), and a Spanish Jew called Ibrahim ibn La'qūb (10th cent.) contribute interesting information which is much more impartial and free from bias than the Germanic and Slavic contributions.

From a historical and archaeological point of view, this is the most 'Slavic' period in the history of the race, since at that time, between the advance of Attila and that of Jenghiz Khan, there were no invasions of any importance from the east or from the west—i.e., there was no great infusion of Turanian blood to the Slavic stock, since the Avars were a

Moreover—a fact which Šafarik ignores—it is impossible to regard both Scythians and Sauromatæ as Slavic, since Herodotus most definitely distinguishes the Sauromatæ from the Scythians. They have all the characteristics of the Turkic nomads of the steppes, milking mares, living on meat, milk, and cheese, wearing flowing garments, living in waggons, and using felt tents. On the other hand, that important characteristic of the Turkic people, the use of iron, is lacking.

2. The classical period (1st–6th cent. A.D.).—We have very little information about the Slavs from the classical authors. Pliny mentions them under the name of Venedi or Venedæ.¹ He only says vaguely that they, among other tribes, are reported to live east of the Vistula. He also mentions the Sirbi (Serbs), who, he says, live with the Cimmerians.² Tacitus³ mentions the Venedi as living near what H. Furneaux⁴ considers to be between the Valdai hills near Novgorod and the east bank of the Vistula. He hesitates whether to call them Germans or Sarmatians, but is inclined to class them with the former, because they have fixed houses, use shields, and are swift of foot—all very unsarmatian characteristics. He also says that they are dirty and sluggish by nature. We must remember, however, that in this case the reading of the MS is 'Veneti.' In the 2nd cent. A.D. Ptolemy⁵ places the Venedæ on the Vistula, in Sarmatia, and along the shores of the Venedic gulf, which seems to have been the Gulf of Danzig. He also mentions the Veltæ on the Baltic, the Sudini and Saboci in Prussia, which tribes Minns⁶ considers Slavic. Minns suggests that Ptolemy's 'Stavani,' which he places in Prussia, might be read 'Slavani.' Ptolemy⁷ also mentions the Serbi, whom he places in Asiatic Sarmatia between the Ceraunian mountains and the river Rha.

3. The Byzantine period.—The first definite use of the word Slavini is to be found in the pseudo-Cæsar's dialogue⁸ early in the 6th cent. A.D. The first account of the Slavs under the name of Slavini is given by Jordanes.⁹ He says that the Winidæ, Slavini, and Antes live in Dacia, from the town of Noviodunum and Lake Mursianus to the Danaster (Dniester), and northwards to the Vistula. They dwell in woods and marshes instead of houses. The Antes are the bravest tribe, and live round the shore of the Pontus from the Danaster to the Danaper (Dnieper). Farther on he says that the Winidæ, Antes, and Slavini formed part of the subjects of Hermanreich; they were very warlike tribes, who were then subdued, 'but now range wheresoever they will through our neglect.'¹⁰

The most useful of the authorities is Procopius (6th cent.). His important remarks on 5th and 6th cent. Slavic institutions are worth quoting.

'For these tribes, the Antes and Slavini, are not ruled by one man, but have lived from olden times under democratic rule, and for this reason they deliberate in public all that concerns their weal and ill. Both these peoples have the same laws and customs. . . . They live in miserable hovels very far apart from one another and often change their abode. They go to battle on foot and charge the enemy with small shields and javelins in their hands. Some wear neither tunic nor cloak when going to battle, but merely short breeches. They all speak the same barbarous language, and are very like one another to look at. Their mode of living is hard and uncultured like that of the Massagætæ; they are always dirty. They are not malicious or deceitful, but have something of the simplicity of the Huns. At one time the Slavini and Antes had only one name, for they were called the Spori in ancient days, because, I take it, they were scattered so sporadically over the land they lived in; indeed they inhabit the greater

part of the banks of the Danube. That is all I have to say about these people.'¹

Procopius also gives a good deal about the history of the Slavs.

The Slavs during the 5th and 6th centuries are constantly trying to cross the Danube, and becoming more and more successful each time: the Slavs cross the Danube, and overrun Illyricum as far as Dyrrhachium;² Slavs again cross the Danube and Eurus. They divide into two bands, one of which ravages Illyria and the other Thrace. The latter take the town of Toperos on the Thracian coast, and commit horrible atrocities there.³ A number of Slavs larger than had been seen before cross the Danube and attack Naissos with the intention of invading Thessalonica. Through fear of the Germans, however, they leave Thessalonica untouched, going through the Illyrian mountains to Dalmatia.⁴ As time goes on, the Romans are less able to repel them. In ill. 14⁵ Justinian offers the Antes the town of Tourris and land on the Danube, if they will protect the empire from the advance of the Huns. In ill. 40,⁶ however, they are in the pay of Totila, the Hun leader, and attacking the empire. Towards the end of the 6th cent. they have overrun the whole of Greece, and are in such numbers that the Romans can make no way against them.⁷ In fact, in ill. 14 Procopius admits that since the death of Chilbudinus (6th cent. A.D.) nothing has been able to protect the empire from the barbarians.

Towards the end of the 6th cent. Menander tells us that the Slavs made a raid into Thrace.⁸ The next year (A.D. 578) they were ravaging the whole of Greece. Tiberius, the Roman, not having sufficient forces to meet them, persuaded Baianus, leader of the Avars, to attack them in their own country, and so force them to go back and defend it. Baianus accordingly crossed the Danube and burnt the Slav villages there, whose inhabitants had fled to the caves and woods. Baianus was the more ready to attack the Slavs since he had a private grudge against them; for they had refused to pay him tribute and killed his ambassadors shortly before.

Mauricius⁹ (6th cent.) has much to say on the characteristics of the Slavs. Physically they are strong, well able and accustomed to endure cold and lack of clothing and food. They have great reverence for the laws of hospitality, and are very kind to strangers and prisoners. They are armed with two javelins, wooden bows, and small poisoned arrows; some use shields. Their method of attack is by sudden raids and incursions; they rarely fight a pitched battle. They are supreme in the art of defence; when pursued by enemies or suddenly attacked, they dive under the water, and, lying on their backs at the bottom, breathe through a long reed, and so escape destruction. They live in a continuous state of defence, having several exits to their houses and burying all their superfluous goods.

Thus, in the 6th cent., we have the Slavs definitely settled in large numbers north of the Danube. There were also Slavs in the Mark of Brandenburg.¹⁰

There were Serbo-Croats in Dalmatia and Pannonia, invited there by the emperor Heraclius (610–640) to protect them from the Avars.¹¹ The Danube Slavs were making constant raids into Greece, and had practically conquered N. Illyricum.

Nicephorus Patriarchus (8th cent. A.D.) is our chief authority for the fate of the Slavs in the 7th and 8th centuries. In 626 the Avars, with large numbers of Slav auxiliaries, attacked Blachernæ in Thrace. A number of Slav women were found to be in the forces.¹² In 679 the Boyars subdued the Slavs living in Mœsia and Thrace,¹³ and in 688 the Slavs who had conquered parts of

Thessalonica submitted to the power of the Romans.¹ The same author tells us that in 763 a large number of Slavs crossed the Euxine and settled at the mouth of the river Artanes.²

Fredegar tells us of the foundation of a Slav state in Thuringia under Samo, a Frank, in the early 7th century.³

The period called Byzantine, because the chief authorities for it are the Byzantines, is the most important in Slavic history; in fact, it is the only period in which we can treat the Slavs as one race, though already varying according to locality and having different names in different places. It is certain that the rapid spread of the Slavs over the Eastern Empire was facilitated by its weakness, resulting from the incursions of bearded invaders from the north under Alaric and Odovacer, and beardless hordes from the east under Attila. Whatever region it was in which the Slavs first broke away from the Aryan stock, they must have been somewhere in the forest region of the western part of E. Europe outside the route of the Asiatic steppe invaders immediately before their invasion of the Roman Empire. About the 5th cent. they had spread over the lands of the W. Scythians, Sarmatians, and Celts, and so encroached upon the territories of the Eastern Roman Empire, and later upon the Frankish Empire. In the west they crossed the Rhine and got as far as Spain; in the south-east they reached Asia Minor a century and a half later. In the north-east they were on the northern shores of the Baltic in the 1st cent., and on the Dnieper in the 6th cent. (the Antes).

Pending further archaeological discoveries, there is no exact information as to the date when the Slavs began to spread westwards. This lack of information has given certain Slavic scholars the opportunity of advancing a theory that the Slavs of the Elbe region were autochthonous.⁴ The views of the most prominent German scholar may be summed up by the following quotation:

... From the beginning of the fifth, and indeed for the greater part from the end of the third century, A.D., the country westward to the Oder and southward to the Riesengebirge was abandoned by its old German inhabitants. ... It must be admitted that the Slavs found everywhere scattered remnants of the Germans, because they merely adapted the German names, *Oder*, *Elbe* (*Albi*), *Moldau* (*Walth alwa*), etc., to their own mouths (*Odra*, *Laba*, *Vltava*). For certain times and in certain districts there was a mixed population, and it is to be particularly noticed that even in the sixth century the Germans, who had long withdrawn to the South, did not admit that the East as far as the Vistula had definitely passed to the Slavs. It had not been conquered by them—only occupied by loose bands of settlers.⁵

Since Peisker gives us a great deal of valuable historical information in this chapter on the expansion of the Slavs, it is the more important to point out where his preconceived ideas have vitiated his facts.

The axioms on which he bases his theory are: (1) that the rapid Slav conquest was due to either a Germanic or a Turanian (Avar) admixture, since the Slavs were merely the passive party; (2) that the organization of the early Slavic states was due to these two elements.

(1) His first argument is based on a quotation from Theophylactus' 'spy story': 'Three captives were brought before the Emperor Maurice having neither swords nor any other weapon, but only citharas with them. Being questioned they answered that they were Slavs from the coast of the northern ocean [Baltic Sea], whither the Khagan sent envoys with presents to ask for auxiliaries. They played on the zither because they were unacquainted with weapons, their land produced no iron and therefore they lived there still and peacefully, and as the war trumpet was not understood there they played on the zither. These were

obviously spies, but the fiction of their entire harmlessness could only deceive the Emperor when the story of the Khagan's embassy to the Baltic Slavs appeared natural. The whole mystification produced the widespread story of the *dove-like nature of the Slavs*.¹

Since Theophylactus himself considers the Slavs not so blameless as they seemed, this will hardly support his theory. Against it we have the testimony of almost all the other writers that the Slavs are good warriors, especially in defensive warfare. Nor are they lacking in savagery. Peisker ignores this evidence, however, and, when he deals with the pre-Avar conquests of the Slavs in the west, he says that the Germans for some unknown reason voluntarily abandoned their territories. Again, when he tells of the Rügen Slavs predominating over the Danes, he ascribes it² to the 'remarkable fusion of the viking pirates, Altaian herdsmen and Slav peasants on the island of Rügen' in 1163.

(2) As to the founding of Slavic states which took place at the end of the Byzantine period, it is true that Samo, the founder of a Slavic state bordering on Thuringia, at the beginning of the 7th cent., was a Frank, but the 'empire' was a short-lived adventure, which played no rôle in Slavic history. Peisker ascribes to it the deeper significance of a rebellion of Slavic peasants against their foreign masters, but it was equally a rebellion of the Frank chief against his own king, Dagobert. All the Slavic states which were at all permanent—as the Carinthian (7th cent.), the Croatian, Serbian, Bohemian (Lemusi), and Polish (Lakhy)—were states developed from purely local origins, and could scarcely owe much in that direction to the Avars, who, like all other Asiatic invaders, were better fighters than statesmen. The Bulgarian-Asiatic element among the Slavs who adopted this name must have been very insignificant, if the original Bulgarians changed their language and adopted Christianity so soon after settling down (9th cent. under Simeon and Samuel). Very little greater numerically was the Scandinavian element in the Kiev state, for in the third generation it amounted to the foreign dynasty, which, as is known from modern history, usually adopts the nationality of its subjects. Still Scandinavian influence in the formation of the Novgorod and Kiev states had been undoubtedly great, but its strength was due to the fact that the first Scandinavian Russ soon became Slavified.

In the one case where Germanic influence was not sporadic, but permanent, it does not seem to have had the effect of forming a centralized state. This was the case of the most westerly Slavs, neighbours of the Germans, who lived between the Danube and Mecklenburg—such as the Sorbs of the Saale and Elbe, and the Lyutitsi and Obodritsi farther north—who never formed a state of any importance. Considering the constant disturbances coming from the steppe, we cannot but wonder how the Slavs succeeded in organizing their states, and providing at such an early period such large collections of native law based on legal proceedings rather than force.

It may be questioned whether the Avar invasion made a cleavage between the Slavs, dividing them into Northern and Southern, or whether it helped to accentuate a division already there.

4. The period of independent Christian Slavic states (7th–13th cent. A.D.).—There are two sources of evidence for the period—historical and archaeological. The history of the Slavs during this period can be gleaned from local authorities of the 10th cent. or later. Among these are the Germans, Thietmar of Merseburg (10th cent.), Adam of Bremen (11th cent.), Helmold (12th cent.), and Otto of Bamberg (12th cent.), and the Danish Saxo Grammaticus (12th cent.), Fredegar, and the *Knytlinga Saga*. Others are Slavic, such as the S. Russian chronicler Nestor (12th cent.), the Bohemian Cosmas, bishop of Prague (12th cent.), the Polish-Latin *Homilies* (12th cent.), and the Polish chroniclers, Marcianus Gallus (11th–12th cent.), Vincentius Kadlubek of Cracow (13th cent.), Yanko of Czarnekov (14th cent.), and Dlugosz (15th cent.). The chroniclers, though of a later date, deal with the period which we are now considering. Besides these local sources, the Arabian travellers, al-Mas'ûdi (10th cent.) and Ibrâhîm ibn Vâsîfshâh (12th cent.), and a Spanish Jew called Ibrâhîm ibn La'qûb (10th cent.) contribute interesting information which is much more impartial and free from bias than the Germanic and Slavic contributions.

From a historical and archaeological point of view, this is the most 'Slavic' period in the history of the race, since at that time, between the advance of Attila and that of Jenghiz Khan, there were no invasions of any importance from the east or from the west—i.e., there was no great infusion of Turanian blood to the Slavic stock, since the Avars were a

military and political power, and did not amalgamate with or absorb those whom they conquered. In the west, though the Germans were by this time pushing the Slavs back before them, they were only politically supreme over the Elbe Slavs, who had never united to form a strong Slavic state, but lived in small village communities as Slavic islets in a Germanic sea.

III. *DISTRIBUTION AND CLASSIFICATION OF THE SLAVS UP TO THE PRESENT DAY.*—In dealing with the early Slavs we get more important evidence from archaeological remains than from the actual notices of ancient and Old German historians. The Slavic graves in Germany and Austria have now been thoroughly studied, and a map of their distribution was made by C. Toldt.¹ They date from the 7th to the 12th cent. and are characterized chiefly by metal ornaments of the shape of the letter S (*Schlöferinge*), worn probably on the cap, which are not to be found in the graves of W. Germany, France, or Great Britain.² The graves not possessing this characteristic ornament have small urns without ears, ornamented with a design imitating waves. Rings are found chiefly in the graves in what is now Germany, the island of Rügen, Austria, as well as in Bohemia and Moravia, and less in Poland or White and Little Russia. Some 169 skulls have been found in the Slavic graves on the territory of what is at present E. Germany, and of these 151 are dolichocephalic and only 18 brachycephalic. As to the 'Slavic' graves of Austria, 46 out of 148 were dolichocephalic, but it is not certain how many of these can be described as Slavic. Some archaeologists, among them Niederle, suppose that the Slavs formed the bulk of the population of the Danube, Styria, and Carinthia; others (chiefly Germans) think that the Slavs formed small groups among Roman, German, and Illyrian elements.

From the Elbe to the Volga in 8th cent. graves we meet with Arabian silver coins, which R. Virchow³ considers particularly associated with the Slavic graves.⁴

The skulls from Slavic graves in the territory of the present-day Russia were also dolichocephalic, but it is difficult to say which of them can be ascribed to the E. Slavs and which to the Finns, who lived in that district before the Slavs. The population of Little Russia was dolichocephalic until the Tatar invasion. The dolichocephals of Great Russia, whether of Slavic or of Finnic origin, were affected in modern times by a fair brachycephalic 'Valdai' type from Polesia and a dark brachycephalic Little Russian type.

IV. *LANGUAGE.*—The relation of the Slavic languages to the other European tongues was clearly defined for the first time by F. Bopp,⁵ but, even before, other philologists had noticed points of likeness between the Slavic tongues and Latin, Greek, German, Celtic, Letto-Lithuanian, etc. Since the publication of Bopp's work it has been generally recognized that the Slavic family of languages has developed from the original Indo-European (Aryan) common language, just as the Germanic, Celtic, Italic, Letto-Lithuanian, Albanian, Greek, Armenian, Indian, and Iranian branches did.

V. *RELIGION.*—When we speak of the religion of the Slavs, we mean their religion at the time

when the term 'Slavs' meant more of a unity of language, customs, and beliefs than now—in other words, before they adopted Christianity.

1. *Sources.*—There are no Slavic records written in the pre-Christian era of the beliefs which the Slavs held before they became Christians, but the Slavic chronicles of the 11th–15th centuries frequently refer to the earlier religion. These chroniclers, however, were already looking at things from the point of view of either Byzantine Christians (in the case of the E. Slavs) or Roman Christians (of W. Slavs), and hence they purposely depreciated the pagan era of Slavic history. This is true of the earliest Slavic chronicler Nestor of the Russ (a proto-Russian people), and also of the Czech chronicler Cosmas of Prague, and the Pole Gallus. Even more biased are the references in the early German and Danish chroniclers—e.g., Thietmar, Adam of Bremen, Saxo Grammaticus, Otto of Bamberg—and in the *Knyttlinga Saga*. Further notices are found in the Eastern historians, Byzantine or Arabian, such as Procopius, Constantinus Porphyrogenitus, or Mas'ûdi, and Ibn Fadlân, but the latter often confused the E. Slavs with the Scandinavian Variags, and possibly with the Finns and Turks.

In a sense more valuable evidence may be obtained from the existing folk-lore, such as the customs connected with the change of the seasons which may be called communal, and those connected with *rites de passage* in the life of the individual. Then there is linguistic evidence, which, however, has little value unless it is connected with a survival of ritual or belief; e.g., it will not do to conclude, with some folk-lorists, that, merely because *Bug*, the name of two different rivers, means in all Slavic languages 'God,' the two rivers were therefore objects of special worship. There is one more source of evidence, viz. the church records dealing with pagan practices which pass into Christian ritual, but these must be treated with no less reserve than such documents in other countries. Thus it is folk-lore with all its modes of expression—songs, sayings, epics, sculpture, drawing, dances, or games—that provides us with the most satisfactory material. This material has only begun to be utilized since the publication of Safarik's monumental work, *Slavonic Antiquities*, in 1837, and from the very beginning the study of the past of the Slavs has been impeded by national and racial prejudices. The German scholar Peisker starts his study of the past of the Slavs with the assumption that they are nomads of Scytho-Turanian religious conceptions, while almost all Slavic scholars take for granted that, because the Slavic languages belong to the Indo-Germanic group, their religion must have been also like that of the other Indo-Germanic speaking peoples. Further, their assumption that a distinct Slavic linguistic group corresponded to a distinct Slavic race led them to expect an equal originality in the early religion of the Slavs and their present folk-lore. These ready-made assumptions prevented collectors of Slavic folk-lore from presenting it comparatively with the folk-lore of other peoples, and, on the other hand, from seeing the variety of the Slavic beliefs; e.g., the god Svietovit (spelt in various ways), known exclusively to the Slavs of Rügen, was ascribed to Slavdom, and so was also Perun, who was the Scandinavian Thor, brought by them to Novgorod and Kiev.

2. *Gods.*—The names of the ancient Slavic gods have almost all been gleaned from Russian, Polish, or foreign authors; the Czech and S. Slav writers have contributed little to our knowledge of names famous in Slavic mythology.

All the foreign writers on the ancient Slavs

mention some names of deities that they came across among the Slavs whom they have known; e.g., Saxo Grammaticus speaks of the gods of the Slavs of Rügen—Rugevit, Porevit, Porenuch, and Svyetovit; Helmold mentions Syetovit, Prove, Biel-Bog, and Chernobog.

The authors of the 16th and 17th centuries, curiously enough, have a much larger collection of Slavic gods; thus Michaeli Frenccelli (1658) describes a far greater number of gods than were known to the native and foreign travellers of the earlier period when their worship might still have been tolerated in the newly Christianized states. Frenccelli describes Perun, Martsyana, Didila, Zolotaga-Baba ('golden woman'), Perenuch, Perovit, Biel-Bog, and Chernobog. It is probable that the writers of the later period were influenced by the writings of the Polish historian Dlugosz, who was himself so influenced by classical mythology as to be tempted to find parallels to it in the mythology of the Slavs. Even before Dlugosz, Cosmas of Prague found a likeness between the classical and Slavic Olympus, so that in speaking of the Slavic gods he does not give them their Slavic names, but calls them Jupiter, Mars, and Bellona. Dlugosz was the first to give the Slavic equivalents, most of which do not appear in the Slavic or foreign writers before him. It is open to doubt whether any pagan cult still existed in the time of Dlugosz, 500 hundred years after the introduction of Christianity to Poland; but his deductive genius may have revealed to him from contemporary folk-lore, which must have still been very rich in his time, evidence which escaped the notice of the earlier writers. Historians of a later date merely repeat and seldom amplify his assertions.

Some Russian authors (Gizel, Popov, Glinka, etc.) believe that there were a great number of Slavic gods, and divide them into high gods, secondary gods, and spirits. Others (Nestor, Stroyev, Russov, Prigezjev, etc.) believe that there were only seven chief gods among the primitive Slavs. These were (1) Perun, the chief god, ruler of the lightning; (2) Volos (Veles), god of cattle; (3) Dajd-bog, god of wealth and success; (4) Stribog, god of wind and sometimes war; (5) Semargla (Zimseria), goddess of cold and frost; (6) Khors (Hrs), god of sickness, sometimes of hunting and libations; (7) Mokosh (Mkosh), god of trade, often a 'gossip'. The supporters of the seven-god system mention mostly the high gods known chiefly among E. Slavs; the supporters of Slavic polytheism mention sometimes as many as 69 (Glinka) gods and spirits, of the various Slavs, as well as names whose meaning they could not explain, and to which they could not assign any individuality—e.g., Didila, Prono, Yassa, Krado, etc.

The Russian historian N. M. Karamzin says that the old Slavs worshipped Biel-Bog ('white god') and Chernobog ('black god'). This is the repetition of a statement made by Helmold that the W. Slavs made a distinction between a good and a bad god, and called the latter Chernobog ('black god');¹ but we may look in vain for evidence of the cult of either of these gods in the archaeological remains or in the present folk-lore. According to the great Russian folk-loreist Sakharov, who tried to introduce some system into this host of meaningless names of Slavic gods, the seven Slavic gods mentioned by Nestor ought to be called Eastern or Russ Slav gods. He attributes to the Lett or Polish Western Slavs the names of the following gods: (1) Mya, whose temple was in Gneran, (2) Gassa, (3) Lada, (4) Dzila, (5) Zyeanna, (6) Zivalo, (7) Lel, (8) Polel, (9) Pogoda, (10) Pohvist. He further considers that Svyetovit was worshipped by the Slavs of Rügen and the Wends, while the god Perkun originated with the ancient Prussians and Letts.

We may now consider the early authorities' accounts of these gods and their ritual.

The first authority to give a definite account of Slav religion is Procopius; he, of course, speaks of E. and S. Slavs. Of these people he says:

'They worship one god whom they conceive to be creator of the thunder and maker of all things; to him they sacrifice cattle and other victims. They do not recognize "Destiny," nor do they admit that she has power over men, but when death seems near them, whether it be that they are attacked by pestilence or force of arms, they vow that, if they escape, they will straightway make a sacrifice to the gods in payment for their lives. Then if they do escape, they sacrifice as they promised to do, and believe they have bought their safety by

the sacrifice. However, they reverence rivers, nymphs, and other spirits, and sacrifice to them all; from these sacrifices they divine the future.'¹

Our next authority is Thietmar, bishop of Merseburg, in the 10th cent., who speaks of the Elbe Slavs. He gives an account of the town of Riedegost, with its three gates surrounded on all sides by sacred woods and its wonderful wooden temple, the foundations of which are made of the horns of different kinds of beasts. Inside this temple are images of gods and goddesses with armour which makes them terrible to behold, and foremost among them is the chief god, Zuarasici. They have banners, which are never moved save when they lead the way to battle, and specially appointed priests to guard the gods and their treasures. When the time comes to appease or supplicate these gods, the priests sit down—the congregation stands—and, muttering spells and incantations, take lots. Then, with accompanying prayers, spears are fixed in the ground, and a sacred horse is led through them. If he steps through them, well and good; if not, trouble is imminent. The results of this augury are compared with the lots first obtained, and, if the omens agree, their fulfilment is inevitable. Thietmar goes on to say that there are as many temples in these parts as there are districts, and many single images of gods are worshipped by the people, but the city of Riedegost is the centre of the cult. Human sacrifice to appease the wrath of the gods is common.² Thietmar also mentions a sacred and inviolate grave at Zutibure,³ and a sacred stick at Silivellum, in which place the people worship and sacrifice to *penates*, or domestic gods.⁴ At Glomuzi was a sacred well which produced blood and ashes when war was impending.⁵

Adam of Bremen (11th cent.) gives an account of the city of Rethre (Riedegost) which is probably based on that of Thietmar. He calls the chief god 'Redigost'.⁶ He also mentions the town of Iumne inhabited by Greeks, Slavs, and barbarians, where Olla Vulcani and Neptune are worshipped.⁷ He tells us that in Great Estland the people worship dragons with wings, to whom they offer sacrifices of men without blemish, buying them from merchants for the purpose.⁸

Cosmas of Prague gives us information about the religion of the Czechs. He tells us that they worshipped Oreads, Dryads, and Hamadryads. Some worshipped streams, some fires, and some groves, trees, or stones. Some prayed to mountains or hills.⁹ He also mentions the cult of *penates*.¹⁰

Helmold and Saxo Grammaticus are the chief authorities for the cult of Svantovit, who was worshipped by the people of Rügen. His temple was at Arkona on the island of Rügen. Saxo Grammaticus describes the image as having four heads and necks, two facing to the front and two behind. The beards of these heads were shaved and their hair was cut short, as was the custom of the people of Rügen. In his right hand the image held a horn of divers metals, and in the left a bow. He wore a tunic of wood reaching to the knees. Saxo describes the cult as follows. 'Once every year, after the harvest, a motley crowd from the whole island celebrated a ceremonial feast before the temple of the image and sacrificed animals as peace-offerings. The priest of the image, who was conspicuous for the length of his hair and his beard, which he wore longer than is the custom in that country, on the day before that on which

he was to celebrate, carefully cleaned out with a broom the sanctuary, which he alone was allowed to enter. He was careful not to breathe in the building, and, as often as he was forced to inhale or exhale, ran to the door lest he should contaminate the presence of the god with the pollution of mortal breath. The next day, while the people watched before the doors, he took the horn from the hand of the image and looked at it carefully; if any of the liquid in it had disappeared, he judged that this portended a scanty harvest next year. With this knowledge he ordered the people to preserve their present corn for future need. If it seemed to be as full as it usually was, he predicted that the next harvest would be a good one. So then, according to the omen, he advised them to use their corn in the coming year lavishly or sparingly. Having poured the old wine at the feet of the image as a libation, he filled the empty cup with fresh wine and adored the image, pretending to be its cup-bearer. Thus doing, he prayed for an increase of wealth and victories for himself and his country in a set form of words. When he had finished he drained the cup dry at one draught with overmuch haste, and, refilling it with wine, put it again in the hand of the image.

Mead cakes were also brought forward as offerings, round in shape and almost as tall as a man. The priest put one of these between him and the people, and asked the people whether they could see him. If they said they could, he expressed the wish that they might not be able to see him next year. Then he greeted the people in the name of the image, and exhorted them to prolong their worship of the god with diligent sacrifice, promising them certain reward for their husbandry and victory by land and sea.

When these ceremonies were over, they wasted the rest of the day in luxurious banqueting, striving to turn the very sacrificial feast into conviviality and serving the victims consecrated to the god with intemperance. In this feast it was considered a religious act to get drunk, and impious to restrain oneself.¹

The temple of Svantovit was made of wood; it was gaily painted, and had two enclosures, the innermost having magnificent curtains instead of walls. Among the appurtenances of the god were a bridle, a saddle, and a wonderfully embossed sword. There was also a white horse, sacred to the god, which could be ridden and tended only by the priest. Since it was found covered with mire in the morning, it was concluded that Svantovit rode it during the night. Omens were taken by means of this horse in a way similar to that in which the worshippers of Zuarasici took omens with the sacred black horse; but in this case the omen was good if the horse stepped on the spear with the right foot first, and *vice versa*. Like Zuarasici, Svantovit had sacred banners which led his people to victory, the most revered of these being called *Stanitia*. Svantovit had 300 men-at-arms and horses attached to him, and always received one-third of their spoil. He was identified by the Christian monks with St. Vitus of Corvey.

Saxo Grammaticus mentions other deities in the island of Rugen closely connected with Svantovit. Such were Rugie-Vitus at Karentia (Gazz), who had seven faces and eight swords, and was so tall that Bishop Absalon could only reach his chin with his axe; Pore-Vitus, who had five heads and no weapons; and Porenutius, who had five faces, one of which was in his bosom. Rugie-Vitus was believed by the people to have the powers of Mars.²

Helmold also mentions Zvantevith, god of the Ruciani, and says that he is the pre-eminent deity of the N. or Elbe Slavs. In comparison with him, they consider the rest demigods. Every year a Christian is chosen by lot and sacrificed to him.³

The king is held in very moderate estimation compared with the priest of Svantovit.⁴ Merchants from abroad were not allowed to sell their goods in the market till they had offered part of them to the god.⁵

Herbord⁶ (12th cent.) mentions a god Gerovitus who had his shrine at Hologost, and was worshipped by the Pomeranians; he was said to have the attributes of Mars. Ebbo⁴ mentions his enormous shield which must not be touched by mortal hands, and could be moved only in case of war. He is most probably an analogue to Svantovit.

Another god who is considered to have affinities with Svantovit is Triglav of Stettin. There were four temples in Stettin, one of which was far more important than the others. It had on its inner and outer walls such wonderful embossed figures of men, birds, and animals that they seemed to live and breathe. The colours of these paintings could not be dimmed by rain or snow. The temple was full of valuables, such as drinking-cups of gold and silver, horns decorated for the purpose of drinking or made into musical instruments. One-tenth of all the booty was stored in this temple. The three other temples were less ornate, and had in them tables and chairs for meetings, for on certain days and hours the inhabitants were wont to assemble there to drink, play games, or discuss matters of importance. Near the temples were a sacred oak and a sacred fountain. The image of the god had three heads and was made of gold. Its eyes and lips were covered with a veil. This god had a sacred black horse. Divination was made in the usual way with nine lances. If the horse, when led three times across them, did not touch them, the omen was favourable.⁷

Ebbo⁶ tells the story of another image of this god from Wollin, which was saved from the iconoclasm of St. Otto by the Slav priests, who gave it to a woman to hide in a lonely part of the country. He also tells us⁷ that the three heads of the god denote his three kingdoms—the heavens, the earth, and the under world. Triglav was also worshipped by the Slavs of Brandenburg.⁸

Helmold also mentions the names of several other gods, such as Prove, god of the land of Aldenburg, of whom there was no image.⁹ He had a secret grove surrounded by a fence, where at a certain time the people assembled with their priest and ruler for judgment.¹⁰ This grove was so sacred that even those in peril of death could not take refuge there. Then there was Siwa (Syuna), goddess of the Polabi, and Podaga, an image which was worshipped at Pluna.¹¹

Helmold says that at feasts the Slavs prayed to a divinity of evil as well as to one of good, 'professing to receive prosperity from a good god, and adversity from a bad one. Therefore in their language they call the bad god Diabol or Zcerneboch, which is Black God.'¹² He adds: 'Indeed, among the many forms of the gods to whom they attribute fields, woods, sorrows, and pleasures, they do not deny that one god rules over the others in the skies, who cares only for celestial things, the rest performing their various functions, proceeding from his blood, and enjoying distinction in proportion as they are nearer to that god of gods.'¹³ He does not, however, give the name of this god.

Dlugosz¹⁴ attempts to identify the old Slav gods with the Greek and Roman deities. Jessis he identifies with Jove. He is the highest god, from whom is all temporal good and protection from one's enemies. Honour is paid to him above all other gods and he is worshipped with more frequent sacrifices. Liada corresponds to Mars; he is a leader and god of war. Men pray to him for triumphs over their enemies and that their hearts may be fierce; they propitiate him with a very rude sort of worship. Dzidzielia is the same as Venus, the goddess of marriage and fertility. To her men pray for sons and daughters. Nüa, or Pluto, is worshipped as god of the under world and of souls when they leave the body. He is propitiated to persuade him to admit souls to the more favourable parts of his domain. Pogoda (Zylvie, Dziewanna) is like Diana. She is worshipped as a woman and virgin by wives and

virgins, and as Ceres by settlers and those engaged in agriculture, who try to make corn grow by sacrifices. She is also venerated as goddess of the weather under the name Pogoda ('giver of a favourable wind'). Marzanna was, like Ceres, worshipped as the mother and goddess of corn, and held in very special reverence. Dlugosz goes on to say that those deities had shrines, images, sacred precincts, and priests allotted to them, and were offered as sacrifices cattle, sheep, baggage-animals, and even human victims taken in battle. They had religious games at regular intervals, which survived in the form of the Polish celebration at Pentecost and the 'Stado' after fully 500 years of Christian influence.

3. Spirits.—(a) *Spirits of the dead*.—Leo Diaconus (10th cent.) gives an interesting account of the funeral rites of the Danube Slavs of his period. He describes the scene after a battle:

'Now had night begun, and when the moon shone full, they went out over the plain and sought their dead. These they burnt beside the wall with much fuel in heaps, and with them many captives, both men and women, whom they slaughtered after the manner of their nation. Thus did they feast the infernal deities, suffocating babes unweaned and cocks in the Ister, drowning them in the waters of the river. For they say that these people take part in Greek orgies and make sacrifices and offer libations to the departed after the manner of the Hellenes, having been initiated in these mysteries by Anacharsis and Zamolxis, their own philosophers, or else by the "Comrades of Achilles."'¹

The Arabian traveller Ibn Fadlān gives an interesting description of the obsequies of a Russian chieftain:

'When a nobleman died, for ten days his body was laid provisionally in his grave, where he was left until his shroud was prepared for him. His property was divided into three parts, one-third was given to the family, another served to defray the funeral expenses, and the remainder was spent on intoxicating drinks which were served at the funeral banquet. On the day appointed for the final obsequies, a boat was taken out of the water, and round it were placed pieces of wood shaped to the form of human beings. Then the corpse was removed from its provisional grave and, being clad with a costly garment, was seated in a boat on a richly ornamented arm-chair, around which were arranged the weapons of the deceased together with intoxicating beverages; while not only bread and fruit, but also flesh of killed animals, such as dogs, horses, cows, cocks, and hens, were put into the boat. Then one of his wives, who had voluntarily agreed to be burned together with her dead husband, was led to the boat by an old woman called the "Angel of Death," and was stabbed at the side of the corpse, whereupon the wood piled up under and around the boat was set on fire. After the boat with the dead bodies and all the other articles placed upon it had been consumed, the ashes were collected and scattered over the cairn, and a banquet, lasting for days and nights without interruption, closed the ceremony.'²

Similar evidence is given by Mas'ūdi.³ Testimony is supplied by V. Kadlubek⁴ that young girls tore their hair, matrons their faces, and old women their garments.

It is obvious from these few notices that

ancestor-worship at a remote period was widely spread among the Slavs, who looked upon their dead ancestors as beings deeply interested in the fortunes of their children. Evidence of the persistence of this belief is to be found in the *dziadys* of White Russia and the *zadusnica* of Bulgaria in modern times. The drowned and suffocated children mentioned by Leo Diaconus are the origin of the *rusalky*, or water-spirits, of modern Russia.

(b) *The penates*.—Helmold¹ says that, 'besides groves and household gods (*penates*) in whom the fields and towns abounded, there were powerful gods, etc.,' alluding to the cult of *penates* among the ancient Slavs. Cosmas of Prague² relates the story of Czech who carried the *penates* on his shoulders to the new country, resting on the mountain of the Rzip and saying to his followers: 'Come, good comrades, and make sacrifice to your *penates*, for it is by their help that ye have been brought to this new country destined for you by Fate of old.' The Slavic name for them (*ded*, *dedik*, *deduska*, etc.), meaning 'grandfather,' shows that they had their origin in ancestor-worship. Survivals of this cult are the Russian *domovoy*, the Little Russian *didko*, the Bohemian *setek*, the Polish *skrzatek*, the Bulgarian *stopan*, and the *ludki* of the Lusatian Sorbs and Slovaks.

(c) *Genii of fate, the woods, water, etc.*—Of these we have few notices in the contemporary and early authorities. Procopius,³ as we have seen, denies that they pay any reverence to 'Destiny,' but affirms that they worship rivers, nymphs, and other spirits, and even make sacrifices to them. Cosmas of Prague,⁴ as we saw above, says:

'Oreads, Dryads and Hamadryads are objects of adoration and worship to this foolish and silly people'; and again: 'Some worship streams, some fires, some groves, trees, or stones. Some pray to mountains or hills.'

The modern Slavs have *genii* of fate, *rodjenice* (Croatia) and the Russian *dolya* (Serbian, *sreća*); *vily*, nymphs; *lesig*, Dryads, and the *poludnica*, who is almost an Oread. The Russian *vodyanik* is a sort of Slavic 'old man of the sea.'⁵

LITERATURE.—Modern authorities on the religion and mythology of the Slavs include the following: A. Brückner, 'Początki Kultury Słowiańskiej,' in *Encyklopedia Polska*, vol. iv. pt. 2, Cracow, 1916; J. Długosz, *Historie Polonica*, 2 vols., Leipzig, 1711-12; J. Máchal, *Slavic Mythology* (= *Mythology of all Races*, iii.), Boston, U.S.A., 1918; F. J. Safarik, *Slovanské Starozitnosti*, 2 vols., Prague, 1837, Germ. tr., *Slawische Alterthümer*, Leipzig, 1843-44; T. R. Georgevitch, 'Parthenogenesis in Serbian Popular Tradition,' *FL* xxix. [1918] 53 ff.; N. M. Karamzin, *Hist. de l'empire de Russie*, French tr., 11 vols., Paris, 1810-26; I. P. Sakarov, *The Story of the Russian People* (Russ.), 2 vols., St. Petersburg, 1841-49. SLAVERY (Primitive).—I. *INTRODUCTORY*.—x. Definition and scope.—The most generally accepted definition of slavery is that it is a social system in which one person is the property of another. Westermarek takes exception to this definition:

'The owner's right over his property, even when not

absolute, is at all events exclusive, that is, nobody but the owner has the right to dispose of it,' whereas 'the master's right of disposing of his slave is not necessarily exclusive; custom or law may grant the latter a certain amount of liberty, and in such case his condition differs essentially from that of a piece of property.'⁶

Now those who speak of a slave as property admit that restrictions on the exercise of the master's power are indeed common, but would say, with Nieboer:

¹ 1. 62 (*MGH* xxi. 52).

² *Chron. Bohem. i. 2 (MGH ix. 83).*

³ *De Bell. Got. iii. 14. 2*

⁴ 1. 4 (*MGH* ix. 34).

⁵ The writer would like to acknowledge the collaboration of Miss A. B. Finch White, of Lady Margaret Hall, Oxford, in preparing this article.

⁶ *Alt* I. 670.

'Any restriction put upon the free exercise of his power is a mitigation of slavery, not belonging to its nature.'¹

By 'property' this Dutch writer, who is the foremost authority on the economics of primitive slavery, means

'a power that, however leniently exercised in many cases, is in principle unlimited.'²

We are reminded of the following rule in Roman and Romanized modern law:

'The proprietor has had the right to do with his property whatever he is not by special rules forbidden to do.'³

Property in a human being, i.e. slavery, is equivalent to a right to all the labour of the slave.⁴

The view which regards a slave as the property of the master is not then, it seems, inconsistent with Westermarck's own position, that the essence of slavery is to be found in the compulsory nature of the slave's relation to his master; in other words:

'Slavery is essentially an industrial institution, which implies compulsory labour beyond the limits of family relations.'⁵

All would agree with the statement of this authority:

'The master has a right to avail himself of the working power of his slave, without previous agreement on the part of the latter.'⁶ 'Voluntary slavery, as when a person sells himself as a slave, is only an imitation of slavery true and proper; the person who gives up his liberty confers upon another, by contract, either for a limited period or for ever, the same rights over himself as a master possesses over his slave. If slavery proper could be based upon a contract between the parties concerned, I fail to see how to distinguish between a servant and a slave.'⁷

We may combine the two kinds of definition and define a slave as a human being who is the property of another and subject to compulsory labour, beyond the limits of the family.

The expression 'primitive' is difficult to define with precision. By 'primitive peoples' we may understand certain ethnic groups which occupy a relatively little advanced position in the scale of cultural development. The groups included in the present survey will be confined to those which live in 'tribal society'—i.e., that have kinship (a social relation not always synonymous with physical consanguinity) as the basis of membership in the group (clan, gens, phratry, tribe), in contrast to citizenship in political states. Admission of an outsider into the group is by 'adoption,' in contradistinction to 'naturalization.' Another criterion is the possession or lack of literary records, of history in the strict sense. Under 'primitive' will be included not only 'savages,' but also groups in a state of 'barbarism.' Our present discussion will not embrace the early stages of nations that have developed into 'civilization.' We shall consider as primitive, not only hunting tribes, but most pastoral and many agricultural societies.

2. Slavery distinguished from similar phenomena.—(a) *Subjection of wives.*—The status of wives among primitive peoples is often referred to as 'slavery.' Without considering here the question whether the subjection of women, particularly of wives, in primitive society is as abject as is popularly supposed,⁸ it may be said that slavery as a social institution and industrial system does not exist when there are only female slaves. When women only are enslaved, the reason probably is that they are valued as women rather than as labourers; otherwise men also would be enslaved.⁹

(b) *Subjection of children.*—In primitive societies every family has its head, who exercises more or less authority over its members, including, of course, the young. But, no matter how complete

this subjection may be, it cannot be called slavery, which, as a social institution, has a very different origin and function. Slavery is a relation beyond the limits of the family, as stated in Westermarck's definition given above.¹

(c) *Subjection of members of a society to its head.*—The subjects of a despotic ruler are sometimes called his slaves. To this use of the term it is to be objected that, in order to have slavery, it is necessary that the master's power should be recognized by the society.

'The whole group must approve of the custom and must enforce it; otherwise it cannot exist.'²

The slave lives in a society that recognizes him as a slave; slavery can exist only where there is a society of freemen. The head of a community, no matter how great his power may be, is not as such a master of slaves. Of course, a chief, like other freemen, may keep slaves of his own.

(d) *Subjection of tribes, provinces, or classes.*—Where a population or territory is subject to an external power, this is not slavery. The latter is the subjection of men individually and a subjection which includes the whole personality of the slave. A slave cannot live in tribal relations; he would to that extent be free. J. K. Ingram observes:

'The lowest caste may be a degraded and despised one, but its members are not in a state of slavery; they are in collective, not individual, subjection to the members of the higher classes.'³

This is true also of subjected tribes. Subjection of tribes as such sometimes serves as a substitute for slavery proper, making the latter superfluous.

(e) *Serfdom.*—Ingram says:

'The transition to serfdom took place in civic communities when the master parted with or was deprived of his property in the person of the slave, and became entitled only to his services, or to a determinate portion of them.'⁴

This is a correct statement, with this important exception, that the right, not to the services of the labourer, but to 'a determinate portion' of them, is the real differential of serfdom. For, as Nieboer points out, he who is entitled to all the services of another is his owner:

'The slave-owner may do with his slave whatever he is not by special laws forbidden to do; the master of the serf may require from his man such services or tributes only as the law allows him to require.'⁵

It may be remarked that, while it is necessary, for the purposes of discussion, to draw theoretical lines of demarcation, practically there is not a single social institution that is strictly separated from kindred institutions. The student of social phenomena still recognizes the truth in Spencer's observation:

'As the distinctions between different forms of slavery are indefinite, so must there be an indefinite distinction between slavery and serfdom, and between the several forms of serfdom. Much confusion has arisen in describing these respective institutions, and for the sufficient reason that the institutions themselves are confused.'⁶

II. ORIGIN AND EARLY GROWTH OF SLAVERY.

—1. Extra-tribal slavery in relation to war.—Slavery in early society may be divided into intra-tribal and extra-tribal, depending on whether or not the slave belongs to the same kinship-group as the master, i.e. to the 'in-group' as distinct from the 'out-group,' to use Sumner's terminology.⁷ Extra-tribal slavery is first both in time and in extent. In the primitive group all members are on a footing of equality; they are 'all-one-flesh,' and practice conforms to theory. 'Custom everywhere, as a rule, forbids the enslaving of tribesmen.'⁸ It is only in extraordinary cases, and after slavery of the extra-tribal form has become

prevalent, that a person is permitted to enslave a member of his own community.

All available evidence confirms the view, held by all students of the subject, that slavery is a sequence of war, that the earliest slaves were captives in war.¹ Now it is necessary to revise radically the traditional view that war is the constant and normal state of earliest human society. The data from pre-historic archaeology (implements, art, etc.), as well as from the ethnology of latter-day 'savages,' indicate a decidedly peaceable life among primitive mankind. This is even more true if we distinguish, as it is often difficult to do, between blood-feuds and wars of communities as such. In the correlation made by Hobhouse and his collaborators it is found that the groups under the heading 'no war' were confined mainly to the lowest grade of hunting tribes.² As one would expect, the same groups are among those in which slavery is quite unknown.³ When war had become a feature of the relations of human groups, the rights and immunities which prevented the enslavement of tribesmen would not operate in favour of captives from hostile bands. While there are at times mitigating circumstances, in the main it is true that 'the defeated enemy is rightless, and is treated as best suits the victor's convenience.'⁴ Quarter may be refused altogether and the vanquished foes exterminated. Or, if prisoners are taken, they may be tortured, eaten, adopted, ransomed, exchanged, liberated, or enslaved. In the actual practice of existing tribes there are instances of all these modes of treatment.

Adoption, a custom which is especially common among the N. American Indians,⁵ is the main exception to the rule that the life of the captive is spared in order that he may become a slave. It may be remarked here that a distinction is often made between the adult males among the enemy on the one hand and the women and children on the other. The men may be killed, while the women and children are adopted or enslaved. Adoption is probably intimately related to the beginnings of slavery. According to the theory of J. W. Powell,⁶ for which there is much to be said, the latter institution is a development of the practice of adoption. The motives for keeping captives alive are not likely to have been, in the beginning, the shrewd calculations usually ascribed to primitive man, as in the following statement of Hobhouse:

'There comes a time in social development when the victor sees that a live prisoner is after all better than a dead one.'⁷

Nieboer's criticism is much to the point:

'It is not to be supposed that men, convinced of the utility of some new kind of labour, began to procure slaves in order to make them perform this labour; or that, finding some work tedious, they invented slavery to relieve themselves of this burden. Modern psychology does not account for psychical and social phenomena in such a rationalistic way.' 'Social institutions are sometimes made; but this is the exception; generally they grow.'⁸

Whatever the primary motives for enslaving vanquished enemies may have been, it is doubtless true that slavery marks 'a humanitarian improvement in the laws of war.'⁹ Also, as Hobhouse observes:

'The vindictive passions must be sufficiently held in check to prevent their gratification in the moment of victory.'¹⁰

2. Internal conditions of the growth of slavery; occurrence in various states of culture.—No matter what may be the external relations of the group, slavery could not exist unless it conformed to the

requirements of the social life of the tribe both in its purely economic and in its more distinctly moral aspects. This appears clearly from the study of the actual appearance and distribution of slavery among the uncivilized peoples of various cultural grades.

(a) *Among hunting tribes.*—Human societies in the hunting stage hardly ever keep slaves. Among 'lower hunters,' the representatives of the real 'primitive man,' slavery is entirely unknown.¹ Even among 'higher hunters' it is extremely rare; and its occurrence is due to certain extraordinary circumstances. Of the 83 hunting groups analyzed by Nieboer there are 65 negative and only 18 positive cases. Of the latter 15 are Indian tribes on the N.W. Pacific coast of N. America (see below). The remaining three are the Teluelches and Abipones in S. America and the Kamchadales in Siberia.²

The reasons for these facts are not far to seek. As Westermarck says:

'Slaves are kept only where there is employment for them, and where the circumstances are otherwise favourable to the growth of slavery.'³

Now the economic state of hunting societies is decidedly unfavourable to the development of slavery.

'In the absence of industrial activity, slaves are almost useless; and, indeed, where game is scarce, are not worth their food.'⁴

In the desperate daily struggle for existence it is necessary for every man to exert his powers to the utmost, and each man, even then, can produce barely enough for himself and his family. Hence slaves, even if they were as efficient as their masters, could not produce any surplus for the use of the latter. But slave-labour is essentially inefficient in work, such as hunting, which requires great skill and application.

As Nieboer expresses it, 'a compulsory hunting system cannot exist. If a man is to exert all his faculties, there must be other motives than mere compulsion.'⁵ Spencer also observes that 'the relative lack of energy, the entire lack of interest, the unintelligent performance of work, and the greater cost of supervision, make the slave an unprofitable productive agent.'⁶ So too J. S. Mill: 'It remains certain that slavery is incompatible with any high state of the arts of life, and any great efficiency of labour.'⁷

This applies equally to the primitive hunting life and to modern industrialism; it is a striking instance of the correspondence between extremes.

But, even if slaves were profitable, it would be very difficult to keep them in subjection or prevent their escape. Hunting supposes a nomadic life, and the hunter who roams over vast stretches of country in pursuit of his game has not much chance to watch over the movements of his slave. And, if the slave himself were set to hunting, as he would have to be (all men being needed in that work), this difficulty would amount almost to impossibility. Moreover, a hunting slave will be much more inclined to run away than a soil-tilling slave; for the latter, during his flight, has to live upon the spontaneous products of the land, whereas the former can continue hunting, just as he has done before; his flight would not be of the nature of a flight.

Another cause for the non-existence of slavery is that primitive hunters generally live in small groups—at the most, of a few hundred persons.⁸ Now such a small group would not be able to develop coercive power sufficient to keep in sub-

¹ Under this head are included the Australians, Tasmanians, Andamanese, Negritos, Veddas, African Pygmies, Bushmen, Kubus, Botocudos, and Fuegians. They correspond to A. Vierkandt's *unzivilisierte Völker* ('Die Kulturtypen der Menschheit, A 4 xxv. [1893] 67 ff.). See Hobhouse, Wheeler, and Ginsberg p. 80; Nieboer, p. 186 ff.

jection slaves introduced from foreign parts. A fugitive slave would very soon be beyond the reach of his master's tribe, and a relatively small number of slaves would be a danger to the power of the free tribesmen.

But there are still other, more psychical, reasons militating against the introduction of slavery among primitive hunters. Both in emotional interest and in social evaluation hunting is an agreeable and noble occupation.

Nieboer describes it as 'occupying the whole soul and leaving no room for distracting thought; offering the hunter a definite aim to which he can reach by one mighty effort of strength and skill; uncertain in its results like battle, and promising the glory of victory over a living creature. . . . It is not a work fit to be imposed upon men who are deprived of the common rights of freemen and are the property of others.'¹

Not only the intrinsic character of the work of the hunter, but also its social worth, takes it out of the forms of labour suited to enslaved persons. Among a primitive hunting people hereditary nobility is unknown and wealth does not exist; personal qualities are the only basis of social differentiation. Besides generosity, hospitality, and wisdom in council, strength, courage, and skill form the primitive patent of nobility. The activities in which these qualities are expressed and demonstrated are hunting and (though not universally) warfare.² Now, to admit slaves as hunters and warriors would be to place them on a footing of equality with freemen. Public opinion could not consider as slaves those who are successful in the noble occupations of hunting and fighting; and without public opinion the masters would be unable to keep them in subjection. And a poor hunter would be of little or no use as a hunting slave.

This attitude of respect for the hunter prevents the growth of intra-tribal slavery, for no member of the tribe is so superior to any other member that he can reduce him to a state of complete subjection, unless perhaps the latter is a physical or mental weakling, in which case he would be of no value as a hunting slave. It also tends to prevent extra-tribal slavery, though here what Sumner has called 'ethnocentrism,' with the common accompaniment of contempt for people who do not belong to the 'we-group,' would act as a neutralizing force in many cases; it would be a case of contempt for the enemy and stranger against respect for the hunter and warrior. There are, however, not a few instances on record where enemies, though they are hated and feared, are not despised. Among the Indians of the central parts of N. America captives were, as a rule, either killed or adopted; in the latter case they were regarded and treated as members of the tribe.

The study of the life of the simplest grades of human society leads to the conclusion that, in the strictest sense of the word, slavery is not a primitive institution; its appearance and growth depend on social conditions which are absent in the lowest forms of human association to-day, as they undoubtedly were during by far the greater portion of the time that man has existed upon the earth.

Attention is again called to the fact, noted above, that 15 out of the 18 positive cases of slavery among tribes in the hunting stage, according to Nieboer's tabulation, are found among the Indians of the N.W. Pacific coast of N. America. Now, while these tribes are classed in the general economic and cultural grade of hunting groups, on the negative ground of their being unacquainted with cattle-breeding or agriculture,³ they have

some very important characteristics which mark them off rather sharply from hunters in the strict sense. The principal and underlying characteristic is that they get their subsistence from fishing, not from hunting land-animals. The study of these particular aborigines is of special value in that it brings out, in a notable way, several of the general causes which account for the growth of slavery. They possess many features of economic and social life the absence of which tends to prevent or retard the growth of slavery among hunting peoples. Food is abundant and easy to procure. They have fixed habitations and live in comparatively large groups. They are enabled to do so by preserving food for future consumption. Also a settled life makes the escape of slaves more difficult. Living in larger groups brings about a higher organization of freemen, and hence greater coercive power. And the preserving of goods demands additional labour, which is fit to be performed by slaves, as it does not require much skill and has to be done in or near the dwellings, so that supervision is easy. Moreover, as Nieboer remarks: 'The hope of partaking of the stored food is a tie that binds the slave to his master's house, in much the same manner as a modern labourer is bound by having a share in the insurance funds of the manufactory.'¹ Slave-trade is carried on. This facilitates the keeping of slaves. Captives taken in war usually belong to neighbouring tribes and have more opportunity to escape to their native parts than have purchased slaves, who have often been brought from a great distance. Fishing implements have been brought to a high degree of perfection; fishing has become more remunerative; and the product of a fishing slave's labours exceeds his primary wants. The more freemen devote themselves to trade and industry, the more need is there for slaves to do the ruder work of fishing, rowing, cooking, etc.

(b) *Among pastoral tribes.*—Pastoral nomadism has been considered favourable to the growth of slavery. There is 'the mystical belief,' as Nieboer calls it, 'that the taming of animals naturally leads to the taming of men';² i.e., it is supposed that the nomadic herdsman who has learned to domesticate animals begins also to domesticate, to enslave, men.

Thus J. Lippert holds that slavery 'first arises in the patriarchal communities of pastoral peoples'; the slaves 'were the object of an appropriation entirely similar to the appropriation of the domestic animals.'³

A study of the actual origin and distribution of slavery dispels speculations of this kind. Nieboer's survey shows that only one-half of the pastoral tribes of the globe keep slaves. It may be noted here that the positive cases are all found in a few definite areas, mainly N.W. and N.E. Africa, and a few tribes in the Caucasus and Arabia, while the pastoral nomads of Siberia, Central Asia, India, and S. Africa do not have slaves.⁴

The fact is that slavery is of little moment to pastoral peoples as such; among some of the slave-keeping tribes slaves are kept as a mere luxury. The chief reason for this is that, in pastoral life, subsistence depends almost entirely on capital, i.e., cattle, and comparatively little on labour, and for the small amount of labour demanded free labourers are available.

'Among people who live upon the produce of their cattle, a man who owns no cattle, i.e., no capital, has no means of subsistence. Accordingly, among pastoral tribes we find rich and poor men; and the poor often offer themselves as labourers to the rich.'⁵

But, on the other hand, Nieboer continues:

'There are no causes preventing them from having slaves. These tribes are, so to speak, in a state of equilibrium; a small additional cause on either side turns the balance.'⁶

The most important of such additional causes favouring the growth of slavery are the slave-trade and the neighbourhood of inferior races. It is found that the regions mentioned above as being those to which slavery among pastoral tribes is confined are exactly those where the slave-trade has for a long time been carried on on an extensive scale. The slaves are often purchased from slave-traders, and in several cases they belong to races with an inferior culture.

(c) *Among agricultural tribes.*—Three stages in the development of agriculture may be distin-

⁶ *Id.* p. 292.

¹ P. 193. J. Dewey points out that 'game and sport are still words which mean the most intense immediate play of the emotions, running their whole gamut' ('Interpretation of Savage Mind,' in *Psychological Review*, ix. [1902] 217; this art. is an admirable study of the nature and effects of the mental life of the hunting stage).

² For a study of the mores of a typical hunting people see A. N. Gilbertson, 'Ethical Phases of Eskimo Culture,' *Journ. of Religious Psychology*, vi. and vii. [1913-14].

³ See Nieboer, p. 174.

guished in the tribal societies coming within the field of our present consideration: (1) in the first stage agriculture holds a subordinate place, subsistence being derived chiefly from other sources (hunting, fishing, gathering wild-growing plant food);¹ (2) tribes in the second stage carry on agriculture to a considerable extent, but not to the point of exclusive dependence upon it; (3) the third stage is that in which agriculture is by far the principal source of subsistence; the other, more primitive, means of livelihood hold such a subordinate place that, if they were entirely wanting, the economic state would be practically the same.²

A survey of the agricultural tribes of the world shows that slavery prevails extensively among them. On the other hand, there are many agricultural tribes without slaves, so that the practice of agriculture does not necessarily lead to the keeping of slaves. It is found, furthermore, that slavery is much more common among such tribes as subsist chiefly by agriculture than among the incipient agriculturists, who still depend to a considerable extent on hunting or fishing. In the first stage of agriculture a minority of tribes has slaves; the more agriculture develops, the more common slavery becomes, until in the third stage it exists in the great majority of tribes. Now it may be noted that agricultural societies of the most primitive stage bear a strong resemblance to tribes of the more specifically hunting type. Generally the business of the men is still largely hunting and warfare; the tilling of the soil is carried on mainly by the women.³ This division of labour does not in principle differ much from that which prevails among such hunting peoples as the Australian aborigines, where the women gather fruits and dig roots. These primitive agricultural tribes are often nomadic.⁴ When the products of the fields are scarcely ripe, they reap them and move on to some other place. Or they may sow something in a favourable spot as they pass, and return later to reap the fruits. The best examples of this type of agriculturists are found among some of the Indian tribes of S. America.⁵

Where agriculture is carried on without the aid of domestic animals, subsistence does not demand much capital. Where the population is scarce, as it generally is, only the most fertile and most accessible grounds are cultivated; very primitive implements are used; even the plough is used by very few tribal societies; they usually content themselves with a hoe or pointed stick.⁶ And, even where agriculture is carried on in a more skilful manner, as by means of irrigation, it is not capital that is wanted, but labour. The construction of irrigation works may be a long and laborious task, but the materials cost nothing. Since subsistence is independent of capital and easy to procure, nobody offers his services to another.

'All freemen in new countries,' says Bagehot, 'must be pretty equal; every one has labour, and every one has land; capital, at least in agricultural countries (for pastoral countries

are very different), is of little use; it cannot hire labour; the labourers go and work for themselves.'¹

Hence, under such conditions, if a man wants another to work for him, he must force him to do so—in other words, he must make him a slave. This holds true of most primitive agricultural communities, i.e. of all those that have at their disposal more fertile land than is needed for cultivation, in order to support the actual population. But this state of things does not always exist.

In some areas every piece of arable land has been appropriated. In that case a man cannot procure his subsistence independently of a landlord. Hence 'free labourers' are available, slaves are not wanted, and slavery is not likely to exist. And, even where there are no poor persons, but every one has a share in the resources of the country, the use of slaves is not great when all land has been appropriated. When there is free land, a man can, by increasing the number of his slaves, increase his income to any extent. But, where the supply of land is limited, a landowner can employ only a limited number of labourers. As soon as there are hands enough to till his land, an increase in the number of labourers would be unprofitable. Perhaps the operation of this economic principle in primitive societies is best illustrated by conditions in Oceania, where slavery is confined to a few islands. The fact that all land had been appropriated led to a state of things inconsistent with slavery as a social and industrial system.²

It has been pointed out above that the need of skill and application, the intrinsic interest and excitement, and the social worth of the occupation are among the forces preventing or retarding the development of slavery among hunters. These forces are absent in agricultural life. As compared with hunting or sea-faring or even manufacture, agriculture is likely to be rather dull work, requiring patience rather than strength or skill. And there is not a single instance discovered of influence or power depending on agriculture (as distinct from ownership of land). It is an occupation that has been regarded as especially fit for women and slaves. These facts, together with the more material causes, tend to make the social life of agricultural groups favourable to the existence and growth of slavery.

3. Intra-tribal slavery.—After slavery had come to exist in its original form of extra-tribal slavery, it was extended also to some classes of cases in the in-group. The two principal causes of intra-tribal enslavement are debt and crime. In some exceptional cases a debtor who cannot pay is put to death. Much more frequently he becomes the slave of the creditor. Often, though not always, the debtor-slave or pawn has a right to become free again by paying his debt. Such is the case with the debtor-slaves (known by the Dutch name of *pandelingen*) in the Malay Archipelago. Here the creditor cannot refuse to accept the money.³ In some cases a man will pay a debt by giving one or more of his kindred, usually children or women, into slavery to the creditor.

Slavery may be imposed as a punishment for crime, either directly or when the compensation (*wergild*) is not paid. Members of the offender's family may likewise be liable to enslavement.⁴

III. POSITION AND TREATMENT OF SLAVES.—

While slavery may in principle involve an absolute power of the master over his slave, in practice there are undoubtedly many and marked limitations on the exercise of this power. It is found also that slaves may have certain 'rights,' determined by custom or public opinion, which the master is bound to respect. With regard to 'the power of life and death,' it may be expected that, when the slaves are war captives, the right of killing an enemy would pass into the right of killing the

slave; and this seems to have been true to a great extent. Yet it is to be noted that, while in descriptions of primitive peoples one repeatedly finds it stated that the master may kill his slave at pleasure, or that he is not accountable for killing him, as Westermarck says,

'This seems to mean rather that, if he does so, no complaint can be brought against him, or no vengeance taken on him, than that he has an unconditional moral right to put to death a slave whom he no longer cares to keep.'¹

In many cases the master is expressly prohibited from killing his slave at his own discretion.² The slaying of another man's slave is regarded largely as an offence against the property of the master, but not exclusively so. Where the master himself is not permitted to kill his slave, the slave has the right of life, sometimes with little difference in this respect between him and a freeman.

In a surprisingly large number of instances the master does not have even an unlimited right to sell his slave. This is true especially of slaves born in the house; sometimes he may sell at will only slaves captured in war or purchased. In several instances a slave, especially if he be a domestic slave, can be sold only if he has been guilty of some crime. The cases, referred to by Westermarck,³ where the master is entitled only to a limited portion of the services of the slave would come more strictly under the head of serfdom, though we have here border-line phenomena hard to fit into a theoretical system. Sometimes a slave is said to have the right to possess property of his own; in some of these cases he may buy his own freedom. Among several peoples it is even permissible for a discontented slave to change masters. In other instances a slave, in order to secure a new master, needs only to cause a slight injury to some one's property or commit some trifling offence, and he must then be surrendered to the 'injured' person.

'It is astonishing,' says Westermarck, 'to notice how readily, in many African countries, slaves are allowed by custom to rid themselves of tyrannical or neglectful masters.'⁴

In some places a slave becomes free by simply leaving his master, or, if he escapes from one master and selects another, it is presumed that he has been badly treated by the first one, and consequently cannot be reclaimed.⁵

On the treatment of slaves by their masters in tribal society descriptions and opinions vary widely, and there are no doubt marked actual differences among various peoples in this regard. Thus we find this judgment by two American sociologists:

'No pen will ever record the brutal history of primitive slavery through generations and even centuries of which mankind was taught to labor. The bitterest scenes of an *Uncle Tom's Cabin* would be an agreeable relief from the contemplation of the stern realities of this unwritten history.'⁶

While undoubtedly cases could be found of which such a description might be given, taken as a generalization about primitive slavery, it is a gross exaggeration. More consistent with a far greater mass of data are these words of Spencer:

'The current assumption is that of necessity a slave is a down-trodden being, subject to unlimited labour and great hardship; whereas in many cases he is well cared for, not overworked, and leniently treated. Assuming slaves everywhere to have ideas of liberty like our own, we suppose them to be intolerant of despotic control; whereas their subjection is sometimes so little onerous that they jeer at those of their race who have no masters. Assuming that their feelings are such as we should have under the same circumstances, we regard them as necessarily unhappy; whereas they are often more light-hearted than their superiors.'⁷

It appears from the available evidence that the condition of slaves in primitive culture is certainly better on the whole than in civilized states, ancient or modern, especially in the negro slavery of recent centuries; of the last Westermarck says truly:

'This system of slavery . . . at least in the British colonies and the Slave States surpassed in cruelty the slavery of any pagan country, ancient or modern.'¹

Concerning the slave among the lower races we can accept the conclusion of this authority that as a rule 'he is treated kindly, very commonly as an inferior member of the family.' Of the slavery among the fishing tribes of the N.W. coast of N. America we are told that it was of a rather mild type.

'Slaves, as a rule, were well-fed and well-treated, as was natural with valuable property' (a significant remark, of wide application). 'The condition of the bondman indeed seems generally to have been little inferior to that of his master.'²

After considering the evidence with regard to slavery on the Gold Coast of Africa, Westermarck declares:

'The lot of a slave is not generally one of hardship, but is on the whole far better than that of the agricultural labourer in England.'³

These conclusions could be confirmed by evidence from other parts of the globe.

A difference has been observed in the treatment of slaves captured in war or purchased from outside the tribe and that of slaves born within the group, especially in the house of their master. It appears that the latter are generally better treated than the former. Thus, in Central Africa, slavery is more severe in character among pastoral than among agricultural tribes, because the slaves of the former are for the most part war-captives, whereas those of the latter are slaves mostly by inheritance. Domestic slaves seem to be more favoured than slaves employed in the fields. Sumner's statement with regard to slavery in Africa would be equally true of other areas of primitive culture:

'Whenever slaves live in a family, sharing in the family life and associating freely with the male members of it in their work, religion, play, etc., the slavery is of a very light type and implies no hardship for the slave.'⁴

We may give just one typical case, outside of Africa, in N. Borneo:

'In most cases [the slaves] have been brought up as ordinary members of the family, and have no wish to leave their home. Cases of unkind treatment are very few and far between.'⁵

IV. *EFFECTS OF SLAVERY*.—The effect of slavery upon human life is well expressed by Sumner, when he says:

'Slavery, wherever it has existed, has affected all the *mores* of the society. . . . When adopted into the folkways it has dominated and given tone and color to them all.'⁶

We can speak here only of a few of its many far-reaching effects.

One result of slavery which has often been emphasized—perhaps too much so—is that, in the words of the same writer, slavery has been 'the great schoolmaster to teach men steady work'; 'slavery is a part of the discipline by which the human race has learned to carry on industrial organization.'⁷ Now, while it may be true that 'man is naturally inclined to idleness,' this, as Westermarck points out, is 'not because he is averse from muscular activity as such, but because he dislikes the monotony of regular labour and the mental exertion it implies.'⁸ Now, outside of hunting and fighting, and to a certain degree trading, the labour in primitive times, as in later

civilizations, was monotonous and uninteresting. Men preferred to be idle if they could compel other persons to work for them, nor would any one do it unless compelled.

'The original problem,' Dealey and Ward hold, 'was how to make men work,' and they add that 'nothing short of slavery could ever have accomplished this.'¹

In another place, however, Ward criticizes the view expressed by Spencer² that without slavery the stage of discipline is never reached:

'The constant spur of want is sufficient of itself to accomplish this, as is evidenced by non-slaveholding industrial societies.'³

It may be agreed that slavery played an important rôle in disciplining men to uninterrupted labour, but some prevalent theories as to the transmission of this capacity cannot be accepted.

Thus the sociologists just quoted set forth the view that the stronger and more adaptable persons, who could bear and survive the burdens of their enslaved existence, could 'transmit some small increment of their new-found powers of endurance to their posterity. For the capacity to labour is a typical "acquired character," that has been transmitted in minute additions from parent to offspring and generation to generation of slaves, until great numbers of men were at last born with a "natural" or constitutional power to apply themselves to monotonous tasks during their whole lives.'⁴

Now it should be observed that the contrasts so often drawn between native aptitudes of men in primitive life and in civilization are, to say the least, very questionable.⁵ Even if any such difference should be established, it could not be explained in the manner set forth by Dealey and Ward. The trouble with their position is that, on their theory, capacity to labour is an acquired character, and hence, biologically considered, its transmission through inheritance is very unlikely. If there are any innate differences in regard to capacity for labour between contemporary mankind and our earliest ancestors, a more plausible kind of explanation would be found in the operation of a principle of selection, by which the more industrious type of man survived and those unfit for steady and irksome toil were, partially at least, eliminated.

The great fundamental effect of slavery on the economic activities of mankind, and through them on other social traits, is the division of labour. It is the original differentiation of human society into a governing and regulating and a governed and operating class.

Slavery 'creates a set of persons born to work that others may not work, and not to think in order that others may think.'⁶

Thus was made possible the leisure class, released from constant toil, and the historical function of this class, whatever that may have been.

'Leisure is the great need of early societies, and slaves only can give men leisure.'⁷

That the keeping of slaves furthered the augmentation and accumulation of wealth, with all the power and prestige that go with it, need hardly be said.

A further consequence of this division of labour and the social distinction based upon it is a contempt for manual labour, domestic and agricultural, and, in later stages of economic development, industrial.

To give but two typical instances: in Uganda the prevalence of slavery 'causes all manual labour to be looked upon as derogatory to the dignity of a free man,'⁸ and in Dahomey 'agriculture is despised because slaves are employed in it.'⁹

V. SLAVERY AND RELIGION IN PRIMITIVE CULTURE.—Slavery, like other features of the *mores* of a people, has had the sanction of the prevailing religion. It is scarcely necessary to remind ourselves how recently slavery was not only recognized by the governments of leading nations professedly Christian, but also championed by eminent theologians as an institution of divine sanction and even prescription.

An interesting phenomenon in primitive slavery—how wide-spread has not been determined—is the securing of freedom by a slave through his devoting himself to some deity.

Among the Ewe-speaking peoples of the Slave Coast of W. Africa, e.g., 'according to custom, any slave who takes refuge in a temple and dedicates himself to the service of a god, cannot be reclaimed by his owner,' but, we are told, 'as by paying a fee to the priests the owner can close the doors of all the temples in the neighbourhood to his fugitive slaves, this provision of an asylum for an ill-treated slave is more apparent than real.'¹

A parallel to this is found in the emancipation of a serf in mediæval Europe through his taking holy orders.

A curious view of the relation between slavery and religion was put forth by A. Comte,² which would scarcely deserve attention or require refutation at the present time, except for the fact that it seems still to have adherents and has been repeated with approval by J. K. Ingram in his valuable work on the *History of Slavery and Serfdom*.³

Since, so this theory has it, the rise of polytheism was contemporary with or soon followed the formation of sedentary communities, it is concluded that that religious system was coincident in time with the system of slavery. To quote Ingram: 'There is, in fact, a natural correlation between them, as there is between fetichism and the massacre of captives, and between monotheism and liberty'; i.e., 'fetichism, as a strictly local religion, tended to the extermination of prisoners, because it could not establish any spiritual tie between the victors and the vanquished sufficient to check the impulse to destruction. But each form of polytheism being of a receptive and accommodating nature, and not absolutely excluding the others, the conquerors and the conquered had sufficient community of religious ideas to admit habitual harmony, whilst there was yet a sufficient difference to maintain a certain distance between them. The submission of the vanquished implied an admission of the inferiority of his deities, and the acknowledgment sufficed to consecrate his permanent subordination.'

While there is an element of truth in these speculations, especially in the sentence last quoted, as an explanation of the cause of slavery it is wholly inadequate.

VI. DISTRIBUTION OF SLAVERY AMONG PRIMITIVE PEOPLES BY GEOGRAPHICAL AREAS.—Slavery is unknown in aboriginal Australia. In Oceania it is found in only a few islands and districts, being confined, in Melanesia, almost entirely to W. New Guinea, and, in Polynesia, to Tahiti and New Zealand; it probably does not exist at all in Micronesia. There is no clear evidence of slavery among the wild tribes of the Malay Peninsula, while it is of frequent occurrence in the Malay Archipelago and the Philippines. In the last-named group the most primitive and probably the aboriginal race, the Negritos, have no slaves. It is found among a considerable number of the aboriginal tribes of Indo-China and India; it is unknown among such very primitive groups as the Todas and the Veddhas. In Central Asia and Siberia its existence has been proved only in the case of the natives of Kamchatka; some of the Bedawin of Arabia and N. Africa keep slaves.

Slavery was a well-established institution in the civilized states of the American continent, in Mexico, Central America, and Peru, before the European conquest, but was very uncommon among the other aborigines. In N. America it appears to have been unknown outside of the Pacific Coast area from Bering Strait to N. California. The institution is wholly foreign to Eskimo life,

though in Alaska it has, in a few instances, been borrowed from neighbouring Indian tribes. Its occurrence has been reported from a few scattered Central and S. American tribes.

Africa is intimately related to the institution of slavery, not only by its being the great source of supply of the slave-trade of modern European and American nations, but also by its being the continent where slavery prevails most extensively among native peoples of a primitive culture. Leaving out of consideration the civilized and semi-civilized peoples of N. Africa, Nieboer finds only two districts where there is no clear positive evidence of the practice; these are S. Africa south of the Zambesi, and the region about the Upper Nile to the south-west of Abyssinia. Particularly large aggregations of slave-keeping tribes are found on the coast of Guinea and in the district formed by Lower Guinea and the territory bordering on the Congo. It occurs equally among Sudanese and Bantu peoples. It does not exist among the Pygmies and the Bushmen, and there is no definite evidence of its occurrence among the Hottentots.¹

LITERATURE.—The following books will give more extended discussions of the subject and references to most of the literature: H. J. Nieboer, *Slavery as an Industrial System: Ethnological Researches*, The Hague, 1900, 1910 (references in this art. are to first ed.); E. Westermarck, *MI*, 2 vols., London, 1906-08, esp. ch. xxvii.; L. T. Hobhouse, *Morals in Evolution*, 2 vols., do. 1906, esp. pt. i. ch. vi.; L. T. Hobhouse, G. C. Wheeler, and M. Ginsberg, *The Material Culture and Social Institutions of the Simpler Peoples: An Essay in Correlation*, do. 1916; W. G. Sumner, *Folkways*, Boston, 1911, esp. ch. vi.; H. Spencer, *The Principles of Sociology*, London, i.4, 1893, ii.8, 1893, iii, 1896 (esp. pt. viii. ch. xv.).

ALBERT N. GILBERTSON.

SLAVERY (Christian). — 1. **Introductory.** — Slavery has existed from very early times and is hardly extinct in the world to-day. Few institutions have produced greater evil, and, though in primitive and semi-barbarous communities it may have been for a time and in certain places a necessary step in human progress, in its more developed forms in the Roman empire and the New World it has been the cause of an enormous amount of suffering, most of which must be unrecorded. The causes of slavery are at first sight manifold. It may be the result of capture in war; it may be a punishment for crime or debt; or a man who is starving may sell himself or his children to buy food. But, the more we examine the subject, the more we find that the primary cause is capture in war, particularly when the war is between different races. (We shall see presently that the racial element accounts for the perpetuation of slavery or the lingering of legal and social anomalies where they would otherwise probably have disappeared.) A stronger race captures a weaker, but does not exterminate it, and the vanquished become the thralls of their victors. Only as a substitute for slaughter can slavery be said to have been a step forward in moral progress. It must be considered historically and in relation to law, economics, ethics, and theology; and the Church, in this as in other things, affected and was affected by the social and political institutions among which it grew.

2. **In the Old Testament.** — Slavery existed among the Hebrews, as among all the peoples of antiquity, but it appears in milder forms and was inspired by a more humane spirit than in either Greece or Rome, and there was nothing in Israel to correspond to the vast pyramids of Egypt or buildings of Assyria reared by the ceaseless labour of thralls working under the lash of their oppressors.² In the Semitic foreworld slaves were

probably captives in war. The Israelites from being sojourners became bondmen in Egypt and owed their deliverance to Moses. Here, as elsewhere, what is properly called slavery shades off imperceptibly into what is not. The Hebrew *עבד* is used of the service of servants and of slaves to their masters, of subjects serving their king, and of serving God. Its cognates in other Semitic tongues have a like variety of meanings.³

The OT legislation as to slavery is given in art. **SLAVERY (Jewish).**

3. **In the New Testament.** — There is no explicit condemnation of slavery in the teaching of our Lord. It would even be difficult to say how much He refers to it, as the Greek can mean 'slave,' 'bond servant,' or 'servant.' The later differentiation into free, half-free, and unfree, or free man, serf, and slave, was not definitely evolved. But it remains true that the abolitionist could point to no one text in the Gospels in defence of his position, while those who defended slavery could appeal at any rate to the letter of Scripture. Our Lord accepted the political and social conditions of His time, leaving His teaching to work out its consequences in the Christian Church and in the course of history.

In St. Paul we find more explicit references and a more developed doctrine of the relation of man to man. Thus in 1 Co 12¹³ 'were we all baptized into one body,' *ἐν ὁμίᾳ ἐν ἑκδέσποις*, and in Gal 3²⁸ 'there can be neither bond nor free . . . for ye all are one in Christ Jesus.'⁴ But it is in the Epistle to Philemon that St. Paul's teaching is most clear. Onesimus was a runaway slave whom the apostle was sending back to his master Philemon.

The names Onesimus and Philemon are both Phrygian, and 'for some reason or other Phrygian slaves were regarded with contempt': *ὄφει δὲ ἀντὶ πλῆγης ἀμείνων καὶ διακονέστερος* was an old saying.⁵ The name Onesimus is frequent in inscriptions.

St. Paul asks that Onesimus may be forgiven, that he may be received as he himself would have been (v.¹⁷). But there is no condemnation of slavery. Nevertheless it has been rightly said that 'St. Paul does not seem quite to like the relation.'⁶ Why was it that he and others were slow to condemn an institution fraught with so much evil to mankind? Three reasons may be assigned: (1) our Lord left the implications of His teaching to be worked out in time, as we saw above; (2) the immediate abolition or attempted abolition of slavery in the Roman empire would probably have led to the collapse of the fabric of society;⁷ (3) the early Church was buoyed up with the hope of the immediate second coming of Christ; hence earthly things did not matter so much, and, whatever a man's condition in this world, it was generally better for him to remain in it, and be faithful to his duties towards those with whom he found himself in relation whether as a master or as a bond-servant.⁸

The more closely we examine the thought of the NT writers and understand the conditions under which they lived, the less shall we be inclined to

¹ See O. O. Whitehouse, in *HDB*, s.v. 'Servant, Slave, Slavery.'

² Cf. also Col 3¹¹.

⁴ H. M. Gwatkin, *Early Church History*, London, 1900, I. 233, n. 1.

⁵ Perhaps this has suggested the use of the term 'Spartacist' by the extreme socialists of the present day, as Spartacus was a leader of slave revolt.

⁶ Cf. Eph 6⁵⁻⁹, Col 3²²⁻⁴¹, 1 Ti 6¹, Tit 2⁹, 1 P 2¹⁸. We may probably infer that St. Paul felt that there was some danger lest the new sense of spiritual dignity, and of spiritual relation between Christians of all conditions, should tend violently to destroy the old social order; he is afraid lest the conduct of Christian men should bring discredit or suspicion upon the religion of Christ.

¹ A distribution-map is given at the end of the second edition of Nieboer's work.

² For slavery in ancient Babylonia see C. H. W. Johns, *The Oldest Code of Laws in the World* (Code of Hammurabi, king of Babylon, 2285-2242 B.C.), Edinburgh, 1903.

be surprised at their attitude towards this and other social questions.

It is a mistake to say that St. Paul consciously addressed himself to the task of abolishing slavery by urging those aspects of the gospel which, in their practical application, he knew would eventually undermine it. 'It is not likely that he saw the way to its destruction at all.'¹ But this does not mean that the Apostle thought that slavery was right in itself, and a thing so anti-Christian in its nature could not permanently continue.

4. In the early Church.—There are few references to slavery in the Apostolic Fathers.

St. Ignatius says that slaves ought not to be despised, nor ought they to be puffed up: Δούλους καὶ δούλας μὴ ὑπερηφάνει· ἀλλὰ μὲν αὐτοὶ φρονισθῶσαν, ἀλλ' εἰς δόξαν θεοῦ πλεῖον δουλεύτωσαν, ἵνα κρείττονος ἐλευθερίας τύχωσιν. Μὴ αἰρέτωσαν ἀπὸ τοῦ κοινου ἐλευθεροῦσθαι, ἵνα μὴ δοῦλοι εὐρεθῶσιν ἐπιθυμίας.² St. Barnabas does not wish slaves to be commanded with bitterness: Οὐ μὴ ἐπιτάξεις παιδείᾳ ἡ δούλα σου ἐν πικρίᾳ, τοῖς ἐπὶ τὸν αὐτὸν ἐλπίζουσι, μήποτε οὐ φοβηθήσῃ τὸν ἐν ἀμφόροις Θεόν· οὐ γὰρ ἦλθεν οὐκ ἐπὶ πρῶσων καλέσαι, ἀλλ' ἐφ' οὗς τὸ Πνεῦμα ἡτοίμασε.³

The Fathers of the Church make frequent reference to slavery and generally show pity for the slave without condemning the institution. In many cases a common faith must have drawn master and slave together closer than would have been possible had one or both been heathen, for in Christ they shared a higher unity. This was intensified during persecution, when the humblest slaves amazed the Roman populace by showing a fortitude as great as that of any saint or hero.

At the persecution of Lyons and Vienne in A.D. 177 it was said of the torture of the slave girl Blandina, 'Never woman in our time suffered so much as this one.'⁴ Likewise at the martyrdom of St. Perpetua in 203. 'There is something here even more significant than the lofty courage of Perpetua, which forms the front of the story. From first to last she never dreams that Revocatus and Felicitas are less than her equals and companions in Christ. Enthusiasm might have nerved the matron and the slave apart; but no mere enthusiasm could have joined their hands in death. The mischievous eccentricities of Montanism are as dust in the balance while we watch the mighty working of the power of another world in which not only the vulgar fear of death is overcome, but the deepest social division of the ancient world is utterly forgotten.'⁵

With the end of persecution Christianity was not put to so severe a test in its members, and so there was always a tendency to slip back into the standards of a world still largely heathen at heart, for the structure of ancient society lasted beyond the conversion of Constantine, though several forces were combining to shake it. It is not surprising, therefore, that the Church, and the Fathers who were her spokesmen, tended to palliate and even to compromise with, rather than to oppose, the evils of slavery, and that the thought of a spiritual society in which all earthly distinctions are of little account was not so clear to the minds of a later generation as it was to St. Paul, or to master and slave who died together in the Roman amphitheatre. It was easier to say, therefore, that the 'true slavery is the slavery of sin' than to grapple with the evils of an institution inseparable from ancient society.

As the doctrinal system of Christianity became more explicit, it may seem remarkable that its moral implications did not become more explicit too. A few quotations will show the attitudes of the Fathers, though here, as elsewhere, they vary as the spirit of each is that of a mystic, a dogmatist, an administrator, or a lawyer.

St. Irenaeus says that before redemption there was no difference among men: 'Significans quoniam secundum carnem ex liberis, et ex servis Christus statueret filios Dei, similiter omnibus dans munus Spiritus vivificantis nos.'⁶

⁶ *Contra Hæc.* iv. xxi. 8 (PG vii. 1040); ed. W. W. Harvey, 2 vols., Cambridge, 1857, ii. 227.

Clement of Alexandria protests against unfair treatment of slaves, quoting the proverb: Οἱα γὰρ δέσποιναι τοῖδε χ' ἄ κύνες,¹ and states the equality of master and slave before God. He draws out the Pauline teaching that it is the duty of slaves to obey their masters and of wives to obey their husbands, and, if those in authority are bad, the duty of submission remains the same.

Origen recalls in what terms Celsus had reproached the first Christians with the number of slaves they counted amongst them: τοῦτους γὰρ ἀξίους τοῦ σφετέρου Θεοῦ αὐτῶν ὁμολογοῦντες ὄντας εἰσιν, οἳ μόνους τοὺς ἡλιθίους καὶ ἀγενεῖς καὶ ἀναίσθητους καὶ ἀνδράποδα, καὶ γύναια, καὶ παιδάρια, πείθειν ἐθέλουσι τε καὶ δύνανται.² Christians ought to show their slaves how, while having a free spirit, they can be ennobled by religion.

Justin Martyr recalls the forgotten spirit of universal brotherhood.³ Tertullian invokes the same spirit of world-wide charity: 'Unam omnium rempublicam agnoscimus mundum. . . Frates autem etiam vestri sumus, jure naturae matris unius, etsi vos parum homines, quia mali fratres.'⁴

Arnobius enforces the same truth: 'Idcirco animas misit, ut . . . expugnarent atque everterent civitates, servitutis opprimerent, et manciparent se jugo, et ad ultimum ferebant alterius altera potestatis natalium conditione mutata.'⁵

This equality of all mankind is asserted many times. St. Jerome remarks: 'Aequaliter omnes nascimur, et imperatores, et pauperes: aequaliter aut morimur omnes; aequalis enim conditio est.'⁶

St. Ambrose says: 'Eadem enim natura omnium mater est hominum; et ideo fratres sumus omnes, una atque eadem matre geniti, cognationisque eodem jure devicti.'⁷

St. Cyril of Jerusalem does not think that slavery in itself is bad: οὐ γὰρ αἰσχρὴν ἡ δουλεία, ἀλλ' ὅτι τὸ δοῦλον ὄντα, ἐλευθερίαν πλάττειν, κακόν.⁸

Again, the relation of master and slave is compared by St. Cyril of Alexandria with that of the maker and the thing made: οὐ γὰρ ἂν ποτε τὴν αὐτὴν ἀξίαν τῷ δεσπότῃ φορέσῃ τὸ δοῦλον, οὐδὲ τῷ ποιῶντι, τὸ ποιηθέν.⁹

Despite the timidity of some of the Fathers, the instinct of the Church was against slavery. It is significant that no early Christian epitaph bears the inscription 'slave.' Three Roman bishops, Evaristus, Anicetus, and Calixtus I., had been slaves. The tendency of the Fathers certainly was to urge the slave to be obedient, rather than to urge the master to set him free.

St. Augustine writes: 'Etiam sermo mihi est ad vos, servi, quicumque dominos carnales habetis, quicumque servitili conditionem debetis. Obedite dominis vestris, diligite ex corde, non ad oculum servientes, sed ministerium ex amore facientes: quia et illos Deus constituit ut vobis dominentur, et vos ut serviat. Bene serviate propter Deum quia de bono servitio mercedem habebitis. Si boni fueritis, meliores eritis dominis malis: quia apud Deum anima unusquisque non est discernenda nobilitate, sed opere, nec genere, sed actione.'¹⁰

Augustine thinks that the state of slavery is the result of human sin. He discusses the question in the *de Civitate Dei*, xix. 15.

The decrees of Councils and Canons are sometimes interpreted as favourable, sometimes as unfavourable, to the slave. Did the Church hasten the powers of gradual emancipation which without her would not ultimately have borne the fruit that it did, or did she retard a change which but for her would have gone farther and achieved its end more quickly? The right view is between the two, though the truth is on the whole more favourable to the Church than otherwise. The spirit of Christianity, like leaven working within human society, always tended towards freedom; but individual Christian writers and the official decrees of Councils erred on the side of a nervous fear of disturbing established institutions. The same tendency which we see in St. Augustine in the West appears in the East in St. Gregory and St. Basil. A church of Cappadocia by common consent elected for bishop a slave of Simplicia, a rich matron, generous towards the poor, but suspected of heresy. Gregory and Basil consecrated him on the prayers of the people, but they do not boldly claim that it is right to ordain a slave without the consent of his master. That

a slave had to gain that consent has generally been the rule in Catholic Christianity. But in Catholic Christianity properly understood the sacraments must be great levellers, though the implications of this were not fully perceived. So St. Gregory Nazianzus extols the nobility conferred by baptism.¹

As regards the monastic life there was less difficulty than about ordination. Free men or slaves were subjected to three years' probation.² If a slave fled from a monastery and sought to live elsewhere, his former master could claim him. The simple fact of sojourn in a monastery in order to enter there suspended servitude.³

As regards marriage, canon law annulled a marriage of slaves contracted without the knowledge of their servile conditions on the part of the priest; if this was known, the marriage remained valid. Pope Hadrian IV. (1154-59) proclaimed anew the validity of a marriage contracted without the assent of the master, but the slave must continue to serve him.

The general impression left by the study of the attitude of the Church is that it tended to make slavery milder, though not to abolish it, and, owing to its excessive care for the rights of the masters, even to perpetuate what would otherwise have passed away. But in patristic literature we meet with the exhortation to masters to treat their slaves kindly. Despite the worldly compromises with existing institutions, here as elsewhere the spirit of Christ was at work.

5. Slavery and imperial law.—It was, however, not only in the working out of the gospel precepts of the spiritual equality of all men that slavery was modified, but also because of its place in the fabric of ancient society. Slavery was the worst abuse of the Roman empire.⁴ It was a heritage from ancient times vastly increased in its evil nature and its extent, and made worse by contact with the corrupt elements of Greek and Oriental life. That the slave was often better educated than his master led frequently to additional evils, for it was his interest to pander to his master's lowest vices, and he had no rights of body or soul against his owner. The existence of a large class of freedmen was a further misfortune, for their freedom was not entire—it took several generations to remove the stigma of slavery, and the freedman still retained many of the vices of the slave. After Trajan the progressive manumission of freedmen was always resisted by the enlightened emperors as a permanent conspiracy against Roman society, but, when the freedman no longer had the taint of slavery or servile vices, the danger was removed. Christian influence on imperial legislation is seen as early as Constantine, who authorized manumission in the presence of Christian people. Those who had been enfranchised in church were to enjoy the full rights of Roman citizenship. Clergy were enabled to give by their wills complete liberty to their slaves in whatever terms they pleased. Constantine elevated from the enjoyment of the Latin right to the full Roman citizenship those who had been freed in church and subsequently converted to Christianity. One of his enactments declared free a slave who should denounce a ravisher. The work of Constantine was carried on in the East by his successors at Constantinople, while in the West it was profoundly modified by the barbarians.

6. Slavery in the Eastern Roman empire.—The legislation of Justinian here, as elsewhere, was important.

¹ We can perceive that between the age of Galus and the age

of Justinian the feeling that man is naturally free has become stronger, and this feeling was in the spirit of Christianity. Florentius said that liberty was a natural faculty whereas servitude was a constitution contrary to nature; and this view is adopted by Justinian in his Institutes.¹

Justinian re-enacted the legislation of Constantine which made a master who killed or ill-treated his slave liable to punishment. Slaves who became criminals were punished more severely than were free men. He declared that slaves could not refuse enfranchisement, and forbade any Jew, pagan, or heretic to have an orthodox slave.

Basil the Macedonian (867-886) ordered the marriage of slaves to be celebrated with the benediction of the priest.

Constantinus Porphyrogenitus (945-959) fixed the price to be paid for a slave who had been brought back.

Alexius Comnenus (1081-1118) re-enacted that the blessing of the Church should be given to a slave marriage; unless this was given, he decreed that the newly-married slaves be freed. This seems to indicate that the slaves also believed themselves freed by the ceremony. But Alexius declared that in the eye of God all men are equal.

Dreadful punishments might be inflicted on the slave—mutilation of the nose and ears, or gouging out of the eyes. But slavery was less rigorous in new than in old Rome, for with the consent of his master a slave might enter the army and thereby become free.

Various terms are employed by Greek writers for slaves and slavery. Δούλος was, of course, the usual word; sometimes ἀνδράποδον was employed, as the equivalent of the Latin *mancipium*, or ψυχάριον, or ἀνδράκιον; *domesticus* was represented by οἰκέτης. After the 9th cent., δούλος is generally the equivalent of *famulus*. Constantinus Porphyrogenitus relates how the Venetians, asked by Louis I. (814-840) to recognize his suzerainty, refused, asserting ὅτι ἡμεῖς δούλοι θέλομεν εἶναι τοῦ τῶν Ρωμαίων βασιλέως, δούλοι here being subjects. Παιδαρίσκη is used for *ancilla* (the ordinary feminine of *servus*). From the 10th cent. we find a new term, Σκλάβος. The fact that mediæval Greek, like modern English, took its word for 'slave' from the Slav peoples shows that Slavs were often captured and made use of as slaves, as they seemed to possess the toughness and docility which fitted them for servile work. (Σκλάβος was apt to be confused with Σέρβος, 'Servians,' as *servi* with *Servi*.)

Slavery proper disappeared from the Eastern empire in the 13th cent.; but, as in Western Europe, serfs, not personally chattels, but tied to the land, had existed from the time of Justinian. The regular word was γέβργος, *colonus*. The emperor Nicephorus Phocas in 963 forbade religious communities to build new houses or monasteries or to acquire property with ground rents, for these estates were worked by οἰκέται, who were bought as true slaves independent of the land, but they soon came to be serfs or colons paying a fixed amount, as this was more convenient for monasteries than to work them as slaves, needing continual supervision.

The emperor Manuel Comnenus (1143-1180) prohibited all forced labour, and so seems to have abolished the colonate throughout his dominions, like Louis X. of France.

Domestic slavery disappeared by degrees because of the Christian doctrine of the spiritual equality of all men, and at length by special laws forbidding the sale of an individual freeman and punishing the homicide of a slave like that of a free man.² Slavery certainly had as a rule merged into serfdom from the time of Justinian, though its disappearance may not have been as complete as is sometimes supposed. It was hastened by the

¹ J. B. Bury, *Hist. of the Later Roman Empire, from Arcadius to Irene*, London, 1889, i. 371. The emperor regarded himself as the protector of liberty: 'pro libertate quam et fovere et tueri Romanis legibus et praeceptis nostro numini peculiare est' (quoted by Bury).

² For slavery in the Eastern empire see H. J. Roby, in *Cambridge Medieval History*, II. 62-63 (a convenient summary of Justinian's legislation); E. Biot, *De l'abolition de l'esclavage ancien en Occident*, p. 207 ff.

⁴ Cf. art. SLAVERY (Roman).

turmoils of the Latin empire in the East. The war against the infidel was responsible for the perpetuation of slavery. In 1344 the empress Anne agreed that the sultan Orkhan should export as slaves captives belonging to the party of Cantacuzenus.¹ It was against both the theory and the practice of the time to sell Christians as slaves to an infidel.

An interesting document quoted by Finlay records the freeing of a serf of Duke Antonio of Athens in 1437:

Ἀλλὰ καὶ μᾶλλον ἔστω σοι φράγγος ἐλευθέρου καὶ παιδία τῶν παιδίων σου ἀπὸ πάσης ὑπαρκοῦς τε δουλοσύνης ἀπὸ τε ἐγγαρίας κανισκίων, μουστοφοριῶν, ἐλαιοπαρουχίων καὶ ἑτέρων ἄλλων τοιαύτης ὑπαρκοῦς προνόμιον.

7. Slavery in the Greek Church.—A few references to the attitude of the Church in the East further illustrate slavery in E. Europe in the Middle Ages.

If a slave is made a eunuch, he is to be freed and never to be sent back into slavery.—a nomocanon of Photius, patriarch of Constantinople († 891).

'We do not permit slaves to be called to office without their master's knowledge, to the annoyance of the masters who possess them, for such a thing works the overthrow of households. But if a household slave ever appear worthy of obtaining a further appointment, such as our Onesimus appeared to be, and the masters agree to set him free, and send him forth from the house, so let it be.'²

There are various regulations about fugitive slaves in the time of Justinian.⁴

A slave shall be freed if he make known the rape of a virgin.⁵ Those compelled to do something shameful shall be freed by the bishop.⁶ If any one teach a slave to despise his master, let him be anathema.⁷

During the Latin empire the soil was generally cultivated by serfs, as is shown by a letter of Pope Innocent III. to the archbishop of Patros in 1209.⁸

8. Slavery and the barbarians.—The coming of barbarian tribes naturally had an effect on slavery as on other institutions, both before and after the fall of the Western empire. The small proprietor had become more and more depressed and the slave gradually emancipated, so both tended to coalesce into the serf, or *colonus*. The process was gradual and imperfect, as pure slavery did not in the West any more than in the East cease as early or as universally as has sometimes been assumed, and serfdom and slavery went on side by side for many centuries. In the disorder of the fall of the Western empire captives of war were bought and sold; so another contributory cause of slavery was added; through anarchy and privation many men were driven to sell themselves as slaves. The captives of war taken by Clovis after the defeat of the Alemanni, by Charles the Great after the defeat of the Saxons, and by Henry the Fowler and his successors after the defeat of the Slavs were sold as slaves or sometimes settled on the land as colons.

Barbarian legislation forbade Christian slaves to be sold to pagans or Jews, but otherwise tended to recognize slavery as a normal institution. In the West the marriage of slaves with the benediction of priests was refused, as it was generally interpreted to mean freedom.

The distinctive sign of slavery was short hair, and the Salic law forbade cutting the hair of individual freemen, as likewise did a capitulary of Charles the Great.

A few extracts from barbarian laws will illustrate the legislation.

The *Lex Alemannorum*, of Lothar II. (c. A.D. 613-622):
'xviii. 1. Si [libera dimissa] fuerit per cartam aut in

ecclesiam et post haec servo nupserit, ecclesiae ancilla permaneat.

2. Si libera Alemanna servum ecclesiae nupserit et servitium opus ancilla contraxerit, abscedat.

3. Si autem ibi filios vel filias generaverit, ipsi servi et ancillae permanent, potestatem ad extendum non habeant.

4. Illa autem mater eorum, quando exire voluerit, ante tres annos liberam habeat potestatem. Si autem tres annos induraverit opus ancillae et parentes eius non exadonaverunt eam ut libera fuisset, nec ante ducem nec ante comitem nec in publico mallo transactis tres Kal. Marcias: post haec ancilla permaneat in perpetuum et quidquid ex ea nati fuerint servi et ancillae sint.¹

'xxxviii. 1. Ut die dominico nemo opera servilia praesumat facere, quia hoc lex prohibuit et sacra scriptura in omnibus testatur.

2. Si quis servus in hoc vicio inventus fuerit, vapuletur fustibus.²

The *Lex Alemannorum* (c. 817-823) decreed that, if a slave fled to a church, he was to be returned to his lord. If the slave could not be found, another or his value was to be given to his lord.³ If a man killed the slave of any one else, he was to compound with another slave or the value of the slave.⁴ Any one killing a royal or ecclesiastical slave was to compound with 45 instead of 15 *solidi*.

The *Lex Bainvariorum* of Lothar II. fixes the amount of compensation for various injuries to a slave; for killing him the amount was 20 shillings.

Dagobert I. (622-638) decreed that, if a slave was sold and, unknown to his lord, had a *peculium*, this became the property of the lord.⁵

An illustration of the amelioration of slavery into serfdom is seen in the decree that slaves of the Church shall work three days a week on the demesne and three for themselves.⁶ According to the *Decreta Synodorum Bavaricarum* of uncertain date, though not later than the 11th cent., a freeman who has committed sacrilege has to get 72 men to 'do judgment' for him, while a slave has the ordeal of walking over twelve red-hot ploughshares or carrying a hot iron.⁷

In the *Leges Burgundionum* of c. A.D. 500 we read (ii. *De homicidiis*): '3. Si servus in conspectu domini hominem ingenuum occidere fortasse praesumpserit, servus tradatur ad mortem: dominus vero reddetur indemnis. 4. Si dominus huius facti conscius fuerit, ambo tradantur ad mortem. 5. Si servus ipse post factum defuerit, dominus eius pro pretio servi 30 solidos parentibus occisi cogatur exsolvere: similis de servis regis secundum qualitatem personarum circa interfectores conditione servata.'⁸

In the *Lex Frisionum* of the 8th cent. tit. i. [E. Frisia only]: '13. Si servus nobilem, seu liberum, aut litum, nesciente domino occiderit, dominus eius, cuiuscunque conditionis fuerit homo qui occisus est, iuret hoc se non fuisse, et multam eius pro servo, bis simplum, componet. 14. Aut si servus hoc se fuisse domini sui fecisse dixerit, et dominus non negaverit, solvat eum sicut manu sua occidisset; sive nobilis, sive liber, sive litus est.'⁹

The stern side of slave legislation comes out in tit. xx. 3: 'Si servus dominum suum interfecerit, tormentis interficiatur; similiter et litus.'¹⁰

The general tone of this legislation can hardly be said to favour the slave, as an injured slave was viewed as a damaged piece of property rather than a wronged man. Christian influence is shown especially in the marriage laws. Thus the law of the Lombards forbade the breaking of marriages between slaves of different masters,¹¹ quoting Mk 10⁹. The Council of Châlons of 813 permitted the marriage of slaves, but always with the consent of their masters. Marriage, or even intercourse, between a free man or woman and a slave was sometimes punished with death. The condition of offspring of these mixed marriages varied, but was generally servile. In England it usually followed the status of the father¹² (in Cornwall one child was free, while another was a slave), while the Lombard law followed the Roman in making the child take the status of the mother.

The attitude of the Church was to encourage a

master to manumit his slave, but, if the slave fled of his own accord, the rights of the master were protected. It was decreed by canon law that a slave could not be ordained without the consent of his lord. Had the Church protected the fugitive slave in all cases, a great step towards emancipation would have been made.

9. Disappearance of slavery in Western Europe. —In France the transition from slavery to serfdom took place from the 4th to the 10th cent.,¹ while serfdom went on to the Revolution. Before A.D. 1000 there are many references to slavery, but afterwards only a few.² It lasted longer in northern than in southern France. A charter of 1113 contains a donation pure and simple of a woman and her child to a monastery. In southern France the words *servi*, *ancillæ*, *mancipia* are not found later than the 10th cent., and even then there was no sale of individuals separate from the lands on which they worked.

In Germany a scheme of punishment was set forth by the statutes of the Council of Cologne in 1083, while the first privilege of liberty for fugitive slaves was granted by Frederick I. to Bremen in 1186. In 1220 Frederick II. pronounced against refuge in imperial towns for serfs and slaves, but in 1230 he granted it to Ratisbon and Vienna; his charter to Ratisbon leaves to the masters a period of ten years in which to reclaim fugitive slaves. But terminology is rather vague; in 1243 a donation is signed by many *servi*, but these were serfs. In the 12th and 13th centuries personal slavery tended to be extinct in western Germany. Domestic slavery was totally extinct by 1300 at the latest.

In Spain slavery was a prominent feature of mediæval society. Among the Goths slaves were employed in the army and in administrative posts. Here, as elsewhere, the Church was a slave-owner. Donations of *mancipia* were made in 812 and 891 respectively by Alphonso the Chaste and Alphonso III. to the church of Oviedo. In 966 a Count of Barcelona freed in his will all the slaves acquired by him. Wars among the lords and against the Moors led to the abolition of domestic slavery, and it seems to have disappeared from Castile in the 13th century. The marriage of slaves was independent of the will of the master.³ Excommunication was launched against the sellers of men by tit. 24 of the national Council of Valadolid in 1322. In 1491 Moorish captives were set free, and in 1501 they were driven from Spain altogether. In 1558 an ordinance of Philip II. decreed the expulsion from Spain of Jewish slaves and those recently made Christian. Those whom Ferdinand and Isabella ejected were admitted into Portugal by John II. on the condition of emigrating after seven years under penalty of slavery. Many could not emigrate and became slaves. In 1626 all slaves were obliged to embrace Christianity, and the Moorish slaves diminished, but the slave traffic continued. Christian slaves were found in the 18th and serfdom continued to the 19th century.

The end of slavery came slowly also in Italy. The tumults of the 10th and 11th centuries prolonged personal slavery and drove small proprietors into the position of serfs. The Italian republics had Greek Saracen slaves, and the ancient annals of Venice show her as a mart of slaves bought in the East or exchanged into Eastern lands, and among these must be reckoned Christians who had been enslaved. From the 7th and 8th centuries

they brought back slaves from Africa, whom they sold to other Africans or to the Moors established in Spain. This traffic went on despite the prohibition of the Church.

It is recorded in the life of Pope Zacharias (741-752): 'Contigit plures Veneticorum hanc romanam advenisse in urbem negociatores, et mercimonii nundinas propagantes multitudinem mancipiorum, virilis scilicet et femini generis emere visi sunt, quos et in Africani ad paganam gentem nitebantur deducere. Quo cognito idem sanctissimus pater fieri prohibuit, datoque eisdem Veneticis pretio, quod in eorum emptione se dedisset probati sunt, cunctos a jugo servitutis redemit.'

Towards 840 the emperor Lothair I. promised to prevent his subjects from making slaves in the duchy of Venice, keeping them, or selling them to the pagans. About the year 800, under the doge Urso Participato, this species of commerce was forbidden under severe penalties, but the prohibition was little respected.

Sometimes the slavery was qualified, as in one case at least the consent of the slave to be transferred from one master to another was granted.¹

In the 14th and even in the 15th cent. Venetians bought slaves in their colonies of Istria and Dalmatia. In 1323 the explorer Marco Polo freed one of his slaves by his will. There is a contract of 1428 for the sale of a young Russian woman of thirty-three, and a law of 1446 forbade the sale of slaves to the Ragusans and Dalmatians because they sold them again to the Musalmāns. The Venetians bought and sold slaves in Asia and Africa; they were only forbidden to sell Christians to Musalmāns. The existence of slavery and especially of the practice of mutilation was one of the causes of the moral corruption of Venice, and thus probably contributed in the long run not only to the decay of the moral stamina of her people, but also to the decline of her prosperity.²

Not only Venice but also Pisa and Amalfi traded in slaves. The *Opuscula* of Pope Celestine V. (1294) contain various regulations; e.g., the Jews can have only slaves that have been reared in the house—if they are Christians, they become free; if a priest has married a free woman, the children become slaves of the Church, which has been injured by the sin of their father. At Bologna enfranchisement was achieved in 1283; in Florence there are still traces of personal slavery in the 14th century. The statutes of Florence of 1415 permitted citizens to have slaves 'qui non sunt Catholice fidei et Christianae.' The statutes of Lucca of 1537 declare that the master of a female slave can force one who has had intercourse with her to buy her at double the price which she cost, besides paying a fine.

In the kingdom of Naples rural slavery had been converted into the colonate which continued under Greek domination and was found there by the Normans.

So a rescript of the emperor Otto II. in 935 speaks of free men who, in default of slaves, 'ex inopia servorum,' are established as colons in the domain of the Church 'in locis ecclesiasticis patrimonii.'

In the 11th and 12th centuries many small cultivators of Naples and Bologna surrendered themselves to powerful proprietors. In Sicily slavery was disappearing in the time of Frederick of Aragon (1296-1337). His *Capitula Regis Siciliæ* order the master of a slave baptized by him to treat him as a brother and to baptize him soon after birth; if he fail to do so, the slave is to be baptized in church and declared free; female slaves must not be prostituted. Biot acutely observes:

¹ B. Gamba, *Serie degli scritti impressi in Dialecto Veneziano*, Venice, 1832, p. 32, 'Instrumento di vendita d' uno schiavo scritto l' anno 1365.'

² See Pierre Daru, *Hist. de la République de Venise*³, Brussels, 1840, bk. xix. § 61.; also, for Italian slavery in the later Middle Ages, Jacob Burckhardt, *The Civilization of the Renaissance in Italy*³, tr. S. G. C. Middlemore, London, 1892, p. 296f.; Muratori, *Antiq. Ital. mediæ ævi*.

¹ P. Allard, *Les Origines du servage en France*, p. 3.

² Biot, p. 336.

³ Traces of ancient barbarity appear—not only does the father enjoy all his life the goods of his son, but he is authorized to eat him, if he finds himself in danger of dying of hunger—so it was not remarkable if a child could be sold (Biot, p. 417).

'Ces divers exemples nous montrent l'empreinte permanente des habitudes orientales sur le caractère italien.'¹

It is clear, therefore, that slavery was not extinct in Europe at the close of the Middle Ages, but that commercial interests and the strife between Christian and Saracen or Turk had perpetuated it in the eastern Mediterranean. When Elizabethan adventurers and their contemporaries of other lands explored America and exploited Africa, they only transferred to fresh soil an institution which they found ready to hand. This perpetuation of a decayed ancient and mediæval abuse and its re-erection on a far vaster scale than ever before is one of the most remarkable and deplorable instances of historical continuity. Thus, when the emperor Charles V. took Tunis in 1535, thousands of men and women were killed or led away into slavery.² Christians and Muhammadans alike employed prisoners of war as galley-slaves. By this time negroes had already been brought from Africa to America. But slavery was destined to continue on the widest scale in English-speaking countries. In England, as in N. Europe generally, there is a gap in the institution between mediæval and modern times.

10. Slavery in Britain.³—The early history of slavery in Britain is obscure as everything else in primitive development, but it seems clear that slavery existed not only from Celtic but also probably from pre-Celtic times. When slaves appear, they are probably the relics of subject races. Thus it may be conjectured that the conquering Celts reduced to servitude some of the aboriginal Iberians, but it is not probable that this process was thorough-going, and more would be kept in a half-free condition or allowed to mingle with the conquering races. Early Celtic customs show us a number of slaves, but the structure of society is not really that of a slave economy, and at the English conquest of Britain slavery was rather a survival. There was hardly the clear-cut division between bond and free which marks the slavery of ancient Athens or Rome, or of the United States in modern times.

'It appears that the arrangement of society on the basis of slavery or serfdom is not so easily carried out as many suppose, and that it is, perhaps, a more complex result of historical development than even primitive democracy.'⁴

So in the undeveloped polity of pre-Conquest England slavery, though frequent, was not the economic basis of society. Slave-owning, therefore, became limited to kings and other important persons.

'With the rest of the inhabitants of Scotch and Welsh mountains and of Irish bogs, slaves might be an exceptional commodity, female slaves might even be specially sought for different purposes; but there could be no slave-holding husbandry arrangements.'⁵

We do not know enough of the details of the English conquest of Britain to be sure how the English dealt with those whom they conquered. The theory of the almost complete displacement by slaughter or driving west of the Celtic tribes is

now exploded—perhaps a larger number were made slaves than is often assumed, and, if so, this would account for the longer continuance of slavery in England than on the Continent, for slaves are continually mentioned alike in Old English literature and legislation and must have been fairly numerous at the Conquest. The old English term was *peow*, and sometimes *esne*. The story of Pope Gregory the Great and the sale of beautiful English slave-boys in the Roman Forum is too well known to need repetition,¹ but it shows that English slaves found a ready market abroad. Till after the Conquest Bristol was the chief port for the sale of slaves. But how far was Old English slavery an inheritance from early Britain and how far an importation from the Continent? Roman masters had lorded it over British slaves at Colchester and elsewhere.² Slavery among Teutonic tribes is described in the *Germania* of Tacitus; it is disputed whether the English tribes brought over large numbers of slaves with them to England.³

As the Celtic tribes were driven west, some men would doubtless be enslaved, and the survival of remnants of a former race would explain some anomalies, such as the half-free *laets* of Kent, whose exact nature is not known.⁴ Many points indeed of early English slavery remain obscure. The greater number of slaves were probably in bondage to landowners.⁵ Various regulations are given in the *Penitentiary* of Theodore, archbishop of Canterbury (669–690). A father compelled by necessity can hand over his son to slavery for seven years, but, if for longer, only with the consent of the son. In Alfred's laws it is decreed that slaves should not have the same holidays as free labourers, only the Wednesdays in the four ember weeks.

In a bilingual dialogue written in the 10th cent. the slave complains of his thralldom, 'Ha! ha! hard work it is, hard work it is, because I am not free' ('*hig, hig, micel gedeorf ys hyt, geleaf micel gedorf hit ys, ferþam ic neom freoh*').⁶

The ravages of the Danes seem to have forced some monks to escape starvation by becoming slaves on large estates.

The manumission of slaves was common, being often done in a will—and, of course, at other times.⁷

Bishop Wilfrith, on receiving a grant of Selsey from Caed-waelha of Wessex, manumitted 250 slaves.⁸ A letter of Archbishop Brihtwald to Forthere, bishop of Sherborne, begs him to order Beorwald, abbot of Glastonbury, to release a captive girl.⁹

What percentage of the population were slaves is not known, but there were probably more just before the Norman Conquest than in the other countries of W. Europe.

'If we turn to the Old English charters we shall have to recognize that up to the eleventh century, slavery and manumission from slavery are playing a most important part in social life.'¹⁰

Domesday Book shows 25,000 slaves in England. These were spread over the country in very unequal proportion—none in Yorkshire or Lincolnshire, 9 per cent in Kent, 24 per cent in Gloucestershire, and 18 per cent in Devon.¹¹

¹ The narrative is in Bede, *HE* ii. 1.

² Hodgkin, *Political Hist. of England*, i. 89.

³ Tacitus (*Germ.* 40) describes the immolation of slaves 'to ensure' secrecy in the worship of the goddess Herthus by the Continental Angli, in a 'hallowed grove' on an island, perhaps Rügen (see art. *EURORÉ*, vol. v. p. 693). The slaughter of slaves may also have been part of the ceremony itself (see Tac. *Germ.* [cf. ed. of H. Furneaux, Oxford, 1894] *ad loc.*).

⁵ *Id.* p. 27.

But personal slavery was beginning to disappear into villeinage, and the villein was half-free; he was generally free as against all men except his lord, only attached to the land and not able to leave it. Instead of constantly watching slaves and spending care and thought in organizing their unwilling labour, the upper classes of mediæval society levied dues and services from villeins who were attached to the soil and held in order by the interests which they had in their own households.¹ Slavery properly so called became extinct in England in the 13th cent., though it still seems to have been possible from a legal standpoint. But the rural population was still 'largely unfree,' and in 1313 the bishop of Durham manumitted a scholar of the city.²

One feature differentiates the disappearance of slavery in England and in the Roman empire—that in England there were no *libertini*, or freedmen, though Vinogradoff thinks there may be some trace of them in the *coliberti*.

The gradual change from slavery to villeinage was accomplished by the elimination of slavery, as for a time the two institutions had existed side by side; villeinage was swept away finally at the Restoration, though it had been nearly extinct for some time before.³

A statute of 1547 (Edward VI.) ordered a runaway or one who lived idly for three days to be brought before two justices of the peace, marked V with a hot iron in the breast, and adjudged for two years the slave of him who bought him. The slave was to be fed, and punished if he refused to work; if he absented himself for fourteen days, he was to be marked with an S on the breast and be his master's slave for ever.

Villeins in the 13th and 14th centuries comprised a large class including not only the villeins of early times but also the degraded freeman and the half-emancipated or now nearly freed slave.⁴ About 1240 there is a grant of freedom to the population of the vill of Kirby in Kendal who had previously been unfree.⁵

11. Slavery in the East Syrian Church.—Directions about slave-holding are found in the works of Ebedjesus (+1318), metropolitan of Nisibis, or Zoba.

He directs that, if any one have manumitted some of his slaves and not manumitted others, those still under the yoke shall be manumitted. If a non-manumitted slave dies, his lord shall be his heir.

This plainly shows that the slave could acquire property, presumably like the *peculium* of the Roman slaves. If the slave had sons, it would go to them, but, if not, then to his lord—not to the slave's other relatives.⁶

Mar Gregor of Melitene, known as Bar-Hebræus or Abulpharagus (primate of the Jacobites in Chaldaea, Assyria, and Mesopotamia, 1261), issued instructions on the manumission of slaves:

If a lord shall say to his slave, 'O my lord,' or to his slave woman, 'O my lady,' or 'O my sister,' or 'O my wife,' the manumission shall not be confirmed by these phrases. But, if he shall say to the slave, 'O free man,' and to the slave woman, 'O free woman,' they shall be freed. He who is sick cannot

free a slave whose price exceeds a third part of his goods. If a slave belong to two lords and both say to him, 'When we die, thou art free,' he shall not be freed by the death of one, but only the half of him shall be free.¹

The slavery here referred to may have been of a modified kind, as the slave was not devoid of property, but it is further evidence for the continuance of the institution in W. Asia in mediæval times.

12. The revival of the slave-trade in modern times.—It is remarkable that the Renaissance, which brought the minds of men back to the literature of classical antiquity, re-established in newly-discovered lands the classic institution of slavery. The first offenders were the Portuguese, but it is unlikely that the slave-trade would have developed as it did, if men had not been familiar with it in the Ottoman empire and the Mediterranean. In 1442 Gonzales brought back ten slaves and some gold dust to Prince Henry of Portugal. In 1443 Nunez Trestan sailed on an expedition to Africa and brought back fourteen slaves.

The African natives naturally resented slave-raids and resisted with all their might, but without much effect. European traders then tried to foment disputes among the natives as an excuse for making raids. In 1511 Ferdinand the Catholic gave permission to import slaves from Africa into Hispaniola. The Spaniards were led to import African slaves into America by the unsuitability of American Indian natives for labour in the mines, and also because the horrible barbarities which the Spaniards had committed nearly exterminated the American Indians in many places. The emperor Charles V. urged the importation of Africans 'because the work of one negro was more than equal to that of four Indians.' In 1517 he granted a patent to a Flemish gentleman allowing him to import each year 4000 Africans into Hispaniola, Porto Rico, Cuba, and Jamaica.

The Dominican friars in S. America protested against the cruel treatment of the slaves, but the Franciscans defended it. Pope Leo X. (1513-22) in a bull declared that 'not only the Christian religion, but nature herself, cried out against a system of slavery.'

In 1562 Sir John Hawkins sailed to Guinea, obtained 300 negroes, sold them in Hispaniola, and came back to England. Queen Elizabeth told him that, 'if any Africans should be carried away without their free consent, it would be detestable and call down the vengeance of Heaven upon the undertaking.' The French, Dutch, and Spaniards continued the trade, but there do not seem definite instances of English trading in slaves till the charter of Charles I. to the African Company in 1631, supplying negroes to the British settlements in the West Indies. In 1640 Louis XIII. issued an edict by which 'all Africans whatever who came into the French colonies, under any circumstances, were to be made slaves.' In 1655 Cromwell took Jamaica from the Spaniards and found there about 1500 whites and 1500 negroes—the natives had been exterminated. The Third African Company was established in 1622 to supply the British West Indian colonies with 3000 slaves annually, and in 1672 the Fourth African Company, but it has been estimated that at the time the Dutch trade in slaves was ten times greater than the English. Between 1679 and 1689 about 4500 slaves were imported annually to British colonies. The French supplied the Spaniards with African slaves.²

Francis Crow, an ejected minister who had emigrated to the West Indies, wrote from Port Royal in Jamaica (7th March

1687): 'The greatest trade of this place lies in bringing these poor creatures from Guinea hither, to sell them to the home plantations, and to the Spanish factors that buy them at 20l. per head or thereabouts. They come as naked as they were born, and the buyers look in their mouths, and survey their joints as if they were horses in a market. We have few other servants here but these slaves who are bought with our money, except some from Newgate.'¹

In 1713 the Asiento contract was signed between England and Spain. England agreed to supply Spain with 4800 slaves a year for 30 years. England was to advance 200,000 crowns and to pay a duty of 33½ crowns on each slave, and the monarchs of England and Spain were each to have a quarter of the profits. From 1713 to 1733 the number of slaves annually exported by the English from Africa was 15,000, of whom a third to a half went to Spanish colonies; from 1733 to 1753 it was 20,000. England, however, did not derive much profit from the Asiento, for in 1739 the English company was owing Spain £68,000. War intervened, but by the Peace of Aix-la-Chapelle (1748) the Asiento was to be allowed to continue four years more. By the convention of 1750 George II. gave up the privilege of continuing the treaty for £100,000.

In 1755 the negro slaves in the British West Indies numbered 240,000, while the white population was only 90,000. About 1761 feeling began to be stirred in England against the trade; the Quakers were prime movers in the agitation. In 1766 Bishop Warburton preached a sermon against the slave-trade, which 'infringed all human and all Divine law.' In 1769 Granville Sharp brought an action to decide whether a man could remain a slave in England, and it was decided in 1772 that a slave, if he set foot in England, became free. In 1787 William Clarkson, William Wilberforce, Granville Sharp, and others formed themselves into a private committee to try to abolish the slave-trade. It was soon joined by others such as William Paley and John Wesley. At this time and earlier various writers had protested against the trade, including Baxter, Pope, Sterne, and Adam Smith. In 1788 the king by an order in council directed that the Board of Trade 'should take into consideration the present state of the African slave-trade, the purchasing and obtaining slaves on the coast of Africa.' The feeling in favour of abolition gradually grew and was supported by Pitt, Fox, and Lord Grenville. In 1788 a bill was brought in for lessening the horrors of the 'Middle Passage'—the first Act of Parliament which checked the trade. It was estimated that then the annual export of slaves from Africa was 200,000, about 100,000 being sent from Africa to America and the West Indies, the remainder from the east coast of Africa to Persia and the East Indies and partly from the interior of Africa to Turkey and Egypt. In 1789 Wilberforce described the horrors of the slave-trade in the House of Commons, again emphasizing the suffering of the slaves and the loss of life in the 'Middle Passage'—about one-third of the slaves were lost *en route*. Some legislative improvements were effected in the West Indies, as public feeling had been aroused in England, but the planters resented much in the way of change.

In 1791 a Sierra Leone Company was started by Wilberforce, Granville Sharp, and Henry Thornton. The object was to form a colony of liberated slaves. Zachary Macaulay² went out to the colony and became governor in 1793. On his return he became secretary to the company. He was editor of the *Christian Observer*, the periodical of the 'Clapham sect,' from 1802 to 1816. This was specially devoted to the abolition of the slave-trade at home and abroad.

The motion for abolishing the trade was rejected several times by a small majority between 1795 and 1799. Opposition was strong in various quarters.

¹ *The Monthly Repository*, 1811, p. 451.

² See his life in *DNB*.

Thus Lord Nelson in a letter addressed to a friend in Jamaica (10th June 1805) declared himself 'a firm friend to our colonial system,' which he was prepared to defend 'against the damnable and cursed doctrine of Wilberforce and his hypocritical allies.'¹

In March 1807 the 'Bill for the Abolition of the Slave Trade' passed both Houses of Parliament and received the royal assent. A fine of £100 was decreed for each slave dealt in.

At the Congress of Vienna of 1815 the various Powers agreed to abolish the slave-trade. But France 'was allowed to carry on a five years' traffic of insult and injury and rape and murder on the coast of Africa.'² The abolition took effect in 1820 and the following years, Portugal being the last in 1836. But, even after the trade was supposed to be abolished, it went on; like other evil customs, it died hard, and slavery itself was still a firmly-rooted institution.

In May 1823 Fowell Buxton in the House of Commons spoke of the 'inconsistency of British laws which permitted slavery while they prosecuted the slave-trade.' He moved that 'the state of slavery is repugnant to the principles of the British constitution and the Christian religion; and that it ought to be gradually abolished throughout the British colonies.' Canning moved in favour of the amelioration and ultimate abolition of slavery. The anti-slavery feeling was increased by the fact that the colonial legislatures had not carried out the views of Parliament for the amelioration of slaves.

Thomas (afterwards Lord) Denman said in the House of Commons that 'judicial oppression is the hardest of all evils to bear by civilized man, and in Jamaica it had reached the highest pinnacle of its power; the most horrible atrocities were consequently perpetrated with impunity in open day.' He adverted to one case in which a female slave's head was absolutely twisted off in the presence of many persons; the offender escaped conviction because the witnesses were but slaves, and their evidence could not be legally taken.³ Two negroes were sentenced to be suspended in chains and starved to death.⁴ In Barbados there was a protest of the colonial assembly against concessions to slaves.

At length in 1833 the bill for the total abolition of slavery was passed, and the slave-holders were granted 20 millions sterling compensation. On 1st Aug. 1834 slavery came to an end throughout the British empire, and 770,280 slaves became free.

An instance of a slave-holder's mentality is related by Southey. A planter 'describes the refined and elegant manner in which the operation [of branding a slave] is performed, by way of mitigating the indignation which such an usage ought to excite. He assures us that the stamp is not a branding iron but a silver instrument; and that it is heated not in the fire, but in spirits of wine.'⁵

13. In the United States.—The history of slavery in the United States of America cannot be treated here in detail.⁶ The British colonies before the Declaration of Independence were all slave-holding, and it was unhappily to the mother-country that this state of things was due, for it was to her profit that slaves should be sent thither, though the colonies themselves protested.

Thus in 1760 S. Carolina prohibited further importation of slaves; the Act was rejected by the Crown, and the governors of all other colonies were warned against such legislation in future.

In the North slaves were the luxury of a wealthy few, though they were treated with great severity at times. After the slave insurrections of New York in 1712 and 1741 the culprits were broken on the wheel or burned alive. In the South, on the other hand, slave-labour was a part of the economic system. The Declaration of Independence was founded on the principle of the equality

of men. Did this apply to the slave? Two points seem clear: (1) that the founders of the new republic did not quite approve of slavery, while not seeing their way to abolish it; (2) that equality could be quite thorough-going only among whites, as the negroes were an inferior race. Soon after the Declaration it seemed as if slavery might be abolished, and again early in the 19th cent., but in each case it revived, only to gain greater power in the decade before its abolition. By then it was clear to many men that slavery could not continue indefinitely, but it was a complicated question for several reasons: (1) it was left by the constitution for each state to settle the question for itself, though the word 'slavery' was never mentioned; with the founding of new states, the question inevitably arose; (2) but it was much easier to abolish slavery in the North than in the South, as the number of slaves was so much smaller, and they were simply sold to Southern slave-holders; (3) the anti-slavery agitation became extraordinarily bitter, and the pro-slavery party was very violent. There was certainly something to be said for the slave-holders. They were not responsible for the institution, since it was an inheritance which they could not avoid. They naturally resented being viewed as blood-thirsty tyrants. If slavery was abolished, what was to be done with the blacks? If they were given the same rights as white men, Southerners naturally dreaded the result; if not, they might create equally a social, economic, and political difficulty. Slavery had become part of the fabric of Southern society, and it was very difficult to alter it.

But the abolition movement would never have gained the strength which it did nor have ultimately succeeded, had not the abuses of slavery been wide-spread and inevitably bound up with the system. No doubt many, probably most, of the Southern planters were humane men, but the slave had very little redress. He could not generally be a witness, and it was a crime to teach him to read and write. Slave insurrections occurred from time to time, though they were not frequent.

One in Virginia in 1831 was led by Nat Turner, in which 58 whites were killed. Turner was not an ill-used slave, but a religious fanatic. Greater strictness in the administration of the slave laws naturally resulted.¹

As the cotton industry increased, slave-labour was more and more demanded. Continual difficulties arose when new states were founded—Texas (1845), Missouri (1845), Kansas and Nebraska (1854)—and a compromise was arranged. But the Fugitive Slave Act of 1850 was much more of a concession to slavery than to its opponents, for escaped slaves who imagined themselves to be in safety were ruthlessly hunted out from non-slave-holding states. In the ten years before the Civil War (1850–60) slavery, though more actively threatened, became stronger than ever, and, when war was declared, it was the avowed intention of the Confederate States to erect themselves into a slave Power. Abolitionists in the South were not allowed the right of free speech, so it is not surprising that at times their language became exaggerated. A few examples may be given of the attitude of divines on both sides.

W. E. Channing, the Unitarian anti-slavery leader, said: 'No power of conception can do justice to the evils of slavery. They are chiefly moral, they act on the mind and through the mind on the body. As far as the human soul can be destroyed, slavery is that destroyer.'²

Theodore Parker, also a Unitarian, wrote to Miss Frances Power Cobbe: 'You in England, I think, do not see how slavery corrupts everything. Politics, theology, literature, trade, it is the *bête noire* which threatens to devour all the

flock.'³ His position is described thus from the pro-slavery side: 'Rev. Theodore Parker supposes the case of a man who aids a slave to escape from his master and who is brought to trial for an offence against the law. He assumes he has taken the oath as a juror to try the man, and says, "If I have extinguished my manhood by my juror's oath I shall do my business and find him guilty, but if I value my manhood I shall say not guilty; then men may call me forsworn and a liar, but I think human nature will justify the verdict." We have fallen upon evil times when the teachers of our holy religion thus debase themselves and their pulpits to a level with the lowest rum-shops and their frequenters.'

Other pro-slavery utterances are remarkable, and it must not be forgotten that the ministers and members of orthodox churches in the South held slaves to the number of at least 660,000.

A Southern slave-holder wrote to Theodore Parker in 1848: 'The Bible is either inconsistent—the Almighty a changeling—or you are a horrid monster of infidelity or blasphemy in your execrable spirit of Yankee conceit against the South.'⁴

Robert N. Anderson, a Presbyterian minister, said: 'If there be any stray goat of a minister among you tainted with the bloodhound principle of abolitionism, let him be ferreted out, silenced, excommunicated, and left to the public to deprive him in other respects.'⁵ Joel Parker, of Philadelphia, was credited with saying: 'What then are the evils inseparable from slavery? There is not one that is not equally inseparable from depraved human nature in other lawful relations.'

The slave-holding South managed to get the Christian Church, on the whole, on its side.

Were the evils of American slavery as great as is popularly supposed? No doubt the exploits and execution of John Brown and the publication of *Uncle Tom's Cabin* aroused popular feeling in America and in Europe almost to fever pitch. The evils were exaggerated in that the exceptional was too often taken as normal. It was sometimes asserted that slavery was beneficial to the African as introducing him to Christianity and civilization. But in some states of the South slave-labour simply meant that the slave was worked to death, as it was most profitable to the slave-holder to use up his slaves quickly. Nothing, however, can alter the fact that American slavery meant very real abuses and was dangerous morally both to the slave-holder and to the slave, and, so long as it continued, all real progress, moral, social, and political, was impossible.

Slavery was abolished for ever in the United States in 1862, and negroes were declared completely equal with whites in 1870.

14. The final disappearance of slavery.—The abolition of the slave-trade in the British empire was followed by its abolition in other countries. Since the discovery of the New World slavery had continued in the French colonies. The *Code Noir* of Louis XIV. was more lenient to the slaves than were the codes of most British colonies. All slaves were to be baptized and instructed in the Catholic faith.⁶ But many cruelties were perpetrated here as elsewhere. J. B. Labat⁷ described the abuses of French colonial slavery. Spaniards seem to have been gentler and more successful in dealing with slaves than either the English or the French, and the Portuguese were often kindly in dealing with natives in Africa. But there probably was not any considerable difference between one nation and another. The *Code Noir* punished the first desertion on the part of the slave with ear-cropping and the mark of the fleur-de-lys on the left shoulder, the second with a fleur-de-lys on the right shoulder and the cutting of the leg sinew, the third with death. Slavery in French colonies was drastically reformed in 1845 and abolished in 1848. Other countries followed; the Dutch West Indies abolished it in 1863, Porto Rico in 1873, Cuba in

1886, Brazil in 1888. It lingered longest in Portuguese colonies and in Africa — which was natural, as Africa was the source of slaves. The Republic of Liberia for free blacks was founded in 1822. Slavery was suppressed in Zanzibar in 1897, though there has been sporadic slave-raiding in the Congo Free State and probably elsewhere since then. The later 19th cent. saw practical slavery revived in the South Sea islands by Queensland adventurers till it was put down in 1884, and the Putumayo atrocities in S. America also involved practical slavery.

15. Slavery in Slavic countries. — As the very word 'slave' is of Slavic origin,¹ it is not surprising that slavery and serfdom lingered longer in Slavic lands than in W. Europe. It has been asserted by some Russians that there were no pure slaves in Russia in early times, but there were actually three classes in the rural population: (1) slaves, (2) free agricultural labourers, and (3) peasants. In the 18th cent. these were welded together into the slave class, and even then serfs were often more like slaves, as they were regularly bought and sold and advertised for sale. An extract from the *Moscow Gazette* of 1801 shows this:

'To be sold: Three workmen, well trained and handsome; and two girls, one eighteen and the other fifteen years of age, both of them good-looking, and well acquainted with various kinds of handiwork. In the same house there are for sale two hair-dressers—the one twenty years of age, can read, write, play on a musical instrument, and act as huntsman; the other can dress ladies' and gentlemen's hair. In the same house are sold pianos and organs.'²

Alexander I. (1801–25) prohibited advertisements of this sort, and Nicholas I. (1825–55) repressed them.

Again, the Turks raided Russian and Polish territory and sold their captives as slaves in the Crimea, till it was conquered by Russia in 1783. The men especially were badly treated and fed on putrid flesh; the women were employed to amuse their captors.³ They were sold to Saracens, Persians, Indians, Arabs, Syrians, and Assyrians.

In Poland serfdom in the 14th cent. became harsher and practically developed into slavery. It lasted till the 19th century. In Serbia slavery was legal, though serfdom was more common in the Middle Ages.⁴

16. Slavery and law. — The legal aspect of slavery is clearly of great importance, and, if we are right in the definition that a slave is a human being treated as a chattel, it is obvious that the question must arise: Should he ever be regarded in the light of a human being? Primitive jurisprudence did not always see clearly the exact position of the slave. To treat a person as if he were legally a thing requires a step in legal metaphysics of which a very undeveloped mind is incapable. If a slave is only a thing, his master cannot be punished for ill-treating or killing him; if he is a thing, the slave cannot be punished either; but most codes have punished a criminal slave with severity. If a slave is once fully recognized to be a person, slavery is doomed. So the mediæval jurists regarded it as contrary to natural law and as an institution of the *jus gentium* or *jus civile*.⁵ Slave codes show how far the rights of man and the facts of human nature can be perverted in the interests of selfishness.

17. Slavery and ethnology. — Where slavery has persisted, it has often been owing to the survival of a subject race, imperfectly assimilated. Where two races have been widely different and one has

been subject, it has been most difficult to abolish. Thus in the United States the question still remains: How far can white and black men live happily side by side? Intermarriage of two races which are not meant to mingle, and the consequent existence of mulattoes and quadroons, only leads to further difficulties. These legacies of slavery exist to-day.

18. Slavery and economics. — This is largely outside the scope of this article, but the question arises: Is a system which puts society on a false basis likely to be economically sound? It seems clear that slavery has sometimes been the most profitable economy for the time, though the wastage of labour and of men generally brought its result in the long run; the economy of the Southern States of America before abolition was wasteful, and still more so was that of ancient Rome.

19. Slavery and morality. — In the long run slavery must have evil results alike in the master and in the slave, because it lowers the dignity of human nature, and because no man can fittingly be entrusted with absolute power; he will not always use it aright even if it is to his own interest to do so. Thus a favourite argument of slaveholders collapses.

In the narrower sense of sexual immorality slavery has been productive of untold evil. A master has power to gratify his lusts on his chattels, and it is to the interest of the slave to play up to the vices of his master. The very phrase 'The White Slave Traffic' is significant, and suggests what did and must take place under actual slavery. The corruptions of life under the Roman empire and the abuses of American slavery show that, while purity is always hard for man, slavery makes it much more difficult, and the evils which resulted from this aspect of it alone would have justified its abolition.

20. Slavery and war. — We have seen that conquest has been one of the first causes of slavery and that war has led to its recrudescence at various times. The deportations from Belgian and French towns carried out by the Germans in 1916–18 meant a species of enforced labour which may be called serfdom and seems akin to slavery.

21. Slavery and Christian theology. — Man is a spiritual being akin to his Maker. St. Paul says: 'In Christ is neither bond nor free.' Can then slavery be right? It can be shown to be contrary to the spirit of Christ's gospel, though the Church has often been too timid to deal drastically with it.¹ It was sure sooner or later to disappear, and only traces of it now survive. Though it may have been a necessary step in human progress at certain times and places, and though the wickedness of slaveholders as individuals or as a class is often exaggerated, a detailed study of its records leaves the impression that it has been definitely evil, productive of untold misery for the slave, and of deep-seated corruption alike for the slave and for his master. But even slavery may not have run its evil course in vain, if its varied fortunes and final disappearance have shown that to treat a man as if he were no man but a beast is theologically false, morally wrong, economically unsound, and politically and socially disastrous, and that there is an essential unity of aim and principle between the moral and theological precepts of the gospel and the freedom and welfare of mankind.

LITERATURE. — I. *ENCYCLOPÆDIAS*, etc. — Artt. in *HDB* ('Servant, Slave, Slavery'), *DCG*, *DAC*, *EBI*, *EB11* ('Slavery' and

¹ An instance of ecclesiastical timidity is the view of Theodore of Studium, who wrote that a monk ought not to possess as a slave a man made in the image of God, and then spoils it by saying that this, like marriage, is only for seculars (quoted by Sirmondus, *Opera Varia*, Venice, 1728, v. 66). St. Thomas Aquinas compares the relation of master and slave to that of father and son (*Summa*, ii. ii. qu. 1viii. art. 3).

Russell, 'A Priestess of Freedom,' in *Manchester Guardian*, 5th Aug. 1911 (sketch of Mrs. Stowe); Reinhold Schmid, *Die Gesetze der Angelsachsen*, Leipzig, 1858; Harriet Beecher Stowe, *Uncle Tom's Cabin*, 2 vols., Boston, 1852, and republished since in numerous edd. and trr. (a wonderful book, which, though a work of fiction, contains the best, if a somewhat highly coloured, presentation of American slavery); *The Key to Uncle Tom's Cabin*, do. 1853 (Mrs. Stowe here substantiates her statements); H. Wallon, *Hist. de l'esclavage dans l'antiquité*, 3 vols., Paris, 1879 (a very good monograph; emphasizes perhaps even too strongly the work of the Church in mitigating slavery); Eliza Wigham, *The Anti-Slavery Cause in America and its Martyrs*, London, 1863; James Williams, *The South Vindicated*, do. 1862 (an able but prejudiced pro-slavery work); H. Wilson, *Hist. of the Rise and Fall of the Slave Power in America*, 3 vols., Boston, 1872-77.

iii. *PAMPHLETS*.—A vast number of pamphlets, especially those by anti-slavery reformers, are a most important source of information, though they may contain overstatements. Many volumes of *Tracts on Slavery* will be found in the Cambridge University Library and doubtless elsewhere. Among the most interesting are the following: Stephen Fuller, *Two Reports from the Committees of the Honourable House of Assembly of Jamaica*, London, 1789; John Jeremie, *Four Essays on Colonial Slavery*, do. 1831; Hannah More, *The Feast of Freedom; or, the Abolition of Domestic Slavery in Ceylon*, do. 1827 (a curiosity of literature); *Representation of the State of Government . . . in the Mauritius*, by a resident, do. 1830; John Kay, *The Slave Trade in the New Hebrides*, Edinburgh, 1872.

iv. *ANNUAL PUBLICATIONS*.—Statistics of the slave-holding countries in America can be found in the various volumes of the *Almanach de Gotha*, published annually (also in German as the *Hof-Kalender*).

v. *BIBLIOGRAPHY*.—Works on American slavery will be found in the bibliographies to *Cambridge Modern History*, Cambridge, 1902-12, vol. vii., esp. chs. 15 and 16. Much MS material must still exist in the British Colonies and also in America, and in print in the *Acts of the Privy Council and Calendars of State Papers, Colonial Series*.

Works noted above are either important works of reference or monographs, or are interesting from some special point of view. Other authorities are referred to in the text.

LEONARD D. AGATE.

SLAVERY (Greek).—i. **Introduction.**—Slavery arose in Greece, as elsewhere, from two main causes—want and war, the one operative chiefly within the community, bringing about the subjection of individuals or whole families to other individuals or families of the same community,¹ the other producing the same result mainly as between different communities. The tendency to

spare life in view of ulterior advantage would vary with the stage of culture.¹ A slave is of little use to the hunter, besides being troublesome to guard; he cannot earn his keep. In this stage the victor will mostly slay his enemy out of hand, though he may retain some of his captured women as wives, *i.e.* for domestic servitude. In the pastoral stage both male and female captives, even young children, can earn their keep by tending cattle and working up their products.² In proportion as the sedentary agricultural stage is reached, with its hard and more continuous toil at definite seasons, the demand for 'labour' becomes more insistent. The disadvantage is that in the slack seasons the slave is 'eating his head off.' Only as the industrial stage is reached is a more continuous and economical use of such 'living machines' possible. Moreover, it is in communities strongly organized for war that forced labour or slavery attains its highest development and importance, as it is at once a main product and a main support of military organization and activities. Applying this to ancient Greece, we find that in the historic period Greece is predominantly agricultural, but with pronounced local symptoms of transition into the mercantile and industrial phase, the whole being strongly overlaid by militarism of a somewhat aimless though highly specialized type.³ Under the conditions of ancient life, in which one must be either hammer or anvil, military organization was inevitable⁴ as a standing condition of existence itself; so that slavery in some shape was apparently equally inevitable. Sparta, the state which exhibited military organization in its most intense and logical form, was therefore constituted practically as a standing army supported by what was essentially slave-labour for the most part. Even in the ideal communities sketched by the Greek thinkers, military and servile institutions together constitute the very warp and woof of the entire fabric—though this fact is kept out of sight, partly by not calling things by their true names.⁵

If the special conditions and temper of a people be such as to allow it to devolve its military obligations upon some agency (mercenaries), in order to be free for wealth-production (*e.g.*, Carthage), the result will be still the same. For, if the conditions be favourable, no limits, except such as are purely temporary in view of greater ultimate

¹ Cf. art. **SLAVERY (Primitive)**.

² Cf. Herod. iv. 2: Skythians keep blinded slaves (cf. Jg 16²¹: Samson blinded and kept at the mill; the Skythians would of course have other slaves, not blinded) to churn the milk—for they are not tillers of the soil, but nomads.

³ 'It was of necessity an organization of society in which, to use the forcible words of Bagehot, "every intellectual gain was made use of—was invested and taken out—in war"' (B. Kidd, *Principles of Western Civilisation*, London, 1902, p. 176, quoting W. Bagehot, *Physics and Politics*, do. 1872, p. 49). Cf. Plato, *Laws*, 626 A.

⁴ Ar. Pol. ii. 7=1267 A: ἀναγκαῖον ἄρα τὴν πολιτείαν συντεταχθαι πρὸς τὴν πολεμικὴν ἰσχύιν.

⁵ This is especially the case in Plato's *Republic*, which never mentions slaves as constituent elements of the construction, though Plato nowhere impugns the principle of slavery, as applied to βάρβαροι, who are πολέμιοι φύσει (Rep. 470 C). But the non-appearance in the *Republic* of the precise legal status and name of slavery matters little; the essential point is that of the real relationship between the elements—a dominant class set over against an inferior, and deliberately using the latter for purely self-regarding ends. No intrinsic excellence of those ends has any bearing upon the morality of such construction. Nor, again, can it be moralized, as it were by a side wind, by pretending that it involves an educative process both for the individual and for the race, or the like, which is just Aristotle's line of defence of openly recognized and confessed slavery—a defence which had not even the merit of novelty, having been invented by Perikles in the interest of the Athenian empire as a whole (see Thuc. ii. 63, and 35 f.). To say of Plato and slavery that 'in his ideal *Republic* he abolishes it silently by merely constructing a state without slaves' (O. Murray, *The Rise of the Greek Epic*, London, 1911, p. 37) is simply to forget both Aristotle's warning, δὲν ἐπὶ σωτηρίᾳ γε τῆς ἀληθείας καὶ τὰ οἰκία ἀναρῶν (Eth. Nic., i. vi. 1), and what Plato himself said, ἀλλ' οὐ γὰρ πρὸ γε τῆς ἀληθείας τιμωρὸς ἀνὴρ (Rep. 595 C). The lowest class in Plato's ideal state is practically a serf class.

¹ Thuc. i. 8 (speaking of primitive Greece). Cf. the experience of Attica before Solon (Aristotle, *Ath. Pol.* ii. 2; Plutarch, *Sol.* 13).

advantage, are set to production—save by such factors as are themselves beyond human control.¹ Of controllable factors, one of the chief is the amount of labour available; and the problem of its supply is solved by the reduction of masses of men to serfdom, or by the importation of labourers either forced or only nominally free.

Military power, then, and the accumulation of material wealth both led, in the ancient state, directly to the satisfaction of the unceasing hunger for a fully exploitable form of labour, i.e. slavery.² This demand is everywhere strongly reinforced by the almost universal natural distaste of men for the severer forms of labour, especially for those in which the activity demanded is of a sustained, monotonous, and unexhilarating type. As a matter of fact, in whatever parade of economic logic or philosophy of social evolution the historian may indulge about it, even sometimes to the extent of defending it, the institution of slavery, for the individual slave-owner, had its *raison d'être* in his own idleness and desire for self-indulgence,³ seeking gratification through the ruthless exploitation of the strength and capacities of others whom circumstances permitted him to control absolutely, without attendant responsibilities, except such as mere possession of a damageable property involved. As Aristotle puts it, if the shuttles could have set to work of themselves, we should have had no need of slaves.⁴ It is this claim of one man to exploit another to the utmost, under a converse minimum of obligation, that constitutes the fundamental vice of the institution of slavery.

2. Slavery in Homer.—Slavery is found already established as an immemorial usage in the Homeric period, and slaves of both sexes are a staple commodity to which the victorious warrior looks for his profit, just as he will on occasion replenish his flocks and herds by foray.⁵

The Homeric slave has no rights, and is powerless against the caprice and fiat of his owner.⁶ Odysseus does actually execute his erring maids without reference to any other authority. Yet, as in historic times, custom has so far ameliorated the lot of the Homeric slave as to allow him to amass property on sufferance.⁷ The promise of Odysseus to give a wife and house and *κτήματα* to the loyal Eumaios and Philoitios⁸ must be regarded as merely an extension of this customary tolerance, not as an indication of a practice of legal emancipation;⁹ at best it would mean elevation to the status of serf. The patriarchal character of Homeric society doubtless ameliorated the servile status, but without altering its legal aspect or essential nature.¹⁰ Though he draws these charming pictures of kindly social intercourse, Homer has also uttered one of the most truthful and famous judgments on the real significance of slavery in *Od.* xvii. 320 f.:

'Thralls (δούλοι) are no more inclined to honest service when their master's control is gone . . . for Zeus takes away half the worth (ἀρετή)¹¹ of a man when the day of slavery (δουλίον ἡμᾶρ) comes upon him.'

¹ Cf. Aristotle, *Pol.* i. 8 = 1256 B; ὥσπερ Σόλων φησὶ ποιήσας 'πλοῦτον δ' οὐδὲν τέμα πεφασμένον ἀνδράσι κεῖται.'

² Cf. Herod. i. 66; Paus. iv. xiv. 4.

⁶ Cf. *Il.* ix. 449, *Od.* xix. 91 f. (Penelope threatens her maid Melantho with death).

⁷ *Od.* xiv. 449 f. (Eumaios has a bought slave of his own, *νόσφι δεσποίνης*—whatever that may mean).

⁸ *Il.* xxi. 213 f.; cf. xiv. 62 f.

⁹ Though so understood by Plut. *Quæst. gr.* 14.

¹⁰ Cf. *Od.* vi. 84 f. (Nausikaa superintends the family washing and takes part in it with the slave ἀμφιπόλοι), xvii. 256 f. (Melanthios the goat-herd sits and eats with the suitors). See also *Od.* xviii. 322 f. xv. 363 f.

¹¹ *Ἀρετή*, not to be taken here specially of moral qualities, but in the sense in which we say a man is 'no good' for a thing,

External appearance and demeanour alike were affected by servile status, in the popular conception.¹ This was also the historical Greek view, as formulated by Xen. *Mem.* iv. v. 2.²

3. Types of slavery in historical Greece.—In historical times Greece shows two main types of unfree status—imported slaves (δούλοι,³ ἀνδράποδα, οἰκέται, often simply σώματα), and indigenous serfs (Εἰλωτες in Laconia, Πενέσται in Thessaly; other names elsewhere)—which are associated typically with Athens and Sparta respectively. Although the historical origin of Greek serfdom was identical with one of the main sources of true slavery, viz. war, the primary distinction between the two types was that, while the slave was an alien without legal rights, who could be bought and sold at will, the serf was a descendant of an earlier population settled in the land 'before the Conquest,' and was permanently and legally attached, with customary and legal rights, to what had been his ancestral soil (*ascriptus glebæ*). The two types were in general mutually exclusive, in fact though not in law. The Lacedæmonian social and political organization based upon serfdom hardly knew slavery in its ordinary sense, whereas in Attica, where there were thousands of bought slaves (ἀργυρώνητοι), serfdom was unknown—though the 7th cent. B.C. had come very near evolving and perpetuating its institution.⁴ In Greece, the distinction tended to coincide with that between agriculture (carried on by serfs) and industry (carried on by slaves).

(a) *The Helots.*—The Helots of Laconia and Messenia (Εἰλωτες, Εἰλωταί)⁵ are the best known representatives of the serf class. They were state slaves (δούλοι τοῦ κοινοῦ),⁶ cultivators attached as perpetual hereditary appendage to the lot (κλήρος) assigned to individual Spartiates. Hence the individual in whose interest they laboured could neither emancipate nor sell nor slay the Helots on his lot, and was bound under a curse not to exact more than the specified annual amount of produce, which was paid in kind as a first charge on the estate, the balance belonging to the serfs. The state also had a paramount claim to the service of Helots in war as light-armed troops or as rowers, or even on occasion as heavy infantry,⁷ and sometimes emancipated them for good service.⁸ Helots were also liable for all manner of personal service to their lords in peace and war.⁹ They enjoyed, however, by customary right, if not by express convention made at the time of the conquest, their own household and family life, with a large degree of personal freedom and power of amassing wealth.¹⁰ As they were the economic basis of the whole Spartan organization, it was imperative that they should be allowed to propagate and live in a certain measure of comfort, though doubtless there was no lack of cases of oppression.¹¹ The general attitude of the Spartans towards them was one of meaning in respect of efficiency; certainly not here 'manhood,' as rendered by G. Murray, *Rise of the Greek Epic*², p. 37, any more than it is true to say that Homer 'speaks always of slaves with a half-puzzled tenderness' (*ib.*)—pure imagination. Cf. D. B. Monro's note in *loc.* (*Homer's Odyssey*, bks. xiii.—xxiv., Oxford, 1901)—'probably the sense [of ἀρετή] is very general'; 'Zeus takes out half the good of a man'; cf. *Od.* xiii. 45.

¹ Cf. *Od.* xxiv. 252; 'There shows nothing of the slave about thy face and stature.'

² Cf. Theogn. 635, and Aristotle's half-pathetic lament that Nature after all often blunders in her stamp (*Pol.* i. 5 = 1254 B).

³ For the etymology of the word δούλος see M. Lambert in *Glotta*, vi. [Göttingen, 1914] 1-18, and E. Assmann, *ib.* ix [1917] 94 f.

⁴ Cf. Ar. *Ath.* *Pol.* ii. 2: ἐδούλευον οἱ πένητες τοῖς πλουσίοις καὶ αὐτοὶ καὶ τὰ τέκνα καὶ αἱ γυναῖκες.

⁵ The name was, by the ancients, derived from the town of Helos in lower Laconia (Strabo, p. 365), but is more probably connected with ἑλός, 'fen,' or with the root of ἑλεῖν, 'to capture.'

⁶ Paus. iii. xx. 6.

⁷ Xen. *Hell.* vi. v. 23.

⁸ Thuc. v. 84.

⁹ Cf. Herod. vii. 229, ix. 10.

¹⁰ Cf. Plut. *Æleom.* 23.

¹¹ Cf. Athen. 272 A.

suspicion and perpetual watchfulness.¹ They felt that they held a wolf by the ears, for the Helots, says Aristotle, were ever on the alert to take advantage of any national disaster.²

(b) *True slavery in Greece*.—As known from the Homeric and Hesiodic poems, Greece is a land of free peasant cultivators, slavery, though a familiar institution, being of comparatively little economic importance, confined chiefly to female domestic slavery, so that the Greeks themselves easily imagined a Greece which once knew no slavery.³ Even Hesiod appears not yet to know rural slavery as a fact of any great importance in the social stratum with which he is chiefly concerned. For, in enumerating the items of capital outlay for the peasant, he mentions first the homestead, next the wife, and then the ox for the plough, and finally the 'things,' i.e. gear.⁴ This is in accord with the historical development, for Bœotia, as well as Lokris and Phokis, was predominantly a land of free farmers even in the 5th cent. B.C., as was also the Peloponnese.

Chios had the dubious honour of inaugurating the slave-trade on a large scale.⁵ It spread rapidly to the rising industrial and trading states of the Saronic gulf. As early as 600 B.C. Periander tried to check it in Corinth, probably in the interests of native labour;⁶ but in vain, for the Corinthians soon earned their mock-name of *χοινικομέτραι*.⁷ In Greece, therefore, slavery as a factor of prime importance in the national life was intimately connected with the economic revolution of the 7th and 6th centuries B.C. The transition from the agricultural to the industrial and mercantile system of national life, undermining the old static aristocratic society and the privileges of birth, and substituting a social stratification according to wealth expressed in terms of coinage (except in those states which, like Sparta, Crete, or Thessaly, applied special safeguards of the old régime), opened innumerable avenues for exploitation and stimulated a demand for cheap docile labour. The free citizen was ill adapted to meet this demand, by reason of his rapidly developing political freedom and his equality before the law with his employer.⁸ He did not readily accept the subordination implied by the relationship of employer and employed.⁹

The case stood quite otherwise with the slave—an alien, and therefore without legal rights, a mere live tool (*ἐμψυχον ὄργανον*), in some respects indeed the more valuable just because it was alive, yet with almost as little power of protest as a lifeless instrument.¹⁰ Hence the use of slaves became ever more prevalent, the heavier forms of labour being definitely abandoned to them (e.g., the mines), and slaves becoming a lucrative and favourite form of investment; for here was found a solution of one of the great problems of ancient life, viz. how to invest savings profitably and safely. Hence prosperity and the employment of slaves went hand in hand, as mutually cause and effect.¹¹ The essence of the demand was not for workers who were in a legal sense slaves, that is to say, not for slavery as an institution *per se* desirable, but for cheap, docile, and fully exploitable labour; and such was to be had, in any degree

of perfection, only in the form of forced alien labour.¹ The slave class, therefore, held in the ancient industrial organization precisely the place held in modern times by free labour working under contract.

4. Sources of supply.—The sources of slave supply were chiefly war and commerce.

(1) *War*.—In dealing with a conquered town, whether Greek or foreign, Greek practice was to kill all bearing or capable of bearing arms, and to enslave the rest of the population without exception.² It marked, therefore, some advance when Philip in 348 B.C., instead of slaughtering the men of the Chalcidic cities, sold the population *en masse*, and when Alexander in 335 B.C., upon the capture of Thebes, sold its 30,000 inhabitants into slavery.³

(2) *Commerce*.—Supply of slaves through war was of the nature of a windfall. There was in addition a systematic slave-trade catering for the constant demand. The market was fed chiefly from lands on the fringe of the Hellenic world,⁴ especially the hinterland of Asia Minor (Lydia, Phrygia, and Galatia), and the countries bordering the Euxine (Pontos and Paphlagonia, and above all Thrace). Syria, Egypt, Æthiopia, and even Italy,⁵ were also taken in toll. The great slave marts were Samos, Chios, and Ephesus for Asia, Pagasai and Byzantion for the Balkan area; Delos and Cypros were the *entrepôts* for the human freights of the pirates and kidnappers working the eastern Mediterranean, while Corinth and Athens were the main emporia in Greece proper.⁶ Probably there were regular agents in frontier towns buying whatever was offered in this line and asking no questions. War and rapine among the hill-tribes, sale of families by natives,⁷ casual kidnapping, and apparently even the organized slave-raid, kept up a fairly steady stream of supply, which gradually attained enormous dimensions. It savours of irony to find that the sacred island of Delos became ultimately, perhaps as the most central, the main slave mart, so that a saying arose: 'Put in, skipper, unload—all's sold.'⁸

(3) Minor sources were: (a) natural increase among the slaves themselves, the status being hereditary; this was important mainly in later times; (b) sale of children—tolerated generally in Greece (but not in Athens, though an Athenian father might, and seemingly often did, refuse to rear a child, especially if a female,⁹ and expose it); (c) sale into slavery, even of adults, due to the action of the law; e.g., before Solon's time an insolvent Athenian could be sold into slavery by his creditor (as in Rome), or he might be retained as a bond-slave on his estate.¹⁰

5. Employments of slaves.—One of the most striking differences between ancient and modern slavery is the great variety of *skilled* employments for which slaves were trained in Athens, apparently with success.¹¹ Besides their employment, to a moderate extent, as personal attendants (*ἀκλουθοί*, both in and out of doors),¹² slaves of both sexes were used for all manner of domestic service and domestic production.¹³ Naturally, agriculture

¹ Cf. Meyer, p. 197; Ar. *Ec.* i. 5. So *Plut. claimed many.¹ A large number were employed in all grades of public service²—e.g., 1200 *Σκῦται* as city police in Athens. At one end of the scale are slaves employed in the higher professions and skilled trades (doctors, teachers, bankers, and business-agents), at the other those doomed to the tragic horror of the Laurion silver mines. This last class it is that stands closest to Roman as well as to modern prædial slavery; the former class, on the other hand, stands very close, in external aspect at any rate,³ to that of the free alien, or even the free citizen. Artisan slavery was, in fact, a main factor in the development of Athenian industrialism and commerce in the 6th and 5th centuries B.C.; it is here that the most important, and at the same time most obscure, problems in the economics of ancient slavery lie, viz. in the co-existence of a free and a servile artisan population, working side by side in unrestricted competition.

A peculiar and early development, best known to us from Athens, was that of a class of slaves known as *οἱ χωρὶς οἰκοῦντες*. These slaves 'living apart' were allowed by their master to work in quasi-independence, living upon the proceeds of their labour, under condition of paying him regularly a fixed sum (*ἀποφορά*).⁴ Sometimes a group of such slaves worked together, under a foreman, himself a slave, mutually sharing the profits after paying the stipulated *ἀποφορά*.⁵ These slaves, therefore, lived in practical independence, and were able to amass money, and so might ultimately be allowed to purchase their freedom. Legally, the master's rights remained unimpaired; the permission so to live was revocable, and the slave retained his earnings (so far as we can see) purely on sufferance. The system relieved the owner of responsibility, while guaranteeing him regular and high interest on his capital outlay; between him and loss of income through trade depression there stood the savings of the slave, and in the last resort the market value of the slave himself.

6. The economic problem.—Here arises a problem of particular interest, viz. that of the economic relation of slave-labour to wage-labour in Greek states, and the degree to which the latter was affected by the competition of a servile class probably greatly superior in numbers, and at least its equal in skill. Here it is necessary to avoid the exaggerations widely current in much popular exposition. Statements such as that of J. P. Mahaffy—'for each freeman with a vote there were at least three or four slaves. . . . Even very poor Athenians kept a slave or two'—belong to a pre-scientific age.⁶ Equally unscientific is the sentimentalism of the 'New Hellenism,' which is bent upon 'clearing the name of Athens from one cruel reproach which has clung to it ever since the human conscience began to concern itself with these questions,' teaching that it was only late in the history of Athens, 'when the structure of her civilization became too heavy to be sustained by her own unaided efforts, that slaves and free immigrants crowded in to co-operate in the task. And these she treated in most cases, not as mere living instruments, but as "fellow-workers" with her citizens and free partners in the Empire.'⁷

We can only glance at the problem thus raised. How fundamental slavery appeared to its contemporaries, and how universally the social and economic effects which it entailed were accepted as part of the natural order of things, is shown by the fact that the most serious crisis in Athenian

economic history originated in the pre-Solonian age, i.e. before the great development of industrial slavery in Attica.¹ It is true that 'the ultimate controlling fact in Greek politics of the 5th and 4th centuries is the evil economic condition of the lower classes, due to the competition of slave labour';² but analysis of social and economic facts in this regard was almost impossible, because neither in dress nor, above all, in colour were Athenian slaves marked off from the free community. Hence the standing poverty of the middle and lower class in Athens—a poverty which co-existed with a high degree of prosperity of the state as a whole³—is rarely, if at all, traced to its real root in slave competition.⁴ From this point of view we may say that the expansion of artisan slavery, which by cheap labour took the bread out of the mouth of the free worker and threw him upon the street to subsist upon state pay,⁵ with a large margin of leisure, but hardly any of wealth, closely resembled in its working the introduction of machinery into modern industry. But the bitter class war in ancient Greece⁶ is waged not as between starving free artisans and their servile competitors; rather, the slave is the sign and source of the wealth which the lower classes covet, and for which the cry of *γῆς ἀνάδασμός* and *χρεῶν ἀποκοπή* is raised. Hence the constant tendency of the lower classes actually to look for allies in the slave class, for the one partner desires freedom and the other wealth—both by the same means, and at the expense of one and the same foe.⁷ The discussion of slavery arises, therefore, as an ethical, not as an economic, question; it originates with poets and philosophers, not with the political champion of popular rights (*προστάτης τοῦ δήμου*)—and this is in fact quite characteristic of the Greeks.

7. Treatment of slaves.—The readiness with which Greek slaves ran away is not to be taken as evidence of their general ill-treatment.⁸ For the mere natural instinct of freedom will impel the slave to flight, often aimlessly. The Greek prædial serfs, a permanent immobile population, speaking a common language and inheriting a common tradition of national life, older and richer than that of their lords, and, above all, sharing in the essentials of contemporary Greek culture equally with them as a recognized element in the political structure, though without political rights, found life upon the whole more intolerable and more offensive to dignity than was the case with slaves proper; hence the danger of Helot insurrection was a constant and notorious factor in Lacedæmonian politics.⁹

Demosthenes¹⁰ says that, if the barbarians who supplied the Greek slave marts could be told how civilized and humane the Greeks were¹¹ in their treatment of slaves, they would officially constitute the Athenians their public protectors! Apart from the singular and intolerable bathos of the orator's conclusion, it is to be remarked that his statement is an example of those naive delusions which in all ages pass current among peoples concerning themselves;¹² it is, in addition,

suspicion and perpetual watchfulness.¹ They felt that they held a wolf by the ears, for the Helots, says Aristotle, were ever on the alert to take advantage of any national disaster.²

(b) *True slavery in Greece*.—As known from the Homeric and Hesiodic poems, Greece is a land of free peasant cultivators, slavery, though a familiar institution, being of comparatively little economic importance, confined chiefly to female domestic slavery, so that the Greeks themselves easily imagined a Greece which once knew no slavery.³ Even Hesiod appears not yet to know rural slavery as a fact of any great importance in the social stratum with which he is chiefly concerned. For, in enumerating the items of capital outlay for the peasant, he mentions first the homestead, next the wife, and then the ox for the plough, and finally the 'things,' i.e. gear.⁴ This is in accord with the historical development, for Boeotia, as well as Lokris and Phokis, was predominantly a land of free farmers even in the 5th cent. B.C., as was also the Peloponnese.

Chios had the dubious honour of inaugurating the slave-trade on a large scale.⁵ It spread rapidly to the rising industrial and trading states of the Saronic gulf. As early as 600 B.C. Periander tried to check it in Corinth, probably in the interests of native labour;⁶ but in vain, for the Corinthians soon earned their mock-name of *χορικομέραι*.⁷ In Greece, therefore, slavery as a factor of prime importance in the national life was intimately connected with the economic revolution of the 7th and 6th centuries B.C. The transition from the agricultural to the industrial and mercantile system of national life, undermining the old static aristocratic society and the privileges of birth, and substituting a social stratification according to wealth expressed in terms of coinage (except in those states which, like Sparta, Crete, or Thessaly, applied special safeguards of the old régime), opened innumerable avenues for exploitation and stimulated a demand for cheap docile labour. The free citizen was ill adapted to meet this demand, by reason of his rapidly developing political freedom and his equality before the law with his employer.⁸ He did not readily accept the subordination implied by the relationship of employer and employed.⁹

The case stood quite otherwise with the slave—an alien, and therefore without legal rights, a mere live tool (*ἐμψυχον ὄργανον*), in some respects indeed the more valuable just because it was alive, yet with almost as little power of protest as a lifeless instrument.¹⁰ Hence the use of slaves became ever more prevalent, the heavier forms of labour being definitely abandoned to them (e.g., the mines), and slaves becoming a lucrative and favourite form of investment; for here was found a solution of one of the great problems of ancient life, viz. how to invest savings profitably and safely. Hence prosperity and the employment of slaves went hand in hand, as mutually cause and effect.¹¹ The essence of the demand was not for workers who were in a legal sense slaves, that is to say, not for slavery as an institution *per se* desirable, but for cheap, docile, and fully exploitable labour; and such was to be had, in any degree

of perfection, only in the form of labour.¹ The slave class, therefore, ancient industrial organization pre-empted in modern times by free labour contract.

4. Sources of supply.—The sources of supply were chiefly war and commerce.

(1) *War*.—In dealing with a country whether Greek or foreign, Greek warriors kill all bearing or capable of bearing arms, enslave the rest of the population.² It marked, therefore, some Philip in 348 B.C., instead of slaughter of the Chalcidic cities, sold the population and when Alexander in 335 B.C., upon the capture of Thebes, sold its 30,000 inhabitants.

(2) *Commerce*.—Supply of slaves through the nature of a windfall. There was a systematic slave-trade catering for demand. The market was fed chiefly on the fringe of the Hellenic world,⁴ the hinterland of Asia Minor (Lydia, Phrygia, Galatia), and the countries bordering the Black Sea (Pontos and Paphlagonia, and above all Syria, Egypt, Æthiopia, and even Italy),⁵ taken in toll. The great slave marts were Chios, and Ephesus for Asia, Pagasai and Nauplia for the Balkan area; Delos and Cyprus as *entrepôts* for the human freights of the pirate-kidnappers working the eastern Mediterranean while Corinth and Athens were the main markets in Greece proper.⁶ Probably there were agents in frontier towns buying whatever offered in this line and asking no questions, and rapine among the hill-tribes, sale of fugitives by natives,⁷ casual kidnapping, and apparently even the organized slave-raid, kept up a steady stream of supply, which gradually attained enormous dimensions. It savours of irony that the sacred island of Delos became ultimately perhaps as the most central, the main slave market, so that a saying arose: 'Put in, skipper, unless all's sold.'⁸

(3) Minor sources were: (a) natural increase among the slaves themselves, the status being hereditary; this was important in later times; (b) sale of children—tolerated generally in Greece (but not in Athens, though an Athenian father might, and seemingly often did, refuse to rear a child, especially a female, and expose it); (c) sale into slavery, even of adults, due to the action of the law; e.g., before Solon's time an insolvent Athenian could be sold into slavery by his creditor (as in Rome he might be retained as a bond-slave on his estate).¹⁰

5. *Employments of slaves*.—One of the most striking differences between ancient and modern slavery is the great variety of skilled employment for which slaves were trained in Athens, apparently with success.¹¹ Besides their employment, to a moderate extent, as personal attendants (*ἀκόλουθοι*, both in and out of doors),¹² slaves of both sexes were used for all manner of domestic service and domestic production.¹³ Naturally, agriculture

¹ Cf. Meyer, p. 197; Ar. *Ec.* i. 5. So Polybius, describing the advantages of Byzantium, says: 'For those commodities which are the first necessities of existence, namely cattle and slaves, are confessedly supplied by the districts round the Pontos in greater profusion and of better quality than by any others' (iv. 38).

ium, was effected either *inter vivos* or by testament.¹ Manumission *inter vivos* naturally involved publication, as by announcement in a law-court (*ἐν δικαστηρίῳ*)² or other public place.³ Proclamation by the herald in the Athenian theatre before the people became a fashionable nuisance which had to be checked by the severest penalty.⁴

(c) *Through a deity*.—In many places the favourite method was manumission under the form of dedication to a deity, the slave thus becoming the god's property (*τερόδουλος*). This was perhaps historically the oldest method. Properly and originally it was not manumission, but substitution of ownership; and originally perhaps the slave was actually transferred to the service of the temple—certainly always lighter than that of a private owner.

By far the largest and most instructive class of manumission inscriptions is that dating generally from the end of the 3rd cent. B.C. to the 2nd cent. A.D., in which the deity named appears not merely as accepting or witnessing to a dedication made to himself, but as one of the principals in a purely commercial transaction, *i.e.* as himself purchasing the slave, not to retain him as *τερόδουλος*, but to set him free⁵—his freedom being generally conditioned in the instrument of sale by certain obligations towards his old master. Many hundreds of such records having survived, a study of them tends to dissipate all illusion as to the real significance of slavery among the Greeks. The sale to the deity is not fictitious, for real money passes into the master's pocket⁶—perhaps the full market-price of the slave, hardly less, as agreed between slave and owner; the purchase money is of course provided by the slave himself from his *peculium* or sufferance savings. As the slave, having no legal personality, could not enter into any legal contract with his master, he must rely upon the god to act for him, *i.e.* he must entrust his priest both with the purchase money and with the carrying out of the entire transaction (*καθὼς ἐπλόμεσε τῷ θεῷ τὰν ὄντων* is the phrase used). Thus the owner could not touch the money deposited by the slave with the priest without first parting with his property in the slave to the god, under a legal contract of sale providing adequate secular safeguards against its breach. The transaction was profitable to the temple indirectly, and perhaps also directly; the owner secured his own price for his living property, and the slave got just what he was able to wring from a situation in which, in the last resort, he was absolutely powerless.

It is clear that this method of sale into freedom was simply a means of getting hold of the bulk of the slave's *peculium* and retaining his services during his best years, and of throwing him upon the world at the end of his days to fend for himself; neither humanity nor religion had much real significance in this connexion. The method is applied almost wholly in the interest of the vendor,

who of course could have found no purchaser so complaisant as the deity with whom he deals. The vendor retained in effect what he professed to sell.¹

11. **Freedmen**.—In Roman history freedmen (*ἀπελευθεροί, ἐξελευθεροί*) play a great part, but not in Athens or Greece generally. In Greece, freedmen were indistinguishable from ordinary domiciled aliens (*μέτοικοι*). Even as early as Kleisthenes freedmen seem to have been numerous in Athens, for he made many of them citizens.² Like ordinary domiciled aliens, freed slaves of Athenians must put themselves under a patron (*προστάτης*—their old master), and must observe certain obligations of service and respect towards him, details of which are unknown, and must pay to the state the alien's annual tax (*μετοίκιον*), with an additional three obols, besides performing all required military service by land or sea.³ Standing thus to the state as a metic, and to his former owner as a client, the Athenian freedman was worse off than the Roman freedman, being in a condition intermediate between slavery and complete freedom as a citizen—an ambiguity characteristic of the Greek incapacity for clear legal conceptions, and illustrative of the extreme difficulty of naturalization in the ancient state, with its inherent conception of exclusive citizenship. If a freedman was false to his obligations, he was liable to prosecution (*δίκη ἀποστασίου*), and, if condemned, sank again into slavery, or in the other event became finally freed of obligation towards his former master—*i.e.*, he became a free metic, with freedom of choice as to his patron. A special vote of the assembly alone could elevate him to citizenship.

12. **Slavery and Greek thought**.—A discrimination between lower social functions (those of husbandman, artisan, trader, and the like) and higher social functions (those of administration, legislation, and war) is characteristic of Greek sentiment, though not everywhere made in practice. Of rigid coincidence of theory and practice, indeed, solitary examples were presented by Crete and Sparta, which 'sorted' the elements of the state with a thorough-going doctrinairism that appealed powerfully to the philosopher, but found itself, in Greece at large, with the exception of particular coteries, at ever greater variance with the facts of life. Nevertheless, even in such states as admitted the industrial and commercial classes to political power, popular sentiment, in its usual illogical and snobbish way, was thoroughly contemptuous of the so-called *βανανυσικαὶ τέχναι*.

To do manual work, even of such sort as did not obviously impair health and vigour, and especially to do it for pay, implied acceptance of a relation of subservience,⁴ incompatible with the independence and leisure of a free man, and breeding a mean and sordid spirit. The real difference of intellectual and ethical level between some vocations and others was the solid core of truth upon which Greek philosophic thought seized, from which with merciless logic it developed a distinction between a professional ruling class and all such as engaged in the 'necessary' functions of trade and the manual arts. A separate class, or classes, must needs exist in the state for the discharge of these lower functions, and those so employed must, unless justice is to be infringed, be capable of nothing higher. The existence, in adequate numbers, of such a class is essential to

¹ See Aristotle's own will, in Diog. Laert. v. i. 9; cf. Dio Chrys. xiv. 440: οἱ δὲ τινες τὴν αὐτὴν τιμὴν καταβεβλήκασι τοῖς δεσπόταις, and xxxi. 326.

⁴ Eschin. Ctes. 41.

⁵ Hence the confusion of thought and phrase in the formula in use: ὡς ἐλευθερὸν ὄντα καὶ τοῦ θεοῦ, 'free and yet the god's property.' Doubtless this method was a transaction in which the god, *i.e.* his priest, bought in money (the temple treasures), bought in male or female, required for service about the temple. Many, if not most, of the slaves donated to a temple as hierodoules must have been, or must eventually have become, too old and feeble to be of much use; but the god could no more reject such dedications, or cast them adrift, than he could refuse the cheap and slimy offerings of the poor. Hence the Greek temples in this way served as almshouses.

⁶ Cf. the almost constant formula καὶ τὰν τιμὰν ἔχει, ὅς ἀπέχει πᾶσαν, asserting this.

¹ This is not to say that there may not have been numerous instances in which the transaction was genuine in spirit and form.

² Ar. Pol. iii. 2=1275 B: πολλοὺς γὰρ ἐβούλευντο εἶναι καὶ δούλους μετοίκους (see Newman's note in loc., and vol. i. p. 231).

⁴ διακονία (Plato, Laws, 919 D); cf. Ar. Pol. i. 13=1260 A: ὁ γὰρ βάνανος τεχνίτης ἀφωρισμένην τιὰν ἔχει δουλείαν.

deliberate sophistry, for Demosthenes well knew that the intention of the law which he quotes, and of which he makes so much, was quite other than the advantage of the slave as such—i.e., it protected him as another's property, not as being himself a person with inherent rights. Nevertheless, the comparative humanity of the Greek, and especially of the Athenian, treatment of slaves is indisputable.

The law protected the slave against ill-treatment by strangers, by allowing an owner to bring a prosecution for assault (*γραφὴ ὕβρεως*)¹ against the assailant. The slave is protected as a chattel of his owner. Further, having no legal personality, an Athenian slave could not put the law in operation in his own behoof.² Although a slave was his master's absolute property, to be disposed of by sale, gift, or bequest at his pleasure, a death penalty could be inflicted upon him, even for murder, only by a legal tribunal.³ If a master killed his slave, he was subject to religious obligations of purification—which in practice meant little more than financial outlay.⁴ Against inhuman treatment by his owner the Athenian slave could get a doubtful and temporary measure of protection by taking asylum, if he could, at the temple of Theseus, or in the precinct of the Semnai, and perhaps there obtain the good offices of the priest to induce his master to sell him to another.⁵ It is clear, however, that the practical amount of legal protection was but slight, the only real restraining force being the owner's self-interest, reinforced by natural humanity, and to a certain extent by religion, which in Athens as elsewhere was very chary of interference with rights of private property.⁶ The lot of the state slaves was in this respect probably more tolerable than that of the ordinary slave, as being less exposed to individual caprice; and the state employees, of various grades, naturally tended to acquire a certain independence by virtue of their official status.⁷

8. Modes of punishment.—(1) The commonest naturally was flogging.⁸ This could easily become a death penalty (and is so used in Plato, *Laws*, 872 B, in cases of wilful murder of a free man by a slave). Flogging is very often the statutory penalty for slaves in the inscriptions, usually 50 strokes.⁹ Sometimes flogging is combined with a fine, touching the slave's *peculium*, or with *ἀπεργασία*, 'working off the penalty.'¹⁰

(2) Short rations, and confinement of various types and degrees of painfulness.¹¹ Shackling was so ordinary a precaution as hardly to be classed as a punishment.

(3) Branding, applied especially to runaways.¹²

(4) Hard labour, at the mill, or, worse still, at the mines—reducing the culprit to the lowest grade of chattel-slave and practically dooming him to death.¹³

(5) Doubtless also tortures privately administered were not unexampled in the households of masters callous to public opinion.¹⁴ But Athens seems to have known little or nothing of the hideous scenes of private torture and capricious cruelty with which Rome was familiar.

¹⁴ A choice list in Aristoph. *Frogs*, 618 ff.

But there was nothing of the kid glove about the generality of Greek slave-owners.¹ Plato is dissatisfied with the older, patriarchal (i.e. Homeric) method, in which slaves were treated 'gently yet firmly'; he would have them kept in their place, 'not admonished as if they were freemen, which only makes them conceited.'²

9. Slave-torture.—Here falls to be mentioned the Attic rule, 'almost grotesque in its absurd cruelty,'³ under which the evidence of a slave was inadmissible in a court of law unless it had been extracted on the rack by responsible officials (*δημόκονοι*)⁴—themselves of course slaves.⁵ Slaves who were themselves suspected of, or charged with, crime were tortured to secure a confession, but this sort of torture, frequent in all ages, even in the case of free men, needs no further remark here. Again, a master was free to torture his own slaves for his own ends, but the answers so obtained did not constitute legal evidence. The torture here in question is that applied to slaves of the parties in a suit. The views of the orators on the value of such evidence depend entirely upon the needs of the argument. Sometimes it is dismissed as worthless, but in general it is spoken of as final and unimpeachable, indeed as preferable to that given by a freeman, even under oath.⁶ That citizens were exempted by Attic law from such torture⁷ may indeed prove the 'superior humanity of the Athenians,'⁸ but hardly in respect of their slaves.

10. Emancipation.—Aristotle, in flat contradiction of his own theoretical creed—for clearly a 'natural' slave, according to his definition, could only lose by being freed—recognized that the prospect of ultimate freedom was the slave's most powerful incentive to zeal and loyalty;⁹ and the author of the Aristotelian *Economics* says: 'Slaves are willing to take trouble when freedom is the prize and the time is fixed.'¹⁰ This principle was well established in popular usage, and various methods of emancipation were in vogue. The characteristic of these is their want of precision and the vagueness of the idea of personal freedom upon which they were based. Hence no universal legal forms were evolved, and the practical result in many cases was the highly illogical one of creating a class intermediate between those of the pure slave and the free citizen, subject to all degrees and kinds of servitudes. With all their imperfections, however, these more or less regularized, easily available, and constantly employed methods of creating free or semi-free status constitute one of the principal features of distinction between ancient and modern slavery.

(a) *By the state.*—The state itself sometimes conferred freedom on individuals, or even on considerable numbers, for special services, especially those rendered in defence of the country.¹¹

(b) *By individuals.*—Emancipation by a private owner, either as an act of grace or upon payment by the slave of a sum agreed upon out of his *pecu-*

¹ As is clear from such passages as Xen. *Ec.* i. 22, *Mem.* iii. xiii. 4, ii. i. 17 (*κολάζω πᾶσι κακοῖς, ὥς ἂν δουλεύειν ἀναγκάσω*).

The law protected the slave against ill-treatment by strangers, by allowing an owner to bring a prosecution for assault (*γραφὴ ὕβρεως*)¹ against the assailant. The slave is protected as a chattel of his owner. Further, having no legal personality, an Athenian slave could not put the law in operation in his own behoof.² Although a slave was his master's absolute property, to be disposed of by sale, gift, or bequest at his pleasure, a death penalty could be inflicted upon him, even for murder, only by a legal tribunal.³ If a master killed his slave, he was subject to religious obligations of purification—which in practice meant little more than financial outlay.⁴ Against inhuman treatment by his owner the Athenian slave could get a doubtful and temporary measure of protection by taking asylum, if he could, at the temple of Theseus, or in the precinct of the Semnai, and perhaps there obtain the good offices of the priest to induce his master to sell him to another.⁵ It is clear, however, that the practical amount of legal protection was but slight, the only real restraining force being the owner's self-interest, reinforced by natural humanity, and to a certain extent by religion, which in Athens as elsewhere was very chary of interference with rights of private property.⁶ The lot of the state slaves was in this respect probably more tolerable than that of the ordinary slave, as being less exposed to individual caprice; and the state employees, of various grades, naturally tended to acquire a certain independence by virtue of their official status.⁷

8. Modes of punishment.—(1) The commonest naturally was flogging.⁸ This could easily become a death penalty (and is so used in Plato, *Laws*, 872 B, in cases of wilful murder of a free man by a slave). Flogging is very often the statutory penalty for slaves in the inscriptions, usually 50 strokes.⁹ Sometimes flogging is combined with a fine, touching the slave's *peculium*, or with ἀπεργασία, 'working off the penalty.'¹⁰

(2) Short rations, and confinement of various types and degrees of painfulness.¹¹ Shackling was so ordinary a precaution as hardly to be classed as a punishment.

(3) Branding, applied especially to runaways.¹²

(4) Hard labour, at the mill, or, worse still, at the mines—reducing the culprit to the lowest grade of chattel-slave and practically dooming him to death.¹³

(5) Doubtless also tortures privately administered were not unexampled in the households of masters callous to public opinion.¹⁴ But Athens seems to have known little or nothing of the hideous scenes of private torture and capricious cruelty with which Rome was familiar.

But there was nothing of the kid glove about the generality of Greek slave-owners.¹ Plato is dissatisfied with the older, patriarchal (i.e. Homeric) method, in which slaves were treated 'gently yet firmly'; he would have them kept in their place, 'not admonished as if they were freemen, which only makes them conceited.'²

9. Slave-torture.—Here falls to be mentioned the Attic rule, 'almost grotesque in its absurd cruelty,'³ under which the evidence of a slave was inadmissible in a court of law unless it had been extracted on the rack by responsible officials (*δημόκοινοι*)⁴—themselves of course slaves.⁵ Slaves who were themselves suspected of, or charged with, crime were tortured to secure a confession, but this sort of torture, frequent in all ages, even in the case of free men, needs no further remark here. Again, a master was free to torture his own slaves for his own ends, but the answers so obtained did not constitute legal evidence. The torture here in question is that applied to slaves of the parties in a suit. The views of the orators on the value of such evidence depend entirely upon the needs of the argument. Sometimes it is dismissed as worthless, but in general it is spoken of as final and unimpeachable, indeed as preferable to that given by a freeman, even under oath.⁶ That citizens were exempted by Attic law from such torture⁷ may indeed prove the 'superior humanity of the Athenians,'⁸ but hardly in respect of their slaves.

10. Emancipation.—Aristotle, in flat contradiction of his own theoretical creed—for clearly a 'natural' slave, according to his definition, could only lose by being freed—recognized that the prospect of ultimate freedom was the slave's most powerful incentive to zeal and loyalty;⁹ and the author of the Aristotelian *Economics* says: 'Slaves are willing to take trouble when freedom is the prize and the time is fixed.'¹⁰ This principle was well established in popular usage, and various methods of emancipation were in vogue. The characteristic of these is their want of precision and the vagueness of the idea of personal freedom upon which they were based. Hence no universal legal forms were evolved, and the practical result in many cases was the highly illogical one of creating a class intermediate between those of the pure slave and the free citizen, subject to all degrees and kinds of servitudes. With all their imperfections, however, these more or less regularized, easily available, and constantly employed methods of creating free or semi-free status constitute one of the principal features of distinction between ancient and modern slavery.

(a) *By the state*.—The state itself sometimes conferred freedom on individuals, or even on considerable numbers, for special services, especially those rendered in defence of the country.¹¹

(b) *By individuals*.—Emancipation by a private owner, either as an act of grace or upon payment by the slave of a sum agreed upon out of his *pecu-*

¹ As is clear from such passages as Xen. *Ec.* i. 22, *Mem.* iii. xiii. 4, ii. i. 17 (καλῶς πᾶσι κακοῖς, ὥς ἂν δουλεύειν ἀναγκάσῃ).

⁹ Ar. *Pol.* iv. (vii.) 10 = 1330 A.

¹⁰ 1344 B.

¹¹ Cf. Xen. *Hell.* i. vi. 24 (slaves on the fleet at Arginusai in 406 B.C. freed); Diod. xvii. 11 (Thebes), xx. 84 (Rhodes); cf. Dittenberger², 329. 49 (Ephesus); see A. Croiset, 'L'Affranchissement des esclaves pour faits de guerre,' in *Mélanges Henri Weil*, Paris, 1893, p. 67 f.

lium, was effected either *inter vivos* or by testament.¹ Manumission *inter vivos* naturally involved publication, as by announcement in a law-court (*ἐν δικαστηρίῳ*)² or other public place.³ Proclamation by the herald in the Athenian theatre before the people became a fashionable nuisance which had to be checked by the severest penalty.⁴

(c) *Through a deity*.—In many places the favourite method was manumission under the form of dedication to a deity, the slave thus becoming the god's property (*τερόδουλος*). This was perhaps historically the oldest method. Properly and originally it was not manumission, but substitution of ownership; and originally perhaps the slave was actually transferred to the service of the temple—certainly always lighter than that of a private owner.

By far the largest and most instructive class of manumission inscriptions is that dating generally from the end of the 3rd cent. B.C. to the 2nd cent. A.D., in which the deity named appears not merely as accepting or witnessing to a dedication made to himself, but as one of the principals in a purely commercial transaction, i.e. as himself purchasing the slave, not to retain him as *τερόδουλος*, but to set him free⁵—his freedom being generally conditioned in the instrument of sale by certain obligations towards his old master. Many hundreds of such records having survived, a study of them tends to dissipate all illusion as to the real significance of slavery among the Greeks. The sale to the deity is not fictitious, for real money passes into the master's pocket⁶—perhaps the full market-price of the slave, hardly less, as agreed between slave and owner; the purchase money is of course provided by the slave himself from his *peculium* or sufferance savings. As the slave, having no legal personality, could not enter into any legal contract with his master, he must rely upon the god to act for him, i.e. he must entrust his priest both with the purchase money and with the carrying out of the entire transaction (*καθὼς ἐπίστευσε τῷ θεῷ τὰν ὄντων* is the phrase used). Thus the owner could not touch the money deposited by the slave with the priest without first parting with his property in the slave to the god, under a legal contract of sale providing adequate secular safeguards against its breach. The transaction was profitable to the temple indirectly, and perhaps also directly; the owner secured his own price for his living property, and the slave got just what he was able to wring from a situation in which, in the last resort, he was absolutely powerless.

It is clear that this method of sale into freedom was simply a means of getting hold of the bulk of the slave's *peculium* and retaining his services during his best years, and of throwing him upon the world at the end of his days to fend for himself; neither humanity nor religion had much real significance in this connexion. The method is applied almost wholly in the interest of the vendor,

¹ See Aristotle's own will, in *Diog. Laert.* v. 1. 9; cf. *Dio Chrys.* xiv. 440: οἱ δὲ τινας τὴν αὐτῶν τιμὴν καταβεβήκασι τοῖς θεοποιῶσι, and xxvi. 328.

² *Dion. Hal.* v. 696.

³ Cf. *Suid.* s.v. Κράτης (ἐπὶ βωμὸν ἄρβεις εἶπεν) Κράτης ἀπολύει Κράτην).

⁴ *Æschin. Ctes.* 41.

⁵ Hence the confusion of thought and phrase in the formula in use: ὡς ἐλευθέρων ὄντα καὶ τοῦ θεοῦ, 'free and yet the god's property.' Doubtless this method was a development of a transaction in which the god, i.e. his priest, with the god's own money (the temple treasure), bought in open market the slaves, male or female, required for service about the temple. Many, if not most, of the slaves donated to a temple as hierodoules must have been, or must eventually have become, too old and feeble to be of much use; but the god could no more reject such dedications, or cast them adrift, than he could refuse the cheap and flimsy offerings of the poor. Hence the Greek temples in this way served as almshouses.

⁶ Cf. the almost constant formula καὶ τὰν τιμὰν ἔχει, or ἀρέχει πᾶσαν, asserting this.

who of course could have found no purchaser so complaisant as the deity with whom he deals. The vendor retained in effect what he professed to sell.¹

11. **Freedmen**.—In Roman history freedmen (*ἀπελευθεροί, ἐξελευθεροί*) play a great part, but not in Athens or Greece generally. In Greece, freedmen were indistinguishable from ordinary domiciled aliens (*μέτοικοι*). Even as early as Kleisthenes freedmen seem to have been numerous in Athens, for he made many of them citizens.² Like ordinary domiciled aliens, freed slaves of Athenians must put themselves under a patron (*προστάτης*—their old master), and must observe certain obligations of service and respect towards him, details of which are unknown, and must pay to the state the alien's annual tax (*μετοίκιον*), with an additional three obols, besides performing all required military service by land or sea.³ Standing thus to the state as a metic, and to his former owner as a client, the Athenian freedman was worse off than the Roman freedman, being in a condition intermediate between slavery and complete freedom as a citizen—an ambiguity characteristic of the Greek incapacity for clear legal conceptions, and illustrative of the extreme difficulty of naturalization in the ancient state, with its inherent conception of exclusive citizenship. If a freedman was false to his obligations, he was liable to prosecution (*δίκη ἀποσταλίου*), and, if condemned, sank again into slavery, or in the other event became finally freed of obligation towards his former master—i.e., he became a free metic, with freedom of choice as to his patron. A special vote of the assembly alone could elevate him to citizenship.

12. **Slavery and Greek thought**.—A discrimination between lower social functions (those of husbandman, artisan, trader, and the like) and higher social functions (those of administration, legislation, and war) is characteristic of Greek sentiment, though not everywhere made in practice. Of rigid coincidence of theory and practice, indeed, solitary examples were presented by Crete and Sparta, which 'sorted' the elements of the state with a thorough-going doctrinairism that appealed powerfully to the philosopher, but found itself, in Greece at large, with the exception of particular coteries, at ever greater variance with the facts of life. Nevertheless, even in such states as admitted the industrial and commercial classes to political power, popular sentiment, in its usual illogical and snobbish way, was thoroughly contemptuous of the so-called *βανυστικὰ τέχνηα*.

To do manual work, even of such sort as did not obviously impair health and vigour, and especially to do it for pay, implied acceptance of a relation of subservience,⁴ incompatible with the independence and leisure of a free man, and breeding a mean and sordid spirit. The real difference of intellectual and ethical level between some vocations and others was the solid core of truth upon which Greek philosophic thought seized, from which with merciless logic it developed a distinction between a professional ruling class and all such as engaged in the 'necessary' functions of trade and the manual arts. A separate class, or classes, must needs exist in the state for the discharge of these lower functions, and those so employed must, unless justice is to be infringed, be capable of nothing higher. The existence, in adequate numbers, of such a class is essential to

¹ This is not to say that there may not have been numerous instances in which the transaction was genuine in spirit and form.

² *Ar. Pol.* iii. 2=1275 B: πολλοὺς γὰρ ἐφύλαττευσεν ξένους καὶ δούλους μετοίκους (see Newman's note in *loc.*, and vol. i. p. 231).

³ *Dem. Phil.* i. 36.

⁴ *διακονία* (Plato, *Laws*, 919 D); cf. *Ar. Pol.* i. 18=1200 A: ὁ γὰρ βάνυστος τεχνίτης ἀβάρησι μὲν τινα ἔχει δουλείαν.

the realization of the highest type of society, just as the household must consist of both slaves and free.¹ Unless, however, there was to be frankly accepted a dichotomy of the Hellenic race itself, such as would be fraught with the gravest menace of national disruption and chaos, there was nothing for it but to adopt the old standing division of humanity into Hellene and non-Hellene,² and to find therein the philosophic justification of the institution of slavery, while doing what could be done for the slave himself. The 5th cent., less troubled than the 4th with doubts, had not discovered the comfortable doctrine that slavery might be actually good for the slave, enabling him, under the mild yoke of the exponents of culture, to lead a higher sort of life than was otherwise possible for him.

The bias of Aristotle being, in general, to accept, with his own amendments, the institutions and views in which the collective experience of the Greek race had crystallized, he retains slavery in his ideal state, but retains it in an ideal form which would make it spiritually as well as practically advantageous to the highest capacities of both master and slave. The slave is an article of household property, an indispensable animate instrument,³ of a superior sort—an instrument not of production, but of action, i.e. not coming solely within the sphere or purview of economics, but within that of ethics;⁴ being an article of property, he belongs wholly to his master. The facts of the world show that there is a natural, and therefore just, because actually existing, principle of rule and subordination, or scheme of co-ordination in nature, both animate and inanimate.⁵ There is, then, a 'natural slavery' (φύσει δοῦλον), in which the slave's bodily strength is complementary to the master's intelligence and 'virtue', just as the union of male and female is necessary for purposes of reproduction and continuance of the species.⁶ The natural slave is as far inferior to his master as the body is to the soul, or as the lower animals to man generally, so that the relation of rule and subordination which obtains between soul and body, or between men and animals, is applicable here also. The only difference, indeed, between such men and animals is that the former can listen to reason; but their best function is the obedient expenditure of their physical strength,⁷ making noble life (τὸ εὖ ζῆν) possible for their master. The moral possibilities of the institution of slavery justify it—justified as it is indeed already by the mere fact of its existence as part of the teleological scheme of things. Paradoxical as it may sound, it was not every one who could be a slave in the true sense,⁸ for the status properly connoted a certain spiritual as well as physical aptitude. It is less therefore upon the social or economic necessity for slavery than upon the moral benefits which through it arise for both master and slave that Aristotle insists, and he postulates for the master an intellectual and moral endowment as high as that of the slave is low. Thereby, in effect, was condemned a great deal of current slavery, in so far as it included captives, not a few even of Greek blood, taken in war, i.e. men in whose case mere brute force was the basis of the status. The true test of just freedom and just slavery, according to Aristotle, lay in the relative goodness and badness, i.e. the intellectual and moral capacities, of men. Constituted on such lines, slavery would be, for the slave, no such one-sided bargain as in actual fact it was.

Aristotle's theory, though it started from fact and claimed to return to fact, yet made shipwreck upon the rock of fact. For, in the first place, there were in Attica tens of thousands of slaves who, being in no genuine sense elements of a household, were yet in mental and moral capacity and actual output fully on a par with the free citizens who owned them and claimed the main part of the fruits of their intelligence and conscientious labour. In the second place, the ultimate basis of their status, let the theorists say what they would about laws of nature and existent right, was mere force and violence enlisted in the service of idleness and greed, and worse. Lastly, the actual moral effects of slavery, alike for slave and for slave-owner,

were as a rule very conspicuously different from those desiderated by Aristotle; yet, if the institution was natural and right just because it was an objective fact, how could its fruits be logically condemned? The task of moralizing an essentially immoral institution was beyond his powers. Then as now rapacity and selfishness were apt to define right strictly from their own standpoint, and men were not slow, with grandiloquent phrase and fitful exhibition of capricious benevolence, to gloze national wrongdoing.

The noteworthy points are, not the precise amount of truth in Aristotle's attitude, but, firstly, the fact that 'the Greeks are characteristically the first human beings who felt a doubt or scruple about slavery' and that it was 'in Greece alone that men's consciences were troubled' by it, so that Aristotle found himself driven to defend the position with what forces of argument he could muster; secondly, that he makes little or no point of any supposed indispensability of slavery to the maintenance of the economic fabric of his age. And practical philosophy itself was soon to demonstrate the illusoriness of his fundamental axioms. Kleanthes was none the less a 'wise' man though he earned his living by the sweat of his brow in nightly toil as a drawer of water and kneader of bread, both reputed servile employments.¹ The Stoics demonstrated that virtue and happiness were independent of social condition,² thus making it clear that slaves were not essential by way of bolstering up virtue in order to save supposed higher natures from deterioration through contact with the crudities of life; thus 'slavery lost its Aristotelian *raison d'être*.'³ Aristotle perceived clearly enough that slavery is incompatible with full human dignity, but, his thought being conditioned always by the vicious aristocratic antithesis of Hellene and βάρβαρος (though Plato could have taught him better),⁴ he was unable to go on to perceive also that the concept of human dignity is either universally valid or everywhere equally worthless. He is honest enough, however, to confess that nature has left us without any practical criterion by which to distinguish the noble from the ignoble;⁵ for the obvious criterion of colour, to which men in more modern times were fain to appeal, was to the Greeks unknown, or at least insignificant, and he was unwilling to fall back upon the 'verdict of history' as given by war, for that, as all Athenians knew to their sorrow, often proves far too much.

For the influence of Stoicism on slavery see art. SLAVERY (Roman).

W. J. WOODHOUSE.

SLAVERY (Hindu).—Slavery is an institution fully recognized in the Sanskrit lawbooks of India. The Code of Manu (viii. 415) names seven causes of slavery, viz. capture in war, voluntary submission to slavery for a maintenance, birth from a female slave, sale, gift, inheritance from ancestor, and condemnation to slavery by way of punishment. Manu adds that wives and sons, like slaves, can have no property of their own,

¹ Diog. Laert. 163.

² Newman, i. 156.

³ Cf. *Ar. Pol.* iv. (vii.) 7=1327 B for Aristotle's own well-known comparison of Hellenes and Asiatics, the valuelessness of which is shown by comparing what Isocrates says on the same subject (*de Antid.* 293); cf. *Plato, Polit.* 292 D. But Plato's formal profession of faith in this matter is just as uncompromising as Aristotle's (see *Rep.* 470 C).

⁴ *Pol.* i. 5=1254 B.

¹ *Ar. Pol.* i. 3=1253 B: οἰκία δὲ τέλειος ἐκ δούλων καὶ ἐλευθέρων.

² βάρβαρος; cf. *Ar. Pol.* i. 2=1252 B: ταὐτὸ φύσει βάρβαρον καὶ δούλον ὄν, and *Eur. Iph. Aul.* 1266.

³ *Ar. Pol.* i. 4=1253 B; cf. *Eth. Nic.* viii. xi. 6.

⁴ *Pol.* i. 4=1254 A: ὁ δὲ βίος πρᾶξις, οὐ ποιήσις ἔστιν: διὸ καὶ ὁ δούλος ὑπερέτης τῶν πρὸς τὴν πρᾶξιν. So William Morris: 'We must see industry not simply as a process of production but as a form of association,' etc., simply echoing Aristotle. See A. E. Zimmern, 'Progress in Industry,' in *Progress and History*, ed. F. S. Marvin, Oxford, 1912, p. 212 f.

⁵ *Pol.* i. 5=1254 A: ἐν ᾧ ἅπασιν ἐμφαίνεται τὸ ἄρχον καὶ τὸ ἀρχόμενον.

⁶ *Id.* i. 2=1252 A.

⁷ This is just the point at which Aristotle comes within hail of modern systems of 'scientific management,' such as the notorious Taylor system, the inventor of which in his defence thereof (as is pointed out by Zimmern, *loc. cit.*) unconsciously paraphrases Aristotle's defence of slavery.

⁸ *Pol.* i. 5=1254 B: ἔστι γὰρ φύσει δοῦλος ὁ δυνάμενος ἄλλου εἶναι.

and that Śūdras, even when emancipated by their master, are not therefore released from servitude, because the state of dependence is innate in them. The perpetual slavery of the Śūdra class is one of the axioms of Brāhmanism, and may be traced back to the *Puruṣasūkta* hymn of the Rīgveda (x. 90), in which it is stated that the Śūdra issued from the feet of Puruṣa, the primeval male, feet meaning service. Nārada (v. 25 ff.) gives some further details regarding slavery, and enumerates fifteen kinds of slaves: one born (of a female slave) in his master's house, one bought, one received by gift, one obtained by inheritance, one maintained during a general famine, one pledged by his rightful owner, one released from a heavy debt, one made captive in war, one won in a stake, one offering himself for a slave, an apostate from asceticism, one enslaved for a stipulated period, one becoming a slave for maintenance, one enslaved on account of his connexion with a female slave, and one self-sold. The difference between these various slaves and the class of hired servants, according to Nārada, lies in this, that the former, but not the latter, do impure work, such as removing urine and ordure, attending their naked master, handling cows, cleaning the house and the road. The first four in the above enumeration of fifteen slaves, likewise an apostate from asceticism and one self-sold, can never be released from slavery except by the favour of their owners, but the others may obtain their release by giving a compensation in money or providing a substitute. One intending to emancipate his slave has to take from the slave's shoulders a jar with water and smash it, sprinkling his head with the water, and thrice declaring him free. One superior in caste cannot be the slave of his inferior, nor is it legal slavery when a man has been sold after having been captured by robbers, or has been enslaved by force. Here it should be observed that the ancient Hindu law contains important relics of the practice of selling children for slaves which obtained amongst ancient societies. Thus it is stated by Vasiṣṭha (xv. 2) that the father and the mother have power to give, to sell, and to abandon their son, and the son bought is generally mentioned among the various substitutes for a real legitimate son. It is true that Apastamba (ii. 13. 11) does not recognize the right to buy or sell a child, and the secondary sons generally were abolished in the more recent lawbooks, excepting the adopted son (*dattaka*; see art. ADOPTION [Hindu]). Adoption itself may be regarded as the survival of an archaic institution which owed its origin to the principle of slavery, whereby a man might be bought and sold, given and accepted, or relinquished in the same way as a cow or horse. The statements of the lawbooks on the subject of slavery are corroborated by the historical records, and V. A. Smith in his *Early History of India* observes that prædial and domestic slavery of a mild form seems to have been an institution in most parts of India from very remote times. In the time of J. A. Dubois (in India, 1792-1823), the Pariahs 'were looked upon as slaves by other castes, and treated with great harshness' (see art. PARIAS). Under British rule, slavery was not abolished at once, but gradually. Regulation x. of 1811 prohibited the importation of slaves from foreign countries into the British territories. This rule was by Regulation iii. of 1832 extended to the provinces which subsequently came into the possession of the British Government. Later on was passed Act v. of 1843 prohibiting all officers of Government from recognizing slavery. And it was finally abolished in 1860 by the Indian Penal Code, which declared the equality of all men, and provided punishment for buying or selling any person as a slave.

SLAVERY (Jewish).—Slavery was one of the features of ancient and mediæval Jewish life, and there is a large crop of Jewish legislation on the subject. It is noteworthy that among the Jews treatment of the slave was never debasing or cruel. The Mosaic legislation, with its insistence upon the rights possessed by the bondman or bondwoman and its consequent limitation of the master's power over them, inculcated the duty of clemency in the master—a virtue which colours their mutual relations in all subsequent epochs. Besides this, the Jew at every turn was confronted with such injunctions as those in Dt 5¹⁵ 15¹⁵, where the law of kindness to the slave is brought home to the Israelite by the duty to recollect how much his own ancestors had suffered during their serfdom in Egypt.

1. In OT literature.—Gn 14¹⁴ speaks of Abram 'arming his trained men, born in his house, three hundred and eighteen.' These 'trained men' were most probably hereditary slave property. That such slaves were, even in this early epoch, something more than the chattels of ancient Greece and Rome is evidenced by Gn 17²³, where 'all that were born in his [Abraham's] house, and all that were bought with his money' underwent the rite of circumcision—a clear proof that the master owed some sort of family obligation to the slave. Similarly in Ex 12⁴⁴ the circumcised slave, by becoming a member of the family, and thus sharing its religious duties and privileges, is permitted to eat of the Passover. But the fountain-head of ancient Jewish slave legislation is Ex 21²⁻²⁷. A clear distinction is here drawn between the Israelitish and the non-Israelitish bondman or bondwoman, a distinction which held in all succeeding ages. An Israelite could buy a fellow-Israelite for six years only. In the seventh year he automatically received emancipation, unless he voluntarily decided to remain. Gentile slaves, however, whether male or female, could gain their freedom only if they had previously been the victims of certain specified acts of cruelty by the master. In the year of jubile¹ all Israelite slaves together with the children born to them during serfdom were, according to Lv 25³⁹, to be liberated without exception; but, if the children were born of a Gentile mother, then they, like her, must remain in slavery (Ex 21⁴). According to Lv 25⁵⁰, the Hebrew slave of a non-Hebrew master had also to be freed in the year of jubile, although he should previously be redeemed, if possible, by his kindred or by his own money, the redemption price being reckoned in accordance with the number of years that had still to elapse before the arrival of the jubile. That the traffic in slaves led to numerous abuses, religious, moral, and economic, is seen from Jer 34⁸⁻²², where the princes, priests, and people of Judah are divinely warned of the dire punishment which will overtake them as a result of their breach with the ordinances of the Mosaic slave legislation. There are numerous points, both of resemblance and of contrast, between the Mosaic slave laws and those of the Code of Hammurabi.²

2. In Rabbinic literature.—The status, rights, privileges, and manumission of slaves are subjects of elaborate discussion in the Talmud as well as in the subsequent mediæval code-books, such as—to mention the two principal ones—the *Mishneh Tōrah* of Maimonides (*q.v.*) and the *Shūlḥān 'Araḥh* of Joseph Qaro (*q.v.*). From Lv 25³⁹, 'And if thy

¹ See art. FESTIVALS AND FASTS (Hebrew), § I. iv. 2.

² See art. LAW (Babylonian), vol. vii. p. 818.

brother . . . be waxen poor, and be sold . . .,' the Talmudic authorities deduced the injunction that a Jew should sell himself into slavery only as a very last possible resort, as such an act was a stigma upon the honour of the Jewish religion, which declared through Lv 25⁴⁵ that the Israelites were to be servants of the divine, and not of any human, master. He should not sell himself to a woman or to a convert or to a Gentile; but, should he do so, the sale is valid, and it then becomes the religious duty not only of his family but also of the Jewish community to effect his redemption. Such an act was always considered a highly meritorious one, and the social life of the mediæval Jews is studded with instances of it on the part of individuals and communities in different parts of Europe—although it should here be said that the Synagogue forbade the traffic in Jewish slaves at quite an early stage, but placed no bar on the commerce in heathen slaves. The master was religiously bound to have his non-Jewish slave circumcised. In default of this, it was the duty of the ecclesiastical authorities to have the circumcision performed. But, should such slave have been purchased from a non-Jewish master, then circumcision was optional to the slave, who, if he refused to undergo it, was not allowed to be kept longer than twelve months, after which it was incumbent upon the Jew to sell him to a non-Jewish master.¹ The object of laws like these was to make the slaves an integral part of the Jewish community. Once circumcised, they were regarded as being 'received into the fold' and bound by all the 'negative' precepts of the Tōrah and by such 'affirmative' precepts as apply 'to stated times only.' But they were never more than a subordinate and inferior part of the community, as is proved by the limitations imposed by the Talmud and all the later codes upon their rights of intermarriage with the general Jewish population. When, however, as in the Middle Ages, the act of making Jewish converts was fraught with danger at the hands of Christian authorities (who in many places officially prohibited such conversions), the duty of circumcising slaves was entirely abrogated. According to the Talmud,² the master of a Jewish slave was compelled to accord him the same home comforts as he himself enjoyed.

As the *Shūlḥān 'Aṛākh* puts it, 'It is the quality of saintliness (*hasidūth*) and the way of wisdom for man to be merciful to his slave, not to make his yoke heavy nor to distress him, but to give him to eat and drink of all manner of foods, not to contemn him either by deed or word, not to multiply complaints and anger against him but rather to speak gently to him and lend a kindly ear to his grievances.'³

Self-redemption for the slave, whether Jewish or not, was always permitted, the conditions governing such an act on the part of a female differing in many material ways from those attaching to a male.

Jewish legislation, like all other systems which legalized slavery, refused to slaves all title to independent property. As the Rabbis laconically phrased it, 'Whatsoever the slave hath acquired, the master hath acquired.'⁴ Whatever he may receive from others, or find by the way, belongs to the master. Should he be assailed and injured, the damages—which were a five-fold compensation for (a) the blow, (b) the pain caused, (c) the cost of healing, (d) loss of time, (e) the indignity—were to be paid to the master.

A subject elaborated at great length in the Talmud and the mediæval codes is the manumission of the non-Jewish slave, which became compulsory on the master's ill-treatment of him in certain

specified respects. A deed of manumission had to be drawn up, and, should the master refuse to sign it, he was excommunicated. It had to be handed to the slave in the presence of two witnesses; and, should the master have expressed a merely oral intention to manumit, he could not retract, as his words were binding, and the court could compel him to write out the official deed. A curious law is the following: if the master married his slave to a freewoman, or if he put phylacteries on his head, or if he bade him read three verses in a scroll of the Law before the congregation, or if he asked him to do any of those precepts which only a freeman might perform, the slave became free and the master was compelled to give him a document of manumission.¹ To write in the future tense 'I shall manumit' was ineffectual. It must be in the past tense, 'I have manumitted.' According to Lv 25⁴⁶, it is the Jew's duty to retain his non-Jewish slave and transmit him as a heritage to his children. Hence it was that the Rabbis said that to manumit a 'Canaanite' (i.e. non-Jewish) slave was to infringe a negative precept.² An exception, however, was made in the case of manumission *lidbar mitzvah*, i.e. for the purpose of fulfilling a precept, as, e.g., to complete the number of ten males required for the celebration of public worship. Should the slave express a wish to go to Palestine, the master was compelled to go with him or to sell him to some one who would consent to take him there. If a slave fled from anywhere to Palestine, he might not be brought back into serfdom; and the master was bound to manumit him. This law is based on Dt 23¹⁵, 'Thou shalt not deliver unto his master the servant which is escaped from his master unto thee.' He who, living in Palestine, sells his slave to a master outside Palestine thereby enables the slave to get his freedom, as the second master is compelled to manumit him.³ Should a Jew sell his slave to a non-Jew, the slave thereby acquires his freedom.

3. Jews and the slave trade.—The mediæval Church's objection, from the time of Constantine, against the ownership of Christian slaves by Jews did not prevent the latter from becoming, at certain epochs, the chief traders in this class of traffic. Indeed, Christians openly defied the Church by co-operating with Jews in this commerce. In the reign of Louis the Pious the Jews imported large numbers of Christian slaves into Spain and N. Africa. Likewise they acted as middlemen, supplying Christian slaves to the Muslim world and Muslim slaves to the Christian. At the zenith of the Jew's prosperity in Spain (from the 10th to the end of the 15th cent.) many of the most wealthy Spanish-Jewish families amassed large fortunes by the importation of slaves from Andalusia.⁴ The circumcision of slaves often incensed the mediæval Church authorities, and bitter protests were frequently heard. As the practice was looked upon as an infringement of the law prohibiting Jews from making converts, the Rabbinical authorities made the rite of circumcision optional on the part of the bondman.

SLAVERY (Roman).—Slavery among the Romans differs from slavery in Greece in respect of the scale and the application of the institution. To these differences must be added that of greater range in time, so that the historical development of Roman slavery is both more apparent and more complex than is the case in Greece. In spite of these differences, however, the essential nature and general characteristics of the institution remain the same, so that much of what is said under the head of Greek slavery is true here also.

I. **FIRST PERIOD.**—We must distinguish three periods in the history of Roman slavery. The earliest, a comparatively brief phase, is that of what Mommsen calls 'the old, in some measure innocent, rural slavery,'¹ under which the farmer tilled his moderate holding in person, assisted by his sons and his slaves, and occasionally by hired hands—a system under which the slaves were comparatively few, and mainly of Italian or at least Etruscan origin. They were either war captives or born of such. There was thus 'no striking distinction, and often no distinction at all, of race, appearance, speech, or manners, no instinctive repulsion between owners and owned, which, in other regions, have supplied some of the most painful chapters in the history of human relations. Chattels at law, ritual included them not only within the pale of humankind, but to a limited extent even of the family, and the simple households of earliest Rome may have witnessed little difference in the treatment of slaves and sons.'²

Traces of this older humanity of relations between master and slave still linger in the household of the elder Cato in the middle of the 2nd cent. B.C., though he belongs in reality to the following period.³ Like the housefather and landholder of old time, Cato shared the labours and coarse fare of his slaves,⁴ and his wife—'if she allowed her children to be suckled by female slaves, she also allowed their children's' in return to draw nourishment from her own breast; one of the few traits which indicate an endeavour to mitigate the institution of slavery by ties of human sympathy—the common impulses of maternity and the bond of foster-brotherhood.⁵

II. **SECOND PERIOD.**—The second stage of Roman slavery was entered upon early in the 4th cent. B.C., when the national economy of Italy began to experience a revolution, the earliest evidence of which is the enactment of the law of 367 B.C., compelling a landholder to employ along with his slaves a certain proportion⁷ of free labourers. The centralized farming on a big scale which began after the Hannibalic war was probably derived from the Carthaginian slave plantation-system,⁸ with which the Romans came in contact in Africa and Sicily; perhaps also, as Mommsen

suggests,¹ it was not unconnected with the recent introduction of wheat-growing. The result was the rapid expansion of slave-owning as a mode of investment—a process which simply repeated the industrial development seen in Greece two centuries earlier. The new system 'was pervaded by the utter regardlessness characteristic of the power of capital,'² and was 'just like that of America, based on the methodically-prosecuted hunting of man.'³ Concomitantly, special factors were at work to divert attention from agriculture to cattle-rearing as being at once easier, more profitable, and apparently capable of unlimited development, besides being more immediately available and lending itself to the spirit of an age in which the display and spending of wealth (in some respect actually enforced by law⁴) was more congenial than the making of it by personal industry, as in the old days.⁵ But, in whatever direction speculation applied itself, 'its instrument was without exception man reduced in law to a beast of burden.'⁶ This expanded slave-system was applied in two main forms—to pastoral husbandry carried on by means of armed, often mounted, slave-herdsmen on great ranches,⁷ and to the plantation-system proper, i.e. cultivation of huge estates (*latifundia*) by means of gangs of slaves,⁸ working often in shackles and always under the supervision of overseers, slaves like themselves. To these types a third may be added, that of domestic industry carried on for the profit of an owner by slaves skilled in various arts or trades, or by freedmen working in part for the profit of their *quondam* master.⁹

Thus from the latter part of the 2nd cent. B.C. the slave-system of the Republic reached its acme. An enormous increase in the slave trade was the consequence of the sudden and universal demand for cheap labour—'occupiers of State land required shepherds; the contractors required labour for public works or military equipment; the State required it for the public services; traders for the crews of their ships; the wealthy for domestic service or for gladiatorial shows; small proprietors and the middle class generally to relieve them of the more distasteful part of their daily work.'¹¹ There can be no question that the work controlled by the public companies was done mainly by slaves, and that their operations were unhampered by the organized claims of free labour; they were therefore able to choose their instruments solely with a view to efficiency. For the more technical side of the various activities in request the Roman citizen was in general never sufficiently well educated, while for the life on the great cattle-runs and sheep-walks he was if possible still less adapted. Moreover, the frequent calls to military service,¹² the real industry of the Roman freeman,¹³ made it undesirable, from the employer's point of view, to use citizens even for such labour as they might be willing to undertake.¹⁴

The inherent viciousness of the situation was hardly felt at all at first.¹⁴ For, while the continual wars of plunder bred and fostered a capitalistic class crying ever for labour and yet more labour, they also directed towards Italy a ceaseless and, as it seemed, inexhaustible stream of the cheapest labour in the world,¹⁵ in the tens of thousands of slaves torn from all parts of the Mediterranean area and the north. There was perhaps hardly

³ *Id.* iii. 306.

⁴ Dion. Hal. vii. 71.

⁵ Mommsen, lii. 120.

⁶ *Id.* iii. 307.

⁷ This pastoral husbandry on slave-manned ranches or sheep-runs was rapidly extended to the provinces as they became available for exploitation; e.g., Dalmatia in 155 B.C. was no sooner acquired than the Roman capitalists began the rearing of cattle there on a big scale. T. Pomponius Atticus possessed enormous cattle-runs in Epirus (Cornelius Nepos, *Atticus*, xiv. 8). It was the vast military needs of the time that made these so profitable.

⁸ Especially in Etruria (Plut. *Tib. Gracchus*, 8, and cf. Ferrero, *l.c.* 302 f.).

⁹ Cf. the case of Crassus, who made much of his wealth by buying unskilled slaves and having them trained to various professions (Ferrero, i. 203 and 340; A. H. J. Greenidge, *Hist. of Rome*, i. 66 f.).

⁷ One-third, in the law as revived by Julius Cæsar (Suetonius, *Julius Cæsar*, 42). Appian, *de Bellis civilibus*, i. 8, is the only authority referring this provision back to the Licinian law.

⁸ See Mommsen, iii. 307; cf. *ib.* 118.

any branch of trade better organized than the slave trade itself, the foster-mother of all other trades of the time.

1. Sources of supply.—‘The Negroland of that period was western Asia,’¹ where the Cretan and Cilician corsairs, the real professional slave-hunters and slave-dealers, robbed the coasts of Syria and the Greek islands.² To such a pitch was the hunting pursued that about 100 B.C. the king of Bithynia pleaded, as a reason for his inability to supply the required military contingent, the ravages of the Roman revenue-farmers among the able-bodied population of his kingdom.³ At the great slave-mart in Delos, where the Eastern dealers disposed of their human cargoes to Italian middlemen, as many as 10,000 head were said to have been landed and sold off in a single day.⁴ Many regions must thus have been permanently depopulated and permanently depressed below the margin of cultivation.

After the overthrow of the Macedonian kingdom at the battle of Pydna Æmilius Paulus, under the senate's orders, sold into slavery, i.e. to the speculators or wholesale agents (*mangones*) who accompanied Roman armies for that purpose, 160,000 free inhabitants of 70 communities in Epirus which had sided with Perseus.⁵ The defeat of the Cimbri and Teutones contributed a like number to the Roman slave-market.⁶ Caesar on a single occasion sold into slavery 53,000 of the Aduatuci;⁷ and similarly, at the opposite extremity of the empire, Cicero, after his own petty campaign in the Taurus and the capture of the hill-fort of Pindenissus, writes to Atticus telling him how much the sale of the captives brought.⁸ Titus sold 90,000 Jews into slavery in the conquest of Palestine.

2. Legal position.—In law the slave was a chattel; he was the one human being who could be owned. He is not only a chattel (*res*), but is treated constantly in the legal texts as the typical chattel. Under the republic there were no legal limitations to the master's power; *iure gentium* his rights were unrestricted. Public opinion,⁹ however, and self-interest, combined with the religious sentiment connected with family life, exercised a powerful influence to the slave's advantage at a time when slaves were few and in closer relations with the master than was the case in later ages. The censors could also take note of outrageous cruelty to slaves as of other conduct unworthy of a citizen. In political and civic life the slave had no share; he could hold no public office nor sit in any public assembly; nor could he serve in the army.¹⁰

3. Public slaves.—A considerable number of slaves were employed in various public departments in subordinate duties. These formed a class standing somewhat apart from the rest of the slaves, and were known as *servi publici populi Romani*. They formed in fact a sort of rudimentary lowest grade of a permanent civil service, as at Athens, serving as messengers, magistrates' attendants, clerks, servants in temples,¹¹ assistants in the fire, water, and sewerage services, under the control of the *ædiles*.¹² Under the empire the employment of *servi publici* diminished, and they were superseded by freemen, except within the capital, as early as the time of Augustus.

4. Status in religion.—The exclusion of slaves

¹ Slaves from that region were regarded as being specially fitted for slavery owing to their great powers of endurance. Plautus commends the Syrians ('genus quod patientissimum est hominum' [*Trinummus*, 542]). Sardinians, on the other hand, were little worth (cf. Cicero, *pro Flacco*, 27 [65]; Festus, p. 322: 'Sardi venales, alius alio nequior').

² Mommsen, iii. 308.

³ Strabo, p. 668.

⁴ Livy, *Epit.* 68.

⁵ *ad Att.* v. xx. 6.

⁶ So even under the empire (see Sen. *de Clem.* i. 18).

⁷ Death was the penalty for enrolment; cf. Livy xxii. 83 for the crucifixion of 25 slaves, 'quod in campo Martio conlurassent' (see Pliny, *Epp.* *ad Trajanum*, 29 and 30). The state itself could of course override this rule, as was said to have been done after Cannæ.

⁸ Livy, ix. 29; Tac. *Hist.* i. 43.

⁹ Cf. *Lex Colonia Genetiva Julia*, 62 (in E. G. Hardy, *Roman Laws and Charters*, Oxford, 1912).

¹⁰ Tac. *Ann.* ii. 30.

¹¹ But not at natural law (Ulpian, *Digest.* i. xvii. 32: 'Quod attinet ad ius civile, servi pro nullis habentur; quod ad ius naturale attinet, omnes homines aequales sunt'). Slavery is the only case in which, in the extant sources of Roman law, a conflict is declared to exist between the *ius gentium* and the *ius naturale*. It is part of the *ius gentium* because it originates in war. The Romans therefore frankly admitted that slavery was inconsistent with the highest ideals of human society. The thesis of Aristotle, on the contrary, was that slavery realized the purpose of nature as formulated in those ideals.

from the public cults was not due to any denial of their claim to divine protection, but simply to the fact that the gods were divinities of certain special groups, *gentes*, etc., to which slaves neither did nor could belong. Hence they could not share in the *sacra* of the *gens* of their master. But slaves had a special cult of Diana, and were given special consideration at the festival of the *Saturnalia*, the most remarkable feature of which was the temporary licence granted to slaves in the household—slaves and free for the nonce exchanging rôles.¹ Within the household, slaves shared in the worship of the Lares and Penates. In the burial customs their common humanity is fully recognized, and the grave of the slave is declared as sacred as that of the freeman; he rests there with the other departed members of the family of which he was the humblest element. Hence memorials to slaves are among the commonest of funeral inscriptions. Slaves are also members (with their master's consent) of burial clubs² (*collegia*).

5. Marriage.—Legally slaves were incapable of marriage, but it is abundantly clear from the literary and legal texts that they habitually entered into permanent unions, which were marriage in all but their legal aspect, and were in general respected as such by their masters; and the names of legal relationships arising through legal marriage—*uxor*, *pater*, *filius*, *frater*, and the like—were freely applied in the case of slaves, even in the legal texts, but, as is expressly said, by analogy only and without legal significance. In strictness, however, any such connexion between male and female slave, or between slave and free, could only be 'cohabitation' (*contubernium*), not *matrimonium*. Hence, in the case of free persons, enslavement of either party broke the marriage tie.

6. Torture.—A slave could not be party to civil proceedings, either to sue or to be sued; this must be done through his master. Nor could a slave be accuser in a criminal case;³ but he could 'inform,' i.e. make *delaiones* of criminal offences, though not against his master (except, from the time of Severus, for certain specified offences; cf. the rules regarding slaves' evidence against their masters).

As a rule, the evidence of slaves was not admissible in civil cases, but there were some exceptions. Where it was admissible, it had to be taken under torture (*questio*), as in Greece; but recourse was not to be had to such evidence unless there was already independent evidence before the court. In criminal cases also the evidence of slaves must be elicited by torture, conducted out of court under the supervision of the *questor*; it might be applied more than once.⁴ But a slave could not be examined under torture to elicit evidence against his own master, or, in the case of jointly-owned slaves, against either joint-owner.⁵

7. The peculium.—Though slaves were *pro nullis* in the eye of the civil and the prætorian law,⁶ they were in practice far from being nullities. Practical needs compelled recognition of a slave's individuality, and suggested those illogical com-

¹ See *GB*³, pt. vi. *The Scapegoat*, London, 1913, p. 307 f.; and cf. Seneca, *Ep.* xlvii. 14: 'honores illis in domo gerere, ius dicere permiserunt et domum pusillam rem publicam esse iudicaverunt.'

² The *Lex collegii Lanuvini* of A.D. 133 has survived, and shows slaves as members (C. G. Bruns, *Fontes iuris romani antiqui*, Tübingen, 1909, I. 383 f.; see S. Dill, *Roman Society*, p. 251 f.).

³ Hence, to save the principle, Hadrian enacted that complaints lodged by slaves, of cruelty on their master's part, were not technically 'accusations.'

⁴ Valerius Maximus, viii. 4: 'octies tortus.'

⁵ Tac. *Ann.* ii. 30.

⁶ But not at natural law (Ulpian, *Digest.* i. xvii. 32: 'Quod attinet ad ius civile, servi pro nullis habentur; quod ad ius naturale attinet, omnes homines aequales sunt'). Slavery is the only case in which, in the extant sources of Roman law, a conflict is declared to exist between the *ius gentium* and the *ius naturale*. It is part of the *ius gentium* because it originates in war. The Romans therefore frankly admitted that slavery was inconsistent with the highest ideals of human society. The thesis of Aristotle, on the contrary, was that slavery realized the purpose of nature as formulated in those ideals.

promises which are inherent in the Roman conception and law of slavery, and in the Greek also, though there less striking because of the paucity of documentary evidence. In Rome, as in Athens, almost any industry now carried on by free men might be and was carried on by slaves;¹ in imperial times it is hardly an exaggeration to say that Roman commerce was mainly in the hands of slaves; they carried on business (e.g., banking) for their master, or were partners in firms; the whole sphere of private trading was shared by slaves in competition with free men, freedmen, and *peregrini*, before the development of the free *procurator*, or agent. It is this activity of slaves in the higher walks of mercantile and professional life—an activity which is at variance with the strict law of their status—that constitutes one of the most striking, and indeed hardly comprehensible, differences between ancient and modern slavery. For these activities demand for their exercise precisely those qualities of intelligence, industry, integrity, and mutual respect which in the conventional literary estimates of the slave are *totidem verbis* denied, and seem to moderns, partly on the basis of experience and partly through mere prejudice, incompatible with a status so degraded.

The institution which enabled the rich Roman to engage in commerce without that personal intervention which would have offended the social prejudices of his age, and at little risk, was that of the slave's *peculium*. The *peculium* was a fund which masters allowed slaves to hold and, within certain limits, to deal with as they pleased; in law it was the master's, but *de facto* it was the slave's. Originally it was simply the small savings of food and such like that a slave had a mind to make by stinting himself. Under the empire it might imply a great sum and be in any form, even including other slaves (*vicarii*) and their *peculia*, to a total value greater than that of the principal slave in whose *peculium* they were held, and whose stock-in-trade they constituted. In dealing with it commercially the slave appears as quite distinct from his master, though his capacity is purely derivative from him, ostensibly and in ordinary parlance dealing for himself, but in the eye of the law for the master's account. The *peculium* was thus a sort of property of the slave, so that upon his manumission by a living master, whether *vindicta* or informally, he took the *peculium*, unless it was expressly reserved;² by manumission by will it did not pass to the slave unless expressly given in the will. But alienation of the slave did not carry with it the *peculium* unless it was expressly so granted.

8. Treatment.—The mutual goodwill and even familiarity of intercourse marking the earlier domestic slavery of the Romans gradually gave place to harshness and cruelty, though the legal position of the slave remained in essentials unchanged. Life, however, does not necessarily move always on the lines of strict logic and law, and it is always open for the individual to rise above the standard of his age, so that the actual position of the slave was no doubt very often much better in fact than it was in theory.³ In this later period also examples of happy relations between slave and master are not unknown, such as those between Cicero and his slave (later his freedman) Tiro⁴—though Cicero's general views on slavery seem to have been on all fours with those of Aristotle.⁵ Such also were the relations between Atticus and his slave Alexis,⁶ and between the younger Pliny and his *libertus* Zosimus.⁷ But such humanity was purely personal, or at best confined to limited and cultured circles,⁸ and represented neither the law nor average opinion and practice.

¹ Cf. Cicero, *de Officiis*, I. 42.

² In Greece apparently the rule was that the master manumitting or selling took the *peculium* unless he expressly waived his right (L. Mittels, *Reichsrecht und Volksrecht*, Leipzig, 1891, p. 882).

⁸ Cf. Boissier, *Cicéron*, p. 118.

For with the economic revolution and the resultant broad distinction between the *familia urbana* and the *familia rustica* a greater distance had been put between master and slave.¹ The slaves working on the estate, the stronger, rougher, less cultured and less tractable element, with which the master had as a rule little personal concern or contact,² came to stand, in comparison with the slaves of the town house, somewhat as a penal establishment, degradation to which could be held in *terror* over the heads of the more favoured class.³ The fact that the slaves on the country estate were now controlled by a *villicus*, himself a slave, was probably but an aggravation of their condition.

Cato expressly advised the sale of old, worn-out, or sick slaves for what they would fetch—the system he applied to cattle and the inanimate tools.⁴ Rations of sick slaves, he suggests, should be doctored—a maxim adopted on other than hygienic grounds.⁵ The practical application of this advice must generally have meant the callous abandonment of ailing slaves to their fate. A slave, Cato held, should either be at work or be asleep, i.e. he must as far as possible be reduced to the condition of a machine.⁶ Though he ate with his household slaves, his after-dinner leisure was devoted to administering to peccant slaves 'the proper number of lashes with a thong wielded by his own hand.'⁷ In the same business-like spirit he allowed indeed the union or quasi-marriage (*contubernium*) of his slaves, but only at a tariff, paid out of their *peculium*—a practice which doubtless would not lack imitators.

What in Cato's régime was the outcome of a mean and unsympathetic nature was in later times the calculated product of systematic policy.⁸ Although it was universally recognized that harshness and injustice failed of their end,⁹ the very numbers of the slaves led to the adoption of extreme cruelty in their punishments¹⁰ and the application of the harshest methods of control.¹¹ No limits were set by law, until long after republican times, and very wide limits by custom and the tone of society, to the lengths to which caprice, passion, fear,¹² or innate love of cruelty might go in punishing even the most trifling offences.

Among other things, the use of chains, no longer as a penal measure,¹³ but as a normal and constant precaution, and that not only for the slaves when at work in the fields under the eye of overseers, but also when they were herded at night in the fetid *ergastulum*, and even for women, became common.¹⁴ In Ovid's time even the house-porter was, by old custom, a chained slave.¹⁵

Against such treatment the slave was, until the empire brought him a measure of relief,¹⁶ quite impotent. Flight within Italy was in general hopeless,¹⁷ and, even if effected, could at best but

¹ The distinction between the *familia urbana* and the *familia rustica* was one of occupation (and therefore of type of slave) rather than of place (*Dig. L. xvi. 166*: 'urbana familia et rustica non loco, sed genere distinguitur').

² Cf. Wallon, *Hist. de l'esclavage*, II. 229. For monstrous exaggeration of demeanour towards slaves by the upstart freedman see the behaviour of Pallas (*Dio Cass. lxi. 14*; *Tac. Ann. xiii. 23*).

¹⁷ Through the right of asylum at the emperor's statue (*Tac. Ann.* III. 36).

¹⁸ The laws concerning *fugitivi*, and the legal interpretation of the term *fugitivus*, were very severe (see Buckland, *Roman Law of Slavery*, p. 267 f.). *Fugitivi* were pursued by hue and cry, their description being circulated and reward offered. Professional *fugitivarii* were employed to hunt them

lead eventually to the violent end of the highway-man,¹ and, if unsuccessful, to the doom of the arena or the cross, or to the more fearful forms of private execution which were among the grim secrets of the slaves' prison.² Mommsen has summed up the facts of this later slavery:

'The abyss of misery and woe, which opens before our eyes in this most miserable of all proletariates, may be fathomed by those who venture to gaze into such depths; it is very possible that, compared with the sufferings of the Roman slaves, the sum of all Negro sufferings is but a drop.'³

9. Gladiatorial slaves.—Amid the general misery of this slave world two classes, doomed to a yet blacker depth, are to be distinguished—(1) the wretched property of the *leno* ('qui cogit invitas pati stuprum'),⁴ and (2) the gladiators of all varieties, kept either by private persons or by a *lanista*⁵ in his training-school (*ludus*).⁶ They were bound to their master by an oath (*auctoramentum gladiatorium*) to endure burning, bonds, flogging, and death by the sword, or anything else that the master ordered.⁷ Prisoners of war, slaves, and criminals (especially brigands and incendiaries) condemned to death formed the bulk of the class, which numbered in its ranks also a proportion of voluntary combatants (often freedmen).⁸

Men even of the type of Cicero⁹ and the younger Pliny¹⁰ speak approvingly of the gladiatorial combats as an education in bravery and contempt of death. 'Even a man of high moral tone like Tacitus, while he condemns Drusus for gloating over his gladiatorial shows, has only a word of scorn for the victims of the butchery.'¹¹ Among the Romans Seneca here also showed himself far in advance of his age, and a noble exception to its lust for cruelty.¹²

The rewards of the successful gladiator were great, exceeding even those paid in modern times to men of thews and sinews and skill of this sort—the *popularis aura*, the praises sung by famous poets,¹³ and the favours of fair admirers.¹⁴ His fighting days over, the champion gained the wooden foil (*rudis*) of honourable retirement—fortunate if he escaped the honour of dying by the hand of a lunatic emperor;¹⁵ more often in a last unlucky contest he heard the blood-maddened crowd roar '*Habet*' as some younger and more

down (cf. Petron. *Sat.* 97). When caught, they were branded on the forehead (*ib.* 103) or maimed or sent to the arena (cf. the story of Androcles [Aulus Gellius, v. 14]).

³ *ib.* 303.

⁴ See art. PROSTITUTION (Roman).

⁵ Isidore of Seville (*Orig.* 10) says this is an Etruscan word meaning 'butcher' or 'executioner.' The gladiatorial spectacles were introduced from Etruria; they were a survival of the practice of immolating slaves and prisoners at the tomb of a chieftain; at Rome also they were for long confined to funerals. Even Atticus invested in gladiators (as did others) to let out or to sell again to the ædiles for the public games, or to such as wanted a gang of roughs as bodyguard (cf. Cic. *ad Att.* iv. 4, ad Q. *Fratrem*, ii. 4, 6).

⁶ Cf. Quintilian, *Decl.* ix. 21: 'In ludo fui, qua poena nullam graviorem scelera noverunt, cuius ad comparationem ergastulum leve est.'

agile arm got home, and saw the pitiless thumbs give the signal for the fatal stroke.¹

10. Murder of a master.—Not infrequently ill-treatment or an overpowering sense of degradation drove a slave, or even an entire household, to a desperate and bloody revenge.² 'As many foes as slaves' was held to be a truism,³ even by a naturally merciful master. This led to the atrocious rule that the death of a master by the hand of one of his slaves was the signal for the summary execution of every slave in the house.⁴

Apparently this rule was so far modified that there was substituted a general liability to torture with the object of discovering the murderer, who thereupon alone would be executed. Hadrian definitely limited the torture to such slaves as had been under the same roof, or hard by, or actually in the slain man's company—those who had presumably been near enough to render help ('armis, manu, clamore at oblectu corporis').⁵

A fearful instance of the operation of the old practice was given in Nero's reign, upon the murder of the city prefect Pedanius Secundus in A.D. 61. The monstrous horror of the proposed wholesale execution of the *familia urbana* of the slain senator—400 slaves of both sexes—caused an outbreak of popular sympathy.⁶ By this date a large proportion of the *plebs sordida* of Rome was tainted with servile blood. Although apparently the actual perpetrator was known to have acted alone on purely personal grounds, the senate refused to make an exception, and Nero was compelled to guard by troops the route of the condemned slaves to the place of butchery.

11. Servile revolts.—Slave conspiracies directed against the state itself, as distinguished from outbreaks against the tyranny of individual owners, were familiar to the Romans from an early date. In respect of both kinds of servile outbreak the history of Rome is in striking and instructive contrast with that of Athens.⁷ Tradition carried back servile unrest even to the 6th cent. B.C.⁸ and to the social and political struggles of the Roman Commons⁹—just as at the end of the republic the warring factions relied in part upon slave support. As time went on, servile insurrection became ever more possible, and ever more dangerous, through the increase in the servile and semi-servile classes.¹⁰

It was in Sicily, where the pradi slavery was seen in its most hateful operation, that servile revolt on a really great scale took place. The island was full of slaves herded in great gangs, branded like cattle, overworked under the lowest possible conditions of life, and in part expected or even urged to maintain themselves by violence and rapine, as was also the case on the great pastoral domains in Italy.¹¹ At the same time, the measure of precaution inculcated by Plato and Aristotle,¹² against bringing together men of the same race, had been quite neglected; for the great mass of Sicilian slaves were of Syrian, or at least Asiatic, origin—a source which was reputed moreover to furnish the hardest type of slave. The rising under Eunus, in 133 B.C., was suppressed by the consul P. Rupilius only after three years of warfare and the slaughter of over 20,000 slaves.¹³ Then came the great slave war in Sicily, lasting five years, under Tryphon (Salvius) and Athenion, from 103 B.C.¹⁴ Even more formidable was the insurrection of gladiatorial slaves¹⁵ under Spartacus, in Italy.

12. Slaves in the civil wars.—Naturally, the slave resources of powerful houses became an instrument of political warfare also, as waged in the

streets and environs of Rome by men like Milo and Clodius.¹ Clodius controlled the streets and the Comitia by means of his *opera*, or 'gangs.' In 58 B.C. he legalized the so-called *Collegia Compitalicia*, or religious guilds of the lower orders, to which slaves also were admitted;² these received a semi-military organization.³ In the civil wars slaves also were called into play, as by Saturninus (100 B.C.), who tried to rouse them by the offer of freedom.⁴ 'The turning of slaves into soldiers is the proper work of civil war. . . . This is the final desperate act of a political party.'⁵ Sulla relied largely upon the 10,000 slaves whom he had called to freedom and citizenship.⁶

The last desperate throw of Milo was his attempt to raise the pastoral slaves of S. Italy.⁷ The senate itself, at the time of Catiline's conspiracy, determined to call out the gladiators of private citizens.⁸ Cicero goes out of his way to boast of the protection afforded himself by the gladiators bought by Milo.⁹ The assassins of Cæsar were guarded by the gladiators of Decimus Brutus.¹⁰ In the struggle between Octavian, Antonius, and Pompeius gladiators and other slaves were freely employed, and were not seldom tricked to their destruction when they had served their purpose.¹¹

III. *THIRD PERIOD.*—The second period of Roman slavery extends into imperial times for about a century. It passes insensibly into the third period, which is marked by the cessation of the military expansion of Roman power,¹² and consequently by a partial failure of the sources of slave supply. Being thus to a great extent thrown back upon the human resources already accumulated, the Roman slave-owners 'were reduced to the milder but more tedious method of propagation,'¹³ and to a more careful conservation of their human property. Hence the prominence now assumed by questions of status where one or other parent was a slave. This enhanced interest in the practical problems of slavery, to which the legal genius of Rome had always given much thought, is from henceforth further complicated by the new factors calling for recognition. The result is that legislation in regard to slaves exhibits a sort of ebb and flow of humanitarianism. Although there is observable under the earlier emperors a tendency to ameliorate the servile status by legislation punishing various forms of cruelty to slaves (*e.g.*, the decree of Claudius in reference to the exposure of sick slaves), yet the legislation of Trajan was in this respect distinctly reactionary—a fact which may perhaps be connected with his renewal of external conquest. It is in Hadrian's time that the new spirit of humanitarianism and cosmopolitanism—that great social and spiritual change of so deep significance for the future of the world—in the main an outgrowth of Stoicism (*q.v.*), becomes a real factor in legislation. Hadrian is the first imperial representative of this new spirit, the operative principles of which had long before been formulated by Seneca (*q.v.*) and put in practice by that 'noblest type of a true Roman gentleman,'¹⁴ Pliny the younger. Of Seneca it has been truly

said that 'no modern has more clearly discerned the far-reaching curse of slavery.'¹

It is significant of the seminal quality of the mind of Hellas that, although the first reasoned utterance of her philosophy on the slave question had been in defence of the 'peculiar institution,' a development of that philosophy in the fullness of time enunciated just as clearly and unmistakably the moral principles upon which the humanitarian legislation of Hadrian and the Antonines in this field was based; for these principles were no discovery of Seneca's, but had been in the air for generations before they find expression in the 'Stoic sermons'² addressed to Lucilius or in the earliest documents of the Christian Church. They are of course but the simple development of that assertion of the natural equality of bond and free, upon the common plane of rational humanity, which had been promulgated by the unnamed critics against whom Aristotle argues. By them slavery had been attacked, not on grounds of its inexpediency, whether social or economic, but on those of a natural justice which slavery violated or definitely impugned.³

1. *Stoicism and slavery.*—The theory of life elaborated by Stoicism was that of a spiritual city with a spiritual law, a city not made by hands, the citizenship of which was gained through spiritual insight, whether of bond or of free. Thus the classical and Aristotelian position was abandoned in two directions: the *πόλις* yielded place to the cosmopolis, the *κοινή πατρις ἀνθρώπων ἀπάντων*, and slavery, the basis of the ancient city, gave place to equality of all men in the 'dear city of God.'⁴ That Roman conquest had made the Mediterranean area for the first time an actual political unity simply rendered things easier for the Stoic, by creating out of the multiplicity of city- and nation-states the single world-state, or something very like it.⁵ But the same kind of opposition that is observed between Stoicism and the narrower social ideals of Aristotle is found also when Stoicism is transplanted to Italy. For the fundamental difference between Stoicism, or the religion of humanity, and early Roman thought is that the former maintained the existence of a bond of unity among mankind which transcended all the distinctions of the actual political and social organization.

2. *Amelioration of slavery.*—When the tramp of the legions had reached its destined limits, and the empire, in obedience to the obscure laws of its own evolution had ceased to expand, there began that slow economic process by which, through the intermediate stage of serfdom, the servile status of the producing class was changed into one of legal freedom.⁶ How far the different emperors in their legislation furthering these changes, as by protecting the slave against his master, facilitating manumission, and elevating the freedman, were working with prescience under a definite conception of the economic and social tendencies of their age is a problem far too obscure to be lightly answered.⁷ Here, being concerned with the bare facts, and among them with such only as are significant for culture, we must content ourselves with tracing

¹ S. Dill, *Roman Society*, p. 12, quoting Sen. *de Ira*, iii. 35: 'deinde idem de republica libertatem sublatam queris quam domi sustulisti.' 'Seneca has never risen higher, or swept farther into the future than in his treatment of slavery. He is far in advance of many a bishop or abbot or Christian baron of the middle age' (*ib.* p. 328).

the general tendency of imperial enactments and legal rules in favour of freedom.

Something was done to check subsidiary sources of slave supply by the prohibition of the exposure or sale of children or the giving of them in pledge for debt. A *lex Petronia* of the 1st cent. A.D. forbade masters to punish slaves by sending them to fight with beasts in the arena, except with the assent of a proper court. Hadrian made it illegal for a master to kill his slave, except after judgment before a magistrate;¹ Antoninus Pius held a master who killed his slave just as liable for homicide as if the slave had belonged to another. He further laid down the rule that a slave badly used might take sanctuary at a temple (*fana deorum*) or the emperor's statue² and thus initiate a magisterial inquiry into his case; if his complaint of excessive cruelty³ were made good, the slave was to be sold *bonis conditionibus* to another master.⁴ A series of enactments had by the time of Justinian gradually limited the master's right of punishment to reasonable castigation. Protection to the morality of slaves was strangely slow in developing. Domitian forbade the commercial castration of slaves,⁵ under penalty of forfeiture of half the offender's property; Hadrian increased the stringency of the law, and allowed the slave to lodge a complaint. Justinian confirmed all this in his *Novellæ*, 142, and punished all concerned in the perpetration of the act, on whatever pretence, and declared the slave free. Protection to the chastity of female slaves was similarly long delayed, and very imperfect. Not until A.D. 428 was it made penal for *lenones* to employ their slaves in prostitution. Justinian made rape of an *ancilla aliena* a capital offence; but there is no penalty laid down for seduction of an *ancilla* by her own master.

As regards the natural relationships which arose between slaves, the marked distinction between the rules of law and the practice of everyday life has been noticed.⁶ Here also law tended to recognize the validity of practice informed with natural equity. Constantine laid it down that upon division of a property the slaves were to be so distributed as to keep together parent and child, brother and sister, husband and wife, thus recognizing not only the tie of marriage but also that of blood. Justinian went farther, and not only restricted the master's freedom of action so as to benefit the slave, but gave certain rights of succession to the issue of servile or semi-servile marriages, when one or other parent was manumitted.

Here may be mentioned the mass of legislation designed in the interests of orthodoxy, from the time of Constantine onwards. Its purpose was to crush heresy and prevent proselytism to the non-Christian cults tolerated by the empire (especially as it directed against Judaism). This legislation culminates in that of Justinian consolidating earlier efforts. It provided that no Jew should acquire a Christian slave by any title whatsoever, and that, if he did acquire one and circumcised him, or indeed if he circumcised any non-Jewish slave, Christian or not, he should be capitally punished, and the slave be free. Further, no pagan, Jew, Samaritan, or unorthodox person was allowed to hold a Christian slave, but such slave was to be free, and the man was to be fined. Lastly, if any non-Christian slave or heretic joined the Christian Church, he *ipso facto* became free, without compensation to his master. This must have operated powerfully to foster the idea of the Christian faith as constituting an order within which the victims of oppression of various kinds found protection and privilege.⁷

¹ Hadrian exiled for five years a Roman lady who treated her slaves with atrocious cruelty on slight occasion (*Dig.* l. vi. 2; cf. *Juv. Sat.* vi. 490 f.).

² In later times of course the Christian Church superseded these (cf. *Code Theodosianus*, ix. 44. 1).

³ This was held to cover not merely bodily violence or starvation rations, but also *infamias iniuria*, which would probably cover attempts to debauch an *ancilla*.

⁴ Cf. the Attic rule; Gaius, iii. 63: 'si intolerabilis videbatur dominorum sævitia cogantur servos suos vendere.'

⁵ Suet. *Domitianus*, 7.

⁶ Above, II. 5.

⁷ Cf. artt. SLAVERY (Christian) and (Jewish).

3. Influence of Christianity.—It is evident from the above that, while the legitimacy of slavery continued to be firmly held, humanitarianism made its first conspicuous advance under Hadrian and the Antonines; and that the two hundred years following the first Christian emperor were comparatively barren in this respect. The legislation of Theodosius and Justinian marked a second advance, by its abolition of the restrictions on enfranchisement and the amelioration of the condition of freedmen, and its regulations in connexion with slave marriages (through the repeal of the *Senatus-consultum Claudianum*) and the status of exposed children. But *per contra*, even under Constantine, the rights of property were still so strictly guarded that, even for crimes, slaves were forbidden to lay information against their own master—a rule to which Constantine allowed no exception, but enacted that in all such cases the slave proffering information was to be crucified unheard.¹ The emperor Gratian, under whom orthodox Christianity for the first time became dominant in the empire, improved upon this by a law 'which may rank among the most atrocious of Paganism.'² It provided that, if a slave accused his master of any crime, except treason, the justice of his charge was not to be examined, but the slave was to be burnt alive;³ the same terrible punishment, under Constantine, was laid on the slave guilty of intercourse with his mistress. Even Justinian's legislation, though it is no doubt influenced by the new religion, yet has nothing to say about slavery being opposed to either the spirit or the letter of Christianity; its guiding principle is expressed in a formula that is Stoic rather than specially Christian: 'pro libertate quam et fovere et tueri Romanis legibus et præcipue nostro numini peculiare est.'

The change in sentiment and policy of which the above modifications of the law are significant, so far as they go—which is indeed not very far—was of much earlier date than the official recognition of Christianity, and even antecedent to its introduction into the empire at all.⁴ Perception of this fact gives the corrective of the exaggerated estimate, or rather the false historical perspective, in which the influence of Christianity upon the slave system of the empire is sometimes presented.⁵ Partly the change was the fruit of philosophy or higher thought of the time, partly it was the natural adaptation of sentiment to the existing economic facts. 'While we cannot deny that Christianity tended to discourage slavery, and to lessen the evils of slavery by humanizing the relations with masters, it is certain that the economical conditions which changed the slave system into the colonate and serf system were the chief cause. Beliefs and sentiments generally adapt themselves to facts, and facts are in turn modified by beliefs.'⁶ Such humanitarian sentiments and attitude were not the exclusive property of Christianity. 'What is a Roman knight, or a *libertinus*, or a slave?', Seneca asks. 'They are mere titles, born of ambition or of wrong.'⁷ "Slaves!", he says in one of his finest letters. 'Nay, rather they are men. "Slaves!" No, comrades. "Slaves!" No, they are lowly friends, yea our fellow-slaves. . . . Remember that he whom you call your slave sprang from the same stock, is smiled upon by the same skies, and on equal terms with yourself breathes, and lives, and dies.'⁸ 'Virtue is fenced against none, but is open to all, admits all, calls to all—freedborn, freedmen, slaves, princes, exiles.'⁹ In such passages as these Seneca preaches, with the unction of an evangelist, all the doctrines on which the humane legislation of the Antonine age was founded, all the principles of humanity and charity of every age.¹⁰

Pliny the younger is like him in feeling that his slaves are of the same flesh and blood as himself,¹ and that towards them he has moral duties transcending the legal conventions of his time. His kindly letter on behalf of the repentant freedman of his friend Sabinianus² has often been brought into comparison with that of St. Paul addressed to Philemon on behalf of the runaway slave Onesimus.³

It has been pointed out⁴ that the services of Christianity in this sphere were of three kinds. (1) The ceremonies and discipline of the Church ignored class distinctions; slave birth was no bar even to priesthood. This, however, is no innovation of the Christian brotherhood, for such equality of membership is found in the mystery-religions and other social-religious unions.⁵ And, as in them, so in the Christian Church the obliteration of the distinction between bond and free is confessedly limited to those who come within the sacred pale; for those outside the Church, social and legal distinctions are left untouched, and therefore implicitly valid. Precisely the same attitude is forced upon the Church in modern times in dealing with similar conditions (often in deference to purely political considerations). That is to say, it has to be content to 'wait upon God,' in the sense that it must await the slow operation of what, humanly speaking, are secular causes. (2) In so far as Christianity imparted moral dignity to the servile class, by insistence upon the moral worth of just those qualities which were especially open for a slave to cultivate—obedience, fidelity, gentleness, patience, and resignation—it was but reinforcing the higher secular teaching of the time; and, like that, it found itself precisely herein most at variance with current conceptions and popular ideals of character. It would probably be correct, however, to see here the most profound and far-reaching influence of Christianity upon the social history of the empire; and not improbably much of the social hostility towards it was inspired by a perception of this fact of the inner sympathy of the new faith with the discredited and submerged sections of the population.⁶ (3) The claim that the Church gave a special impetus to the movement of enfranchisement does not seem to be borne out as fully as one would wish.⁷ It is at least a curious commentary thereon that the ecclesiastics 'were among the last to follow the counsels they so liberally bestowed upon the laity,'⁸ and Christians continued to own slaves like their pagan neighbours. The historical fact is that slavery lasted in Europe for nearly 1000 years after Constantine—so slow is the working⁹ of the moral leaven, even when, as here, economic factors conspire with religious motives in effecting the ultimate freedom of labour.

The truth is that much of what is said on this topic falls for want of historical knowledge, or through actual *suppressio veri* in the interests of prejudice. We can hardly with justice claim that the Church in its infancy and youth, advancing not by jumps but by and through human volition conditioned always by immediate facts and the forces of inherited tendency and circumstances, should have seen things more clearly than proved to be the case nearly 2000 years later when the 'three or four absolutely virtuous pages comprised in the history of nations' were written—written, moreover, largely in blood. Its action was not so much definitely official and mandatory as steadily influential for good, a *causa causans* in the heart of the individual slave-owner.¹⁰

4. Manumission.—Hardly anywhere better than in connexion with the manumission of slaves is the fundamental selfishness and meanness of antiquity observable. The emancipator never lost by his act, but probably in most cases stood to gain much.

Among the Romans manumission was 'less an act of liberality than an industrial speculation, the master often finding it more for his interest to share the profits of the trade or commerce of the freedman than to assert his title to the whole proceeds of the labour of his slave.'¹¹

Manumission was of two kinds—regular (*iusta*), and informal (*minus iusta*). Of the former class there were three varieties.¹

(a) *Censu*.—This was essentially connected with the republican constitution and forms, and was probably a very ancient mode. Under the empire, with the extinction of the censorship, it is practically obsolete. In form it was simply the censor's enrolment of the slave, under a name of Roman type, on the list of citizens,² with his owner's assent. The slave became free and a Roman citizen. No conditions could be attached, though by means of a preliminary oath taken by the slave such could in practice be imposed.³

(b) *Vindicta*.—This mode was really a fictitious litigation or collusive action, in the form of an action brought by an *adsertor libertatis*, who claimed the slave before the presiding magistrate as a free man; the part of *adsertor libertatis*, in later times, was usually played by a *licitor*, who touched the slave with his wand (*vindicta*, or *festuca*), which gave its name to the method. As the point of the method lies in the official declaration that the slave is a free man, the freedom conferred is absolute; i.e., it cannot be suspended or made conditional either expressly or tacitly, though doubtless there were ways of circumventing this difficulty so as to safeguard the claims which the master wished to retain over the services of his freedman. It was not unusual to exact from the slave to be manumitted an oath before manumission covering such services; repudiation of the oath rendered the freedman liable to penalties as a *libertus ingratus*.⁴

(c) *Testamento*.—This mode, by far the most important, is as old as, and therefore probably older than, the XII Tables. It differs from the preceding methods in that it is not based on fiction. It takes effect only upon the operation of a valid will, so that in general manumissions by this mode stand or fall with the will itself. Further, this manumission may be conditional or deferred (pending the event the man is a *statu liber*); the subject in the interim, until the arrival of the stated time or the occurrence of the condition, is exposed to the ordinary incidents of slavery, sale, etc., but he may not be brought into a worse condition or be deprived of his conditional right to freedom. Once effective, his liberty is irrevocable, subject to his performance of his duties as freedman.

(d) These were the only forms of manumission recognized as valid under the republic; but there were in use certain other less formal modes. Of such there were several varieties—e.g., voluntary declaration *inter amicos*, or *per epistolam*. Such declarations were legally void, but towards the end of the republic the *prætor* intervened to protect slaves who had been declared free in this way, so that they enjoyed freedom *de facto*, though not *de iure*.⁵

(e) To these forms of manumission must be added one in use from the time of Constantine—the *manumissio in sacrosanctis ecclesiis*. A constitution of Constantine in A.D. 316 says that it had long been allowed for masters to free slaves in *ecclesia catholica* before the people, in the presence of the priests. By a constitution of 321 such manumission is declared to give also the *civitas Romana*. Hence it is surmised that this method was at first informal—a development of the manumission *inter amicos*. Justinian seems to have added the provision that there must also be a document signed by the master *vice testium*. This method appears to be in part a descendant of

¹ Cf. Cic. *Top.* 2: 'sicut proinde cum vinclis, non testamentis liber factus est, non est liber.' The origin of Roman manumission is unknown; it is probably an ancient institution at the time of the XII Tables (450 B.C.). Dion. Hal. (iv. 22) credits the law about it to Servius Tullius, but little weight attaches to this.

² Cf. Cic. *de Orat.* i. 183.

³ This mode could be applied only in Rome, where alone the true Roman *censu* was held. Strictly the entry of the name did not confer the *civitas*; it was the fictitious renewal of the record that the man was a citizen, under his proper class; but the legal mind of the Romans detected here a nice problem.

⁴ Cf. Cic. *ad Att.* vii. ii. 8; Tac. *Ann.* xiii. 26.

⁵ Hence such could not dispose of their *peculium*; cf. Tac. *Ann.* xiii. 27.

¹ Cf. Juv. *Sat.* xiv. 16; Pliny, *Ep.* v. 19.

² *Ep.* ix. 21.

³ Tr. of Pliny's letter in Lightfoot, *Coloss. and Philem.* 9, p. 316.

⁴ Lecky, *Hist. of European Morals* 8, ii. 66 f.

⁵ Cf. Schiller, i. 455.

⁶ Cf. i Co 126.

⁷ When, in reference to St. Paul's Epistle to Philemon, Lightfoot says, 'The word "emancipation" seems to be trembling on his lips' (p. 321), we must hold that to be purely imaginary. The letter contains not the slightest hint that Philemon ought to set Onesimus free. The hope that he will receive him as a brother means only that the old tie should be beautified by the new relation of Christian fellowship. Certainly the phrase of v. 16: *οὐκέτι ὡς δούλον, ἀλλὰ ὑπὲρ δούλον*, cannot be twisted to signify manumission. There is no evidence that the thought of an ultimate general abolition of slavery being possible or desirable had ever occurred to St. Paul (cf. A. C. McGiffert, *Hist. of Christianity in the Apostolic Age*, Edinburgh, 1897, p. 376).

⁸ Lecky, *Hist. of European Morals* 8, ii. 71.

⁹ 'The power of tradition in the blood is quite strong enough, often indeed is so powerful as to make progress both slow and doubtful, and to prevent the intrusion of new ideas' (P. Gardner, *Explorations in the History of the Church*, London, 1899, p. 500).

¹¹ Mommsen, ii. 84.

the Greek mode of manumission by dedication in a temple to a deity.¹

M. Aurelius and his brother authorized or regulated the purchase of freedom by slaves. This must have been an old practice in Rome, just as in Greece it was apparently the usual practice. The slave arranged with a third party to purchase him from his master, with money supplied by the slave, and then manumit him. The source of the purchase-money was immaterial, whether it came from the slave's *peculium* (which in law belonged actually to the vendor, his master) or from a loan advanced by a friend or even by the purchaser by arrangement with the slave. A slave so purchased was said '*suis nummis emi*.'² The purchase was fictitious (*imaginaria*), but was winked at by the law.

IV. FREEDMEN.—Upon formal manumission by a valid method a slave became a freedman (*libertinus*, if spoken of with reference to class; *libertus* [= *liberatus*] in relation to his former dominus, who now becomes his *patronus*). In business relations with the world he was his own man,³ but towards his old master and his family he continued to stand in a semi-servile relation,⁴ under certain ties recognized by custom and law.

1. Social position.—Liberated slaves were perhaps usually set up in business or industry by their old master, who indeed in most cases liberated them to that end, and they continued to act as his confidential agents in financial undertakings, and as managers of businesses in which the *patronus* was sleeping partner. A man was thus able to profit by trade while avoiding the social stigma of direct management, and, if he was a senator, he was thus enabled to evade the Claudian law of 218 B.C., forbidding senators or their sons to engage in commerce—an enactment which drove them partly to invest their money in land, i.e. in slave-worked estates, partly to defeat the law in various ways through business slaves and freedmen. The Claudian law thus indirectly encouraged manumission.

Freedmen, though citizens, were in an inferior position, as they had not *connubium* with free persons, or the *ius honorum* (right of office or of sitting in the senate); nor could they as a rule serve in the legions⁵ or among the equites. Their political rights were really annulled by their being restricted to enrolment in the four city tribes.⁶

2. Importance under the empire.—One of the most remarkable features of the empire was the swift rise of freedmen to wealth and power,⁷ and the extraordinary importance to which individual freedmen attained, not only in the business world, but in that of imperial administration, in spite of the most violent prejudice and hatred felt towards them by aristocrats and plebeians alike. The inscriptions bear testimony to the extent to which wealth drifted into the hands of this class, just as in previous centuries it had tended to concentrate in the hands of a comparatively small section of *ingenui*, the great noble and the great contractor, and to be almost wholly withdrawn from the peasant and artisan. Since a freedman had no social standing to lose, the whole field of industry and trade, to which he had been trained as a slave,

was open to him; so that he became, from the economic point of view, the greatest enemy of the pure-blood Italian. Not only were the lower walks of trade and industry invaded by freedmen, but as capitalists and landowners on the largest scale, both in Italy and in the provinces, they became a power in the land, and were conspicuous for their liberalities to *collegia* and municipalities. It is to this class that we must turn if we wish to trace the rise of a free industrial and free mercantile element divorced from the social and political traditions of the ancient world.

'They began to be regarded as the natural free workers of the community, who surrendered a portion of their profits to their superiors to maintain the upper and middle-class Italians in a luxurious idleness.'¹

Trimalchio, the self-made man depicted by Petronius, is in many of his traits typical of the class—of its opulence, its vulgar consciousness of success, and its utter lack of all traditions or standards, except such as were expressible in terms of money.²

It is under Sulla that, in the person of Chrysogonus, there first comes into view 'the artful Greek freedman . . . a sinister figure, destined to reappear again and again in the days of the Empire as an instrument of administration, and to wield enormous power.'³ The regular use of slaves and ex-slaves as public officials began under Julius Caesar, who installed slaves of his household as officers of the mint.⁴ But the practice must go back to a still earlier date, to the time of C. Gracchus, who 'concentrated the most varied and most complicated functions of government in his own person.'⁵ In these multifarious activities Gracchus must have relied upon the skill and devotion of educated slaves and freedmen, just as did the great companies of *publicani*. 'The houses of politicians like Pompey, Crassus and Caesar were miniature government offices where numberless freedmen and slaves from the east were engaged on their master's work.'⁶ It is of this class above all, both under the later republic and under the empire, that Ferrero's words hold good when he says that 'in the pages of too many modern historians the mighty host of the workers lies concealed and condemned behind the dominant personality of a few soldiers and politicians.'⁷

3. The imperial freedmen.—The system of employing in the imperial administration the household talent of the reigning emperor was a necessary concomitant of the empire itself; for theoretically the emperor was only the first citizen, and his administrative staff was simply that of his private house, with its hierarchy of slaves under departmental heads who were themselves also either slaves or freedmen.⁸ He had neither ministers of state nor a trained civil service, but was in theory his own secretary of state, chancellor, and minister of foreign affairs. It was not until the reign of Claudius, however, that the 'household of Caesar' was confounded with the commonwealth, and his freedmen placed 'on a level with himself and the laws';⁹ the political importance of the emperor's personal administrative staff increased, so that his freedmen became really ministers of state, responsible solely to him, and presiding over new departments, or acting with increased power and independence abroad.¹⁰ The three great departments of controller of accounts (*a rationibus*), presided over by Pallas,¹¹ secretary

¹ Cf. Mitteis, pp. 100, 376.

² Cf. Suet. *de illust. Gramm.* 13.

³ A slave, having no legal name, had to have one made for him on manumission. He took the name (*nomen* and *praenomen*) of his old master, adding his own slave name as cognomen; cf. Cic. *ad Att.* iv. xv. 1.

⁴ A slave liberated by will was called *orcinus libertus*, and the patron's rights fell to the children of the deceased.

⁵ This was the strict rule under the empire, so that a freedman, before he could be enrolled in the army, must have *ingenuitas* conferred upon him by the exercise of the imperial prerogative. But *libertini* were always freely employed in the fleet.

⁶ Mommsen, i. 396 f.; details in his *Staatsrecht*, Berlin, 1874–83, iii. 430 f. Cicero in reference to this approves of the action of T. Gracchus, censor in 169 B.C., saying that otherwise 'republicam quam nunc vix tenemus, iam diu nullam haberemus' (*de Orat.* i. 9 [38]). Cicero, of course, exhibits all the narrow prejudices of the *municipalis eques*.

⁷ Cf. Petron. *Sat.* 38: 'sed liberti scelerati, qui omnia ad se fecerunt.' In Martial's day 'freedman's wealth' has become proverbial (*Mart. Epigr.* v. xiii. 6; cf. Sen. *Ep.* xxvii. 4: 'et patrimonium habebat libertini et ingenium'); see also Juv. *Sat.* i. 102 f., xiv. 305 f.

¹ Ferrero, i. 340.

² Cf. Petron. *Sat.* 77: 'Credite mihi: assem habens, assem valeas; habes, habebis,' and 43: 'Ab asse crevit et paratus fuit quadrante de stercore mordicus tollere.'

³ Heitland, *Roman Republic*, ii. 499.

⁴ Suet. *Jul. Cæs.* 76: 'peculiares servos praeposuit.'

⁵ Mommsen, iii. 355.

⁶ Ferrero, i. 341.

71. 347.

⁸ Cf. Suet. *Aug.* 67. 'It was a standing anomaly of the constitution that many offices which in a modern state would be important departments of the civil service were regarded as no more than posts in the chief citizen's household, unworthy of the dignity of any person above the rank of a freedman' (H. Furneaux, *Taciti Annalium*, ii. 28). Even under the republic 'the domestic transaction of official business was very large at Rome, for the State had given its administrators not even the skeleton of a civil service' (Greenidge, *Hist.* i. 15).

⁹ Tac. *Ann.* xii. 60.

¹⁰ E.g., Felix, brother of the freedman Pallas, 'quem cohortibus et alis provinciaeque Iudaeae praeposuit, trium reginarum maritum' (Suet. *Claud.* 23; *Ac* 234), who 'exercised the power of a king in the spirit of a slave' (Tac. *Hist.* v. 9).

¹¹ Tac. *Ann.* xi. 29.

(*ab epistulis*), presided over by Narcissus,¹ and receiver of petitions (*a libellis*), presided over first by Callistus and then by Doryphorus²—all these being private freedmen of the emperor—originated or took their importance in this reign. The rule of these powerful and wealthy freedmen was one of the bitterest memories of the outraged aristocrats³—as though it had been the work of a set of mere menials rather than of men at the highest level of capacity and education. In spite of their many gross and obvious vices, the ability and immense energy of these freedmen are undeniable. The disadvantage of their use was that, for all their efficiency and fidelity to their imperial master, they were not legally state officials at all, and their actual position was a standing offence to the social prejudices of their time.

4. The *augustales*.—The strict exclusion of *libertini* from magistracies and priestly offices, and from a seat on the municipal senates, was a public loss, as it debarred from public life and the constant distribution of wealth entailed by office precisely the richest and most enterprising class in the municipalities. To the problem of associating this class with the social and political ideals and organization of the empire Augustus early devoted attention. To this end he opened to the ambition of freedmen a field in the municipalities of Italy and the west by means of a new institution—that of the *Augustales* and the *Seviri Augustales*.⁴

V. ECONOMIC AND SOCIAL EFFECTS.—Investigation of the economic effects of slavery upon the Roman community is at once one of the most important and most difficult chapters in the history of the institution. To what degree did slave labour interfere with the development of free industry? An answer to this question would involve primarily an accurate estimate of the number of slaves found in Rome at a given moment, and the proportion they bore to free adults.

We have no statistics as to the number of urban slaves, public and private; much less can we discover the total slave population of Italy or the number of freedmen. Both slaves and freedmen are spoken of vaguely as a vast multitude, so great as to awaken alarm in the mind of any one who faced the facts.⁵ The statement of Athenaeus⁶ that 'very many' (*πάμπολλοι*) Romans possessed 10,000 and even 20,000 slaves is no doubt an exaggeration. The freedman, O. Cæc. Claud. Isidorus, under Augustus, lost much property in the civil wars, but left at his death 4116 slaves;⁷ Pedanius Secundus had 400 slaves in his city establishment.⁸ But there is no doubt that in Rome as in Athens the vast majority of the people possessed no slaves at all. A reasonable estimate puts the urban slaves at 800,000 or 900,000.⁹

'The history of the Roman Republic is largely the history of the wealthier classes.'¹⁰ Of the poorer classes we know little, as we hear of them only in the mass, and generally only as a political instrument in the hands of the demagogues. They must have had some means of livelihood other than the cheap corn distributed by the government (which indeed was not distributed gratis until 58 B.C.). This applies still more forcibly after the number of recipients was ruthlessly cut down from 320,000 to 150,000 by Julius Cæsar¹¹ to a little over 200,000 by Augustus.¹² The continued existence of the trade guilds (*collegia opificum*) in the last

century of the republic (though then largely misused as instruments of anarchism, *collegia sodalicia*) must, it seems, indicate that some freemen at least, in spite of the prejudice against small industry and retail trading,¹ made their living by such labour. Some indeed have gone so far as to maintain that even under the early empire a freeman could always obtain work if he wanted it²—in spite of the competition of slaves, and of *libertini*, who, as bound to their *patronus*, must in this connexion be reckoned with the true slaves. A large number of urban slaves worked within the great houses of the rich,³ making them to a great extent self-supporting, but not directly competing with the small freeman, though undoubtedly restricting the field of his enterprise. Probably still larger in the aggregate was the class of slaves employed by contractors for public and private works, for public shows, and for all the activities of the various classes of *publicani*. Many of these slaves had been specially trained for their work.⁴ This is the class which directly competed with free labour, for the free citizen either was not sufficiently well educated for these posts or was too independent for manual labour, apart from the fact that the stigma attaching to labour, other than agriculture, was very pronounced.⁵ It was obviously as easy to hire from his master the sort of slave one wanted as to hire the services of a freeman from himself, without any certainty that he was capable of doing the work. The slave, it was certain, would do the work—his master would see to that. Hence both the skilled and the unskilled forms of labour would appear by a natural law to have been almost wholly in slave hands, except in so far as freedmen and their children, having gained special skill and habits of industry in slavery, retained a place in the industrial world. The whole tendency of the later republic and the empire was in the direction of 'permanent endowment of the unemployed.'⁶ As regards the country estates, the tradition had always been that the farm should be as far as possible self-supporting;⁷ but this had not implied that it should be run solely by slave labour.⁸ Hired free labourers⁹ were called in when extra hands were wanted, as at hay-harvest-time, or for the gathering of olives, and the vintage; Varro¹⁰ also recommends the use of hired labourers rather than one's own slaves in unhealthy districts. Nevertheless the tendency was to make such properties more and more self-contained and self-supporting, so that even Varro's farming, which stands midway between the small farming of early times and the later plantation system, is essentially slave-farming and leaves little room for free labour. Upon the cattle-runs of S. Italy the work was apparently entirely in the hands of the half-wild herdsmen,¹¹ and here the economic system had sunk to a more primitive level; the same was true of Etruria also.¹² Here the exclusion of free labour

¹ Cf. Cic. *de Off. l.* 42 (150); Livy, xxii. 25.

must have been absolute, for life on the cattle-run was below the culture level of the Roman populace.

Two remarkable facts stand out in this inquiry. (1) The Roman proletariat, so far as appears, never at any time complained of the competition of slave labour as depriving them of bread, though the Roman populace wanted bread badly—even Cicero, superficial as are his social and political judgments, admits that the corn-law of Gracchus was necessary.¹ (2) The Roman slave-owners, though the shrewdest men in the world, never seem to have had any doubts about the comparative advantages of slave labour. Both classes—and the same is true of Greece—persist, the one in acquiescence in, and the other in an application of, a system which is now held condemned not only in its moral basis but also in its economic results. Yet the Roman proletariat showed itself all through its history by no means unready to proceed to the most violent measures in relief of its grievances; and, on the other hand, we have no right to assume on the part of the Roman capitalists a stupid inability to gather from experience in what direction their maximum profit lay. It is undeniable that the Roman grandees found their account in the slave system as actually worked; only when the financial conditions altered, under the later empire, did slavery give place, in obedience to the law of maximum profit, to a new economic form, which indeed is very old—that of serfdom. In this connexion it must be noted that the Gracchan movement would be entirely wrongly interpreted as a protest of free labour against a slave system which deprived the freeman of the right to live by his toil. When Tiberius Gracchus cried that the beasts had their lairs, but nothing was left to Roman citizens save the air and the sunshine, that those who were styled masters of the world had no longer a clod they could call their own,² he was protesting, not against the slave system as such, but against a vicious system of land-distribution and of land-tenure, and his aim, like that of his brother, was not to revive the free labourer, but to re-establish the free peasant proprietor; the anonymous appeals to him were not that he should abolish the slave, but that he should restore to the poor their share of the public lands.³ The failure of the Gracchan legislation, so far as it did fail—in proving unable to check the influx of the country population to the capital—was due to the fact that it 'offended against social ideals rather than against economic tendencies.'⁴ Yet it is accepted almost as an axiom that it was the slave system, and the slave system alone, that ruined the Italian middle class of small proprietors and created the urban proletariat.

It is of course on the moral and spiritual ground, not on the economic, that slavery must ultimately be judged. That wide and deep demoralization which results for both master and slave is sufficiently obvious in the case of Rome also. On the one hand, the slave-owners, with no feeling of responsibility, except that of mere self-interest towards those who were absolutely at their mercy, fell into that despotic temper which found its logical but unexpected final expression in the insane cruelties of the successive masters of the Roman world. On the other hand, the existence in Italy of tens of thousands of men for whom all ties of race and kindred and home had been snapped at a stroke, for whom no moral standard thenceforth held good but that of their master's

will, for whose conduct the only sanction was corporal punishment in its most debasing forms, for the vast majority of whom life offered no faintest prospect of moral or social independence and development, meant, at its lowest valuation, a permanent and terrible menace to the whole community. The evil was accentuated by the fact that this poisoned reservoir was not fenced off by the law, nor guarded by nature's colour-signal, which only those for whom the claims of their native race and culture already stood for little dared disobey; on the contrary, from this tainted source an ever-flowing stream was directed into the free population by the way of manumission. The condition of social progress, viz. the gradual elimination of class inequality, was certainly in a degree achieved thereby, and the decay of the native population to some extent made good;¹ but it was unfortunately from the most corrupted and most pernicious class—that of the urban slaves—that the freedmen who were the active agents in transmission of the blood-taint were mainly derived.² The steady stream of manumissions meant that the blood of the lower and middle classes of Latin stock was, generation after generation, losing its purity and becoming contaminated into a mongrel mixture of blood derived from nearly every race in the empire—and that only after its purveyors had been for a longer or shorter time submitted to all the deleterious influences of slavery. At a comparatively early date the effect of this process was manifest.³ To argue that such qualitative distinctions are historically and philosophically invalid, and to point to the fact that in the fullness of time the blood which Scipio reviled was destined to produce a new race,⁴ is not permissible, for it was after all true that, in comparison with Thracians, Gauls, Germans, and Asiatics, the Italian peoples had been and still were the vehicles of higher culture, and that, in so far as the elements assimilated through manumission were derived from Greece, it was nevertheless from a Greece decadent and debased.⁵ The criticism rightly taken, however, is directed not against the mere fact of incorporation of diverse alien material, but against the ill-regulated and fortuitous way in which the incorporation proceeded, and the absence of any selective process worthy of the name, the whole field being in fact abandoned to a capricious and haphazard operation which gave no guarantee that only those most deserving of the honour attained it—a process entirely contrary to that lengthy education through which the larger political groups within the Italian peninsula itself had been incorporated with the republic. It is surely passing strange that aliens were freely admitted to citizenship provided that they entered by the door of slavery, whereas the incorporation of individual foreigners on grounds of personal merit was the rarest thing⁶ and mostly the result of jobbery. Dionysius of Halicarnassus in the time of Augustus gives remarkable expression, as the result of his own experience, to the

evil effects of this indiscriminate system of manumission, with suggestions of a remedy.¹ But the collapse of the empire was not brought about by slavery,² but partly by the inclusion of undigested masses of barbarians³ (who play on a larger scale within the empire the rôle previously played by slave-masses within the body politic of Italy), and partly by the vicious non-productive economic system of the empire itself.

SLEEP.—See DREAMS AND SLEEP.

SMĀRTAS.—1. The Smārtas are an important sect of Brāhmins, found mostly in the south of India, their chief seat being in the Mysore State. There are also many in the Central Provinces. They derive their name from *smṛti*, 'what was remembered,' or tradition, as distinguished from *śruti*, 'what was heard,' inspired or revealed truth, only orally and audibly transmitted. As Manu⁴ explains it, *śruti* means the Veda, *smṛti* 'the institutes of the sacred law.'

The Smārtas worship the triad of Brahmā, Śiva, and Viṣṇu under the mystic syllable *Om*, and, while admitting them to be equal, exalt Śiva as their chief deity. They hold the pantheistic Vedānta doctrine of *advaita*, or non-dualism, which means that the universe is not distinct from the supreme soul. The leading tenet of the sect is the recognition of Brahma Para-Brahma as the only existing being, the sole cause and supreme ruler of the universe, and as distinct from Śiva, Viṣṇu, Brahmā, or any individual member of the pantheon; to know him is the supreme good. The attainment of complete wisdom results in *mukti*, or liberation, and re-union with the divine essence. But, as the mind of man cannot elevate itself to the contemplation of the inscrutable first cause and only soul, he may be contemplated through inferior deities and sought through the prescribed rites and exercises. This creed thus tolerates all the Hindu deities, and the worship of the following was, by Śaṅkarāchārya's express permission, taught by some of his disciples: Śiva, Viṣṇu, Kṛṣṇa, Śūrya, Śakti, Gaṇeśa, and Bhairava. The distinctive marks of a Smārta Brāhmin are three parallel horizontal lines, of pounded sandalwood or of the ashes of cow-dung, on the forehead, with a round red spot in the centre. The Daṇḍis of the north of India are an outcome of the Smārtas; they are mendicants.

The founder of the sect was Śaṅkara or Śaṅkarāchārya (q.v.), the celebrated Hindu reformer of the 8th cent., and apostle of the Uttara Mīmāṃsa or Vedānta. Their *guru*, or spiritual head, is the Śringeri Swāmi, designated the Jagad Gurn, or priest of the world. He is a man of eminent learning and an ascetic of great sanctity, trained for his office from boyhood. His claims to

reverence are admitted by all votaries of Śiva, whether of the Smārta or of any other communion. The enormous sums obtained from the piety of his disciples during his tours, on which he is often away for several years, are spent with a lavish hand in hospitality and works of charity so called. Śringeri, Śringa-giri, or Rishya-Śringa-giri, the site of the monastery, is a most picturesque and fertile spot on the bank of the Tungā river, sheltered by the Western Ghāts, in the Koppa taluq of the Kadūr District of Mysore. The *jāgir*, or landed estate, is about 8 miles long by 6 wide.

2. Subdivisions.—The following are some of the subdivisions of the Smārtas, in certain of which are also included some members of the Mādhva (q.v.) sect. The Baḍaga-nāḍ had their origin in the northern (baḍaga) districts (nāḍ) and speak Kannaḍa. The Deśastha are immigrants from the Mahratta country and mostly retain the use of Mahratti. The Babbūr Kamme, Kannaḍa Kamme, and Uliha Kamme nearly all speak Kannaḍa, a few Telugu also. The Kamme country seems to have been to the east of the Kolar District. The Muliki-nāḍ or Muriki-nāḍ are from the Kaḍaga District and speak Telugu. The Hoysaṇiga, also called Vaiṣaṇiga, derive their name from the old Hoysala or Hoysaṇa kingdom and of course speak Kannaḍa. The Aruvēlu, or the Six Thousand, speak both Kannaḍa and Telugu. The Aruvēlu Niyogi are a branch of them who are *laukikas*, or devoted to secular callings. The Chitpāvan are Mahrattas. The Havika or Haiga are immigrants from Haiga, the ancient name of N. Kanara, and they are almost entirely confined to the west of the Shimoga District. They are now principally engaged in the cultivation of areca-nut gardens. They lay claim to original descent from the north of India. The small communities of Kandāvara, Kavarga, Kōta and Kōṭṣvara, Kusasthala, Śiśuvarga (properly Śiṣyavarga), with the Śivalli, are all Tulu Brāhmins, immigrants from S. Kanara, the ancient Tuluva, and mostly located in the western districts. They engage in agriculture and trade and speak Tulu and Kannaḍa. The Karāḍe or Karhāḍe are Mahrattas from Karhāḍ. Some are employed in the Revenue Survey. The Konkapaṣṭha are also Mahrattas, from the Konkani. The Nandavāidika are from the Telugu country and speak Telugu and Kannaḍa. The Prathamāsākhē or Madyāndina also speak Telugu and Kannaḍa. The Sahavāsi are immigrants, like the Chitpāvan, from the Mahratta country. The Sanketi are from Madura and speak a corrupt mixture of Tamil and Kannaḍa. There are two branches—the Kauśika and the Beṭṭadpur, so named from the places in which they first settled, which are in the west of the Hassan and Mysore Districts. The Sanketi reverence a prophetess named Nāchāmma or Nāngiramma, who seems to have been instrumental in causing their migration from their original seats. The Hale Siraṇāḍ speak Kannaḍa and probably derive their name from Sira in the Tumkūr District. The Vengipuram all speak Telugu. So do the Velnaḍ, who resemble the Muriki-nāḍ. They are mostly in the south and east. The Vegi-nāḍ speak Kannaḍa.

3. Śringeri.—The fortunes of Śringeri, of such vital importance to the Smārtas, have had their ups and downs. It is worthy of note that the same neighbourhood was the cradle of two great states, thus proving it to be what is called 'heroic soil.' It was the birthplace of the Hoysalas, who developed into a first-rate power, arrested the Chola invasion in these parts, and finally drove the Cholas out of Mysore, thus becoming rulers of the whole country. But on the collapse of the Hoysala kingdom through Musalmān invaders from the north, in the 14th cent., an interregnum was created. Advantage was taken of this by the head of the Śringeri *math* to add two princes who had been connected with the Hoysalas to found a new kingdom, which before long expanded into the great Vijayanagar empire, embracing the whole of S. India. Mādhava, surnamed Vidyāraṇya, 'forest of learning,' the abbot of Śringeri, himself became the first minister, and after him the capital was first called Vidyānagara, eventually changed to Vijayanagar, 'city of victory.' It was now that the *math* was endowed with lands and entered on a prosperous career. But Vijayanagar fell a prey in 1565 to a confederacy of Musalmān powers, and evil times overtook Śringeri. It was reduced to ruins, and its lands were seized by any one who could get hold of them. Meanwhile the Keladi or Bednūr kings in the north-west of Mysore had been extending their power and absorbed all Kanara and Malabar, with regions beyond to the north. They, in common with all the neighbour-

⁴ ii. 10.

ing states, had adopted the new Vira Śaiva or Lingāyat (*g.v.*) faith, which had spread with great rapidity throughout the Kannada and S. Mahratta countries. To them, nevertheless, the *guru* appealed in person and was successful in enlisting their support. The ruined buildings were rebuilt and the lands restored. At the same time, the *guru* judiciously resolved to recognize the Lingāyats, as being votaries of Śiva, though they would have nothing to say to Brāhmins. Since that time the place has been in safety, and, after the Keladi or Bednūr kingdom was subdued, has been liberally maintained by the Rājas of Mysore.

4. Other maths.—Other *maths* besides Śringeri were established by Śaṅkarāchārya in various parts, which are still in operation. The most notable is the Badarikāśrama at Kedarnāth in the Himālayas. This is where he died, at the early age of 32. The temple there is to this day always served by a Nambūtiri Brāhman (known as the *rāval*) from Malabar, which was Śaṅkarāchārya's native country. Other *maths* are at Dwāraka in Kathiawar, Jagannāth in Orissa, and Kumbakonam in Tanjore. There was thus one at each cardinal point of the compass.

SMOKING.—1. Smoking to produce rain.—In primitive society, where the food-supply is governed directly by the rainfall, the attitude of man is intensely practical and calculated to produce states of emotional intensity. The emotions must find vent somehow; this they do in representative and emotional ceremonies to produce the desired result. When primitive man wants rain, he does not imitate it, but endeavours actually to make it.¹ He has learnt by observation that the gathering of clouds presages the fall of rain, and consequently, he argues, to make clouds is the equivalent of making rain. Now nothing would more readily suggest to his mind the phenomena of clouds than smoke, and it is therefore not surprising that this substance frequently figures in rain-making ceremonies.

Thus the Bechuanas burn the stomach of an ox at evening because they imagine that the black smoke will produce rain-clouds,² just as the Tarahumare Indians of Mexico envelop the whole country in smoke in the spring by burning the grass, in order to gather rain-clouds. Likewise the Zuñi Indians of New Mexico set fire to the grass and trees at the summer solstice in order to make a great cloud of smoke, while bull-roarers are swung and prayers offered imploring the rain-makers to water the earth.³ Every four years in August, when the corn is a foot high, a sacred dance is performed by Zuñi maidens carrying baskets of corn, while a man of the Frog clan smokes a cigarette of native tobacco over vessels of water and stalks of green corn. The object of the rite is to ensure a supply of rain and the growth of corn.⁴

Among the Omahas of N. America, when the first thunder is heard in the spring, the Elk and Bear clans assemble in a sacred tent belonging to the Elk gens. There one of the Bear people takes a pipe from a sacred bag and hands it to one of the Elk men with tobacco from an elk bladder. Before the pipe is smoked, it is held towards the sky and the thunder-god is addressed. After the pipe has been smoked, the rain always ceases.⁵

2. Smoking to produce trance.—It not infrequently happens that various psychological experiences are produced by inhaling the smoke of certain plants—a fact that has led primitive man to regard smoking as a means of getting into communication with the spirit world. Thus in the Hindu Kush the *dainyal*, or sibyl, inhales the smoke from the smouldering sacred cedar with a cloth over her head, till she is seized with con-

vulsions and falls to the ground.¹ The smoke of the same wood is also inhaled by the prophet among the Takhas on the border of Kashmir in order to keep off evil spirits before he utters his oracle.² The sacred laurel was inhaled by Apollo's prophetess before she prophesied,³ and in Madura the woman who is to act as the medium of a spirit inhales the smoke of incense, sitting with her head over a smoking censer. Gradually she falls into a trance, and her utterances are regarded as oracular.⁴ By smoking tobacco the sorcerers of Brazilian tribes raise themselves to ecstasy in their convulsive orgies and see spirits. The Bororo Indians (Brazil), *e.g.*, bless the new maize by an *aroetorrari* (medicine-man) working himself into a frenzy by dancing, singing, and incessant smoking, and in this condition biting into the husk and uttering shrieks from time to time.⁵

Among the Baganda of Central Africa a priest is set apart as the vehicle of the manifestation of the late king's spirit. The royal tomb is visited five months after the death of the king by his successor's uncle, three chiefs, and a few soldiers. One of the party enters and severs the head from the late king's body, brings it out, and puts it in a heap for insects to eat off the flesh. The skull is then washed and filled with wine and later with milk, after the former has been drunk by one of the priests. The lower jaw-bone (*luanga*)—the special portion of the body to which the ghost of the deceased clings—is put into a separate house shaped like a bee-hive. This 'temple' containing the jaw-bone and umbilical cord (*mulongo*) of the king is divided into two compartments—an outer one, into which the ordinary people are admitted, and an inner one, where the spirit of the departed king is said to dwell. In front of the partition is a throne covered with lion- and leopard-skins, and in front of this is a rail of spears and shields and knives, keeping the entrance to the throne sacred. When the *mandua*, or priest, who is to be possessed by the king's spirit wants to converse with the people in the king's name, he first comes to this throne and speaks to the spirit inside the inner room, telling it the business of the people. He then smokes one or two pipes, and after a few minutes he begins to rave, being possessed with the spirit, and speaks in the tones of the late king.⁶

3. Smoking to produce guardian spirits.—Young men of the Blackfeet tribe of N. America use pipes in a ceremony for acquiring a guardian spirit. They 'go up on to a hill, and cry and pray for some animal or bird to come to them. . . . They take with them a pipe and tinder and flint, and a native weed or bark for smoking (not matches or tobacco). When the pipe is filled, they point the stem to the sun and say, "Pity me, that some animal or bird may come to me!" Then they address the trees, the grass, the water, and the stones in the same manner.' The animal or bird that appears to them in their dreams becomes their guardian spirit.⁷

4. Smoking as a means of propitiation.—Smoking is employed in ceremonies to propitiate gods, animals, and stones. (a) *Gods*.—The Osages of N. America begin an undertaking by smoking a pipe with a prayer: 'Great Spirit, come down to smoke with me as a friend! Fire and Earth, smoke with me and help me to overthrow my foes!'⁸ The Comanches of the prairies send the first puff of tobacco-smoke to the Great Spirit, and the second to the sun. The Creeks, who regard the sun as a symbol of the Great Spirit, send him the first puff of the calumet at treaties, and the Natchez chief smokes towards the east at sunrise.⁹ Among the Thompson Indians of British Columbia, when the first tobacco of the season is gathered and smoked, an elderly man assembles all the inhabitants of each lodge, arranging the smokers

(male and female) in a circle while he stands in the middle. He then addresses the company, cuts up some of the tobacco, and, after mixing it with bear-berry leaves, fills a large pipe, lights it, and hands it to each of the individuals in turn, following the sun's course. Every one takes a whiff and, holding up his hands, blows the smoke between the fingers and over the breast, praying to the Tobacco Chief to be kept from sickness and death.¹

The Hañga and Iñkë-sabe, or Black Shoulders clans, of the Omahas are in possession of two pipes made of red pipe-stone and decorated with porcupine quills. According to Anbahebe, the aged historian of the Omahas, the old men made seven pipes and carried them round the circle formed by the tents of the tribe. They gave the first pipe to the head of the Iñkë-sabe gens, and then passed on to the Hañga, to whom they handed a firebrand with which to light the pipes for the chiefs. The Bear, Blackbird, and Turtle people received no pipe because they feared them. The Eagle people, however, not being feared, were given a pipe, and the remaining five pipes were distributed among the 'good' sections of the other clans. This tradition is based on the belief that these seven pipes are symbols of peace.² On ceremonial occasions the two pipes kept by the Iñkë-sabe are brought out of the sacred bag in which they are kept with the other tribal relics, and solemnly cleaned and filled by Ictasanda men, who, while performing these functions, recite certain formulæ. They are lit by a member of the Hañga clan, and are passed round the circle of the chiefs assembled in council on tribal affairs. Both pipes are smoked by the chiefs, who blow the smoke upwards, saying, 'Here, Wakanda, is the smoke.' This is done because they say that Wakanda gave them the pipes and he rules over them.³

(b) *Animals*.—Before setting out on a bear hunt, the American Indians 'offered expiatory sacrifices to the souls of the bears slain in previous hunts. When a bear was killed, the hunter lit his pipe, and putting the mouth of it between the bear's lips, blew into the bowl, filling the beast's mouth with smoke. Then he begged the bear not to be angry at having been killed and not to thwart him afterwards in the chase.⁴ The Assiniboin address prayers to the bear and offer to it sacrifices of tobacco, belts, and other valued objects. The head of the animal is often kept in camp for several days and ornamented, the pipe is offered to it, and prayer made that the natives may be able to kill all the bears they meet without harm to themselves.⁵ The trader Alexander Henry has described the apologies offered by the Ojibwas to a bear which he killed near the winter camp in 1764. The animal was reminded that it was an Englishman who had done the deed and was requested not to lay the fault upon the natives. The next day the head of the bear was placed on a new stroud of blanket, pipes were lit, and tobacco-smoke was blown into the nostrils to appease her anger.⁶ A similar ceremony was performed in the same district when an Englishman killed a rattlesnake. It was addressed as grandfather and smoked over, and its protection was sought for the Indians and their families.⁷

(c) *Stones*.—The Huron Indians of Canada offered tobacco to certain rocks, such as the one called Tsanhohi Arasta (the abode of Tsanhohi, a kind of

bird of prey), which apparently stood at one time on the bank of the St. Lawrence. This stone is said to have once been a man, and it was thought that in the hollows of the huge boulder a demon dwelt. In consequence tobacco was deposited in one of the clefts of the rock by the natives as they paddled up and down the river, and the spirit was addressed thus: 'O demon, who dost inhabit this place, here is some tobacco which I offer to you. Help us, save us from shipwreck, defend us from our enemies, cause us to do good business and to return safe and sound to our village.' Likewise every spring the Mandan Indians approached a thick porous stone some 20 ft. in circumference, 'and solemnly smoked to it, alternately taking a whiff themselves and then passing the pipe to the stone.' The following morning certain marks (secretly painted on the stone during the night) were examined and deciphered.¹

LITERATURE.—The literature has been given in the footnotes.
E. O. JAMES.

SNEEZING.—See NOSE, § 4.

SOBRIETY.—The relation of sobriety² to temperance and moderation (*qq.v.*) has been variously understood. Aquinas regards sobriety as a part of temperance.³ Jeremy Taylor, on the other hand, says that sobriety 'hath within it [includes] the duties of temperance, chastity, humility, modesty, and content.'⁴ The fact is that the word in its widest sense is equivalent to moderation.

'Nomen autem sobrietatis sumitur a mensura: dicitur enim aliquis sobrius, quasi *briam*, id est, mensuram, servans.'⁵

But, inasmuch as it is 'chiefly praiseworthy' to observe moderation in the matter of drink, since drink in a greater degree than food impedes the use of reason, sobriety may be regarded as a 'special virtue' designed to guard against 'the special impediment of reason', which is involved in excessive use of strong drink.⁶

1. As a special virtue, sobriety is a duty particularly enjoined upon the young, on women, and on the Church-ruler.⁷ Speaking generally, Scripture is far from discouraging or prohibiting the use of wine. It was, indeed, forbidden to the priests at the time of their ministrations and to the Nazirite during the period of his separation,⁸ but generally 'wine' is regarded as the symbol of all that is most generous and joyous in human life. Its good effects, however, depend upon strictly moderate use, and St. Paul's words in Ro 14²¹ imply that there may be cases in which total abstinence is a way of showing true brotherly love; in other cases it may be a condition of personal perfection.⁹

2. In the NT use of the word *νηφάλιος* we see a gradual extension of the word 'sobriety' to other spheres. In 1 Th 5¹¹ the word *νήφειν* is opposed to *μεθύσκειν*, but *νηφάλιος* in 1 Ti 3² is evidently understood by early commentators to imply something more than abstinence from the disabling use of strong drink. Thus Chrysostom¹⁰ says: *νηφάλιον εἶναι δεῖ τὸν λεγέα . . . διαπρατικόν, καὶ μυρρίους πανταχόθεν κεκτῆσθαι τοὺς ὀφθαλμοὺς*. He adds that the multiplicity of cares and worldly business usually hinders the growth of this grace.¹¹ The wider use of *νήφειν* appears also in 1 P 1¹³ 4⁷ 5⁸. It is used in these passages metaphorically to mean calmness of temper, watchfulness, and self-control.¹² Thus in

1 P 1¹³ the duty of 'sobriety' is closely connected with that of girding up 'the loins' of the mind, checking the vague wandering of thought and speculation, etc.

Sobriety in this sense 'guards men against the "intoxication" of false prophets, against false views of ἐλευθερία, against moral and doctrinal caprices.'¹

In the same way, St. Paul opposes to intoxication the duty of being 'filled with the Spirit.'² The word, however, that is more frequently used in this connexion is the verb σωφρονεῖν; the adv. σωφρόνως is also found,³ and σωφροσύνη at least once, in this sense.⁴ The grace of sobriety corresponds to the actual condition of the world, and to the fact that human life necessarily involves warfare and struggle, demanding the vigilance of a soldier and the endurance of an athlete.⁵

(1) According to the teaching of the NT, sobriety thus includes watchfulness against the greater enemies of our salvation,⁶ and against the danger of being overcome by the intoxicating draught of pleasure, the pressure of worldly care, the example of an evil world. This is the temper enjoined by our Lord in Mt 24⁴²⁻⁵¹, Lk 12³⁵⁻⁴⁸ and 21³⁴⁻³⁶; the wakeful heart, the girded loins, the lighted lamp are symbols of the spirit which should animate the Christian in a world full of hidden snares, deceits, and allurements.

(2) Sobriety also includes a moderate and temperate use of creatures, 'a moderate delight and satisfaction in prosperity,'⁷ the temper that does not expect too much of life and is not inordinately dismayed or depressed by adversity. Bernard speaks of sobriety as the counterpart of two forms of intoxication:

'Ebrietas exterior voluptatum effusio, interior curiositatum occupatio.'⁸

Sobriety accordingly involves restraint in the matter of pleasure,⁹ and the curbing of curiosity. Practically the duty of sobriety in this aspect is identical with temperance (q.v.).

'The sobriety of the soul consists in humility, and in being content with necessities.'¹⁰

(3) A very important part of sobriety is a just self-estimate. So St. Paul insists,¹¹ having regard to the general needs of the community and the necessity that each individual should realize his true function and place in it.¹² Sobriety in this sense is equivalent to 'the philosophic mind' which comes with years.

'As we grow older . . . we take more and more our right place in the social organism. . . . We recognize that we are members one of another. That is a fact which involves a claim—the claim that we should love our neighbour as ourselves. We recognize that one member cannot suffer without the other members suffering with it. . . . We come to accept our limitations, internal as well as external. . . . It is only in middle age that most of us are able to say calmly of our rivals: "he must increase but I must decrease."¹³

(4) Finally, sobriety is the temper that results from a particular view of the world and of life—a view everywhere implied in Scripture, and equally removed from shallow optimism and from pessimism. There is a frame of mind which perhaps finds its typical embodiment in men like Bishop Butler.

'We should,' he says in a characteristic passage, 'propose to ourselves peace and tranquillity of mind, rather than pursue

after high enjoyments. . . . The miseries of life brought home to ourselves by compassion . . . would beget in us that moderation, humility, and soberness of mind, which has been now recommended: and which peculiarly belongs to a season of recollection,' the only purpose of which is to bring us to a just sense of things, to recover us out of that forgetfulness of ourselves, and our true state, which it is manifest far the greatest part of men pass their whole lives in.'²

This temper is characteristic also of Wordsworth and the whole 'Romantic' school of poets. Christianity sanctions and encourages it, in so far as it frankly recognizes the presence and power of evil in the world, and the close relation that exists between physical and moral evil. The Christian habitually bears in mind the inevitable limitations of human nature in respect of knowledge, power, and character. The spirit described in 2 Co 6¹⁰ 4⁸ is this: 'sorrowful, yet always rejoicing, perplexed, but not in despair.'³ This is a temper which, as we have said, corresponds to the facts of life, and which is not unmindful of the divinely ordained regenerative forces which are at work in the world, counteracting the disturbing and disintegrating elements introduced by sin, sorrow, and death.⁴ It is a temper which finds its characteristic view reflected in the Bible, which 'looks on the world as God's world,' and with severe truthfulness takes account of the stern and sombre aspects of human life,

'the heavy and the weary weight
Of all this unintelligible world.'⁵

Hence Bishop Wilson enjoins as 'our greatest wisdom' 'a constant seriousness of temper; an universal care and exactness of life, an indifference for the world; self-denial, sobriety, and watchfulness.'⁶

The Christian character is a union of opposites. The sobriety described above is quite compatible with fervour of spirit,⁷ 'joy and peace in believing,'⁸ and cheerful thankfulness 'for all things.'⁹ In a world like ours all things

'Do take a sober colouring from an eye
That hath kept watch o'er man's mortality';¹⁰

but the reign of God is a truth which countervails the impression made on the heart by the stern and sombre facts of life. The site of St. Peter's martyrdom at Rome is marked by an obelisk bearing the inscription:

'Christus vincit; Christus regnat; Christus Imperat;
Vicit Leo ex tribu Juda.'

Sobriety is the temper which has great things in view, and which, because it believes in the victory of God, learns to 'use the world as not abusing it.'

R. L. OTTLEY.

SOCIALISM.—Socialism, with all that it implies and reveals of the desires and possibilities of human life in this world, stands in thought and history as gathering into itself tendencies, ideals, impulses, visions, and activities, theoretical and practical, which are as profoundly significant as any in our modern civilization, and the power and worth of which for the future of mankind no one would be justified in estimating on a low scale. By enthusiastic believers socialism has been described as in itself a religion; and the fact that for thousands of earnest men and women, feeling themselves crushed in the tangle and welter of human existence, something called 'socialism'—often something crude, indefinite, tinged with the violence of discontent—has been indeed substituted for religion, and made the goal of effort and the standard of

conduct, is an indication both of the passion and the enthusiasm for humanity which lie behind all socialistic theories, even the crudest, and of the failure on the part of religion, as usually understood, to meet desperate problems and high aspirations in the life and thought of modern men and women. It would be unwise and unworthy to present socialism as an insignificant thing, whether we deal with it as a theory or complex of theories about existence, as a vision of what human society might be and perhaps ought to be, or as a comprehensive ideal to be achieved in the future. Socialism belongs to the big things of human history and endeavour.

As practically all writers on the subject have confessed, socialism is difficult to define with accuracy and brevity in such a way as to cover all that the term contains, still more all that it means for those who most sincerely and devotedly use it. Socialism has been called a religion. In modern history it stands before the observer as distinctly a 'movement,' something with its ground and origin in life rather than in thought, in the factory, the workshop, and the slum rather than in the study. But it appears equally as a theory, or more truly a complex of theories, economic and political, concerned with social existence and organization. On occasion it may advance to the rank of a philosophy. It has been described as the 'economic philosophy of the suffering classes.' Again and again, by upholders and opponents alike, it has been set in contrast with the philosophy of individualism (*q.v.*), however that may be defined. In the later years of the 19th cent. socialism became an organized political force in all Western States, with its programmes, national and international, its representatives in legislative assemblies, its parties, and its press. Socialism may, therefore, be considered in any or all of these aspects, and attempts at definition made accordingly. Further, it may be treated simply as an ideal and defined or described under the form of a Utopia. A definition that shall cover all the possibilities seems beyond attainment. The best way of approach is probably through a study of the history of socialism, as a theory and as a political force, with a steady and sympathetic eye upon the actual conditions of human existence out of which the theories developed and within which alone they could be turned to weapons of practical endeavour.

I. HISTORICAL SURVEY OF SOCIALISTIC IDEAS.

—In this article it is impossible to treat the history of socialism with any completeness of detail. Only a survey sufficient to bring out the chief characteristics, and this mainly in the region of socialistic ideas rather than socialistic effort, will be attempted.

i. **SOCIALISM A MODERN DEVELOPMENT.**—It is important to recognize from the outset that socialism, as a historical fact, both in its theoretical aspects and as possessing political and practical importance, is a modern development. If socialism were so indefinite as to be only the philosophy, explicit or latent, of the suffering classes of mankind, or if we include under it any and every attempt at emancipation on the part of people in economic and social enslavement, or again any vision at any time of a better social future for humanity, any ideal 'Republic' or 'Civitas Dei' or 'Kingdom of Heaven' that imagination has bodied forth, then there has always been socialism; but it is rhetorical exaggeration to push back socialism beyond the limits of the modern period. Those limits are fairly definite. They may be taken to be, on the one hand, the French Revolution and, on the other, with less accuracy as to delimiting dates, that series of changes, in the social and economic structure of civilization, from the basis of feudalism, the land, and economically individualized production, to the basis of commercialism, capital, machinery, and collective production, which is summed up under the phrase 'the Industrial Revolution.' We need look no farther back than the last quarter of the 18th cent. for the beginnings of socialism.

ii. **EARLY SOCIALISTIC THOUGHT ILLUSTRATED: ITS SOURCES.**—J. T. Merz¹ points out that the historian Michelet opens his *History of the Nineteenth Century* 'by introducing three great Socialists.'

¹ *History of European Thought in the XIXth Century*, Edinburgh, 1896-1912, iv. 472 ff.

It is a significant beginning, and reveals profound insight into the deeper currents of 19th cent. life and into the importance of socialism. The socialists whom Michelet names are Babeuf (1764-97), Saint-Simon (1760-1825), and Fourier (1772-1837).

These men, he says, 'emerge about the same time from the prisons of the Terror. Their ideas, to begin with, are in no wise discordant; they have the same point of departure: humanity, pity, the outlook on extreme misery. . . . Whatever opinion one may form of the three famous Utopists, we must admit that their systems, even their eccentricities, sprang from an admirable emotion, from the rising of a most generous feeling. Babeuf asks only for the division of deserted lands, abounding everywhere, in order to make them productive: Right is the single basis, the universal right of men to a sufficient living; Saint-Simon desires Progress . . . Fourier raves for Harmony.'¹

Far more important than the 'systems' which these men desired or the practical demands which they made are, as Michelet suggests, the motives underlying their writings, the controlling ideas with which they worked, and the assumptions on which they rested. They aimed, in the end, at nothing less than an entire reconstruction of society, a radical alteration in the whole method and manner of human living. In so doing they established from the outset a characteristic of socialism which it has always retained, and lapse from which may truly be regarded as lapse from genuine socialism. Both as theory and as movement, socialism seeks to envisage and to establish an order of social existence totally different from that which is characteristic of modern industrial civilization. The order of social and economic life which the Industrial Revolution induced was accompanied from its inception by the demand for an altogether new order. In a sense, though not quite in the sense intended by him, the contention which, as we shall indicate, Karl Marx insisted on as so important, to the effect that the capitalistic order of life contains within itself the seeds of its own destruction, is true enough. Revolt has been with modern industrialism all along, its second self, its perpetual shadow. The mind and heart of modern life, which in the French Revolution, despite awful failures and disillusionment, received so rich an emancipation, have ever been in conflict against machinery, the peculiar force in the Industrial Revolution; and socialism represents in no small degree the persistent struggle of mind and heart against machinery. Feelings of pity, a sympathetic enthusiasm for humanity, belief in equality and brotherhood and the rights of man, distrust of 'civilization,' a strong sense of the injustice and ugliness of poverty and misery—these emotional and spiritual qualities, so potent in producing the mighty upheaval in France, lived on into the era of the factory and the machine as perpetual incentives to criticism and discontent; they are the moral springs of every consciously elaborated socialistic theory, even the most apparently materialistic, and they are the real sources of energy in every socialist movement. It is, therefore, significant that men like Saint-Simon and Fourier, who influenced socialism in the beginning, were more Utopian than scientific, more akin to the poets than to the sociologists or economists, more open to the logic of the heart than to that of the philosophy of history.

i. **Saint-Simon.**—If socialism seeks a beginning in the thought of Saint-Simon, Fourier, and their followers, we must admit that it originates from men who had a genuine passion for humanity. They sought after a complete reorganization of society which should allow human beings full opportunity to develop and display the qualities of humanity which they possessed; they believed in the natural goodness of man, in his natural ability to achieve absolute truth, and in his natural and inalienable right to full and satisfying life. The systems which they imagined as likely to give

¹ Michelet, *Hist. du XIXe siècle*, i. 1, quoted in Merz, *loc. cit.*

human nature the best chance to be itself would hardly pass muster now as in accord with received socialistic theory. Saint-Simon, *e.g.*, who directed his sense of revolt mainly against the ancient régime and viewed the approaching change to industrialism as good in itself, seems to contemplate an ordering of society in which spiritual power shall be vested in men of science, and temporal power in representatives of the property-possessing class, leaders of the new industrialism—a disastrous heresy, viewed from a later standpoint. The contrast between labour and capital, so prominent in subsequent theory, is not present to him. In the writings of his later life his interest, it is true, becomes more and more fixed on the question of the condition of the poorest classes in society. In his *New Christianity* (1825) he emphasizes this aspect of the matter repeatedly and develops the view that the main function of society is the betterment of the moral and physical existence of the poorest class: society ought to organize itself in the way best adapted for attaining this end. This was Saint-Simon's final interpretation of the Christian ethic, a true philosophy of the suffering classes, and an attempt, not noticeable in his earlier works, to place his social theories on a religious basis and present them indeed as a necessary fulfilment of Christian truth. Saint-Simon's writings contain many fruitful and brilliant ideas, and there are few of the great social problems of modern life on which he does not touch; but his schemes have historical interest only. His main contribution was to present plainly the truth that the crucial problem of the new modern world which he saw opening before him would be nothing less than the ultimate organization of society as a whole. Among his more immediate followers, in the midst of many extravagances which brought the whole complex of his ideas into disrepute, we find notions which were destined to play a great part in later socialistic thought. The definite attack on private ownership, soon to become one of the cardinal characteristics of socialism, finds emphasis, and there is development towards doctrines of extreme communism, whilst the conception that the principle of association (co-operation) must be fundamental in social organization becomes prominent; we get the first hints of the emancipation of women and of the doctrine of the political and economic equality of the sexes as necessary to worthy social life.

2. **Fourier.**—The underlying assumptions on which Fourier, a clearer and more systematic though less influential thinker, rested his views were much the same as Saint-Simon's. He believed in the ultimate, native goodness of human nature, and desired a social organization that should give freedom for full exercise of every individual's capacity and desire. Set free from restraints, human nature, he believed, would inevitably work towards harmony. The social system which he imagined as adequate to meet the need for freedom is interesting as representing a tendency in socialism opposed to the corresponding dominant tendency of the Saint-Simon school. Whereas Saint-Simon looked rather to centralization and what we might call bureaucratic government, by scientific experts, as the way of social salvation, Fourier envisages a tremendous development of the small, autonomous group—a kind of village commune with full local self-government—as the basis of social organization. He thought that such an arrangement would allow a greater measure of real freedom to the individual than any other method, freedom for the individual being the object of social organization.

These two tendencies, the one towards centralized government and the absolutizing of the State, the other towards group-organization and decentralization—the spreading of

autonomous power over as wide an area as possible—appear again and again throughout the history of socialism and might even be taken as differentiating schools of socialist thought one from another. Saint-Simon represents one tendency, Fourier the other. Intellectually and spiritually the one thinker belongs to the camp of the bureaucrats, the other to that of the anarchists. Socialism knows both.

These early French thinkers, and we may say practically all who can be described as socialistic thinkers throughout the first half of the 19th cent., developed their ideas on the basis of a profound belief in human reason and in an underlying natural law, natural right, natural harmony of created things, due to the goodness of God or of Nature, which it was the highest business of reason to discover and to accept. In their view the ultimate principle of reality, God or Nature, had intended an orderly and harmonious creation, and as part of that creation an orderly and harmonious human society, in which man could be happy. The principles of that natural social harmony and organization existed in *rebus æternis* and only required looking for. 'Has not Nature,' exclaims Cabet, a typical socialistic thinker of the time, 'endowed us with intelligence and reason with which to organise happiness, society, and equality?' True social organization is a matter of knowledge and perception; only reveal the underlying natural principles of society to mankind, educate men's minds, and their reason will accept and act on them and all will be well.

3. **Rousseau.**—In all this belief in reason and natural right and order, which had and still has so much to do with the vitality of socialistic speculation, there is clearly discernible the influence of the spiritual forces that helped to bring about the French Revolution, and particularly the influence of Rousseau (*q.v.*), the father of so many of the greatest ideas in modern thought. It was very largely from Rousseau and kindred sources that the early socialistic thinkers learnt their belief in the goodness and perfectibility of human nature, their distrust of civilization and consequent demand for a new start in history, a complete change, their conviction that mankind needs and must have, and can rationally devise, a political constitution and an economic and social structure that shall give the individual full freedom of personal life, and their optimistic faith in progress and education.¹ Convinced, thus, that man was intended for happiness and was by nature a social being, and yet seeing all around them unhappiness, misery, crimes, disorders of all kinds, they could only conclude that the laws of nature had been defied or misunderstood, and that the way out of the morass was a new application of reason to the discovery of these laws and a complete reorganization of society on the basis of them. The fact that other thinkers of the period also believed in a 'natural' order for society, and thought that they had discovered that natural order in industrialism, free competition, and capitalism, does not seem to have troubled the pioneers of socialism very much. Views opposed to their own belonged, no doubt, to what Owen called the irrationality and insanity of the past and present state of the human race. Although the systems of the first socialists differ considerably from one another in detail, the authors of them are agreed in the conviction that the rational order is different from the one in which they lived, and tend to reach agreement also in the belief that among the natural principles of social harmony and organization there may be found at least two which are to be regarded as axiomatic: (1) that *common property is natural* and therefore necessary to happiness,

¹ All the early socialists were great believers in propaganda and had a remarkable faith and trust in mankind's power of understanding. They thought that men had only to be shown the truth in order to act upon it.

(2) that *labour is the only title to property*. All socialistic economics may be said to be variations on these fundamental themes.

4. Robert Owen.—A very interesting and remarkable illustration of socialistic ideas, of the rationalist and Utopian kind, is to be found in the writings and the practical activities of Robert Owen (1771–1858).

Owen was a man of extraordinary capacity and great personality. His career was a varied and amazing one; in the course of it he rose to wealth and European reputation as a successful manufacturer with novel ideas of treating his workers, and sank to poverty and ill-repute as an advocate of extreme communism, a supporter of social change and militant trade unionism, and an experimentalist in communist settlements. As a 'model employer' in his famous factory at New Lanark he introduced reforms, amenities, privileges, opportunities of education, for his work-people, which showed on his part a deeply humane insight into the social problems and sadness of the new industrial era, and also laid down the lines that were later followed in many respects when legislation had to step in, perforce, to remedy some of the worst evils of competition and mechanical industry. The direction and character of his later activities may be illustrated by such facts as these: in 1825 he established, at his own expense, a communist society at New Harmony, Indiana; in 1832 he attempted, on a small scale, the establishment of 'an equitable labour exchange system, in which exchange was effected by means of labour notes, the usual means of exchange and the usual middlemen being alike superseded';¹ in 1834 he was mainly responsible for the appearance, with amazing though short-lived success, of the 'Grand National Consolidated Trades Union,' with syndicalist ideals, in 1835 for the 'Association of all Classes of all Nations,' a premonitory sign of socialistic internationalism.

Owen's socialistic thought, which chiefly concerns us, set forth mainly in his *New View of Society* (1813) and *The Book of the New Moral World* (1836), is based on the familiar belief in reason and natural right and in ultimate principles of natural social order and social harmony which reason can discover. Those principles Owen thought he had discovered, and in his writings he undertakes to explain them for the benefit of his fellows. Give, first of all, freedom to human nature, and it will develop a form of society in harmony with natural law. Systems of restriction are due to the stupidity of man refusing to follow reason; they prevent human nature doing its proper work. The present social system is a monstrous imposition which must be got rid of; enlightenment of reason and education will achieve its destruction. Owen apparently believed that there once was historically a true social order, in accordance with nature, and the new order which he desiderated was a reproduction of that first paradise. The eternal principles of natural social order were communistic. By natural right, property is common. Therefore the institution of private property must be abolished. Owen contended (and the contention has been repeated in socialist teaching time and again) that the institution of private property is the root of all divisions and separations in society, the basis of economic poverty and of the difference between rich and poor, and the source of all jealousies, rivalries, strifes, and wars; private property, he maintained, is not necessary to meet human needs, nor is competitive industry, based on private property, the best way of satisfying legitimate human wants. Co-operative labour, aided by science and machinery, would produce so much wealth that not only would all needs be supplied, but there would be abundance beyond all wants or wishes, so that 'any desire for individual accumulation or inequality of condition' would cease. This communism of the natural order Owen carried to some lengths with regard to the institutions of marriage and the family, making marriage an easily terminable contract, whilst his extreme belief in the necessity for the free play of individual preferences and feelings and his equally extreme distrust of man-made laws led him far, though with inconsistencies, in the direction of anarchism.

¹ Cf. Kirkup, *Hist. of Socialism*⁴, p. 67.

Owen was not content with preaching his socialistic communism; he made valiant attempts to practise it, obsessed somewhat by the heroic, though mistaken, idea, which appears over and over again in socialist history, that the best way of destroying the present evil social order and establishing the new natural and good order is to start out at once and build 'communities' within the existing fabric of society, on the basis of the laws discovered by reason. Owen tried this method and failed, though not before he had created considerable interest and set going a stream of potent influence. A recent socialist writer has said that the promulgation of Owen's ideas on the 'community' forms a landmark and may be reckoned as the beginning of modern socialism. The claim is extreme; but without doubt the ideas which Owen expounded have played a tremendous part in socialist thought, whilst the sentiments from which his ideas drew their inspiration are characteristic, both in their good points and in their defects, of every socialistic Utopia that has been imagined, portrayed, or attempted.

Another not unimportant aspect in socialistic thought which finds remarkable illustration in the ideas of Owen may be mentioned here. He seems to have perceived with great clearness that the troubles of social existence under the new régime of machines and factories were economic rather than political; he was concerned more with the worker at his work than with the citizen in the larger life of the community. He was among the first to envisage the social situation definitely from the point of view of the economically enslaved workman. As a result, he and his followers were often thought to be lukewarm towards the agitations for political reform and the securing of the franchise, which aroused much popular enthusiasm at the time. Owen did not believe that the way to the social, and still more the economic, revolution which he desired lay through the controlling of political and parliamentary power. Political democracy appeared to him 'quite secondary to Industrial Democracy, or the co-operative ownership and control of industry answering to the economic co-operation in all industrial processes which had been brought about by machinery and factory organization, and which had removed manufacture irrevocably from the separate fire-sides of independent individual producers. . . . Owen and his more enthusiastic disciples were persuaded that a universal voluntary association of workers for productive purposes on his principles would render the political organization of society of comparatively trivial account.'¹

When his isolated communities of producers failed to realize his dream, Owen hit on the idea of turning the trade unions, defensive combinations of workmen, into the voluntary communistic associations, 'National Companies,' as he called them, which should supersede both the capitalist manufacturers and the State. All that the workers had to do was to combine into such associations of producers as Owen imagined, and the capitalistic system was doomed. Just how the associations of producers were to secure the transfer of industries from the existing proprietors Owen does not seem to have made clear; he does not appear to have approved of violence, and the concept of the 'general strike' is not adopted by him, although that method was advocated by contemporaries.

In various forms this idea of voluntary co-operative associations of producers has appeared frequently in socialistic thought and effort.² But the notion of turning the trade unions into such associations was distinctly an inspiration on the part of Owen himself, and, as the quite recent history both

¹ Cf. Sidney and Beatrice Webb, *Hist. of Trade Unionism*, new ed., p. 159 f.

² We may instance the social workshops—associations of workers provided with capital by the State—conceived and attempted by Louis Blanc in France about 1818 (see his *Organisation du travail*, Paris, 1839). Ferdinand Lassalle, the founder of German socialism as a political force, advocated associations of producers working with capital supplied by the State, as a practical method of advance. We may compare also the self-governing workshops favoured by the 'Christian Socialists' in England.

of trade union theory and of socialist theory has shown, a much bigger and more fruitful idea than some of Owen's critics have allowed. The point, however, to be emphasized here is that Owen's ideas in this respect sprang from the fact that, in envisaging the social and economic problem of his time, he fixed his attention on the worker as producer, the worker at his work, more than on anything else. Freedom for the individual in his industrial life, the power of self-government and self-control there, was what Owen wanted to secure. The fact is that, like most of the Utopians of his time and since, he begins his socialism with the individual. There is another school of socialist theory which begins definitely with the concept of 'the State,' the community as a whole, 'society' as such, the 'social organism,' and so forth. The difference is very great, with regard both to the way in which the socialistic Utopia is envisaged and to the methods by which it is to be achieved.

There has been a tendency in some socialistic writers to treat almost with contempt all this earlier socialist speculation. Marx and Engels described it all alike as 'Utopian,' a term not overburdened with respect, in contrast with their own 'scientific' socialism. Others have quarrelled with it because it has no real philosophy of history, no sense of historical evolution, above all no concept of 'the State,' whilst its criticism of social conditions is rejected as sentimental. The sources of its intellectual origin in the rationalism of the 18th cent. are suspect. Its inclination towards extreme communism in economic theory and voluntaristic anarchism in political theory makes it repugnant to some types of mind. But no one can really hope to understand socialism without consideration of its early Utopian period. Ideas characteristic of all socialistic thought were then and there developed, or at least set going. But, even more significantly still, these early Utopians—and this feature is characteristic of all others like them—reflected and expressed the usually voiceless feelings and aspirations of oppressed masses, and particularly of the crushed and enslaved individual, out of which socialism most truly springs, and they never failed to waken the passion for freedom and individuality without which socialism is unrecognizable. In default of a philosophy of history and a sense of historical evolution they had faith in humanity, belief in the perfectibility of man by education, and a strong apocalyptic idealism, leading them to expect the dawn of a new era, as it were, on the morrow.

iii. **EARLY SOCIALISTIC THOUGHT AND RISING DEMOCRACY.**—Socialism can never be properly appreciated in any of its aspects unless it is seen in intimate connexion with the life of the working-classes of society, and its best exponents have been just those who, either through actual experience or through sympathetic imagination, have entered most fully into the feeling and passion of the working life of working people. The early pioneers of socialistic thought were the voices of new forces and new classes in society, above all of that characteristic product of the Industrial Revolution known commonly as 'the working-class,' described more technically as 'the proletariat.'

i. **Emancipation of the proletariat.**—Werner Sombart defines socialism as 'the intellectual embodiment of the modern Social Movement,' and the 'Social Movement' he takes to be the totality of 'all the attempts at emancipation on the part of the proletariat.'¹ That definition brings out the fact, which it is important to emphasize, that socialism is and always has been, theoretically

and practically, a movement in thought and life intimately concerned and connected with certain particular social classes, roughly the wage-earning classes, economically the most insecure and menaced members in the social whole. The more modern, and so-called 'scientific,' way of regarding socialism, which would elevate it to the position of a political philosophy, or a doctrine of society, as it were, in its own metaphysical right, is really mistaken and historically incorrect. In the sources of its vitality, and in the general scope of its most characteristic ideas, socialism might not inaccurately be described as the philosophy of an oppressed social class, which was itself the product of a particular series of economic developments and a particular kind of economic organization.

The Industrial Revolution, which we have pointed to as one of the limits beyond which it is needless to look for socialism, created new social forces and social classes. Especially, it created, on the one side, the social class possessing capital and the power to employ labour and, on the other side, the social class possessing nothing but power to work, and dependent on the capitalistic class for opportunity to exercise that power, and so to live. There had been land-less men before: there were now capital-less men—men possessing power and skill to labour, but destitute of the economic facilities for utilizing their labour and making it productive. That was the root fact of the new situation created by the change to industrialism; it is the dominating social fact of the 19th cent. and of modern civilization. The coming of machinery, the application of science to industry, the collectivization of production by the factory system, and in the early years of the new era the amazing rapidity with which wealth was gained, affording temptation and opportunity to unscrupulous greed and selfishness, speedily intensified the new class divisions and deepened the misery of the non-possessing members of society. The story of that evolution is well known; the social history of England for certainly the first half of the 19th cent., if not more, illustrates the condition of things only too well.¹ Admittedly the new era produced 'suffering classes' and there was need and room for 'an economic philosophy of the suffering classes.' Socialism rose to answer that need. Socialistic ideas were the intellectual formulation of desires, aspirations, half-conscious longings and stirrings after freedom, fuller and better life, felt by these economically subordinate social classes. Often it is difficult to say whether a socialistic idea owed its origin to an independent thinker and was accepted by the proletariat, or whether the man who formulated the idea first discerned it germinating in the mind of the struggling proletariat itself. Socialism, at any rate, has been a live force only when there has been close interaction between its intellectual formulation in the realm of ideas and the instinctive thought and feeling of the proletariat, or, if we like the phrase better, the heart of the people.

2. **The Chartist movement.**—We may illustrate what we have just said, and also, perhaps, bring out some further characteristic ideas of socialism by a brief consideration of the remarkable Chartist movement which largely constituted the life of the English working-classes for a

¹ The pitiful story of these years has been told frequently, perhaps nowhere better, at any rate for the first thirty years of the century, than in the social studies of J. L. and Barbara Hammond, *The Village Labourer, 1760-1832*, London, 1911, and *The Town Labourer, 1760-1832*, do. 1917. The terrible indictment drawn by Karl Marx in *Das Kapital*, 3 vols., Hamburg, 1867-95, will always be classic. The novels of Kingsley and Dickens tell the same story, and there is a mass of other evidence.

¹ *Socialism and the Social Movement*, Eng. tr., Introd. p. 1.

quarter of a century, and the actual connexion of which with socialistic thought has not been as fully recognized as it ought to have been.¹

The Chartist movement was the most complete expression of the revolutionary temper of the English working-classes, developed in them, slowly and painfully, by the bitter actual experience of what the Industrial Revolution meant in their lives. It was not the work of agitators, but the spontaneous outburst of oppressed men and women, no longer to be restrained. It was a movement of the new industrial proletariat, the first of its kind that the world had seen. Just as the Industrial Revolution itself ran its opening stages earlier and more quickly in England than elsewhere, so, quite naturally, it there earlier than elsewhere revealed within itself the power of provoking resistance and opposition inherent in its constitution; the capitalistic, competitive mode of social organization creates a class of people whose only hope of enduring existence consists in destroying the creature that begat them.

'The Industrial Revolution,' it has been truly said, 'obliged everybody whom it affected to think about the problems it raised, and when they addressed themselves to these problems the rich and the poor started from different standpoints: the rich from the abstractions of property, the poor from the facts of their own lives. As a result there developed two different systems of morality. For it makes a great deal of difference whether experience is passed through the sieve of hypothesis and theory, or whether hypothesis and theory are passed through the sieve of experience. The upper-class explanations ceased to be satisfying to men and women who wanted to know why they were starving in the midst of great wealth.'²

Instinctively and subconsciously, driven by pressure of experience, the working-classes of the new society were making, on the basis of their own needs and suppressed desires, a philosophy of social life and an economic theory which were bound to be different from those of the possessing classes. The unpropertied man *cannot* think and feel like the propertied: his psychology is different; he sees life from a totally different angle. Chartism is, historically, the first clear pronouncement of the instinctive political philosophy and economic theory of propertyless and unprivileged human beings, awakening, on the one hand, to the sense of enslavement and, on the other, to their capacity for visions and ideals. The fundamental demand of Chartism was for a total change in social and economic organization. It was a revolutionary movement, in the strict sense of being a movement not for 'reform,' leaving the basis untouched, but for radical change involving alteration of basis. It is true that Chartism is frequently presented as a movement merely for political enfranchisement, conditioned by the dissatisfaction of the working-classes with the results of the Reform Act of 1832; and undoubtedly it was a movement of demand for political democracy. The famous 'Six Points' of the Charter were all concerned with matters political, and contained no hint of economic and social demands. But the reason why Chartism, as a political programme, spread like wildfire is not contained in the political programme itself, but in the conceptions which the proletariat had now begun to cherish of the uses to which political power might be put. Political democracy was not desired for its own sake; it was desired as means to an end, and it was the thought of the end beyond the means that created enthusiasm. For twelve years at least prior to 1837, when the Charter appeared, the movement behind it had been fermenting and

developing, and examination of contemporary Chartist literature seems to show conclusively that the aim of the deeper movement was nothing other than the revolutionizing of Britain in a complete socialistic sense, and further that this aim represented, not something given to or foisted upon the working-classes from outside, but their own instinctive, and now partly conscious, reaction to the conditions in which they were placed. The idea of social revolution—radical social and economic change—which gave to Chartism its emotional force was born from the heart of the proletariat. The demand for political power covered the determination to use such power, if acquired, to reconstruct society on a new basis. Democratic parliamentary reform was only a step to the larger goal. Chartism, it is true, was not an uninterrupted movement, nor systematically developed, nor were its intellectual foundations and sources the same as those of more modern socialistic-democratic thought. There was no unanimity in regard to the salient characteristics of the social revolution desired or in the envisagement of the ultimate goal. But in the course of the Chartist movement, and especially during the years of its greatest intellectual activity (1831-34), almost every permanently important socialistic idea found expression, and, more significantly, response from the working-classes, whilst the characteristic proletarian criticism of modern civilization was published in the newspapers and pamphlets of the movement.

We are not concerned here with the course of the Chartist movement itself,³ but only with the ideas lying behind it and their relation to socialistic thought. What were the most prominent of those ideas? (1) Chartism makes evident the presence and operation of the concepts of class-consciousness, class-interest, and class-war. In the literature of the movement we find the doctrines enunciated that the working-class must stand alone and work out its own salvation, that there must be no alliance with the property-owning classes, that the interests of labour and capital are essentially irreconcilable, and that the only solvent for the misery of existence is the democratic organization of society on the exclusive basis of labour as the only title to rights, possessions, and privileges of any kind. The outburst of revolutionary trade unionism (really to be considered part and parcel of the Chartist movement) which followed the repeal of the Combination Acts in 1825, and in which Robert Owen was influential, rested on conceptions such as these. The concept of the 'general strike' as a way towards social revolution appeared, and ideas of the ownership and control of the means of production in each industry, not by the community at large, but by the workers engaged in the industry—ideas which were to have a remarkable resurrection in a later age—were put forward.

(2) Lying behind all this ferment of ideas was the doctrine that labour is the real source of wealth, the only ground of possession, and that consequently the labourer has inalienable right to the whole produce of his labour. This doctrine, in various forms, had been derived by unorthodox economists like William Thompson (1783-1833) and others as an amplification of the reasoning of Ricardo, from whom the economics of unfettered capitalism and free competition also professed their origin. By thinkers drawing their inspiration from the rationalism of the 18th cent. and the theories of natural law and natural right—notably, e.g., William Godwin (1756-1836)—the doctrine of the 'right of labour' had also been enunciated. But it was received by the working-classes only because it corresponded to their own instinctive reactions towards private ownership, their own sense of what was naturally right, and their own painful experience of continually toiling at the production of great wealth and receiving next to nothing of it in return. Quite clearly, if the propertyless producer of wealth achieves an economic theory at all, it will inevitably contain some proposition to the effect that the man who produces is also the man who ought to own the product, that the only title to wealth is that a man has worked for it. Equally inevitably and naturally, when it is observed that only a very small portion of the wealth produced by labour, or *ex hypothesi* so produced, is enjoyed by labour, whilst the residue goes off elsewhere into interest, rent, and profits, this departure of the product appears to be a taking away from labour of its rightful due, and almost, in fact, robbery. That doctrine, and economic criticism of capitalistic society, also found expression in the Chartist movement, but in the more polite form of the theory of 'surplus value,' later to be made by Karl Marx a cardinal theory of socialist economics, and to be elaborated by him with great acuteness and skill. Again, the doctrine is part of the instinctive economics of the

¹ The best treatment of the Chartist movement in its relation will be found in Max Beer, *Gesch. des* (for the best history of socialistic thought yet produced). Another illuminating study of Chartism is that of Mark Hovell, *The Chartist Movement*, Manchester, 1918.

² J. L. and B. Hammond, *The Town Labourer, 1760-1832*, p. 289.

³ See art. CHARTISM.

proletariat. About 1835, in the *Poor Man's Guardian* and elsewhere, the declaration is to be found that, under the modern system, whilst the worker produces all the wealth, he receives only the barest minimum needed for subsistence, and sometimes not even that, whilst all wealth over and above that, the surplus, goes to the capitalist, who, with the aristocracy and priests and gentlemen, lives by the toil of the workers.

(3) The aspirations of the proletariat in the Chartist movement turned partly in the direction of desire to socialize the land of Great Britain and organize life on a basis of communistic colonies—a desire frequent enough in early Utopian socialism; partly in the direction of preparing the workers, by parliamentary reform, political organization, and education, to revolutionize and control the country in a political sense, making them ready for economic power through use and exercise of political power; and partly, again, in the direction, as we have already suggested, of the ownership and control of industry and the means to industry by the associated workers themselves—a kind of syndicalism. These aspirations received little systematic expression, but their undoubted presence illustrates characteristics of the mind of the workers in revolt on which socialism has always depended, if not for its theories, at any rate for the vigour of its practical effectiveness.

(4) Another significant feature in the movement is found in the differences of method advocated as likely to secure the desired goal. Chartism had a 'moral force party' and a 'physical force party'—names which sufficiently indicate the nature of the methods proposed. For our purpose the matter has importance as showing how thus early, in the first real movement of the modern proletariat towards social redemption, what we might almost call the two wings of socialism in all stages and in all countries make their appearance—on the one side, the tendency towards violence, insurrectionary revolution, anti-parliamentarism, distrust of politics, and ultimately a loose, communistic, group-organization of society, with suggestions of anarchism; and, on the other side, the tendency towards political reform, change by constitutional legislation and parliamentary action, evolutionary socialism, as it was called later, and ultimately a centralized, rather bureaucratic social organization.

3. Revolt against machinery.—It is not necessary to recapitulate the ideas that we have found present in Chartism. The parallelism between them and the ideas of early theoretical socialism is obvious, and it is important to notice that actual experience of misery on the part of the proletariat led, not only to the acceptance, but also to the instinctive discovery, of the same kind of ideas concerning social life and organization as had been prompted in the minds of theorists by contemplation of and sympathy with that misery. Still more significantly, just as theoretical, Utopian socialism was animated by a genuine passion for humanity and a deep sense of human beings as persons, so this proletarian, instinctive socialism, as manifested in Chartism, was everywhere fanned into a flame by a sense of outraged personality. That was the deepest motive in it; it was inspired, we may say, by hatred of the machine. For the men and women concerned in the Chartist movement machinery was the monstrous symbol of the new social and industrial and economic order in its totality.

They felt passionately that the new power 'was inhuman, that it disregarded all their instincts and sensibilities, that it brought into their lives an inexorable force, destroying and scattering their customs, their traditions, their freedom, their ties of family and home, their dignity and character as men and women.'¹

Proletarian socialism is a characteristic form of the revolt of mind against machinery which is the innermost thing in modern history; and the right way to see socialism is not as a system in economics or as a political philosophy, but as a movement of humanism and personalism in life, especially in the life of the working-classes.²

¹ Cf. J. L. and B. Hammond, *The Town Labourer*, p. 18.

² We may add here two observations: (1) the Chartist movement collapsed about 1850, in failure so far as its main objects were concerned. But the ferment that it created and the ideas that were disseminated during it led to lasting results in the social life of Great Britain: we may instance the co-operative movement, and the movement for education of the people which led to the great Acts of 1870 and 1871, and, also, noticing here the special influence of Robert Owen, the legislation for the control of factories and the employment of women and children, which helped to remedy some of the worst abuses of the early years of industrialism. So far as British socialism is concerned, it is usually said to have died, at any rate as a movement, about 1848, and not to have revived again till 1880, except for the labours of the so-called 'Christian Socialists,'

iv. 'SCIENTIFIC' SOCIALISM.—Many writers, following Marx and Engels, have spoken of the first period of socialistic thought as 'Utopian,' and of the second as 'scientific,' though the changes are often represented as much deeper than they really were. Socialistic thought, as we shall see, has never wholly lost the characteristics of its humanistic and, if we will, Utopian origins. Still, there were changes, made inevitable by various causes operating in the world of intellectual, social, and political development generally. The long-continued influence of the rationalism of the 18th cent. disappeared, about the middle of the 19th cent., before the advance of the evolutionary, scientific, and developmental point of view; historical realism displaced *a priori* speculation in regard to the problems of human life and society; political theory and philosophy were subjected to scientific method, with consequent departure from all conceptions of a 'natural order' of society and a possible displacement of the existing order by reversal at the instigation of the human will. On the continent of Europe also, at any rate, if not in Britain, the philosophy of the State, centralized and organized, as the real social entity, became prominent, whilst in Britain itself, the special home of political individualism, by the beginning of the last quarter of the century, the older view of the State in relation to the individual was dying, if not dead, and the social sense, the social conscience, the feeling of corporate and collective responsibility, were everywhere growing apace. Further, the endeavour of the working-classes to secure emancipation from industrialism became actively and prominently involved in the development of political democracy; socialism, in some form or other, became the programme of political parties, organized and forceful; and this fact also affected socialistic thinking.

Under these and similar influences, socialistic thought, as we are now to consider it, appears much more definitely than before as systematic economic theory and political philosophy. It develops a distinctively economic, rather than a purely humanistic, criticism of modern capitalistic society. Socialism is now presented not simply as a desirable social change to be striven for by those who will to strive for it, but as a necessary stage in the evolution of society, an order of social life that must supervene on the present order. On its theoretical side, in some aspects, it loses touch with the heart of the proletariat and tends to become even academic, drifting often from its original and indeed essential character as a revolutionary movement and appearing frequently as little more than an impetus towards evolutionary, gradual, and politically-engendered social reform.

1. The Communist Manifesto.—The characteristic language of this new level of socialistic thought is heard for the first time with concentrated power and the force of genuine eloquence in the famous *Communist Manifesto*, which has been called the charter of independence of modern socialism, and which is described by Werner Sombart as 'a unique document in the literature of the world.' We shall get to the heart of the most

chief among whom were F. D. Maurice and Charles Kingsley, with their abortive efforts at 'self-governing workshops.' (2) In other countries, where capitalism has pursued a similar course, the connexion of socialistic ideas with movements of emancipation on the part of the proletariat was not unlike that illustrated by the Chartist movement, especially in the concentration of the first proletarian efforts everywhere to secure wider political power. Socialistic ideas became connected with efforts to secure political democracy, whilst industrial unrest among the workers tended to find expression in socialistic visions and efforts. That is the usual story. The years round about 1848 were years of proletarian unrest and revolt throughout Europe, and these years witnessed a vast spread of socialistic thought, thereafter soon to induce definite socialist political movements and parties, organized, national, and international.

effective and most wide-spread socialistic thought of modern times, and of working-class life even to-day, by considering the leading ideas in this *Communist Manifesto*.

After a challenging preamble, describing the fear which the spread of communism, i.e. socialism, is creating throughout Europe, the *Manifesto* begins by laying down the principle that all history, since the days, at any rate, of primitive tribal community of property, is the history of conflict between social classes, created by economic conditions, and distinguished from each other by the possession or non-possession of economic independence and power.

'The modern bourgeois society,' says the *Manifesto*, 'that has grown from the ruins of feudal society, has not done away with class antagonisms. It has but established new classes, new conditions of oppression, new forms of struggle in place of the old ones. Our epoch, the epoch of the bourgeoisie, possesses, however, this distinctive feature: it has simplified the class antagonisms. Society as a whole is more and more splitting up into two great hostile camps, with two great classes directly facing each other: Bourgeoisie and Proletariat.'

The development, characteristics, and achievements of capitalistic civilization, under the dominance of the social class distinguished by the possession of capital, are next described, with full regard for the amazing endeavours and results of modern industrialism.

'The bourgeoisie, during its rule of scarce one hundred years, has created more massive and more colossal productive forces than have all preceding generations together. Subjection of Nature's forces to man, machinery, application of chemistry to industry and agriculture, steam-navigation, railways, electric telegraphs, clearing of whole Continents for cultivation, canalization of rivers, whole populations conjured out of the ground—what earlier generation had even a presentiment that such productive forces slumbered in the lap of social labour?'

Under the new industrial régime economic existence, production and consumption of wealth, has become cosmopolitan, international. Home industries, national industries, are displaced everywhere by new industries which 'no longer work up indigenous raw material, but raw material drawn from the remotest zones; industries whose products are consumed, not only at home, but in every quarter of the globe.' This means, according to the *Manifesto*, the breaking down of national barriers and exclusivenesses, and the rise of 'a universal interdependence of nations'—a real internationalism of intellectual creation and a common form of civilization. But unrestricted competition rules in the realm of consumption and distribution of created wealth: there is competition on the one hand to secure markets in which the goods produced can be disposed of, and on the other hand to secure raw material to which the new vast productive forces can be applied. This means perpetual instability in economic existence. Driven by insatiable competition, the capitalistic methods of production and distribution must exploit every corner of the globe; the instruments of production are constantly being revolutionized; productive capacity overleaps itself and its opportunities, periodic crises occur, 'epidemics of over-production,' which destroy 'a great part not only of the existing products, but also of the previously created productive forces,' and threaten the whole fabric and existence of society. All this is really due to a contradiction inherent in the nature of capitalistic, competitive civilization itself—a contradiction between socialized, or collective, production, and individualistic, competitive appropriation, which tends of itself to destroy the capitalistic order of civilization, by creating conflict between the productive forces at the disposal of society and the conditions, of private ownership of capital and free competition, on which the actual existence of bourgeois, capitalistic society depends.

This inherent contradiction—and it is on this point that the *Manifesto* chiefly insists—is reflected, and indeed represented, in the struggle between

the classes, bourgeoisie and proletariat, of which the one stands for the factor of individualistic ownership and appropriation, the other for the factor of socialized labour and collective production. These social classes are created by economic conditions and are differentiated from each other by economic characteristics. The bourgeois, possessing class is marked by ownership of the means of production, with consequent economic independence and control of economic power, on which follows control of political power, the institutions of government, and the organization of the State. The proletariat, on the other hand, is marked by lack of economic power and independence, concentrated in the fact of wage-labour, the basis of capitalistic exploitation, the essence of which is the compulsion placed on the wage-earning class to sell their labour-capacity, in order to subsist, at a price not only dependent on the will of the possessing class and capitalist controllers of industry, but (according to the doctrine of the *Manifesto*) tending always, by 'iron law' of the economic system itself, to approximate only to the level of the cost of subsistence needed to keep the wage-earner in being as a productive agent. Between the two classes thus characterized there is and must necessarily be mortal antagonism: their interests are opposed; their function in history is different; their destiny is not the same. As capitalistic society develops, this antagonism deepens and intensifies, capital tends to become concentrated and centralized in fewer and fewer hands, with the steady advance of large-scale organization in industry, whilst, on the other hand, the proletariat tends to be numerically constantly increased by a mass of individuals, resting at the bottom on complete unemployment and poverty, who benefit not at all by the progress of industry and the increasing facility of production, but sink deeper into misery.

'The modern worker,' says the *Manifesto*, 'instead of rising with the advance of industry, sinks deeper and deeper because of the conditions which his own class imposes upon him' (i.e., because of the compulsion of the wage-system and the competition for existence among the workers). 'The worker becomes a pauper, and pauperism develops even more quickly than population or wealth.'

Such an ever-widening gulf between classes, with the steady pauperization of one class as the condition of the enrichment of the other, constitutes an inherent criticism of social organization which must in the end be disruptive. This inherent conflict 'makes it abundantly clear that the bourgeoisie [the condition of whose existence is private ownership of the means of production] is incapable of remaining the ruling class in society, and of forcing society to accept the conditions of its own existence as a general law regulating the existence of society as a whole. The bourgeoisie is incapable of bearing rule because it is unable to ensure for its slaves a bare existence, because it is forced to place them in a position where, instead of maintaining society, society must maintain them.' The only way to escape from the impasse is to resolve the fundamental contradiction in the system—viz. the contradiction between collective, socialized production and private appropriation, ownership, and control. This means either reverting to individualized production, which in view of the progress of industry is impossible, or advancing to socialization, not only of production, but also of appropriation, ownership, and control. This means, again, socialization of the means of production, abolition of private property in these respects—in a word, appropriation, ownership, and control of the socialized means of production by the socialized producing agents, i.e. by the proletarian class.

The rôle of the proletariat in social evolution is

to represent and work out, in unity and solidarity, the negative side of the contradiction inherent in capitalistic organization—to turn that negative into the positive of the new social order by taking over the ownership and control of the means of production, thereby emancipating itself, overthrowing class society, and compassing the real social revolution, which is not only to accord with the desire and will of the workers for freedom, but also to be a necessary fulfilment of the inherent conditions of economic development itself. The very progress of capitalistically organized industrial society creates the conditions of change and the class by which change is to be brought about; it accumulates misery, which breeds revolt, and it compels the proletariat more and more towards self-protective unity and solidarity, by which revolt can be directed to its appropriate end. The class struggle represents the developing economic situation; the main duty of the proletariat is to spread and intensify that struggle, and to hasten the inherent economic development, by cultivating class-consciousness, the sense of their destined historical function, solidarity of intention and aim, and unity.

The *Manifesto* ends with the famous appeal for unity; and, because the conditions are in essence identical wherever capitalistic industrial organization prevails, the appeal for unity is made to all workers everywhere, the call to socialism becomes international: 'The workers have nothing to lose but their chains: they have a world to gain. Workers of all lands, unite!'

2. Influence of Karl Marx.—This *Communist Manifesto*, drawn up in 1847 for a relatively small society of revolt in Brussels, calling itself the 'Union of the Just,' and in principle repeated in 1864 as the basis of the 'International Workingmen's Association,' the real beginning of international socialism, was the work of two men, Karl Marx (1818-83) and Friedrich Engels (1820-95), mainly the former. These two names are indelibly associated with modern socialism in all its aspects, and wherever it has found acceptance. Marxian socialism moulded and dominated the socialistic thought of the Continent almost completely, and, till a relatively few years ago, almost without question. Its influence has been less in Britain than elsewhere, though socialism in Britain was in some measure reborn from the study of Marx which occupied certain acute minds about the year 1880.¹ Marx has the greater fame, and he was a more erudite and accomplished thinker than Engels, but he owed much to Engels, and especially to the knowledge which the latter possessed of the development of industrialism in Britain. Marx, in *Das Kapital*, may be truly said to be theoretically diagnosing and formulating, in his own metaphysical and economic terms, the history of capitalistic industrial organization in Britain, and peculiarly the proletarian reaction manifested in the Chartist movement, whilst his indebtedness to English political economists, and again especially to the economists of Chartism, is well known. The leading ideas in the *Communist Manifesto* are the ideas to the elaboration of which Marx devoted his splendid intellectual faculties, and to the practical organization and spreading of which he gave his energy and his life.

(1) From amongst these ideas we may single out, firstly, the so-called *materialistic conception of history*. Marx was a student of philosophy and

belonged to the extreme left wing of the Hegelian school, being influenced especially by Feuerbach. From Hegel he accepted the monistic and systematic interpretation of life and history and the (Hegelian) evolutionary theory of development, but he rejected Hegel's ideal principle of reality and substituted a naturalistic or purely materialistic principle, which he further identified with the economic factors of existence. For the Hegelian dialectic of the Absolute Idea Marx substitutes a dialectic of economic conditions and economic development: it is economic changes that determine all else, whilst the ideal elements in man's nature and life are reflexes only, or reflexions, of alterations, movements, in the play of material conditions and economic forces. History, says the *Manifesto*, is the record of the struggles of social classes; but the main point is that the existence and character of these social classes are determined by economic factors.

'The materialist conception of history,' writes Engels, expounding Marx, 'starts from the proposition that the production of the means to support human life and, next to production, the exchange of things produced, is the basis of all social structure; that in every society that has appeared in history, the manner in which wealth is distributed and society divided into classes or orders, is dependent on what is produced, and how the products are exchanged. From this point of view the final causes of all social changes and political revolutions are to be sought, not in men's brains, not in man's better insight into eternal truth and justice, but in changes in the modes of production and exchange.'¹

Unrest of any class or group of human beings against the conditions of their existence—e.g., proletarian unrest against capitalistic society—is only a reflexion of an unstable and changing condition of things, a lack of equilibrium of forces, in the economic system itself, which is pursuing the laws of its own being towards a new stage. There is, thus, determinism in the process, a certain fatality of events, which the will of man cannot finally hinder, though it may conceivably help. In any condition of social existence there is always development going on, and at some point a climax will come when the existing economic and social order will give way to another. If, at any given moment, the character of the economic forces at work in social life can be discerned and understood, if observation can lay bare the hidden dialectic of any given economic system, reveal the stage of its movement and the contradictions which it contains, then the character of the next stage, the direction of the changes implicit in the existing system, can be predicted, and, as it were, the programme and policy of human life arranged accordingly. This was the metaphysic behind the *Communist Manifesto*; it was this view of history that led Marx to the conviction that socialism could be made scientific and displayed as scientifically necessary; it was this that prompted him to search out the secret of capitalistic industrial organization, to undertake what Engels called 'the revelation of the secret of capitalistic production.' This materialistic conception of history, and the consequent conviction of some intimate connexion between socialism and science, had for socialistic thought certain ethical implications of importance which are noticed below (§ III.). For the moment we leave the theory with two observations: (a) it clearly serves to emphasize the undoubtedly great importance of economic, and in so far material, conditions in human history and existence, and sometimes the thoroughly deterministic power of the economic factor is overlooked; (b) in the applications which Marx made of his theory, especially with regard to the enhancing of the historical rôle of the proletariat, it is very difficult to decide whether he made these by virtue of scientific and impersonal loyalty to the theory or by virtue of a temperamental,

¹ E.g., H. M. Hyndman, who was mainly responsible for the founding of the Social Democratic Federation in 1881, and E. B. Bax, who did much to popularize socialism. The group of brilliant and adventurous thinkers who established the Fabian Society in 1883 studied Marx, though after, rather than before, reaching socialistic ideas, and to many Marxian ideas they became strongly opposed.

¹ *Socialism, Utopian and Scientific*, Eng. tr., p. 45.

revolutionary strain in his nature which, resting on profound sympathy with human misery and hatred of oppression, made him from the outset of his career a champion of the socially subordinate and politically impotent classes.

(2) The *Manifesto* next reveals the fundamental Marxian economic criticism of capitalistic society. This criticism is really a restatement of the older, Utopian, humanistic criticism in terms of socialistic economics. Three intimately associated strands may be discerned in it: (a) the well-known doctrine of 'surplus value,' (b) the concept of a contradiction between collectivistic production of wealth and individualistic control and appropriation, and (c) the focusing of interest on the human agents in production, on the worker as a person.

(a) *Doctrine of surplus value.*—In the *Communist Manifesto* the main economic criticism of the wage-system, the basis of capitalistic production, is drawn, not in terms of the theory of surplus value, but in terms of the cognate doctrine of the 'iron law' of wages.¹ The general form of this doctrine, familiar enough in socialistic thought, is to this effect, that from the produce of labour only so much is distributed among the workers as is required for their maintenance, with reference to their qualities and needs not as persons but only as producers, and that the amount thus distributed is determined by the varying number of workers to be maintained, or by the number required at any given moment by the conditions of capitalistic production. By the operation of this law, it is said, the workers are permanently and necessarily excluded from participation in any increase of productivity in their own labour; under capitalism their position can never become better, but, as their number grows, must inevitably become worse, until a point of collapse is reached, when the capitalistic system must topple over through sheer inability to maintain the wage-labour on which it rests. In passing, we may remark with reference to this doctrine that, whilst it has been severely criticized by modern political economists, and whilst some of the conclusions based on it—e.g., the steady pauperization of the proletariat and the approach to collapse—do not seem so far historically justifiable, it has an ethical value often overlooked. The sting of it, and its persistent appeal, as a criticism of capitalistic society, are to be found in the fact that, viewed from the side of the wage-earners, the distribution of wealth does appear to be decisively dependent, not on any principle of justice, but only on the necessity for keeping them alive—if they were not needed, they would receive nothing—and the level of wages, whatever the reasons in economic theory may be, appears to the worker practically variable only in accordance with variations in the cost of living and the demand for labour. No mere economic criticism of a doctrine like this will ever shake its force amongst people who instinctively feel that they are not receiving a fair share of the wealth which they conceive themselves to be producing. The fact is that socialistic economics, in so far as they have life in them, are not drawn from theoretical political economy, but are interpretations, in economic terms, of instinctive ethical reactions of the mind of the proletariat to the conditions of its existence.

(b) *Production and appropriation of wealth.*—The doctrine of the 'iron law' of wages, taken in connexion with the further doctrine that labour is the source of all value and so of all wealth that can be distributed,² leads to the discovery of a contradiction in the economic system between the production of wealth and its appropriation, and to the further doctrine that the surplus of wealth produced by labour, over and above the

portion distributed to it for its maintenance, is held by the capitalistic class unjustifiably and to the detriment of the worker. It is this doctrine of surplus value that Marx makes central in his economic criticism of capitalistic production, and to the development and exposition of which he devotes a considerable part of his chief work, *Das Kapital*. Marx starts out definitely to analyze economic conditions on the basis of a theoretical political economy, beginning with an analysis of the concept of value. By subtle and frequently very difficult definition and argument he seeks to show that the essence of capitalistic commercialism consists in the appropriation of value, due to the expenditure of labour-power, but in excess of what is needed to replace that labour-power itself and maintain it. Into the economic intricacies of the argument we shall here make no attempt to follow him, more especially as, in effective socialistic thought, it has always been the general significance of the doctrine much more than the precise Marxian economics that has been prominent. And that general significance is clear enough, and has already been indicated.

(c) *The worker as person.*—More important in Marxian socialism than the doctrine of surplus value are (1) the insistence on a contradiction in capitalistic society itself, and (2), in the analysis of the significance and meaning of labour-power, the emphasizing of the worker as producer, and the concentration of interest on him and his class as dominant social facts—a concentration of interest made poignant by Marx's exposures of the iniquities of competitive industry.³ Marx urges again and again that the disastrous peculiarity in modern industrialism is the contradiction between socialized production and individualistic appropriation. In an earlier stage of economic development, when individualized production was the rule, the worker had, in general, been himself the owner of the means to make his work effective, and consequently had exercised control over the conditions of his industry and the disposal of its product. The great change to modern industrialism meant the divorce of the worker from the means of making work effective, and consequent loss of all control over conditions of industry and disposal of the product. The workers, no longer their own masters, were driven by the exigencies of advancing conditions, on the one hand, and the fear of starvation, on the other, to accept socialized production—i.e. factory-labour, large-scale industry, and so forth—and dispose of their labour-power to the owners of the means of production in return for wages. Wage-labour became the rule and basis of all production, and, though nominally one of the conditions of wage-labour is that the worker shall be a free person, able to dispose of his labour-power to the highest bidder, he ceases to be free in reality—for two reasons: (1) because he no longer exercises control over the conditions of his industry and has no say in the disposal of the product of that industry, and (2) because the tendency of the competitive system itself is to exert a compulsion which makes 'free contract' impossible, whilst, inasmuch as labour-power, though treated as a commodity, is inseparable from the personal life of the worker, the loss of freedom within industry inevitably detracts from the free personality of the worker away from his work. This is the contradiction viewed from the side of the workers; socialized production, dependent on wage-labour, along with individualist ownership and appropriation, means the inevitable failure of society to allow and provide for the full development of free personality.

All the economic criticism of the *Communist Manifesto*, all the Hegelian theorizing and subtle economic analyzings of Marx, rest really on this fundamentally ethical indictment of modern industrial existence. Once more it is the sense of outraged personality, full and free development of life denied, that makes real and vital the proletarian-socialist criticism and economics. The class-consciousness of the proletariat, the unity and solidarity by which alone, according to Marx, they can put themselves in alliance with developing historical economic conditions, and accomplish, at the destined moment, the revolution which is to replace capitalist society by a new order, must rest on the realization of the fact that they are being robbed of their freedom as persons.

Marx has been subjected to severe criticism on many points, and much that he regarded as true and vital has been discarded by socialists everywhere, but no one can overestimate the value of his work. He it was who gathered up into the form of a coherent and systematic theory, with its metaphysical background (whether true or false we do not now say), its connexions with historical evolution, its scientific outlook, and its technical economics, all the hitherto mainly instinctive reactions of the proletariat mind to its new surroundings, and its hitherto mainly unsystematic and disconnected aspirations. He limited social-

¹ This doctrine originates with the physiocrats of the 18th century. Turgot, e.g., writes: 'In every sort of occupation it must come to pass that the wages of the artisan are limited to that which is necessary to procure him subsistence' (quoted in Hammond, *The Town Labourer*, p. 201). Wages are determined by natural law and tend to approximate only to the bare level of subsistence. Adam Smith and Malthus give countenance to the doctrine, whilst Ricardo often seems to accept it. It can be used, and was used, as a justification of poverty, and its general acceptance is certainly one of the reasons why the possessing classes in the early days of industrialism were content to see their fellows starving and in misery. But by unorthodox economists the doctrine was used as a severe criticism of capitalistic society and as a reason for abolishing that order. Ferdinand Lassalle, following Rodbertus, made this doctrine one of the bases of his socialism.

² This doctrine appeared, as we have seen, in the economics of the Chartist movement. The orthodox economists, including Ricardo, are cited as authority for it. William Thompson, to whom Marx was indebted, drew practical socialistic conclusions from it in his *Principles of the Distribution of Wealth most conducive to Human Happiness*, London, 1814. The history of the doctrine is treated fully in Anton Mengers, *Das Recht auf den vollen Arbeitsertrag in geschichtl. Darstellung*, Stuttgart, 1886. The doctrine has the form of the general proposition that labour is the source of all wealth—i.e. other than natural resources—and the more technical form that the exchange-value of commodities, on which production for profit depends, is the result of labour expended.

³ Cf. Marx, *Capital*, Eng. tr., 2 vols., London, 1887, pt. III, ch. ix. f., pt. IV, ch. xv., 'Machinery and Modern Industry.'

ism, as Sombart says, 'to the movement of one particular social class, the proletariat,' and this was of the greatest importance; 'he inspired the proletariat with self-consciousness, with a trust in their own strength, and with a belief in their future'; he gave them a historical rôle and a function in the social life of to-morrow; he set before them a simple and definite goal; and he gave them, also, weapons of criticism which, though they may change their form, do not change their incisiveness and force.¹ They were to accomplish their own salvation and that of society by resolving the fundamental contradiction in modern life; socialized production must be accompanied by socialized ownership and control of the means of production; collective labour necessitates collective capital. Ownership of the means of production in industry, and control over the conditions of industry, by the workers themselves—that was the Marxian goal. That was the 'social revolution,' and the first step towards it was the development of class-consciousness and unity, and the realization of international solidarity² amongst the workers of the world. For fifty years Continental socialism held by Marx, in essentials, and the 'revisionist' attempt to get away from him was very soon met by the cry, 'Back to Marx!', and the discovery in him of yet more truth.³

v. SOCIALISTIC CONCEPT OF 'THE STATE': RECENT DEVELOPMENTS OF REVOLT.—The programmes of modern socialistic parties frequently contain, along with some statement of principles and of the goal to be reached, a series of demands for 'reforms' to be undertaken by 'the State.' The *Communist Manifesto* contained such demands, but it contained no theory of the State; socialism was there approached not from the point of view of society as a whole, but from the point of view of a class.

1. Marxian theory of the State.—Marx, despite his Hegelianism, made little use of the concept of the State in thinking out his socialism. The social revolution, for him, consists in the proletariat taking over the ownership and control of the means of production. One way of their doing this (though not for Marx the only way) is for them to acquire political power, through the development and right use of the democratic franchise and representative institutions, and to use that power for the purposes of the social revolution. What happens to the State after the revolution is not very clear. If we are to accept Engels as expressing Marx's views on the point, we must conclude that both regarded 'the State' as a product of class-society and as always in reality representing only the dominant social class, by whom its mechanism is used to subject and exploit subordinate classes. Inasmuch, then, as the proletarian social revolution abolishes all classes and class-distinctions, it of necessity 'abolishes also the State as State.' The State loses its essential function as a weapon of subjection and so ceases to exist.⁴ If, behind this, anything at all is envisaged with regard to the future form of social organization, it can only be some ordering of society under 'groups,' determined by economic factors, which are autonomous and at best only loosely federated into a larger whole for certain purposes. The internationalism of Marx, and his

doctrine that the proletarian has no country, would emphasize this. The political ideas involved in this view are evidently not those which emphasize the State as the main functioning organ of social life, insist on the priority of society to the individual, regard sovereignty as necessarily concentrated in a central authority, incline strongly towards the theory of centralized government and control by experts, and tend to view the 'rights' of groups and individuals, not as constituted by the effective will there present and the purposes contemplated by the groups or the individuals themselves, but as granted only or substantiated only by the sovereign power of the State as such.¹ On the Continent, where Marxian influence was strongest, however, the apparently inevitable connexion of socialism with political democracy, as evidenced in the growth of all socialistic parties everywhere, and the notion of achieving a socialistic régime through acquiring and developing political power, naturally caused the idea of the State to loom large in socialistic thought; and the consequent tendency to formulate an appropriate theory of the State and society was strengthened, on the one hand, by the practical development, especially in Germany, of the absolutism of the State and, on the other hand, by the general spreading of political, and especially of sociological, views which emphasized the organic character of society and asserted, in one way or another, the priority of society over the individual.

2. British collectivism.—But it is to Britain that we have to look for the most complete development and formulation of the theory of the State in explicit connexion with socialism; and indeed the idea of collectivism, or State socialism, may be regarded as the characteristic contribution of Britain to socialistic thought, the product of a national temperament not prone to revolutionary feeling, and of a country with highly-developed political sense and long training in political traditions, and in which the working-classes, for various reasons, never have shown, save for the spasmodic outburst in Chartism and the revolutionary trade unionism of brief periods, many signs of strongly developed class-consciousness.

We cannot here discuss the intellectual and spiritual influences that have moulded British socialism and given it sources of origin very different from those elsewhere.² We can only

¹ The profound importance of the differences in political philosophy here briefly suggested, not only for socialistic thought but also for the whole future of mankind, cannot at the present moment be overestimated. Differences of opinion as to the respective significance of society and individual, and as to the meaning of sovereignty and the functions of the State, not only divide socialistic theory into opposed parts, but actually rend the whole world.

² Socialistic thought in Britain experienced a revival about the year 1880. Chartism failed and perished in 1860, leaving echoes only in the co-operative movement and in a tendency towards revolutionary trade unionism which was spasmodically displayed in recurrent industrial unrest and strikes between 1850 and 1880. Christian socialism maintained, to a certain extent, the Chartist criticism of competitive society, but exercised no wide influence on either Church or State. Political philosophy and economic theory in Britain were dominated by individualism and *laissez-faire*. On the other side, as influences making for a socialistic revival, must be set (1) the literary and humanistic criticism of the dominant philosophies with which the names of Carlyle and Matthew Arnold are prominently associated; (2) the work of Ruskin and his Platonizing; (3) the social theories of Comte and positivism (*q.v.*), which incidentally link British socialism with Saint-Simon, whose disciple Comte was; (4) the movement in the realm of political economy away from individualism to collectivism, to which the great authority of John Stuart Mill contributed much; Mill had not only committed himself to the view that the distribution of wealth is an artificial matter controllable by the State, but in his late writings had more than sympathized with the idea of collective ownership and control of capital; (5) the study of Marx already referred to; (6) above all, the by now manifest failure of *laissez-faire* in political life and the continued growth of State interference, coupled with the rapid development of the sense of society as an organism and the rise of a social conscience. All these influences gave British socialism its peculiar

¹ Cf. *Socialism and the Social Movement*, Eng. tr., p. 601.

² It was Marx who gave to socialism for ever the vital concept of internationalism.

³ About the year 1900 German socialism, under the influence of E. Bernstein, showed a tendency to break with the Marxian tradition, but it was more than counterbalanced by the appearance at the same time of syndicalism in France and Italy—which professed to be, and in no small degree was, a return to pure Marxism. Cf. Georges Sorel, *L'Avenir socialiste des syndicats*, Paris, 1899, and *Réflexions sur la violence*, do. 1903.

⁴ Cf. Engels, pp. 76–77.

touch briefly on its characteristic ideas; and we select, more or less arbitrarily, only a few points. Orthodox British socialism, if we may use the term, has been predominantly collectivistic, evolutionary, and parliamentary or political. Its ideal has been State socialism, the ownership and control of the means of production, land, and capital, in the interests and service of the whole community, by the community as a whole, operating through the organs of its political life, *i.e.* through a central government and officials, responsible to a representative parliament democratically elected, and, locally, through the same essential organs on a smaller scale—the State for national, the municipality for local concerns. The ideas dominating such collectivism are familiar enough.

'The essential contribution of the century to sociology,' says a leader of collectivistic thought, 'has been the supersession of the Individual by the Community as the starting-point of social investigations. Socialism is the product of this development, arising with it from the contemporary industrial evolution. On the economic side Socialism implies the collective administration of rent and interest, leaving to the individual only the wages of his labour, of hand or brain. On the political side, it involves the collective control over, and ultimate administration of, all the main instruments of wealth production. On the ethical side it expresses the real recognition of fraternity, the universal obligation of personal service, and the subordination of individual ends to the common good.'¹

The point of view behind this is that of society as a whole rather than that of an oppressed social class. The controlling thought is of society as an organism, itself conferring individuality on its members; the law of individuality is service to the community as opposed to self-interest and self-assertion, and it is the very fact of society that provides opportunity for such service and so for the development of true individuality. Ethically society, the social organism, is the essential and necessary co-operator with the individual, and indeed the major partner and influence, in the building of a good and valuable personal life. And as the case stands ethically, so should it stand economically. Wealth, like morality, is in the end socially created; without society wealth, like morality, would be impossible; and so the wealth really created by the whole society ought to be 'owned and administered by the whole society.' The ethics and economics of collectivism both depend on the organic conception of society. As the organ of practical administration and the exercise of government, which in theory is to be self-government, collectivism envisages 'the State,' but the State as purely and completely democratic. It seeks to equate State ownership and State control with the notion of ownership and control in industry by the workers themselves, by assuming, and working towards, a fully democratic State in which the State shall be the workers, and the workers the State. Socialization of the means of production and democracy must advance together if socialism is to be realized. Although collectivistic socialists have been prone at times to regard any and every transfer of property or control of industry from private hands to the national government or the municipality as a move towards socialism, it must be said in justice to the true collectivistic theory that only when the State or lesser organ of administration concerned is truly democratic and representative of an enlightened democracy, only when and in so far as the State ceases to be oligarchical collectivist tone and colouring. It sprang to life again as in a highly special sense a philosophy of society and the State, in opposition to individualism, with a fitting ethics and economics; and it was in proportion far less a movement originating in instinctive reactions of the working-classes. Collectivism, with all its outlook and terminology, is decidedly a product more of the study than of the factory—a theory resting much more on intellectualist bases than on the inherent aspirations and desires of a social class. And this difference is very significant.

A full, and probably final, treatment of this topic is contained in Max Beer, *Gesch. des Sozialismus*, referred to above.

¹ Sidney Webb, *Socialism in England*, London, 1890, p. 91.

and the bulwark of a superior economic class, or an entrenched bureaucracy, can change from private to public ownership and control be regarded as genuinely socialistic. It is, indeed, just in the slowness of the advance towards real democracy, and the failure of the organs of collective government and administration to correspond to the ideal of enlightened and educated democracy, that collectivism finds its most serious obstacles and the source of criticism most damaging to it. The upholders of collectivism have been, more often than not, primarily interested in the problems of the administration of wealth and its distribution rather than in the problems of its production, and so more concerned with the efficiency and good order of the social structure as a whole than with the individual life and personal freedom of the worker in his working existence. They have tended, therefore, almost inevitably, to lean towards uniformity in social life, to strongly centralized government, necessitating, because of the magnitude of the powers and issues involved, the continued existence of a governing class, trained in administration—in a word, a bureaucracy—and the maintenance of practically coercive authority. Like other socialistic theories, collectivism has been inspired by sympathy with oppressed social classes, but collectivism differs from other socialistic thought in the extent to which this underlying sympathy has been dominated by a highly philosophical theory of society, the social organism, and the State, which, whatever other values it may have, finds little place in the instinctive reactions of the minds of the workers to their surroundings.

The most recent developments in socialistic thought have made this fact clear. Collectivism is evidently adapted to the political mind and suitable to a purely political form of socialistic thought and activity. The approach to it as goal is evolutionary and gradual, and depends on the acquiring of political power by the workers. The reflexion of collectivism in the world of politics is parliamentary (and municipal) socialism, with its repudiation of violent and revolutionary action, its belief in constitutional methods, and its faith that the social revolution can be accomplished by stages of 'reform.' From all this, recent socialistic thought has diverged in directions which significantly mark the reappearance, of course in more highly developed shape, of earlier, original, and, as we should hold, more fundamental socialistic ideas. The divergence is best illustrated by syndicalism and guild socialism, or the theory of national guilds.

3. **Syndicalism.**—The true home of syndicalism is France. It is the product of a revolutionary national temperament, and of a country in which revolutionary hope and fervour have always lived in the working-class mind, and where socialistic thought has been prevaiingly influenced by anarchist-communist ideals.¹ Syndicalism, with its persistent distrust of parliamentary socialism, revives and emphasizes the conviction that only the workers can emancipate the workers. It holds that the social revolution must be the product of the energizing will of the industrial classes,

¹ The historical origin and general significance of French syndicalism is best treated, among English writers, by G. D. H. Cole, *The World of Labour, and Self-Government in Industry*. Syndicalism was born and developed within the French trade union movement which made rapid and remarkable progress during the two decades before and after 1900. The inspiring personality in the movement was Fernand Pelloutier, whose *Hist. des bourses du travail*, Paris, 1902, was the chief literary influence in forming syndicalist thought. Pelloutier was a philosophic anarchist, of the school of Proudhon and Bakunin, and his whole outlook was swayed by the concepts of voluntary association of producers, group-organization with federation, and the local commune. The philosopher of syndicalism is Georges Sorel, whose chief works have been mentioned already.

operating possibly only through a 'conscious minority,' clear as to goal and method, swaying the mass. But in any case social freedom must come as result of the desire for freedom and the will to freedom, and cannot be imposed by organization from above or ensured by government. The workers must create their own society and do so by act of their own will. The end is still the fundamental socialistic end—the socializing of the means of production—but new methods are upheld. Not parliamentary but trade union activity, not political but industrial organization, not the franchise but the general strike—this is the newer socialism. The concept of the class war is rejuvenated and brought into prominence. Socialism once more is presented as the peculiar and exclusive doctrine and ideal of working-class life. The socialistic order of society must be made by the workers, through their own natural organizations, and especially through their trade unions. The divisions between social classes must be not only kept intact but deepened, intensified. Already a new society, with its own institutions, its own morality, its own point of view, is growing amongst the workers, and nothing must be done to impede that growth, but everything to aid it. Class-consciousness and the 'will-to-revolt' must be kept alive and fostered in every possible way. The goal is freedom, individual and social, and only intense desire for freedom, and the sense of freedom filched away, can lead towards that goal.

Syndicalism envisages the form of the future society as based upon group-organization, groups being determined by economic and industrial functions, workshops, factories, and industries without 'masters,' private or collective, democratically constituted, owning and controlling the means of production, and bound together by a system of local and national federation. The State as central organ of administration disappears, and power is distributed throughout a series of autonomous though interdependent industrial groups. The controlling impulse in the whole outlook is to get back closer to the individual worker in and at his work, and to move outwards to association, determined by the will of the workers and the purposes to be achieved. Syndicalist criticism of capitalistic social and industrial organization is characteristically drawn in terms of the personal life and personal freedom of the worker.

4. Guild socialism.—In Britain the parallel of syndicalism is to be found most theoretically complete in guild socialism, or the theory of national guilds, the latest of all developments in socialistic thought, and still in its early stages.

Guild socialism, says one of its leading exponents, 'sets before itself the ideal of finding that form of social organisation which will afford to the individual the fullest and freest power of self-development in an organised community. It wants men to be free, not merely in order to get good administration, but because freedom is in itself a good thing and the greatest of good things.'¹

It believes that the State, 'in the sense of a governing authority claiming supreme power in every sphere of social organization,' is the negation of self-government. It contemplates, therefore, an organization of society on the basis of self-governing industrial groups, determined by industrial function, each democratically organized throughout, and federated into larger wholes for certain defined purposes. That form of social grouping called 'the State' will not cease to exist, but it will become one only of many groupings, divested of all intrinsic sovereignty, and with its value and significance determined simply by the purposes of man's free spirit which it can adequately and conveniently serve and by the functions of collective life which it can conveniently and adequately dis-

charge.¹ The practical steps towards realization of this type of socialism consist mainly in the development of the existing characteristic products and organs of working-class life, viz. trade unions, the transformation of these into industrial groups (guilds), covering and including all engaged in any industry or common service, and the transference of control, with regard to all the conditions of labour, in workshop, factory, and elsewhere, from the 'employer' to such democratically organized groups of workers—a transference which, passing inevitably from socialized control of the conditions of production to socialized ownership of the means of production, would expropriate the capital-possessing class and bring about the social revolution. The only conceivable ethical justification for the existence of a capitalistic class—viz. the management and control of the conditions of production—would be gone, and the system would collapse. The main criticism of existing society by upholders of guild socialism is drawn in terms of an investigation of the moral significance of wage-labour, and a setting forth of what the inevitable condition of dependence for livelihood on the will of a possessing class means for the personality of the worker in his work, and outside—a kind of criticism which has appeared frequently throughout this article. The desire and intention behind guild socialism is to secure for the worker in his work 'the greatest chance for individual self-expression and for local initiative and experiment,' thereby increasing indefinitely his personal value, both in his working-life and outside it.

Both syndicalism² and guild socialism are fundamentally motivated by interest in the personal freedom and life, the true individuality, of the worker. The evil of society for both is at bottom an ethical evil, and no economic solution can be adequate unless it carries with it an ethical solution, and is indeed determined by the categories of individual freedom and personal worth as supreme for human life. Once more, in syndicalism and guild socialism the source of socialistic aspiration and theory becomes the definite sense of oppression and lack of freedom; the atmosphere of revolutionary discontent is restored; and with the emphasis again on class-consciousness and class-antagonism, in the form of the irreconcilability of the interests of labour and capital, and the conviction that the working-classes must work out their own salvation and be themselves architects of their own future, socialism resumes its character as definitely a movement of emancipation on the part of economically subordinate, and consequently ethically unfree, social classes.

II. WHAT, THEN, IS SOCIALISM?—We must now try to gather together the central points revealed in our endeavour to trace and illustrate historically the characteristics of socialistic thought, and this we shall do in the form of a series of propositions stated without criticism or amplification.

1. A feature of modern civilization.—Socialism is a characteristic fact, element, and feature in modern industrial civilization, and is recognizable throughout its history as an attack upon the economic, and, in so far, the ethical, bases of that civilization.

2. A revolt against capitalism.—Socialism is a movement of revolt against capitalistic, competitive, industrial and social organization, and its significant demand is for a new order of society

¹ It should be noted that in the theory of national guilds the philosophy of the State, its meaning and function, is not yet adequately agreed upon.

² Syndicalism, which we have treated as a characteristic product of French socialistic thought, has what may be called parallels not only in guild socialism but also in 'Industrial unionism,' as promulgated, e.g., by the society known as the 'Industrial Workers of the World' (the 'I.W.W.'), strong in America, Australia, and elsewhere. The common element in all these modern movements of revolt is the predominance of the ethical idea of freedom as corner-stone of doctrine, and the transference in economics of interest from consumption and distribution (the main concerns of collectivism) to production and the democratic control of conditions of production. Their envisagement of the future organization of society depends on the historical and economic national life and development in which they appear.

¹ G. D. H. Cole, in a letter to the present writer.

resting on new economic bases and emphasizing new ethical values. It is a continual criticism of the existing order, from the point of view conditioned by vision of a new order and desire for radical change. Socialism demands the complete reorganization of social and industrial existence, and is, therefore, strictly revolutionary in intention and aim, whether violent in method or not.

3. *A demand for collective ownership.*—Though varying in many details, socialistic theories are united in the conviction that the root of economic evils is to be found in the private and individualistic ownership of those things without which our human ability to labour is unproductive and uncreative, or by which that ability to labour can be utilized more effectively, made more productive, and given greater freedom in creativeness. Socialism seeks the abolition of private possession and individualistic ownership in respect of what may be called fundamentally communal goods—*e.g.*, land and capital, including under the former the material resources of nature, and under the latter all the means and instruments of production by which human labour can be more efficiently applied to those natural resources. Nothing is recognizable as socialism which does not contemplate and strive towards some radical change, not merely in the distribution of wealth, but also in the ownership of wealth and the means to wealth, and consequently some radical change also in the economic fact and the ethical concept and value of 'property' and private possession. Socialistic theories and visions of Utopia show many variations with regard (a) to the standards, methods, and manner of distributing created wealth among the working members of society, and (b) to the extent and meaning of private ownership, consumption, and enjoyment of the portion of wealth thus acquired by the individual, but all are agreed that private ownership in the definite means of production must cease, and that its place must be taken by communal or collective ownership in some shape or form.

4. *An ideal of a juster order.*—Socialism, in so far as it is a vital movement and is not turned into a merely academic philosophical theory, a political or economic dogma, and not too much entangled in parliamentarism and party politics, is a revolutionary criticism of modern society, an ideal and vision of a possible more just and equitable order of life, and an aspiration towards fuller freedom, all engendered by the division of the social structure into separate classes marked off from each other by economic differentiations. Socialism is the characteristic product of the mind, heart, and will of those social classes distinguished by the fact that they in the end own and possess nothing but ability to work, reacting towards the inevitable conditions of their existence under such a limitation. In other words, socialism, at its deepest and in its most vital elements, is the instinctive reaction of working-class thought and emotion towards an economic environment felt to be ethically evil, restrictive, and oppressive, combined with a steadily growing realization of personal worth and consequent desire for personal freedom and self-expression, to be achieved in an environment of greater economic liberty, more complete equality of opportunity, and wider, more satisfying fellowship.

5. *An ever-changing theory.*—Socialistic theories, political and economic, are formulations of these instinctive reactions. No socialistic theory in all its details is ever to be regarded as final or made into a dogma. Socialistic theory undergoes many changes and exhibits many variations, in accordance partly with general changes in the contemporary intellectual and

moral outlook, but more especially in accordance with definite advances in education, culture, opportunity, and the sense of power, among the workers themselves. Socialism itself continues and will continue, finding expression in theory, in visions of Utopia, and in efforts to secure radical change, so long as the division of the social structure into economically differentiated classes remains, and so long as that division, or any similar division, is felt by any straitened and subordinate class to be a restriction on freedom and a curtailment of personality—in other words, so long as economic differentiation is felt to have an evil ethical content and significance.

6. *An ethical criticism of economic system.*—Socialism, although frequently in its theories it has expressed the truth the wrong way round, always contains the conviction that economics, economic systems, and economic theories have ethical significance, ethical meaning and value, and must be judged ultimately by ethical standards. Consequently, always, its economic criticism of society rests and depends upon an ethical criticism, implicit or explicit, and the deepest motive in all socialism is an ethical motive. It may be sympathy with the oppressed, belief in the value of humanity, faith in human nature, the desire for freedom and self-realization, the sense of personality cramped and crushed, the seeking after fellowship, or some similar motive or combination of such motives; but no economic or political theory of socialism, and no action of men under the socialistic impulse, can be rightly judged or appreciated unless it is seen continuously against the background of ethical motive. This is why the economics of socialism has, again and again, received support from quarters where the fundamental, and frequently the only, criticism of modern life has been ethical.¹ The paradoxical truth is this, that the innermost power and quality of all vital and vivid socialism is and always has been something which we can only call 'personalism,' the conviction of supreme ethical values resident in persons, and the certainty that the meaning of life is the realization of these ethical values through and by individual freedom, development, and self-expression. Not any theory of 'the State' or of the 'social organism,' nor any metaphysic of history, nor any economic theory, is the ultimate in socialism, the source of vitality and power, its root and ground in life, but always the conviction of personality, the sense of cramped and fettered existence, nay the very urge of life itself towards personality, freedom, and fellowship; and all this operating mainly, though not exclusively, through particular social classes, created during a particular period of history by arrangements in the social structure largely determined by economic factors. Socialism, as we said at the outset, is a form of the perpetual conflict of in-

¹ This significant truth can be best illustrated by the socialism of a man like William Morris, whose criticism of and revolt against modern society were fundamentally ethical, and whose socialism was born of his experience as craftsman, poet, and artist. In this article we have deliberately refrained from appealing to or noting the tremendous import of socialism of the William Morris type. It must always be remembered that behind and deeper than all political and economic socialism there is somewhere present, giving vitality to the theory, just that criticism of life, that demand for freedom and beauty, that craving for fellowship and joy in creative work, that revolt against sordidness, misery, and ugliness of a cramped existence, which Morris so gloriously and with such magnificent humanity expressed. Morris had the heart of socialism, and no critic has answered him yet. In another direction this bringing of support to economic socialism from a purely ethical criticism of society might be illustrated by the influence on socialistic thought of great individualist ethical thinkers like Tolstol, Carlyle, and even Nietzsche, and indeed of every philosophy and movement in modern times which has insisted on the significance of life as against mechanism, and on the value of personality.

dividual mind against the tyranny of mechanical existence—a ceaseless criticism carried on by life itself against the outward forms of its manifestation, inspired by vision of new and better forms.

III. SOCIALISM, ETHICS, AND RELIGION.—Much energy has been wasted by socialistic writers and even more by critics of socialism in discussion concerning the relations of socialism with, and the effects of socialism upon, morality and religion, with these latter elements ill-defined or not defined at all.

1. Ethical value of socialism.—So far as socialism and ethics are concerned, the underlying purpose of this article has been to reveal the fact that, historically, socialism springs from definitely ethical motives and ethical sentiments, has an ethical value, and must be regarded as a moral force. It is the fact, also, that in all socialistic writings the dominating ethical note is that of altruism, brotherhood, love for one's neighbour, service of the community, sympathy with the oppressed. On the other hand, it is true that socialistic theorists have often seemed to favour unusual, and therefore in the eyes of many people 'immoral,' experiments, arrangements, and possibilities, with regard to certain established institutions of human life—*e.g.*, marriage and the family. It is, however, mere obscurantism to confound socialism with anything and everything that socialistic writers may have chosen to say. The issue is really simple. The motive behind the socialistic demand for a radical change in social organization is ethical. What the effect on 'morality' of such radical change as is desired would depend on what the ultimate ethical result might be of the abolition of private property in the means of production. In so far as existing customary ethical valuations and ethical relationships depend, as they undoubtedly to a considerable extent do depend, upon the method of ownership and distribution of property and wealth, socialism with its radical change in that direction would inevitably induce many alterations and differences. Other causes—as, *e.g.*, the adoption and putting into practice of a full ethical Christianity—might produce equally noticeable changes and differences in morality. But it is obviously impossible to predict in any detail what such alterations and differences would turn out to be. Socialism is to be judged, not by any imagined consequences that might follow from its actualizing, but by the character of the need and the demand which have called socialistic theory, hope, and vision into existence. If that demand and need are really vital, if they represent and accord with the fundamental, instinctive movement of life itself, consequences must be risked. But it should always be remembered by socialists and their critics that in all probability, despite Marx and the materialistic conception of history, the ethical life of humanity, as the story of socialistic hope and theory itself actually reveals, is a deeper and more fundamental reality than the economic or political form of society, and that this ethical life is continually following its own laws of development under influence of many forces other than the strictly economic or political.

2. Variable ethical results.—Within socialistic theory itself intelligent anticipation of ethical effects and results will vary in accordance with the type of ultimate socialistic organization contemplated. The ethical results, *e.g.*, of a highly-centralized, bureaucratic, State socialism, with primary emphasis on the concepts of society, efficient order, the good of the community, the authority of the whole body, and so forth, will not be the same as the ethical results of a socialism tending towards distribution of sovereignty,

decentralization, group-organization, and determination of forms of fellowship and co-operation from the effective will of the individual working outwards to wider association in conformity with purposes initiated and approved by the individual will. It is along the lines of these quite characteristic and indeed ultimate differences regarding the final form of socialistic organization that the question of the effects of socialism on morality should be discussed, allowing always, in all cases, for the extreme difficulty of prediction, and the independent movement of the ethical life in humanity itself.

3. Ethical determinism.—The tendency of much socialistic thinking and theorizing to support, often with startling inconsistencies, ethical determinism and to place exaggerated insistence on the importance of environment,¹ should be noted. Much socialism, as a result of this tendency, has, by an almost perverse devotion to abstract and now largely discredited deterministic theory, both obscured the genuinely ethical character of its origin and aim and given its opponents a ground of criticism which has served only to confuse and complicate the real issues of socialistic thought and aspiration. For this singular and, as we hold, altogether unfortunate obsession by ethical determinism there is a historical reason, which explains not only this but other curiosities of socialism as well.

4. Socialism and religion.—This reason becomes more obvious and pertinent when we consider the relations of socialism with religion. During its history socialism has been marked by very varying relations to religion and Christianity, whether as individual profession or as organized institution. The majority of professing socialists to-day would probably assert that religion is an individual and private affair outside the purview of socialistic theory; they would oppose any State organization of religion, State maintenance, or provision for religious teaching by the community, and they would contemplate religious organizations only on a purely voluntary basis, and altogether without temporal authority; it is doubtful whether many would trouble to identify their socialism with a denial of the religious hypothesis, whilst some certainly would individually accept that hypothesis. Many of the earlier Utopian socialists rested their socialism on belief in God, and strove to identify socialistic theory with Christian ethic and the gospel of Jesus. Similar efforts have been frequently made, whilst from the side of accepted religion and Christianity attempts in the same direction have been not uncommon, though, with few exceptions, what is called 'Christian socialism' has been content with criticism of conditions and advocacy of reform, or the infusing of the Christian spirit into existing institutions, stopping short of the full socialistic demand.²

Socialism and Christian ethic, or the gospel of Jesus, are not essentially related, either historically

¹ Robert Owen expounded and adhered to an almost naive form of materialistic determinism in ethics. Consciousness, for him, is a product merely of material organization and determined wholly by external stimulation, whilst the notion that the individual is in any way responsible for his character he regarded as vicious error. It is of course difficult to reconcile this with Owen's distrust of government, on the one hand, and his belief in education, on the other. The sources of his materialism are to be found in certain well-known aspects of 18th cent. rationalism. In later socialistic thought materialism has other origins. It is often as naive and extreme, but differently based.

² The socialism of Maurice and Kingsley was of the reformative type. The advanced Roman Catholic understanding of Christian ethic tends in the direction of a social organization containing socialistic elements, though officially Catholicism is mortally opposed to socialism. The only definitely Christian organization which to-day seems to advocate a full and strictly revolutionary socialism is the Church Socialist League. A desire for 'social reform' is not socialism.

or intellectually. The existence of the gospel and the Christian ethic has, no doubt, directly and indirectly, influenced and contributed to the existence of socialism, and some interpretations of Christian ethic might, and indeed would, lead to conclusions very closely similar to socialistic theory and demand; but many of the premisses and the line of argument would be different. Christianity, in its ethic, contains a social philosophy which can be and ought to be worked out independently of historical socialism. One of the mistakes of professing Christians with socialistic sympathies has been a too great readiness merely to accept a formed socialism and try by various devices to fit it into their Christian ethic or their ethic into it, whereas they should have been occupied in developing independently the social implications of their faith and gospel and in working its ethical principles out into detailed application.

5. Socialistic faith.—But modern socialism, as most widely accepted and existing as a political force and organized power, has been, especially on the Continent, almost uniformly hostile to organized Christianity, partly through theoretical antipathy to the religious hypothesis in general, but more significantly because, in practical matters, it has been thought, and not unjustifiably, by upholders of socialism that organized Christianity, in modern times at any rate, has little to its credit in the way of sympathy for the struggle of the non-possessing against the possessing classes, and much to its discredit as being a habitual supporter of the established social order and a bulwark of the existing state of things.

The theoretical antipathy of socialistic thought to the religious hypothesis in general is important. Admittedly, such antipathy has been widely prevalent in socialistic writing and thinking, especially since the time of Marx. One reason for this antipathy is obvious: socialism is primarily and indeed absolutely concerned, in all its forms, with the destiny of mankind on this earth and within the sphere of historical time. It contemplates an order of society realizable by men in earthly conditions, and to be entered upon at a date not impossibly distant by generations which will reap the fruit of present sowing. From this point of view, socialism is clearly committed to a high and indeed extreme form of ethical altruism, since any labour for socialism undertaken by an individual must be undertaken without expectation of individual reward and for the sake only of some future hour of realization in which he cannot hope to share. Thus, paradoxically and unwittingly, socialists have frequently demanded and lived by a faith (in the historical future of mankind) more difficult than most accepted religious faiths; but this exclusive interest in historical time has induced a certain blindness among socialists to some valuable aspects in the characteristic religious concepts of eternal life, the future of the soul, and man's spiritual and otherworldly destiny, whilst the feeling that interest in personal immortality and a life beyond this life may become a preoccupation leading either to disregard of this life's problems or to contentment with 'things as they are' has caused socialists again and again to turn altogether away from these necessities of religion.

6. Marxian materialism.—But there is a deeper and more subtle reason for the antipathy of much socialism to the religious hypothesis. This reason is to be found mainly in the teaching of Marx. The materialistic conception of history is obviously hostile to all theories of a spiritual origin and destiny for man and the universe, and Marx accepted the extreme materialism of the Hegelian

Left with its denial of all independent spiritual values and reduction of religion to a man-made illusion. When, as was frequently the case, this Marxian materialism became confused with scientific materialism and determinism, having in reality a quite different origin, the antipathy to religion was only strengthened. But the story of this antipathy does not end there. Far more potent than the materialistic conception of history was the conviction of Marx and Engels that they had made socialism 'scientific.' In that fact lies the final secret of all the antipathy to religion and all the ethical determinism which is to be found in socialistic thought. It was and has been repeatedly assumed that between socialism and 'science' there is intimate connexion, and this assumption has been interpreted to mean that socialism must accept without question all that 'science' may say. If 'science,' therefore, declares for a materialistic hypothesis of life and the universe, socialism must follow suit; if 'science' stands for moral determinism, socialism must accept that view too, and so on all through; only very slowly has socialism begun to emancipate itself from subservience to 'science,' and to realize that between the fundamental socialistic hypothesis and demand and the utterances of 'science,' so often science overstepping its proper limits, there is no necessary connexion. The process of emancipation has been aided by the deeper understanding of its place and function which modern science has achieved for itself, and by the realization within the region of socialistic thought that in any case socialism, in one necessary aspect, is an ideal, a vision, and a hope, and so demands for its acceptance and service a measure of 'faith,' and that determinism and materialism are not the best ground on which to nourish an ideal and faith in that ideal. The most recent movements in socialistic thought show the change clearly. They, although systematic, display little respect for the earlier devotion to so-called 'scientific' argument and talk of the 'necessary truth' of socialism, and so forth, but reveal instead a new intensity of feeling, a belief in human freedom, and a dominating appeal to the power in man of creating ideals and of living and working for them in pure faith, and with an enthusiasm which, it is now recognized, a cold scientific materialism and determinism inevitably destroy.

7. Conclusion.—Socialism is one of the significant movements of modern life, naturally affected by all the varying currents of thought and feeling which go to the making of that complex modern life; and the question of the relations of religion or Christianity, and of ethics, to socialism is really part of the wider question of the relations of these things to modern existence and thought generally, and their place therein. From all such questions the fundamental issues of socialism can be, and for purposes of true appreciation should be, separated, and taken in and for themselves. Then socialism appears, as we have already defined it, as a movement, vision, hope, theory, and ideal, generated by modern conditions, motivated in the deepest intent and meaning of it by ethical impulse and inspiration, and issuing in a characteristic demand for the economic reconstruction of society along well-defined lines, and in the anticipation of an earthly order of existence, based on new economic and industrial arrangements, inspired by new motives and purposes, and intended to provide a fuller and richer opportunity for the development of individual freedom, powers and qualities of personality, in a life of more intense, real, and satisfying fellowship than, thus far, the world has seen. The vital points are two: (1) understanding of the fundamental economic demand and effort

involved in all socialism, viz. the abolition of private possession in the means of production, and (2) understanding of the ethical ground, need, and desire out of which that demand issues. Everything else in socialism, both in the setting forth and in the criticism of it, is subsidiary, and often merely incidental and largely irrelevant, to these two considerations.

LITERATURE.—The literature of socialism in its various phases is vast and extraordinarily dispersed. Much of the best work has taken the form of tracts and pamphlets. It has been possible only to select a very few books, more as being suggestive than as really covering the field.

i. *Historical.*—Thomas Kirkup, *A Hist. of Socialism*, London, 1909; Karl Diehl, *Über Sozialismus, Kommunismus und Anarchismus*, Jena, 1911; Max Beer, *Die Gesch. des Sozialismus in England*, Stuttgart, 1911; *A Hist. of British Socialism*, London, 1919; Werner Sombart, *Socialism and the Social Movement*, Eng. tr. from 6th German ed. by M. Epstein, do. 1909; J. T. Stoddart, *The New Socialism*, do. 1909 (with good bibliography); A. V. Woodworth, *Christian Socialism in England*, do. 1903; Morris Hillquit, *Hist. of Socialism in the United States*, New York, 1910; Sidney and Beatrice Webb, *Industrial Democracy*, new ed., London, 1902, *The Hist. of Trade Unionism*, new ed., do. 1920.

ii. *Theoretical.*—F. Engels, *Socialism, Utopian and Scientific*, tr. E. Aveling (Social Science Series), London, 1892; Jean Jaurès, *Études socialistes*, Paris, 1902; E. Vandervelde, *Essais socialistes*, do. 1905; E. Bernstein, *Die Voraussetzungen des Sozialismus und die Aufgaben der Sozialdemokratie*, Stuttgart, 1906; J. R. MacDonald, *Socialism and Society*, London, 1905, *The Socialist Movement*, do. 1911; A. Schäffle, *The Quintessence of Socialism*, tr. B. Bosanquet, do. 1906; L. B. Boudin, *The Theoretical System of Karl Marx*, New York, 1911; *Fabian Essays in Socialism*, ed. G. Bernard Shaw, London, 1889; K. Kautsky, *Karl Marx' ökonomische Lehren*, Stuttgart, 1903.

iii. *Special.*—*Syndicalisme et socialisme* (essays by various authors), ed. J. Lagardelle, Paris, 1908; A. D. Lewis, *Syndicalism and the General Strike*, London, 1912; A. R. Orage, *National Guilds*, London, 1914; G. D. H. Cole, *The World of Labour*, do. 1915 (good bibliography), *Self-government in Industry*, do. 1917; G. D. H. Cole and W. Mellor, *The Meaning of Industrial Freedom*, do. 1918.

iv. *Critical.*—A. Schäffle, *The Impossibility of Social Democracy*, Eng. tr. (Social Science Series), London, 1892 (pt. ii. of *Quintessence of Socialism* by the same writer); Robert Flint, *Socialism*, do. 1914 (good references to literature of socialism); W. H. Mallock, *A Critical Examination of Socialism*, do. 1903.

STANLEY A. MELLOR.

SOCIETAS PERFECTA.—A *societas perfecta* is a society that contains within itself all means sufficient for its support. The use of the term is derived from Aristotle, and came to mean in the Middle Ages no more than a sovereign and independent community. The term became important in the later Middle Ages, on all topics connected with the relations of Church and State. From Aristotle through St. Thomas Aquinas it filtered into Roman Catholic political theory. In the discussions that arose in consequence of the great schism at the end of the 14th cent. we find it argued that it must be possible for the Council to depose a pope, otherwise the Church would not be a perfect society, i.e., if it could not get rid of an impossible ruler, or had no organ to do so. The point is that a perfect society must have within itself all sufficient means to exercise its own functions and needs no extraneous help. Therefore it must provide implicitly or explicitly for every emergency. In the period succeeding the Reformation the term became more common in regard to the relations between Church and State. We find the argument used on behalf of whichever of the two powers is at the moment depressed. Church controversialists like Bellarmine claimed all kinds of rights for the Church on the ground that it is a perfect society. When these were extended by the papalist party in such a way as practically to deny the independent existence of the State, the secular writers used the argument on their side. John Barclay,¹ e.g., frequently uses this argument—the State is a perfect society no less than the Church. At that date no Roman

¹ *Pietas, sive . . . pro regibus ac principibus . . . vindiciæ*, Paris, 1612.

Catholic thought of denying that the Church was a perfect society; therefore the State had within itself all powers and did not require ecclesiastical sanction or approval; therefore the deposing power claimed for the pope is iniquitous, and so forth. It was the recognition of something like this position for the State that caused the development of the doctrine of the indirect temporal power of the papacy. In theory this doctrine is very different from that of the direct power. The doctrine of the direct power of the papacy is expressed, e.g., in the *Unam Sanctam* of Boniface VIII., or in the writings of Augustinus Triumphus or Bozius, who asserts that the State is a part of the Church, and that kings are servants of the papacy. The doctrine of the indirect power proclaimed by Bellarmine and Suarez allows the State an independent existence as being in some sort a perfect society, but claims an indirect power for the Church in cases in which its own interests might be concerned. The former doctrine has relation to the mediæval notion of the whole commonwealth as one society with its two departments, temporal and spiritual. The other looks forward to the modern doctrine of Church and State as two separate societies. In the 19th cent. the extreme claim of the civil power, especially in France after the Restoration, led to the development of modern ultramontanism (q.v.), and it was necessary to maintain the independence and inherent reality of the Church as a society. For this purpose there was the doctrine of the *societas perfecta* to hand. It was developed with great elaboration by two Jesuit writers, Tarquini and Palmieri. Later we find the official recognition of the doctrine in the encyclical of Pope Leo XIII., *Immortale Dei* (1885). Therein it is stated that the Church no less than the State is a *societas genere et jure perfecta*. The admission in regard to the State shows how different is the condition from that contemplated by Boniface VIII. The following passage from a 16th cent. papalist *Simanca* illustrates the way in which the doctrine was employed in controversy:

‘Cum respublica spiritualis perfecta sit et sibi sufficiens, ut se ipsam indennem servet, potest ea omnia facere, quas necessaria fuerint ad suum finem consequendum exercendo etiam jurisdictionem in eos qui in rebus temporalibus aliqui sibi subjecti non essent, quod quidem naturalis jure cuiusque Principi facere contra aliorum rempublicam licet.’¹

LITERATURE.—Aristotle, *Politics*, I. ii. 8; Aquinas, *Summa*, I. ii. qu. xc. art. 3, shows how the theory comes out of St. Thomas. Much use is made of doctrines of *societas perfecta* by Suarez, *Tractatus de Legibus ac Deo Legislatore*, Antwerp, 1613, iii.; see also C. Tarquini, *Juris Ecclesiastici Publici Institutiones*, Rome, 1875; D. Palmieri, *Tractatus de Romano Pontifice*, Prato, 1902. Discussion of the conception is found *passim* in A. Robertson, *Regnum Dei* [BL], London, 1891; and in J. N. Figgis, *Studies of Political Thought from Gerson to Grotius*, do. 1916, pp. 208 ff. and 264 (12).

SOCIETY OF JESUS.—See JESUITS.

SOCINIANISM.—Socinianism is the term applied to a critical and reconstructive theological movement of the post-Reformation decades, with consequent ideals of faith and morals. It was named after its master spirit, Fausto Paolo Sozzini (latinized into Socinus), a man of commanding intellect, supreme organizing ability, and unflinching will. He led and inspired a succession of able expositors who developed and articulated his tenets. Among these the names of Völkel (his amanuensis), Schmalz, Moscorovius, and Ostorodt, who were his contemporaries, followed in later years by Johann Crell, a most prolific writer, Schlichting, Ludwig von Wolzogen, and Andrew Wiszowaty (grandson

¹ *De Papa*, printed in J. T. Rocaberti, *Bibliotheca maxime Pontificia*, Rome, 1695–99, xiii. 277.

of Socinus), deserve a place in the record. The most important of the Socinian writings were gathered together in the *Bibliotheca Fratrum Polonorum*, edited by Wiszowaty, the first two volumes of which contain the treatises of Socinus. In the *Racovian Catechism*, issued first in Polish in 1605, the year after the death of Socinus, at Rakow in Poland, where the Socinians had a strong church and a noted college, there is to be found the most compact and clearly developed scheme of the doctrines. It is a marvel of clear, orderly, and definite statement in a time of intellectual confusion and doctrinal debate. Socinianism was an intellectual and rationalist system of Christian doctrine on a supernatural basis. It was a species of Unitarianism. The name Unitarian came into general currency through the admission on the title-page of the *Bibliotheca Fratrum Polonorum*—“quos Unitarios vocant.” It asserted the necessity and the fact of a divine revelation, maintained that the Scriptures are its authoritative record, and declared that the reason—the moral and religious nature—is the sole and final arbiter of truth. But in the beginning it was rather anti-Trinitarian than entirely sympathetic with the opinions of the Unitarian teachers of its day. Harnack, in his *History of Dogma*, ranks it, along with Tridentine Catholicism and Protestantism, as one of the three final stages of dogma. That may seem to be an exaggeration of its importance. But, when we look broadly at the historic developments of Christian doctrine, and remember how many schools of Christian thought are sympathetic with the conclusions of Socinianism, Harnack’s classification is justified. The teaching of Socinus and his followers was a distinct variant from both the Roman and the Reformed doctrines, and churches of that variant remain to this day.

1. Historical setting.—The historical setting of Socinianism is of the first consequence. In every European country which was quickened by the religious and theological ferment of the Reformation a new sense of individuality, a clear realization of the discrepancy between the dogmas of the Church and the Christian experience of the times, combined with an intense moral passion, issued in a contempt for all stereotyped forms of doctrine. There was a wide-spread outbreak of independent and adventurous thought and speculation. Its expression and advocacy depended, in great measure, on the attitude of the civil rulers. Where the authorities were sympathetic, or where any measure of religious liberty prevailed, the truths which had laid hold on men’s minds were publicly proclaimed, openly debated, and, when accepted, rigorously enforced upon the community. For this reason Switzerland, Transylvania, and the then large and powerful country of Poland became the haunts and sheltering homes of refugees from intolerant and persecuting lands. In Italy, under the rule of the papacy, with the merciless eye of the Inquisition watching every heretic, the expression of conviction was perilous to both life and fortune. But in Italy, as elsewhere, there were men for whom religious liberty was the breath of life. Foremost among these was the patrician family of the Sozini (as they spelled their name). They had been distinguished as jurists and canonists for several generations. They were as notable for nobility of character as for intellectual energy and dialectical skill.

Lelio Francesco Maria Sozini (1525–62), a jurist whose legal studies had led him on to researches in Hebrew and Biblical literature, broke openly with what he called ‘the idolatry of Rome.’ He sought the larger liberty to be found only beyond the borders of Italy. He visited all the Reformation lands and won the respect of all its leaders by

his wide knowledge and sincere piety, while he gained their friendship by his personal charm. He lived at Wittenberg for a time on intimate terms with Melanchthon. He made the acquaintance at Geneva of Calvin, whom, however, he ‘shocked’ by the audacity of his speculations. His eager and subtle mind canvassed all the doctrinal problems of the day, reaching at last, through the confession and fate of Servetus, the central doctrine of the Trinity. Returning from his travels to Zürich, he spent three quiet years there, when his brief career was closed by his early death in 1562.

Lelio Sozini is of interest chiefly because of his influence upon his nephew, Fausto Paolo Sozzini. Lelio was the father of the doctrine, but Fausto was the moulder of the theology and the founder of the Church. To his nephew Lelio bequeathed all his property. His most precious legacy was a number of MSS and exegetical notes. His nephew acknowledged his indebtedness in generous terms. He declared that his conversations with his uncle imbued his young mind with a moral passion for the things of salvation and with a true conception of its method. He confessed that he learned from him a fair interpretation of Scripture, and he makes the express statement that Lelio’s exegesis of ‘Ev dōxē in Jn 1’ as ‘In the beginning—of the gospel’ was the fruitful hint for a method of a new Christology.

Fausto Sozzini was born in Siena in 1539. There he spent his youth and received his education. On coming of age, he left Italy, living first at Lyons and then at Geneva, where he was enrolled as a member of the Italian congregation. In 1565 he returned to Italy, conformed to the Roman Catholic Church, and, after the custom of the time, entered the service of Isabella de Medici in Florence, who bestowed upon him both office and honour. He always referred to these twelve years as the wasted period of his life. Yet his mind had not been dormant, although he made no open sign. It is now known that the fear of losing his patrimony kept him silent. After Isabella’s death he left Italy and settled in Basel to give himself entirely to the study of the Bible. There he became a centre of theological inquiry and discussion. The first outcome was seen in his treatise *de Jesu Christo Servatore*, a polemic against the evangelical teaching of the Reformers. It was written anonymously and privately circulated. A copy reached the hands of Blandrata, who was court physician in Poland, with an ambition to regulate the religious life of the people. Italians had always been welcome in Poland, where their genius in both literature and art had been admired. The religious tolerance of the rulers had made Poland a land of desire. When Blandrata sent for Socinus, he eagerly accepted the invitation, and his theological learning and deftness in practical affairs found their fitting sphere. Despite his alien birth and his hampering deafness, he so busied himself with his pen, and in debate in conferences, that he impressed himself and his convictions on the religious thought of the people. The Unitarian doctrines held the minds of the ruling classes. Socinus won them to his protest against the doctrine of the pre-existence of Jesus, and, on the other hand, overcame their objection to invoking Christ’s help in prayer. The Unitarians became *invocantes*—*non adorantes*. The Anabaptists, with their urgent and enthusiastic zeal for individualism in religion and their imperative demand for baptism, had enlisted the sympathy of the masses. He purged the Anabaptists from their unreasonableness in doctrine and their excesses in morals. His writings were published pseudonymously. But, when he found himself settled in Poland, married into one of its families, and cut off from his patrimony in Italy, he acknowledged their authorship. This issued in a revolt of the masses against him, and in 1598 he was expelled from Cracow. He found shelter with friends, but the intense toil and strain of his life had prematurely aged him, and he died on 4th March 1604. It is

open to question whether or not the Minor Church, as it was called, with its clear-cut and subtly argued scheme of doctrine from the hand of Socinus, might not have become supreme in Poland. But the authorities at length took up a position of keen antagonism, which issued in active persecution. Its teachers and people were scattered throughout Western Europe, finding shelter in Holland and in England, and giving birth to schools of Unitarian theology. It is only among these Unitarian communities that the modified tenets of Socinus and of his earlier followers are to be found openly avowed, but the influence of his teaching is more pervasive than is commonly realized.

2. *Outline of doctrines.*—The doctrines of Socinianism, because wrought out into a well-knit scheme, can be given an orderly statement. The point of view from which they should be approached is that of a theory of salvation. In this Socinus had caught the spirit of his age. That was the subject of his first treatise written in Basel. The focus of its critical attack was the orthodox doctrine of the Atonement, and to this day all churches and schools who look back to Socinus level their lance at the evangelical interpretation of the death of Christ. The most strenuous pages of the *Bibliotheca* and the most pungent sentences of the *Racovian Catechism* deal with the meaning of the sacrifice on the Cross. To stand with Socinus at his conception of the death and resurrection of Jesus as a centre enables us to sweep round the whole circle of his system.

(a) *The basis.*—The first feature which emerges is its basis in the Scriptures. The NT, whose authenticity, sufficiency, and perspicuity are postulated rather than argued, is the text-book. Its rational and balanced exegesis will yield proofs of its authority as a divine revelation. The witness of tradition, the declaration of creeds, and the authority of the Church are summarily set aside. All that is required is the use of 'right reason' to discover, understand, and apply the things which belong to the faith and its salvation. The OT has no authority in itself. It has a certain value for its illustrative and devotional features. But it is entirely dependent for its authentication and interpretation upon the NT Scriptures. One of the by-products of the teaching of Socinus was his method of a balanced and scholarly exegesis, and the ban which he placed on dogmatic interpretations was a service of exceeding value to Christian scholarship.

(b) *The doctrine of God.*—On this basis there was raised the superstructure, and its first article, in order, is concerned with the doctrine of God. Here Socinus was influenced and even controlled by his Scotist conception of the divine nature. Philosophically Socinianism was a throwback to the Scotist demand for concrete and evidenced reality, and a protest against a metaphysic which would not yield itself to almost entirely natural categories. As a consequence, the conception of God in the mind of Socinus was somewhat external, and His attributes are those which are essential to His being, rather than inherent in His character. Socinus, therefore, defined God after His nature and His will. In His nature God is 'the supreme Lord of all.' Omnipotence is not His only attribute, but it rules every other. God is an *absolutum Dominium*. There can be no question raised against God, who, however, will do no evil. Still more, as the finite cannot be a measure for the infinite, all human conceptions of the nature of God must be considered as inadequate grounds on which to base a critical or condemning judgment. It follows that God's will is an *arbitrium imperium*, a will entirely free, bound by no law that the human mind can formulate, and able to will God's

pleasure, in obedience to His purposes, in ways hidden from the human mind.

'God's dominion comprises a right and supreme authority to determine whatsoever He may choose (and He cannot choose what is in its own nature evil and unjust) in respect to us and to all other things, and also in respect to those matters which no other authority can reach; such as are our thoughts though concealed in the inmost recesses of our hearts—for which He can, at pleasure, ordain laws, and appoint rewards and punishments.'

Thus God is simply the great omnipotent free will, the supreme individual personality, over against whom man is also an individual personality as free in will but impotent in fact. It at once appears evident that such doctrines as predestination, original sin, the necessity of imposing a penalty or of adhering to any doctrine of forgiveness in relation to law, are swept away. God stands above all compulsion, over against man, who also is endowed with a free will to obey or to disobey. From this position it is an inevitable step to the unity of God. God is the absolute arbitrary One. 'There cannot be more beings than one who possess supreme dominion over all things.' To speak of three persons, by which Socinus always means three individuals, is to speak irrationally. Yet the Socinian doctrine was careful to utter a caveat and to suggest a limitation, with a view to giving room for its Christology. As against the personality of the Holy Spirit, there is no hesitation. The Holy Spirit is only an energy. But God may delegate His power or may share it, as He has done pre-eminently in one instance. Yet He remains single, alone, supreme, so that the Socinian argument is always unflinching anti-Trinitarian.

(c) *Doctrine of Christ.*—The Christology of Socinus is set out in regard to Christ's person or 'nature,' and His work or 'offices.' Jesus was truly a mortal man while He lived on earth, but at the same time the only-begotten Son of God, being conceived of the Holy Spirit and born of a virgin. He was separated from all other men, distinguished by the perfect holiness of His life, endued with divine wisdom and power, and was sent by the Father with supreme authority on an embassy to mankind. By His resurrection He was begotten a second time and became, like God, immortal. He was therefore glorified by God, that He might be made the chief director of our religion and salvation—in which office are comprised His supreme authority and dominion. These positions are supported by a comprehensive citation, with a confident exegesis of the relevant passages and types and symbols in the Scriptures. The strenuous and subtle argument, with its occasional violence of denial, indicates the strain clearly felt in dealing with the words of Christ and the witness of the Epistles, as these are accepted by the Church Catholic. A similar pathetic note can be heard in the protests of Martineau under the stress of the same exegetical contest. The 'offices' of Christ are three—the prophet, the high-priest, and the king. But the offices of the high-priest and the king are dismissed briefly, and the whole stress is laid upon His prophetic ministry. Jesus is our high-priest, not because of His sacrifice at Calvary, but because of His mediation and intercession after His resurrection to heaven. Jesus is the king because God has 'placed Him at His right hand and given Him all power in heaven and on earth, that He might at His own pleasure govern, protect, and eternally save those who believed in Him.' In His prophetic office Jesus has manifested and confirmed the knowledge of the hidden will of God, and His work was consummated in the new covenant, as it is found in He 8⁶ and 1 Ti 2⁵. In that covenant, interpreted by Jesus, are stored the perfect pre-

cepts and perfect promises of God, with the modes and grounds of our obedience to them. The precepts are both moral and ceremonial. Some of them were additions by Jesus. Others were interpretations, and a quickening of the inwardness of OT laws. The ceremonial ordinances are baptism by immersion, simply as a rite of initiation, although Socinus himself remained indifferent to the use of this sacrament, and the Lord's Supper, which is nothing more than a feast of remembrance. Through these observances the Christian believer lays hold on eternal life and receives the gift of the Holy Ghost. But Christ's prophetic office fulfilled its supreme function in His confirmation of the divine will by His perfect innocence, His miracles, and His death. With the meaning and efficacy of Christ's death Socinus wrestled in the fullness of his strength. The one thing of which he is sure is that Christ's death is not an atoning sacrifice. Christ indeed suffered for sin rather than for sinners. He was a victim of sin, a witness to its guilt, a deliverer from its power, and, therefore, He willingly 'underwent a bloody death as an expiatory sacrifice.' Because of this willing submission to the rage and fury of sin, men have a right to the remission of sins, and a new hope in God. They are drawn to Christ as their Saviour and see Him to be God's witness to His own boundless love to the human race, and are therefore led into reconciliation with Him. Every other view is rigorously analyzed. The doctrine of satisfaction, which the Reformers urged, is keenly canvassed and its difficulties are set out in an animated dialectic. The conclusion reached is that God, whose will could have chosen any mode of forgiveness which is not foreign to His nature, chose to make acceptance (*acceptatio*) of Christ's death at Calvary, but especially of its offering in heaven, the ground of forgiveness. The forgiveness of God is, therefore, not *propter Christum* and not even *per Christum*, but *gratuito*, because God was willing to accept this sacrifice. Its power consists in its revelation of the will of God and its consequent moral influence on the heart of man.

(d) *Doctrine of faith.*—This theory of salvation is matched by a corresponding doctrine of faith. Faith is an attitude of attention to the promises and an obedience to the precepts of God. It may be of two kinds. 'A bare assent alone of the mind whereby we acknowledge the doctrine of Jesus Christ to be true' is not attended by salvation. The faith required is that 'we trust in God through Christ, and give ourselves up wholly to obey His will.' In spite of the wide gulf between these limiting definitions and the breadth and depth of the Pauline conception, Socinus felt himself compelled to relate his conclusion to the Pauline doctrine of justification. But his reference is slight, and his logic renders his use of Paul's master word unreal, if not unmeaning. The whole system is completed by an ethical demand of high seriousness and even of austerity, although it lacks the glow and colour of an obedience which is the outflow of the adoring gratitude of the redeemed.

3. *Critical estimate.*—When we turn to a critical examination of the doctrines of Socinianism, we find that the contest ranges along the whole front. Socinianism has been condemned both by the judgment of history and by the witness of almost universal Christian experience. The Roman Church, with its adherence both to the method and to the content of the early creeds, and through its passionate loyalty to Augustinian doctrine, dismisses the teaching of Socinus with an unflinching denial. But it troubled the Reformed theologians of the 17th cent. and invaded all their communions, so that they grappled with it as the

subtlest and strongest enemy of evangelical truth. The Christian thought of to-day no longer fears its assault, for it has discarded, once for all, the Socinian method of approaching Christian doctrine, but it maintains and must maintain its protest against its chief conclusions.

The first broad remark to make is that Socinianism was a school rather than a Church. Its congregations were associations for Christian learning rather than communions for Christian worship and service. This is confessed in the opening sentence of the *Racovian Catechism*:

'The Christian religion is the way of attaining eternal life which God has pointed out by Jesus Christ and it may be learned in the Holy Scriptures, especially in the New Testament.'

But the Medieval Church and the Reformers held that the Church was a religious fellowship, a society of divine origin, founded by Christ through His atoning work for men. Within its communion and by its offices sinful men found the way to God. The Church was more important than, and prior to, the individual believer. To the Church God fulfilled more abundantly His promise of the Holy Spirit. Through its message men were called of God, and by its sacraments were sealed to His service and to communion with Him and their fellow-men. Had Socinus and his followers ever entered into this truth, they would have realized how insufficient was the basis, and how external was the structure, of their scheme of doctrine.

The view that Scripture is merely a source of information about doctrines and precepts is a shrunken conception of what both the OT and the NT have been to the Christian mind and conscience. Scripture is a means of grace, a channel through which the message of God passes to the soul of man, a meeting-ground where God and man stand, spirit in touch with spirit. Scripture has a divine power to enlighten, to quicken, to rebuke, to comfort, to give peace. The Reformation doctrine of the witness of the Spirit to the word, which is affirmed not only by Scripture itself but also by universal experience, was never upon the horizon of the Socinians, and that casts a blight upon much of the skilful exegesis of their scholars and commentators. In the same way in their doctrine of God they never rise to the height of the thought that He is the God and Father of the Lord Jesus Christ, and is so regarded, so known, and so confessed through the power of the Holy Spirit. He is not even a moral Ruler of a moral universe with laws unalterably righteous, to which He has set His seal. He is simply an 'All Highest,' for whom creation and providence and, finally, the redemption of men are simply acts of His mere pleasure, the exercise of His will. He is never a holy love, with a necessity to create and redeem, because of a self-sacrificing passion for men and a desire for their fellowship and service.

When we realize the insufficiency of the Socinian doctrine of God, we understand the reason for the limited and depreciatory doctrine of Christ's person and work. Jesus was not the Word made flesh. He was the man whose life in the flesh achieved victory over sin for Himself, whose resurrection, not by His own power but by the will and power of God, made that victory a means of salvation to men. We realize in a moment with what tremendous energy the Reformers did battle with this, as they deemed it, dishonouring conception of the incarnate and redeeming Christ. They pointed out not only that the ecstatic sentences of the NT were inconsistent with these formal statements of Socinian theology, but also that this conception was a throwback to the discredited Pelagianism of the past. They remarked upon the fact that no self-forgetting consecration and no impassioned

open to question whether or not the Minor Church, as it was called, with its clear-cut and subtly argued scheme of doctrine from the hand of Socinus, might not have become supreme in Poland. But the authorities at length took up a position of keen antagonism, which issued in active persecution. Its teachers and people were scattered throughout Western Europe, finding shelter in Holland and in England, and giving birth to schools of Unitarian theology. It is only among these Unitarian communities that the modified tenets of Socinus and of his earlier followers are to be found openly avowed, but the influence of his teaching is more pervasive than is commonly realized.

2. Outline of doctrines.—The doctrines of Socinianism, because wrought out into a well-knit scheme, can be given an orderly statement. The point of view from which they should be approached is that of a theory of salvation. In this Socinus had caught the spirit of his age. That was the subject of his first treatise written in Basel. The focus of its critical attack was the orthodox doctrine of the Atonement, and to this day all churches and schools who look back to Socinus level their lance at the evangelical interpretation of the death of Christ. The most strenuous pages of the *Bibliotheca* and the most pungent sentences of the *Racovian Catechism* deal with the meaning of the sacrifice on the Cross. To stand with Socinus at his conception of the death and resurrection of Jesus as a centre enables us to sweep round the whole circle of his system.

(a) *The basis*.—The first feature which emerges is its basis in the Scriptures. The NT, whose authenticity, sufficiency, and perspicuity are postulated rather than argued, is the text-book. Its rational and balanced exegesis will yield proofs of its authority as a divine revelation. The witness of tradition, the declaration of creeds, and the authority of the Church are summarily set aside. All that is required is the use of 'right reason' to discover, understand, and apply the things which belong to the faith and its salvation. The OT has no authority in itself. It has a certain value for its illustrative and devotional features. But it is entirely dependent for its authentication and interpretation upon the NT Scriptures. One of the by-products of the teaching of Socinus was his method of a balanced and scholarly exegesis, and the ban which he placed on dogmatic interpretations was a service of exceeding value to Christian scholarship.

(b) *The doctrine of God*.—On this basis there was raised the superstructure, and its first article, in order, is concerned with the doctrine of God. Here Socinus was influenced and even controlled by his Scotist conception of the divine nature. Philosophically Socinianism was a throwback to the Scotist demand for concrete and evidenced reality, and a protest against a metaphysic which would not yield itself to almost entirely natural categories. As a consequence, the conception of God in the mind of Socinus was somewhat external, and His attributes are those which are essential to His being, rather than inherent in His character. Socinus, therefore, defined God after His nature and His will. In His nature God is 'the supreme Lord of all.' Omnipotence is not His only attribute, but it rules every other. God is an *absolutum Dominum*. There can be no question raised against God, who, however, will do no evil. Still more, as the finite cannot be a measure for the infinite, all human conceptions of the nature of God must be considered as inadequate grounds on which to base a critical or condemning judgment. It follows that God's will is an *arbitrium imperium*, a will entirely free, bound by no law that the human mind can formulate, and able to will God's

pleasure, in obedience to His purposes, in ways hidden from the human mind.

'God's dominion comprises a right and supreme authority to determine whatsoever He may choose (and He cannot choose what is in its own nature evil and unjust) in respect to us and to all other things, and also in respect to those matters which no other authority can reach; such as are our thoughts though concealed in the inmost recesses of our hearts—for which He can, at pleasure, ordain laws, and appoint rewards and punishments.'

Thus God is simply the great omnipotent free will, the supreme individual personality, over against whom man is also an individual personality as free in will but impotent in fact. It at once appears evident that such doctrines as predestination, original sin, the necessity of imposing a penalty or of adhering to any doctrine of forgiveness in relation to law, are swept away. God stands above all compulsion, over against man, who also is endowed with a free will to obey or to disobey. From this position it is an inevitable step to the unity of God. God is the absolute arbitrary One. 'There cannot be more beings than one who possess supreme dominion over all things.' To speak of three persons, by which Socinus always means three individuals, is to speak irrationally. Yet the Socinian doctrine was careful to utter a caveat and to suggest a limitation, with a view to giving room for its Christology. As against the personality of the Holy Spirit, there is no hesitation. The Holy Spirit is only an energy. But God may delegate His power or may share it, as He has done pre-eminently in one instance. Yet He remains single, alone, supreme, so that the Socinian argument is always unfalteringly anti-Trinitarian.

(c) *Doctrine of Christ*.—The Christology of Socinus is set out in regard to Christ's person or 'nature,' and His work or 'offices.' Jesus was truly a mortal man while He lived on earth, but at the same time the only-begotten Son of God, being conceived of the Holy Spirit and born of a virgin. He was separated from all other men, distinguished by the perfect holiness of His life, endued with divine wisdom and power, and was sent by the Father with supreme authority on an embassy to mankind. By His resurrection He was begotten a second time and became, like God, immortal. He was therefore glorified by God, that He might be made the chief director of our religion and salvation—in which office are comprised His supreme authority and dominion. These positions are supported by a comprehensive citation, with a confident exegesis of the relevant passages and types and symbols in the Scriptures. The strenuous and subtle argument, with its occasional violence of denial, indicates the strain clearly felt in dealing with the words of Christ and the witness of the Epistles, as these are accepted by the Church Catholic. A similar pathetic note can be heard in the protests of Martineau under the stress of the same exegetical contest. The 'offices' of Christ are three—the prophet, the high-priest, and the king. But the offices of the high-priest and the king are dismissed briefly, and the whole stress is laid upon His prophetic ministry. Jesus is our high-priest, not because of His sacrifice at Calvary, but because of His mediation and intercession after His resurrection to heaven. Jesus is the king because God has 'placed Him at His right hand and given Him all power in heaven and on earth, that He might at His own pleasure govern, protect, and eternally save those who believed in Him.' In His prophetic office Jesus has manifested and confirmed the knowledge of the hidden will of God, and His work was consummated in the new covenant, as it is found in He 8⁶ and 1 Ti 2⁵. In that covenant, interpreted by Jesus, are stored the perfect pre-

cepts and perfect promises of God, with the modes and grounds of our obedience to them. The precepts are both moral and ceremonial. Some of them were additions by Jesus. Others were interpretations, and a quickening of the inwardness of OT laws. The ceremonial ordinances are baptism by immersion, simply as a rite of initiation, although Socinus himself remained indifferent to the use of this sacrament, and the Lord's Supper, which is nothing more than a feast of remembrance. Through these observances the Christian believer lays hold on eternal life and receives the gift of the Holy Ghost. But Christ's prophetic office fulfilled its supreme function in His confirmation of the divine will by His perfect innocence, His miracles, and His death. With the meaning and efficacy of Christ's death Socinus wrestled in the fullness of his strength. The one thing of which he is sure is that Christ's death is not an atoning sacrifice. Christ indeed suffered for sin rather than for sinners. He was a victim of sin, a witness to its guilt, a deliverer from its power, and, therefore, He willingly 'underwent a bloody death as an expiatory sacrifice.' Because of this willing submission to the rage and fury of sin, men have a right to the remission of sins, and a new hope in God. They are drawn to Christ as their Saviour and see Him to be God's witness to His own boundless love to the human race, and are therefore led into reconciliation with Him. Every other view is rigorously analyzed. The doctrine of satisfaction, which the Reformers urged, is keenly canvassed and its difficulties are set out in an animated dialectic. The conclusion reached is that God, whose will could have chosen any mode of forgiveness which is not foreign to His nature, chose to make acceptance (*acceptatio*) of Christ's death at Calvary, but especially of its offering in heaven, the ground of forgiveness. The forgiveness of God is, therefore, not *propter Christum* and not even *per Christum*, but *gratuito*, because God was willing to accept this sacrifice. Its power consists in its revelation of the will of God and its consequent moral influence on the heart of man.

(d) *Doctrine of faith.*—This theory of salvation is matched by a corresponding doctrine of faith. Faith is an attitude of attention to the promises and an obedience to the precepts of God. It may be of two kinds. 'A bare assent alone of the mind whereby we acknowledge the doctrine of Jesus Christ to be true' is not attended by salvation. The faith required is that 'we trust in God through Christ, and give ourselves up wholly to obey His will.' In spite of the wide gulf between these limiting definitions and the breadth and depth of the Pauline conception, Socinus felt himself compelled to relate his conclusion to the Pauline doctrine of justification. But his reference is slight, and his logic renders his use of Paul's master word unreal, if not unmeaning. The whole system is completed by an ethical demand of high seriousness and even of austerity, although it lacks the glow and colour of an obedience which is the outflow of the adoring gratitude of the redeemed.

3. *Critical estimate.*—When we turn to a critical examination of the doctrines of Socinianism, we find that the contest ranges along the whole front. Socinianism has been condemned both by the judgment of history and by the witness of almost universal Christian experience. The Roman Church, with its adherence both to the method and to the content of the early creeds, and through its passionate loyalty to Augustinian doctrine, dismisses the teaching of Socinus with an unflinching denial. But it troubled the Reformed theologians of the 17th cent. and invaded all their communions, so that they grappled with it as the

subtlest and strongest enemy of evangelical truth. The Christian thought of to-day no longer fears its assault, for it has discarded, once for all, the Socinian method of approaching Christian doctrine, but it maintains and must maintain its protest against its chief conclusions.

The first broad remark to make is that Socinianism was a school rather than a Church. Its congregations were associations for Christian learning rather than communions for Christian worship and service. This is confessed in the opening sentence of the *Racovian Catechism*:

'The Christian religion is the way of attaining eternal life which God has pointed out by Jesus Christ and it may be learned in the Holy Scriptures, especially in the New Testament.'

But the Mediæval Church and the Reformers held that the Church was a religious fellowship, a society of divine origin, founded by Christ through His atoning work for men. Within its communion and by its offices sinful men found the way to God. The Church was more important than, and prior to, the individual believer. To the Church God fulfilled more abundantly His promise of the Holy Spirit. Through its message men were called of God, and by its sacraments were sealed to His service and to communion with Him and their fellow-men. Had Socinus and his followers ever entered into this truth, they would have realized how insufficient was the basis, and how external was the structure, of their scheme of doctrine.

The view that Scripture is merely a source of information about doctrines and precepts is a shrunken conception of what both the OT and the NT have been to the Christian mind and conscience. Scripture is a means of grace, a channel through which the message of God passes to the soul of man, a meeting-ground where God and man stand, spirit in touch with spirit. Scripture has a divine power to enlighten, to quicken, to rebuke, to comfort, to give peace. The Reformation doctrine of the witness of the Spirit to the word, which is affirmed not only by Scripture itself but also by universal experience, was never upon the horizon of the Socinians, and that casts a blight upon much of the skilful exegesis of their scholars and commentators. In the same way in their doctrine of God they never rise to the height of the thought that He is the God and Father of the Lord Jesus Christ, and is so regarded, so known, and so confessed through the power of the Holy Spirit. He is not even a moral Ruler of a moral universe with laws unalterably righteous, to which He has set His seal. He is simply an 'All Highest,' for whom creation and providence and, finally, the redemption of men are simply acts of His mere pleasure, the exercise of His will. He is never a holy love, with a necessity to create and redeem, because of a self-sacrificing passion for men and a desire for their fellowship and service.

When we realize the insufficiency of the Socinian doctrine of God, we understand the reason for the limited and depreciatory doctrine of Christ's person and work. Jesus was not the Word made flesh. He was the man whose life in the flesh achieved victory over sin for Himself, whose resurrection, not by His own power but by the will and power of God, made that victory a means of salvation to men. We realize in a moment with what tremendous energy the Reformers did battle with this, as they deemed it, dishonouring conception of the incarnate and redeeming Christ. They pointed out not only that the ecstatic sentences of the NT were inconsistent with these formal statements of Socinian theology, but also that this conception was a throwback to the discredited Pelagianism of the past. They remarked upon the fact that no self-forgetting consecration and no impassioned

devotion were to be found in the hymns and prayers of the still life within the Socinian churches. The truth was clear that the Socinians had no sufficient doctrine of sin. It was neither a transgression of a holy and indefeasible law nor a state of enmity to God. It was the offence of an individual man against an individual God, a private injury which God might pass by on any conditions that He might choose to impose. As a consequence the Atonement is really superfluous. All that can be said is that God has chosen to accept it in the exercise of His will as an offering through which He will be reconciled. The motive of the love of God as the source and spring of the Atonement, the fact of the divine reaction against sin, the solemn truth that a holy law cannot be broken without the breach of much else, and the necessity of a reason in righteousness for Christ's death for sinners, all lie outside the narrow path of Socinian theology. The issue of all this is that both faith and obedience, both the relationship to God and its ethical issues, are bleached of their colour. It is not accurate to say that the Socinian conception of faith is only *assensus*. That is denied, with good reason. But it is fair to say that faith never became a full-orbed and adoring *fiducia*. It never attained to a simple, unquestioning confidence in God and in His grace revealed and made potent in Christ. It never reached to that vision of His love, that venture upon His mercy, and that victory over the world which constitute the secret of the Lord. It never evoked that love which casts out fear. The final issue is seen in the fact that the ethics of the Socinian churches in all time never rise to that abandonment of joy, that quenchless zeal for Christ and His kingdom, and that glow of devotion which make up the atmosphere of believing churches and believing men. The Socinian ethics lacks the dynamic of a faith in the love of a divine Redeemer who gave Himself for men. It is unlikely that Christian theology will ever hark back to the way of the Socinian. It will never build either with his intellectual method or upon his narrow and scholastic bases. But there is a possibility that, through the application of similar methods to the self-consciousness of Christ, there may be a reaction to anti-Trinitarianism, and from that men may stand again with the Socinian to utter their denial of the deity of Jesus and all that that implies.

LITERATURE.—The reasoned apologetic of Socinianism is to be found in the *Bibliotheca Fratrum Polonorum*, Amsterdam, 1656. Vols. i. and ii. contain the letters of Socinus as well as his chief controversial works. Of these his treatise *de Auctoritate Sanctae Scripturae*, Rakow, 1670, which is said to be his earliest writing, and his *de Jesu Christo Servatore*, Basel, 1594, state and defend the basis of his system, and the stress-point of his thinking. In the latter it is the work, and not the person, of Christ that is expounded and argued. The simplest and clearest statement is to be found in the *Racovian Catechism* issued in Polish in 1605, published in Latin in 1609, and translated into English by John Biddle in 1652. It was afterwards revised and enlarged and reached its final form in 1680. From this ed. Thomas Rees published his Eng. tr., with a sympathetic historical introd., in 1818. A. Harnack, *Hist. of Dogma*, Eng. tr., London, 1894-99 (vols. v.-vii.), gives a full account of the historic development and theological trend of the system. Albrecht Ritschl, *Critical Hist. of the Christian Doctrine of Justification and Reconciliation*, Eng. tr., Edinburgh, 1872, deals critically with its chief features; T. M. Lindsay, *Hist. of the Reformation*, Edinburgh, 1906-07, II., shows its historic setting and relationship to the Reformation. The standard German work is that of O. Fock, *Der Socinianismus*, Kiel, 1847. The biographies of Socinus are of especial value. The earliest (1630) by S. Przykowski is prefixed to his works. In 1653 it was rendered into English by John Biddle (1616-62), who has been called, significantly, 'the father of English Unitarianism,' whose sufferings in an intolerant age indicate the antipathies aroused by Socinianism. A sympathetic Eng. tr. by Joshua Toulmin, with a historical introd., was published in 1777 under the title *Memoirs of the Life, Character and Writings of F. Socinus*. An illuminating study, embodying the result of recent researches, is A. Gordon, 'The Sozzini and their School,' *Theological Review*, July 1879. The various histories of Unitarianism in England and in the United States trace its con-

nexion with Socinianism, and point out the criticism and reaction of its conclusions and the difference between their points of view.

W. M. CLOW.

SOCIOLOGY.—I. The field.—Sociology is the study of human society, which means in its most general sense the tissue of relations into which human beings enter with one another. The name suggests friendliness and co-operation, and it is true that a certain ultimate community of aim and of character underlies those relations between men which are continuously active and permanent. But these are in fact blended with dealings and feelings of a hostile or indifferent character, and, for purposes of investigation, all or any dealings of man with man, anything that conditions or proceeds from such dealings, is a social fact. 'Envy, hatred, malice, and all uncharitableness'—the unsocial or anti-social elements in one sense of the term—are unfortunately relevant to the study of social facts in the widest sense. The social relation, again, may be direct, personal and conscious, or it may be indirect and unknown or ill understood by those whom it affects. In the complexities of the world market a good harvest in the Argentine may affect the fortunes of a Norfolk farmer and possibly the employment of a labourer who would be puzzled to point out the Argentine on the map. The effect is just one element in the operation of a tissue of social relationships of which perhaps no one but the student of this particular market possesses any adequate knowledge, and it is a part of any sociological inquiry to bring to light relations of social cause and effect which without systematic investigation remain quite obscure even to those whom they most intimately affect. Thus the social relationship is potentially as wide as humanity and as various as life. In the simpler societies, it is true, physical barriers separate off different tribes and peoples so that their lives may have little or no contact with one another, but, as material civilization advances, such barriers are scaled and the range of direct and still more of indirect social interaction is progressively widened. In the study of society we may deal with anything which interests us within the whole range of this interaction, and it will be seen that by 'society' we mean something different from a society. Society is something universal and pervasive, a tissue, as we have called it, of relations of which it is difficult to find the beginning or the end. A society, on the other hand, is a definite collection of people united by certain special relations with one another and in some way marked off by these relations from others who do not enter into them, possessing in fact a certain unity and in general a structure and what for want of a better metaphor we are accustomed to call a certain life of its own. The formation of societies—their growth, structure, and decay, their inner history and their mutual relations—constitutes the principal part of the study of society, but not the whole. Behind societies there is always society, and the door is opened to serious fallacies if we forget the distinction. Broadly we may express the relationship by saying that it is one of the general characteristics of society that it engenders societies. Out of the tissue of social relationships emerge collections of people constituted each with a definite structure of its own distinguishing it, but by no means severing its relations with others. If society is the tissue of relationships between men, a society may be defined as a structure of which the elements are human beings living in certain enduring and defined relations to one another. Any given human being is as a rule a member of many

societies—*e.g.*, family, house of business, trade union, Church, and State—and those societies may either be concentric (the smaller group being members of the larger) or intersect (*e.g.*, a world Church or an international labour organization cuts across State divisions). Running through and beyond all these societies are the social relationships that have not thrown up any organized structure. Thus the influence of science, philosophy, art, and literature is international and extremely pervasive, but, though we speak of the republic of letters or of science, this is no more than a metaphor. The mutual influence of thought and discovery among the peoples is of old standing and is very great, while such organization as it has attained in the shape, *e.g.*, of world congresses is recent and very partial. Nevertheless the tendency of social relationship to take shape in some definite organization is interesting and important here as elsewhere.

Ideally the complete subject of sociology is the entire field of these social relationships organized or unorganized. Any study is sociological which concerns itself with any branch of them, and, as human faculty is limited and the field of society vast, it is in practice necessary to divide the subject into a number of specialisms. Necessary, but a necessary evil. For one of the few generalizations that can be laid down with confidence about society is that all its different parts, however clearly distinguishable for thought, are in their actual development interwoven. The religious, the ethical, the legal, the scientific, the economic relations of life are rightly distinguished, and, if any results are to be attained, each must be studied with the minuteness and accuracy that are possible only to specialism. Yet change in any one of these relations may affect all the others, and the specialist who becomes so concentrated on his particular branch that he ignores the rest is liable to serious errors, such as, *e.g.*, disturbed for a time the development of economics. There is no fundamental difference in this respect between sociology and other sciences, particularly sciences which deal with living beings. A pathologist may specialize with success on the eye or the ear or the liver, though all these organs are part of one organism and are affected in their functions by changes in other organs. What the social specialist has to do is to cultivate his own garden without forgetting the larger field of which it forms a part and from which weeds, let us say, may spread to his own patch. Or, to drop the metaphor, he may make generalizations within his own department, but must bear in mind that these results are conditional on freedom from disturbance by influences emanating from other departments. These things are so obvious that they would hardly be worth stating if it were not for a certain pride of specialism which tends to erect the particular branch, whatever it may be, that the student has chosen into the main stem of society. Thus the economist is apt to see in the industrial and commercial relationships the true and solid foundation of society, the groundwork of its development, the root of its diseases and decay. The political philosopher is convinced that the State is society—not merely the governmental organization which serves as a shell, but the essence and spirit of society itself. The religious man will find all that is of real account in the character of the beliefs current among a people. The biologist sees racial characters everywhere, and the historian of thought is inclined to the view that intellectual development is the sole cause of profound changes in civilization. Against all these tendencies to bias sociology has to make its protest. Its fundamental thesis is that all parts of society interact, and that

no pre-eminence over the remainder can be claimed *a priori* for any one element of social life. What is the extent of the influence of each is a very difficult problem to be solved inductively, and probably is destined to receive a different answer in relation to different societies and different periods.

Perhaps a single illustration may be given of the interlocking of cause and effect and the impossibility of assigning the palm of influence to a single factor. Some economists, the Marxians in particular, represent history as an economic process proceeding by an inherent dialectic determining and not determined by the rest of the social structure. But it must be apparent that the industrial structure of our own time is more and more determined by scientific discoveries; nor in the 19th cent. would the electric telegraph—one of the key processes—have arisen but for the experiments of Gauss and Weber stimulated by a theoretical interest, and derived in their turn from the purely intellectual work of Volta and many others. In our own time wireless telegraphy, a commercial innovation of the highest importance, owes its origin to the work of Hertz, which is affiliated to the purely theoretical researches of Clerk-Maxwell. So far the economic factor is dependent on the intellectual, but, if any one thinks that the intellectual factor alone determines the application of science to industry, let him ask himself why the principle of the steam engine, known to Hero of Alexandria, had to wait for the second half of the 18th cent. for its fruition. It is clear that in the 1st cent. *a.d.* there were men capable of devising practicable steam engines if the conditions had created a demand for them.

It would be easy but superfluous to follow the illustration farther. Let us put the point in this way. The development, say, of science is primarily self-dependent, one discovery leading on to another, but it is conditioned by many elements in the social order—*e.g.*, by religious freedom, the facility of intercommunication, and the social appreciation of intellectual work. Social prejudices, moreover, affect the fashions of scientific thought; *e.g.*, political passions have encouraged theories of race and of the struggle for existence, and national prejudices play their part. So again religion has its own evolution, but is vitally affected by science. Ethical evolution is not the same as religious, but is closely interwoven with it. Law is distinct from either, but cannot violate the ethical or the religious standard with impunity. National evolution has its own roots, but plays upon and is played upon by religious, ethical, and economic influences and even by scientific or pseudo-scientific theories of race. The existing sum of sociological knowledge includes all the scientific studies of all these departments of society. The ideal sociology which has yet to be created would be the synthesis correlating and correcting their results.

Ultimately, then, sociology is a synthesis of the social studies. In the meantime the immediate task of the sociologist is humbler and yet difficult enough. Having in mind the interconnexion of social relations, it is his business to discuss and expose the central conceptions from which a synthesis may proceed, to analyze the general character of society, examine the action of social development, and distinguish the permanent factors on which society rests and from which social changes proceed. In a wider sense sociology may be taken to cover the whole body of sociological specialisms. In a narrower sense it is itself a specialism, having as its object the discovery of the connecting links between other specialisms. In this sense the problem of sociology is the investigation of the general character of social relations and the nature and determining conditions of social development.

2. Social science and philosophy.—So much controversy has arisen as to the method of such investigation as to have in large measure blocked the path of investigation itself. The greater part of sociological treatises is apt to be taken up with questions of the logic of the science. In point of fact every science has found out its own method by experiment, and it is only by investi-

devotion were to be found in the hymns and prayers of the still life within the Socinian churches. The truth was clear that the Socinians had no sufficient doctrine of sin. It was neither a transgression of a holy and infeasible law nor a state of enmity to God. It was the offence of an individual man against an individual God, a private injury which God might pass by on any conditions that He might choose to impose. As a consequence the Atonement is really superfluous. All that can be said is that God has chosen to accept it in the exercise of His will as an offering through which He will be reconciled. The motive of the love of God as the source and spring of the Atonement, the fact of the divine reaction against sin, the solemn truth that a holy law cannot be broken without the breach of much else, and the necessity of a reason in righteousness for Christ's death for sinners, all lie outside the narrow path of Socinian theology. The issue of all this is that both faith and obedience, both the relationship to God and its ethical issues, are bleached of their colour. It is not accurate to say that the Socinian conception of faith is only *assensus*. That is denied, with good reason. But it is fair to say that faith never became a full-orbed and adoring *fiducia*. It never attained to a simple, unquestioning confidence in God and in His grace revealed and made potent in Christ. It never reached to that vision of His love, that venture upon His mercy, and that victory over the world which constitute the secret of the Lord. It never evoked that love which casts out fear. The final issue is seen in the fact that the ethics of the Socinian churches in all time never rise to that abandonment of joy, that quenchless zeal for Christ and His kingdom, and that glow of devotion which make up the atmosphere of believing churches and believing men. The Socinian ethics lacks the dynamic of a faith in the love of a divine Redeemer who gave Himself for men. It is unlikely that Christian theology will ever hark back to the way of the Socinian. It will never build either with his intellectual method or upon his narrow and scholastic bases. But there is a possibility that, through the application of similar methods to the self-consciousness of Christ, there may be a reaction to anti-Trinitarianism, and from that men may stand again with the Socinian to utter their denial of the deity of Jesus and all that that implies.

LITERATURE.—The reasoned apologetic of Socinianism is to be found in the *Bibliotheca Fratrum Polonorum*, Amsterdam, 1656. Vols. i. and ii. contain the letters of Socinus as well as his chief controversial works. Of these his treatise *de Auctoritate Sanctæ Scripturæ*, Rakow, 1570, which is said to be his earliest writing, and his *de Jesu Christo Salvatore*, Basel, 1594, state and defend the basis of his system, and the stress-point of his thinking. In the latter it is the work, and not the person, of Christ that is expounded and argued. The simplest and clearest statement is to be found in the *Racovian Catechism* issued in Polish in 1605, published in Latin in 1609, and translated into English by John Biddle in 1652. It was afterwards revised and enlarged and reached its final form in 1630. From this ed. Thomas Rees published his Eng. tr., with a sympathetic historical introd., in 1818. A. Harnack, *Hist. of Dogma*, Eng. tr., London, 1894-99 (vols. v.-vii.), gives a full account of the historic development and theological trend of the system. Albrecht Ritschl, *Critical Hist. of the Christian Doctrine of Justification and Reconciliation*, Eng. tr., Edinburgh, 1872, deals critically with its chief features; T. M. Lindsay, *Hist. of the Reformation*, Edinburgh, 1906-07, ii., shows its historic setting and relationship to the Reformation. The standard German work is that of O. Focke, *Der Socinianismus*, Kiel, 1847. The biographies of Socinus are of especial value. The earliest (1636) by S. Przytkowski is prefixed to his works. In 1653 it was rendered into English by John Biddle (1615-62), who has been called, significantly, 'the father of English Unitarianism,' whose sufferings in an intolerant age indicate the antipathies aroused by Socinianism. A sympathetic Eng. tr. by Joshua Toulmin, with a historical introd., was published in 1777 under the title *Memoirs of the Life, Character and Writings of F. Socinus*. An illuminating study, embodying the result of recent researches, is A. Gordon, 'The Sozzini and their School,' *Theological Review*, July 1879. The various histories of Unitarianism in England and in the United States trace its con-

nexion with Socinianism, and point out the criticism and re-daction of its conclusions and the difference between their points of view.

W. M. CLOW.

SOCIOLOGY.—I. The field.—Sociology is the study of human society, which means in its most general sense the tissue of relations into which human beings enter with one another. The name suggests friendliness and co-operation, and it is true that a certain ultimate community of aim and of character underlies those relations between men which are continuously active and permanent. But these are in fact blended with dealings and feelings of a hostile or indifferent character, and, for purposes of investigation, all or any dealings of man with man, anything that conditions or proceeds from such dealings, is a social fact. 'Envy, hatred, malice, and all uncharitableness'—the unsocial or anti-social elements in one sense of the term—are unfortunately relevant to the study of social facts in the widest sense. The social relation, again, may be direct, personal and conscious, or it may be indirect and unknown or ill understood by those whom it affects. In the complexities of the world market a good harvest in the Argentine may affect the fortunes of a Norfolk farmer and possibly the employment of a labourer who would be puzzled to point out the Argentine on the map. The effect is just one element in the operation of a tissue of social relationships of which perhaps no one but the student of this particular market possesses any adequate knowledge, and it is a part of any sociological inquiry to bring to light relations of social cause and effect which without systematic investigation remain quite obscure even to those whom they most intimately affect. Thus the social relationship is potentially as wide as humanity and as various as life. In the simpler societies, it is true, physical barriers separate off different tribes and peoples so that their lives may have little or no contact with one another, but, as material civilization advances, such barriers are scaled and the range of direct and still more of indirect social interaction is progressively widened. In the study of society we may deal with anything which interests us within the whole range of this interaction, and it will be seen that by 'society' we mean something different from a society. Society is something universal and pervasive, a tissue, as we have called it, of relations of which it is difficult to find the beginning or the end. A society, on the other hand, is a definite collection of people united by certain special relations with one another and in some way marked off by these relations from others who do not enter into them, possessing in fact a certain unity and in general a structure and what for want of a better metaphor we are accustomed to call a certain life of its own. The formation of societies—their growth, structure, and decay, their inner history and their mutual relations—constitutes the principal part of the study of society, but not the whole. Behind societies there is always society, and the door is opened to serious fallacies if we forget the distinction. Broadly we may express the relationship by saying that it is one of the general characteristics of society that it engenders societies. Out of the tissue of social relationships emerge collections of people constituted each with a definite structure of its own distinguishing it, but by no means severing its relations with others. If society is the tissue of relationships between men, a society may be defined as a structure of which the elements are human beings living in certain enduring and defined relations to one another. Any given human being is as a rule a member of many

societies—*e.g.*, family, house of business, trade union, Church, and State—and those societies may either be concentric (the smaller group being members of the larger) or intersect (*e.g.*, a world Church or an international labour organization cuts across State divisions). Running through and beyond all these societies are the social relationships that have not thrown up any organized structure. Thus the influence of science, philosophy, art, and literature is international and extremely pervasive, but, though we speak of the republic of letters or of science, this is no more than a metaphor. The mutual influence of thought and discovery among the peoples is of old standing and is very great, while such organization as it has attained in the shape, *e.g.*, of world congresses is recent and very partial. Nevertheless the tendency of social relationship to take shape in some definite organization is interesting and important here as elsewhere.

Ideally the complete subject of sociology is the entire field of these social relationships organized or unorganized. Any study is sociological which concerns itself with any branch of them, and, as human faculty is limited and the field of society vast, it is in practice necessary to divide the subject into a number of specialisms. Necessary, but a necessary evil. For one of the few generalizations that can be laid down with confidence about society is that all its different parts, however clearly distinguishable for thought, are in their actual development interwoven. The religious, the ethical, the legal, the scientific, the economic relations of life are rightly distinguished, and, if any results are to be attained, each must be studied with the minuteness and accuracy that are possible only to specialism. Yet change in any one of these relations may affect all the others, and the specialist who becomes so concentrated on his particular branch that he ignores the rest is liable to serious errors, such as, *e.g.*, disturbed for a time the development of economics. There is no fundamental difference in this respect between sociology and other sciences, particularly sciences which deal with living beings. A pathologist may specialize with success on the eye or the ear or the liver, though all these organs are part of one organism and are affected in their functions by changes in other organs. What the social specialist has to do is to cultivate his own garden without forgetting the larger field of which it forms a part and from which weeds, let us say, may spread to his own patch. Or, to drop the metaphor, he may make generalizations within his own department, but must bear in mind that these results are conditional on freedom from disturbance by influences emanating from other departments. These things are so obvious that they would hardly be worth stating if it were not for a certain pride of specialism which tends to erect the particular branch, whatever it may be, that the student has chosen into the main stem of society. Thus the economist is apt to see in the industrial and commercial relationships the true and solid foundation of society, the groundwork of its development, the root of its diseases and decay. The political philosopher is convinced that the State is society—not merely the governmental organization which serves as a shell, but the essence and spirit of society itself. The religious man will find all that is of real account in the character of the beliefs current among a people. The biologist sees racial characters everywhere, and the historian of thought is inclined to the view that intellectual development is the sole cause of profound changes in civilization. Against all these tendencies to bias sociology has to make its protest. Its fundamental thesis is that all parts of society interact, and that

no pre-eminence over the remainder can be claimed *a priori* for any one element of social life. What is the extent of the influence of each is a very difficult problem to be solved inductively, and probably is destined to receive a different answer in relation to different societies and different periods.

Perhaps a single illustration may be given of the interlocking of cause and effect and the impossibility of assigning the palm of influence to a single factor. Some economists, the Marxians in particular, represent history as an economic process proceeding by an inherent dialectic determining and not determined by the rest of the social structure. But it must be apparent that the industrial structure of our own time is more and more determined by scientific discoveries; nor in the 10th cent. would the electric telegraph—one of the key processes—have arisen but for the experiments of Gauss and Weber stimulated by a theoretical interest, and derived in their turn from the purely intellectual work of Volta and many others. In our own time wireless telegraphy, a commercial innovation of the highest importance, owes its origin to the work of Hertz, which is affiliated to the purely theoretical researches of Clerk-Maxwell. So far the economic factor is dependent on the intellectual, but, if any one thinks that the intellectual factor alone determines the application of science to industry, let him ask himself why the principle of the steam engine, known to Hero of Alexandria, had to wait for the second half of the 18th cent. for its fruition. It is clear that in the 1st cent. *a.d.* there were men capable of devising practicable steam engines if the conditions had created a demand for them.

It would be easy but superfluous to follow the illustration farther. Let us put the point in this way. The development, say, of science is primarily self-dependent, one discovery leading on to another, but it is conditioned by many elements in the social order—*e.g.*, by religious freedom, the facility of intercommunication, and the social appreciation of intellectual work. Social prejudices, moreover, affect the fashions of scientific thought; *e.g.*, political passions have encouraged theories of race and of the struggle for existence, and national prejudices play their part. So again religion has its own evolution, but is vitally affected by science. Ethical evolution is not the same as religious, but is closely interwoven with it. Law is distinct from either, but cannot violate the ethical or the religious standard with impunity. National evolution has its own roots, but plays upon and is played upon by religious, ethical, and economic influences and even by scientific or pseudo-scientific theories of race. The existing sum of sociological knowledge includes all the scientific studies of all these departments of society. The ideal sociology which has yet to be created would be the synthesis correlating and correcting their results.

Ultimately, then, sociology is a synthesis of the social studies. In the meantime the immediate task of the sociologist is humbler and yet difficult enough. Having in mind the interconnexion of social relations, it is his business to discuss and expose the central conceptions from which a synthesis may proceed, to analyze the general character of society, examine the action of social development, and distinguish the permanent factors on which society rests and from which social changes proceed. In a wider sense sociology may be taken to cover the whole body of sociological specialisms. In a narrower sense it is itself a specialism, having as its object the discovery of the connecting links between other specialisms. In this sense the problem of sociology is the investigation of the general character of social relations and the nature and determining conditions of social development.

2. Social science and philosophy.—So much controversy has arisen as to the method of such investigation as to have in large measure blocked the path of investigation itself. The greater part of sociological treatises is apt to be taken up with questions of the logic of the science. In point of fact every science has found out its own method by experiment, and it is only by investi-

gating social phenomena that we shall learn to distinguish between the fruitful and unfruitful methods of approaching them. Nevertheless to define the relation of sociology to other inquiries that cover or even touch the same field is to make some advance in our main problem of clearing up fundamental conceptions, and we must deal here briefly with the main issues that have been raised.

(a) *Questions of fact and questions of value.*—Historically the systematic investigation of social life began as a branch of general philosophy. Plato's *Republic* is a treatise on metaphysics, ethics, aesthetics, psychology, education, and political theory in one. For Aristotle ethics and politics in the narrower sense are two branches of a more widely conceived political inquiry, and are together subordinate to his conception of nature and man's place therein. To the Stoic the city of Cecrops was a microcosm within the wider cosmos which was the city of Zeus. In modern times the study of social affairs began with the criticism of political authority and was dominated by the conception bequeathed to the world by the Stoics of a law of nature, and down to our own day among the followers of Hegel the metaphysical theory of the State (*q.v.*) retains its influence. The simpler and truer view of the relations between social science and philosophy is due to the Utilitarians. For them moral philosophy was devoted to the study of the ultimate ends of human action, which they declared to be the promotion of the greatest happiness of the greatest number of those whom action can affect. Political and in general social theory were concerned with the actual relations of man in society, and this investigation would be the servant of ethics, as it would reveal what institutions made for and what were prejudicial to the general happiness. We thus get a clear distinction between three inquiries which are apt to be confused: (1) the inquiry into the nature of the good, a discussion of values; (2) the inquiry into the actual relations of human beings, a discussion of facts; (3) the inquiry into the means of utilizing our knowledge of the facts in the service of the good, the application of ideals of value to the discovered truth as to facts, the art of social improvement.

Certain fundamental questions may be raised here as to the distinction of value and fact. It may be that value (*q.v.*) is also a fact, an element in reality. We shall not pursue the discussion here, as we should be far from denying the ultimate co-ordination of all thought—a co-ordination in which the conception of what is desirable must play a part along with the knowledge of what is actual. But, in whatever sense the actual and ideal are related, they are also distinct, and of any specific inquiry we must know whether it is dealing with the one or the other. We may appropriately use the term 'philosophy' for the discussion of value, whether it be the value of methods of attaining truth or the value of modes of life and conduct, and the term 'science' for the investigation of facts and the interconnexions of fact which we seek to exhibit as laws. As social life is the medium in which all that we most value has its being, it is clear that it falls within the purview of philosophy as here described, and, if we call the study of value ethics, it follows that any social philosophy is a branch or application of ethics, as the Utilitarians justly conceived. But it is also clear that the application cannot be usefully attempted without knowledge of the facts of society, the systematic exhibition of which is the object of a social science. So far we have a justification for both the philosophic and the scientific treatment of our subject. A complete sociology would therefore embrace a social philosophy and a

social science. But it would be a synthesis, not a fusion, of the two inquiries.

It is necessary to make this clear because the distinction has in fact been too often ignored. If we turn to any treatise on social philosophy, we shall find an examination of many of the elementary social institutions—government, law, property, the family, international relations, etc. These are all existing facts, institutions varying endlessly in detail and often in most essential elements from case to case. If we examine these institutions in order to discover what is in fact common to them or how they in fact differ, we are in the region of science. If we examine them to discover how far, or in which of these specific forms, they conduce to the good of man, we are in the region of philosophy. The fundamental defect of the metaphysical treatment of society, however, has been precisely that it has not distinguished these questions and that in analyzing the actual constitution of society it has seemed at the same time to determine what is and to lay down what ought to be. As against this method it must be maintained that the analysis of institutions is either an analysis of values in subordination to some explicit system of ends or an analysis of their actual form of operation in a given society. Both inquiries follow a characteristic method of general philosophy in that they examine those elementary conceptions which ordinary thought takes for granted. Both cover a good deal of the same ground. But their final goal and consequently their continuous interest is different. One thinks constantly of the good which an institution subserves, the other of the precise form which it assumes at a given time, the evolution through which it assumed that form, its interaction with other institutions, and similar questions of fact. Grave confusions arise when issues of fact are coloured by judgment of value; but, when the facts are completely and accurately stated, it is reasonable to essay their valuation, and this is the proper task of social philosophy.

Thus the whole field of society can and should be treated scientifically, and, when scientifically understood, can and should be reviewed philosophically. There is no objection to either method in itself, but only to a confusion of the two. A complete sociology, indeed, aims at a synthesis in which the two parts, though always distinct, are brought into definite relation.

The confusion of method may be illustrated by the uncritical use of terms like 'progress,' which, if it means a change to something better, a change to something more approved, which accords with our standard, is not objectionable. If this meaning had been kept in mind, it would have been impossible for the conception of progress as involving an unmitigated brute struggle for existence to hold its own for a day. In the scientific part of our work we had better avoid terms of distinctively ethical colouring, and with that object, in place of social 'progress' and 'retrogression,' we shall speak of 'development,' 'arrest,' and 'decay.' It may be objected that these terms still carry ethical associations, particularly if we speak, and we shall have to speak, of 'higher' and 'lower' developments. As shown farther on, there is, however, a precise and unambiguous meaning to be attached to these terms which is independent of any ethical valuation; they import differences in the internal vitality, efficiency, and extension of social organization. Whether such organization is on the whole a good or a bad thing is another question. On the method here proposed the question of the nature and conditions of social development becomes a question of social science proper, the question of the social ideal one of ethics, and the question whether actual development has been or is or may be so guided as to conform to the ideal one of the application of ethical principles to scientific results. The present article deals in some detail with the definition of social development, and only briefly indicates the ethical ideal by which the facts should be valued.

(b) *Law and freedom.*—Another philosophical conception which has given trouble in the scientific study of society is the conception of law. It is maintained that the object of sociology as a science is to achieve generalizations which presuppose the

existence of law in the life of society, and it is questioned whether law involving necessary connexion prevails in the field of human action determined by the human will. The metaphysical question of freedom which emerges here has been generally held to be of critical importance to the status of sociology as a science. But this is an error. It is forgotten that in all sciences the 'laws' which investigation reveals are conditional. They tell us what will happen under given conditions, and enable us to predict what will actually happen at a given time and place only on the tacit supposition that our knowledge of the conditions then and there existing is adequate. Even the astronomer who predicts an eclipse for a given hour and minute speaks with the tacit reservation that the solar system remains unchanged by the irruption of a comet or other disturbing body. Whenever we apply science to practical affairs, the possibility that our enumeration of the relevant conditions is incomplete becomes a serious consideration, and the judgment of the practical man is required to round off and apply the conditional predictions of the specialist. The pathologist lays down the normal course of a disease. The family doctor, using the pathologist's results and knowing the history of the patient, forms by the union of the two a prognosis which is valuable in proportion to his discernment but is not matter of demonstrative certainty. Similarly, what sociology tells us or hopes to tell us is what will happen under given conditions. The economist, *e.g.*, shows that, if supply is reduced while demand is constant, prices will rise. This is a result reached by legitimate reasoning from certain postulates, generally verified in the workings of a modern market. But, if a food controller intervenes, or even if there is a strong appeal to patriotism or a wide dislike of 'profiteering,' a new condition is introduced and the conclusion will not hold. The motives that may stimulate the will are so various, and the complications of social life so intricate, that on any theory of the will all our sociological generalizations must be conditional in character. If people act in certain normal ways conformably to our analysis of human nature, confirmed perhaps by statistical records of actual behaviour, then on given conditions certain results will follow. Even if we assume the strictest philosophical determinism, we could not get farther than this until we knew all the possible motives to action which all possible situations might throw up. If, on the contrary, we assume an indeterminism in the old and strict sense, we are for the present no worse off. We shall still be able to say that, if the mass of men act as they ordinarily do, the results will follow. The difference would emerge only at a much later stage than sociology has reached. For, if there is a strictly indeterminate element in the will, then there is a factor which not only is not known but never can be known. In that case, while other sciences might, ideally, complete the study of their subject-matters and succeed some day in transforming their hypothetical predictions into categorical generalizations in which all relevant conditions should be known, sociology and psychology would have to leave a gap where the undetermined will operates. None the less on both sides of the gap the territory could be explored, and the generalizations obtained would be valid conditionally on a statable operation of the will.

But even this distinction admits a little too much. It overlooks the power of statistical method. If there is an element in the operation of the will which is *bona fide* indeterminate, we are in the region of 'pure chance.' Among a thousand persons confronted with a certain conflict

of motives it is even odds whether any individual chooses this or that, accepts, let us say, or refuses. To deny this evenness is to take away the indifference of the will, and inclines us one way or the other. Now in such an event it is quite impossible to determine how any one of the thousand may act, but of the thousand as a whole statistical theory will tell us what the probabilities are. It will tell us that probably the number of acceptances and refusals will be approximately equal, and it will give us a precise measure of the improbability of their diverging by more than a specified amount from equality. If there are many sets of a thousand in question, a divergence in the same direction in all of them becomes increasingly improbable. The approach to certainty is asymptotic, but it is the business of inductive science to yield not only certainties but also measured probabilities, and this is possible to sociology by the use of statistics even on the assumption (which one may take as almost excluded by philosophy) of a strictly indeterminate element in volition. In fact, if the indeterminateness of the will is clearly grasped and the conception rigidly applied, it results that, while the conduct of any individual in a given case is absolutely unpredictable, the average of conduct in a large number of cases will be exactly what it would be if the indeterminate element of choice were non-existent. On the average men will act in accordance with the predominant motive. If, on the other hand, the unknown element does not act indifferently now one way and now another, it ceases to be indeterminate, and, if its effect is studied over a large number of cases, it must become measurable.

(c) *The element of individuality.* — It may be objected that the individual decision may be just the critical event — the turning-point on which great things depend. There are moments in which a single man holds issues as great as those of peace or war in his hands, and the whole future of a community will be different as he decides this way or that. The scientific view of society has sometimes been too hasty in dismissing this objection. Carried to an extreme, indeed, the objection develops with the 'great man' theory of history, the sufficient answer to which is the careful study of the careers of great men. Such study shows that in the realm of action such men have been very narrowly circumscribed by their surroundings and have attained their conspicuous position far more by clever adaptation to the movements of their time than by the power of sheer creation. On the other hand, it is false science to limit the importance of individuals on the strength of any *a priori* preference for the general and the uniform. All social cause and effect runs through the medium of individual character, and it is simply matter of empirical fact that individuals differ and that character is more strongly marked in some than in others. It is also matter of fact that the structure of all societies gives the immediate decision on various issues, sometimes issues of great magnitude, to particular persons in particular positions. In such cases the character of the individual will count. It will not count for as much as appears on the surface, for the large social causes will operate and will be sure to narrow down the choice to a fine point, but none the less at that point the attitude of the individual will be a makeweight, and it may be just the makeweight which turns the balance. There is nothing in this to conflict with the 'reign of law.' A tumbler rolls along a table, coming slowly to rest at the edge. A breath, a tremor, decides whether it stops or falls over and is smashed to atoms. Whichever happens, all is in accordance with uniform and

indeed, in this example, perfectly mechanical laws, but to the tumbler the difference is catastrophic. The most rigidly mechanical view of society cannot ignore these perilous edges, and in general any one who has seen public affairs from the inside, particularly if his position is that of a critic rather than an actor, must have learnt that, while public men are much less free in the range of their choice than appears on a superficial view, yet at every stage of a movement personalities count. The vanity of one highly-placed person, the private enmities of another, the fortunes of a Cabinet intrigue, the fears of this man for his seat in Parliament, the regard of that man for his consistency, the coldness of Mr. A. to a cause which his rival Mr. B. has made his own—all these the onlooker has noted with despair as palpable influences in matters on which great public interests depend.

The European War was long attributed popularly in Britain to the Kaiser. Wilhelm II. could no more have made the war by his single decision than he could have waged it single-handed, but the gradual gravitation of his mind towards war so subtly described by M. Cambon reflected the new distribution of multitudinous psychological forces in Germany during 1913, and a decision was taken in July 1914 in which the scales wavering between very nearly equal weights moved finally to one side and at that moment the weight of the Kaiser's personality and position was amply sufficient to decide the turn.

Individuality, then, counts for something, and its effects are not altogether smoothed out by compensations into simple laws of averages because there are moments and points of turning when individuality—possibly through its weakness as much as through its strength—switches a society on the line to the left instead of on the line to the right, and great consequences ensue. This fact introduces an element of uncertainty into any science based on and resting in social generalization. But to some thinkers it is accordingly fatal to the pretensions of sociology as a science. Indeed many see in it only an illustration of a much wider truth applying not only to sociology but to all sciences that pretend to deal with life. Science, they say, deals with the universal and the measurable. It is or is destined to be mathematical in its final shape. It must have exact likenesses or graded and scaled differentiations, so that it can generalize, formulate, and predict. But life is neither uniform nor differentiated only by degrees measurable in scale. It is individual, and in each of its cases there is something unique and unseizable by the intellect—creative of essentially novel, and therefore unpredictable, developments. Even if the idiosyncrasies of individuals could be in some measure reduced to law by the fiction of averages, the life of a society to which millions of individuals contribute each in individual ways is so unique that no generalizations apply to it, and there are not those large numbers of societies which make possible the use of statistics for the calculation of average results. What we can know about a community is its history as a living organism, just as what we can know about a man is his biography. The history and the biography may be written with greater or less fullness and truth, but, the nearer they come to the real springs of life, in either case the more they will reveal these as unique, incapable of being inferred from any parallel case because there is no parallel case, incapable of revealing their own future activity because they are essentially creative in such a sense that the future need in no way resemble the past.

So far as this argument touches the claim of sociology to be a science, it may be sufficient to reply that the sphere of science is too narrowly conceived when it is identified with generalization and prediction. The function of science is to examine and describe facts impartially, accurately,

and systematically. If it finds any of its facts unique, it is its business to say so. But it is only from systematic comparison that true uniqueness will emerge. If we test the action of a living organism by mechanical principles, we do or do not find a correspondence. Either the circulation of the blood corresponds to that of a liquid forced through elastic tubes, in which case the physical analogy holds and we are right in regarding the process as mechanical, or there is a measurable divergence, in which case we know what is due to the organic elements involved. It is a residual phenomenon which we identify, even if we do not explain it, only when we have contrasted the organic with the known behaviour of the inorganic. If the vitalist is right, there will always, when the physical and chemical explanation has been carried through, be such a residue, but what this residue amounts to can be known only by carrying the physical explanation as far as it will go and no farther. Similarly it is only when we have applied all the generalizations which we can legitimately make to the life of a given society that we can ascertain and measure the value of that factor, if any, which is its own peculiar individual self. Individuality, if real, will display itself as the result of scientific inquiry. We suspect its force just because we do not find uniformity. To know it, we must find out accurately what uniformity means, to what expectations it would lead us, and how far the reality differs from these anticipations. The individual is not withdrawn from our knowledge. On the contrary, knowledge begins with individuals. Generalizations are drawn from them and concern them, and the limits of generalization in turn display and delimit the field of individual differences. We come back to the caution which we advanced at the outset. Generalizations in all science are conditional, with this addendum that it is in the failure of generalizations that we discover residual phenomena.

(d) *Law and will.*—Scientifically, generalizations have become popularly known as laws. It is not the best of all possible metaphors, and in sociology it raises peculiar difficulties. Sociological laws are sometimes crudely confused with the law of the land. In fact, they correspond only in so far as the law of the land formulates the ways in which ordinary people do ordinarily act. Scientific laws have not the force of commands and do not impose penalties, but to seize this contrast is at once to come perilously near to a mistake of the opposite kind. If it is thought that, because sociological law is not an ordinance imposed upon the will, it is therefore something necessarily independent of the will and, if valid at all, must express something which will and must happen in the life of society, no matter what the human beings who constitute that society may think or desire, social development comes to be conceived as something proceeding fatally and even mechanically, which human beings can neither arrest, accelerate, nor modify. In opposition to that view, it must be maintained that social laws rest on and express the ways in which human beings act in their relations to one another together with the consequences of such actions. But, as human beings are capable of that reflective and deliberate action which we call the action of will, sociological laws, far from being independent of the will, must consist largely of statements of the ways in which human wills act. It follows that the mere knowledge of such laws and of the tendencies to which they lead introduces new data for consideration and possible new motives.

Malthus's law of population, e.g., by showing how, under given conditions, population must increase faster than the

means of subsistence, had a profound and far-reaching effect upon opinion, and finally upon action, which seriously contributed to the arrest of the increase of population. Such an effect is falsely described as a defeat of Malthus's law. It is a defeat of the tendencies which Malthus found in operation through the apprehension of the results which Malthus predicted. The law, properly stated, is a conditional generalization. If, and so long as, people act in a certain way guided by certain conditions, population will increase faster than the means of subsistence. When they take this into account, new motives come into play and the condition under which the law holds is removed.

Sociological laws therefore do not necessarily formulate processes that must occur independently of our will, but rather indicate the ways in which men act under assignable conditions and the consequences of such action. The knowledge so obtained is the necessary condition of a fuller control of the life of society by the deliberate will of human beings.

To sum up. Sociology as a science does not involve the negation of the freedom of the will, nor does it negate the individuality of societies or the uniqueness of national history. Its business in general is to give an articulate, impartial, and systematic description of the facts of social life. In these it finds features that recur and features that are unique, events attributable to widely prevalent social conditions and events attributable to the action of this or that individual; and the elements of uniformity it sums up into generalizations which hold conditionally on the character of that complex of circumstances which constitutes the individual life of a society at a given time. These generalizations express the ways in which human beings act in accordance with the promptings of human nature and the consequences of such actions; but they do not hold good if other motives come into play than those which they have taken into account. They display social life as made by man for man, not as imposed on man by a super-incumbent necessity.

3. The social structure.—(a) *Types of society.*—We have described a society as a structure of which the units or elements are human beings living in certain more or less durable and dependable relations to one another. The definition is intended to fit a family or a State, a literary society, or the 'society' of a town or a neighbourhood. In the last case the conditions of durability and definiteness may be sometimes said to recede towards the vanishing point, and the limits which mark out one such society from another become correspondingly vague. Yet even within a society of this kind people exercise mutual hospitality in certain recognized ways and within observed limits, and the relations between them endure sometimes through a lifetime. But, when the term 'society' is used in so large a sense, very little can be said of it in general. If we want to be more precise, we must distinguish different kinds of societies, and in particular those which rest on the deeper needs of man and play the larger part in his life. Of these we may perhaps distinguish three types: (1) the effective kindred¹ growing out of the ties of parenthood and sex, forming a structure of a definite and durable kind deeply rooted in human impulses; (2) the community, which is the entire society occupying a certain territory² as long as it is united by certain connective relations³ that do not extend beyond its borders; (3) what we shall call the 'association,' by which is meant not one

society only or even one species of society, but rather a genus including all societies which are based on specific purposes and needs of man. Some such societies are temporary and superficial as the purposes they serve. But some are based on profound needs and must rank with those of the greatest importance to the sociologist. Of these the Churches are the most conspicuous instance. Professional and trade organizations, political parties and leagues, and finally 'institutions,' universities, colleges and schools, even great businesses and government departments, are all societies existing primarily to meet certain needs and often possessing a life and character of their own which profoundly affect the individuals who join them, and react on the other societies with which they are in contact and on the community or communities to which they belong.

(b) *The community.*—The centre of these three types is the community. For the family is normally, if not universally, a part of a community and intimately attached to its structure and its fortunes, while the association is by definition hardly capable of an independent life, but requires either a community or communities as its background and support. Sociology therefore is right in making the community the centre of its inquiry, though it goes wrong if it forgets that society is wider than any community and that very essential relations may transcend the communal limits.

What we have called the connective relations constituting the community consist mainly in (1) the observance of a common system of rules regulating the ordinary intercourse of life, and (2) mutual protection against both external enemies and internal breaches of the peace. Among many of the simpler peoples these two functions fall apart, the second particularly in internal relations falling rather to the kindred or quasi-kindred (e.g., the totemic group). The community here consists of people who live in habitual intercourse regulated by customs which are generally observed but not necessarily enforced by organized collective action. Moreover, if there are some rules so enforced, they are often not such as ensure the protection of individuals, which is a matter for the kindred or some other constituent group. Even for purposes of external defence or aggression the community as a whole may be very slightly organized. In larger and more organized communities the enforcement of rules and the protection of its members as well as the maintenance of its own being and perhaps the extension of its borders become essential features of the community and are the first function of a distinct organ, the State (q.v.).

A civilized community is, in fact, always organized as a State, but the State and the community are not to be identified. By the community we understand the people in the entire fabric of their life, including their family relationships, their industry, commerce, religion, art, and relaxation. The State is the organized fabric supporting law and government. It is more than mere government—with which it is sometimes identified—while it is less than the community. It includes the executive and judicial system (with the public forces, police and military) on the one side, and the constituent authority on which government is based on the other. In a very democratic country the State may be regarded as the community as organized for those collective purposes which involve compulsion as an ultimate resort. In undemocratic countries the State is not the whole community and may be alien and unfriendly to a greater or less part of it. In many simple communities there is no government and no State. Community and State therefore are different forms of society, and on the whole the State belongs to the type of society which we have called association. It exists to meet specific needs, and it becomes confused with the community because in large and developed societies it is the organ and outer expression of its unity. Questions of the basis, origin, and development of society in general, of the community, and of the

¹ By the term 'effective kindred' the present writer means the kindred to the limit within which its tie is an actually operative force—a limit that varies remarkably among different peoples, and even in different families.

² Or (in the case of nomads) habitually moving in association.

³ If a community is loosely organized, individuals or other communities like gypsies may occupy or move about in the same territory without entering into connective relations with it. Firmly organized communities, of course, bring all such relationships under control.

State should therefore be distinguished. The community is a form of society, and the State is an organ of the community. Man builds society as naturally as the bee builds the honeycomb because isolated man is an incomplete being, and societies vary in every possible way because man's nature is so various, and on all or almost all sides needs the social relation to complete its expression. As social beings the men whose lot is cast together build communities, but in the formation, maintenance, and development of these permanent structures the differences of human qualities make themselves felt. The distinction which we drew between social relations in the wider and narrower sense comes into play, and it is only so far as the tendencies making for co-operation overcome those of antagonism that the community extends, and only so far as the former gain at the expense of the latter that it can develop. Thus the conditions—psychological, historical, or environmental—that make for co-operation determine the life and character of the community, and the abstract fact that man is a social animal is only the first step in explanation. The State reflects the life of the community, in part its conscious or half-conscious need for organization, in part the actual superiority which organization confers in the struggle for existence. It is natural neither in the sense of issuing immediately from man's primitive impulses nor in that of spontaneously expressing his matured perfection. On the contrary, at all known stages it requires effort and criticism to adjust its control, whether to the lower or to the higher nature of man.

As a durable society a community is, in accordance with our definition, a structure of which the unitary elements are human beings living in defined and permanent relations with one another. It may include many subordinate societies, even the simplest communities, *e.g.*, generally including several families (at least in the narrower sense of the term). What is generally necessary to the maintenance of the community is that the several relations between individuals, families, and associations within it should be compatible with one another. However complex, they must, taken together, be self-maintaining; economically, *e.g.*, the relationship between motive and effort must so work out that the community produces enough to maintain itself. On the side of law and order its members must on the whole know what they may expect of others and what others expect of them. Even a game cannot be played without this much of mutual understanding, still less the complex business of running social life. Thus, from the simplest people upwards, every community known has its web of traditional custom, which as a whole makes up a fabric that with less or more of friction will somehow work. Thus a community is not only a structure but a self-maintaining structure—one of which the parts are always in movement and action, but on such lines that by movement and action the structure is on the whole maintained. This description is suggestive of the life of an organism, and not the less so if we consider that the structure may not only be maintained but also develop, and not only develop but also perhaps decay and even perish, so that what might seem to be an objection to our general postulate of self-maintenance falls into place as an exception which proves the rule. How far is this comparison a metaphor, and how far does it express the real essence of communal life?

The objection commonly made is that an organism is a unity possessing a life and consciousness as a whole and not in its several parts, whereas, whatever unity the community may have, the life and consciousness are manifested in its individual

members. Our consciousness in its normal functioning is unitary, and we know nothing of any consciousness in our component cells. In the community, on the other hand, each component individual is a conscious being, and we know nothing of any central consciousness unless it be either (a) that of a ruler, who is after all one member of the community, or (b) the common councils and decisions of many or all members of the community acting in co-operation. Here, we may agree, is a material difference which disposes of any attempt to treat the community as a species of living organism, if that means a species of animal.

(c) *The organic principle.*—But there is another and more effectual way of using the term. We may define the organic in general terms and treat living beings, societies, and perhaps other things (*e.g.*, works of art) as species falling within it. An organic whole, then, is a system with a distinct character and mode of action of its own constituted by the conjoint action of parts, each in turn with a distinct character and mode of action of its own, but conditioned in the maintenance of their character and the pursuit of their activity by their mutual requirements as members of the union. The relation of whole and part requires no external agency to create or maintain it. This differentiates it from a mechanical whole in which something essential to the formation is always external. It must be said further that organic unities differ in two principal respects. (1) Some are more and some less thorough-going and intimate. In some the parts cannot exist without the whole; in others they survive its destruction, but modified or crippled in greater or less degree. Among the higher animals a cell removed from the body rapidly dies; among the lower it may survive permanently with some change of form. Viewed under this aspect, some social relations are seen to be very intimate. Indeed the sum-total of all the social relationships in which a man stands must be regarded as so deeply affecting his whole nature that, if we suppose them all cancelled, it may be doubted whether he could still be called human. Any given society, however, may embody only a fraction of these relationships, and its dissolution might not greatly affect the individual. We cannot say *a priori* how it will be in any given case but merely note that on this side the intimacy of the organic union varies in every possible degree. (2) There is, further, a variation of kind, according as the union is harmonious or constrained. Each part is so far distinct as to have its own tendencies and potentialities. It may find in the other parts the co-operative conditions necessary to fulfil these, or it may find forces which in greater or less degree distort and cramp it. Such mutual constraint—the price, so to say, of mutual development—is of common occurrence in organic unions, but necessarily involves a loss of energy and, if carried far enough, entails the risk of a break-up. The organic principle is pure or harmonious in proportion as the constraint involved diminishes.

To apply these principles to a community, it may have many constituent groups, each with a certain internal life, and these in turn are composed of individuals, each with his capacities which may or may not be fulfilled. It will suffice to consider the community in relation to the individual. What do we mean by fulfilment of capacity? Human life rests on impulses which in their higher and more definite form become purposes. Any attainment of a purpose is *pro tanto* a fulfilment of some element in our nature. But purposes may be distracted and conflicting, so that the fulfilment of one may be the frustration of

others, and there is no fulfilment of the self as a whole. Hence, conversely, if there is any fulfilment of the self as a whole, it must lie in the realization of a comprehensive purpose or in a coherent system of purposes. Now, one purpose might be pursued through life to the disregard of all others. There would then be consistency of action, but no fulfilment of the mass of impulses or purposes. But, conversely, the purpose or system of purposes might be such as would give to all manner of impulses and purposes the greatest scope compatible with mutual consistency. It might indeed be a summing up of such purposes as seem in relation to one another. This would yield the most complete possible fulfilment of the self as a whole. The process of such fulfilment is the development of personality, which is thus seen to rest on the free scope of each part conditioned only by the harmony of the whole.

What is true within the single personality applies *mutatis mutandis* to the plurality of persons in a society. If we conceive a common purpose, or system, embracing all purposes of all individuals so far as they are mutually consistent, the realization of such a system would be the completest fulfilment of the life of a community. Ideally such a system would be one which should lay all elements of our nature under contribution, informing them with a spirit of unity rather than limiting them by constraint. It is clear that such a harmony could be expressed only in a religious ideal setting before humanity as a whole the meaning and value of its life. Of such an ideal all that can be said here is that the two conditions on which it rests are those which we have called harmony and freedom—fullness of scope for our many-sided nature conditioned at the lowest by the requirement of mutual consistency, or at a higher grade inspired by conscious relation to a harmonious whole.

A community will be harmonious or organic in the purest sense in proportion as it realizes these conditions—i.e., as it rests upon and calls forth the personality of its members in all respects in which they are in fact capable of harmonization. Thus it will repose upon the social qualities in the narrower of the two senses given to that term. It will not admit any quality or activity incompatible with the consistent working of the whole, nor allow the restraint or stoppage of any development except on the score of such incompatibility.

Unfortunately, as we saw at the outset, the term 'social qualities' has a much wider sense; the human beings of whom society is composed do not with their whole being enter into harmonious co-operation: they are centres of independent life with interests of their own, in the pursuit of which they impinge on one another, crossing each other's paths. The various groups which they form act with a similar collective selfishness, so that we are faced by centrifugal tendencies and begin to wonder how it is that the community is kept together at all. Thinkers who start from these tendencies have, in fact, formed two main theories of the origin of social union.

(d) *The principle of force.*—One school rests the State upon force. Now it is true that organized society has never yet been able to dispense with force, but force itself as applied in social life is a conception requiring analysis. Where more than two or three are gathered together, force cannot be effectively exerted by a single man. It may no doubt be wielded, directed in detail, by the will of a single chief. But essentially it rests on discipline and organization, and organization involves a delicate psychological balance. Even in a disciplined army there must at bottom be a widely diffused will to obey, and, if there comes a point

at which for any reason that will is shaken, the whole fabric may, as the world has seen, suddenly crumble. In a slave society there must be union among masters and overseers or privileged slaves. In an aristocratic society compromises and shifts are adopted to prevent trouble with the mass, and 'charity' plays a large part in substitution for justice, while the power of the governing class rests on an energetic development of a common will. In short, if organization involves force, it is still more true that force rests on organization, and organization on response of mind to mind, will to will. There may indeed be a large class of slaves, serfs, or subjects who have 'nothing to do with the laws except obey them,' but even here, as we get closer to the facts, we generally find that it is easier to proclaim laws than to enforce them if they are definitely out of keeping with the ingrained tendency of the mass. Repression may unfortunately play a very large part in social organization, and many of the vital social impulses may be inhibited, but there must be some seed of social co-operation, even if it is limited to a small section of the community which conceives its common good as conditioned by the subordination of the remainder. Force is not the basis of the State as such, but is the element in State organization which is the exact antithesis of the organic principle, expanding or contracting as that principle contracts or expands, but incapable of extinguishing the last germs of its life without resolving the structure into a chaos of centrifugal elements.

(e) *The principle of self-interest.*—Other thinkers have founded the community on self-interest, and this theory has taken two main forms. In one the organized community, the State, is based on a contract. Individual self-seeking, unable to get its way, comes to terms with others, 'so as neither to do nor suffer injustice,' and the result is an agreed system of general rules and an accepted government to enforce them. This theory, viewed in broad principle and without regard to the ingenuities of its historical exponents, covers a part of the facts. It is true that on the balance the interests of each man are in general better served by some sort of order than by anarchy, and a vague sense of this truth may even operate as a true psychological factor in securing consent to government. But as a principle the theory of contract errs by omitting the entire common interests of mankind and with it the manifold and complex relations into which human beings enter spontaneously through the development of their own impulses. Compact, express as well as implied, plays its part in public as in private life. Public transactions are affected by reciprocity, and men favour or disfavour a project of laws which does not directly touch them from a sense that the same principle might be applied in a way that would directly touch them. Indeed in this manner there is an element of self-interest in the assent nominally given to law itself. But the part played by calculating egoism is very secondary to that of the various impulses that constitute the Ego. It is true that men are more moved by something that might easily have happened to themselves than by things more remote, but this is largely because such things necessarily lie within the range of their experience and are the more readily realized in imagination. Pity is not a fear lest the like misfortune befall oneself. It is quite another kind of emotion. But it is more easily stirred by a situation in which one can readily imagine oneself or others near to one to be placed. Both for good and for evil our relations to others rest primarily not on egoistic calculation, but on direct and spontaneous impulses and

emotions, and the organized life of the community represents rather the adjustment of such impulses and their reduction to order and system than a precarious balance of purely self-centred interests.

The second form of this theory played an important part at one stage in the development of economics. It was conceived that in a community in which every man was free to pursue his own interests, and enlightened enough to understand its true conditions, the play of economic forces would suffice to secure the common good. Since each knows where his own shoe pinches, it is the free purchaser in the free market who is most likely to get the shoes to fit his own feet. The workman who can sell his labour freely works to the best advantage. The employer who can secure labour freely finds the best man for the most paying job, and the most paying job is that for which at the moment there is the widest demand. Thus demand and supply, operating in a world of free, equal, and intelligent beings, adapt the efforts of each to the maximum needs felt in that world, and there is a natural harmony of interests on which the statesman should rely for the promotion of order and progress. On this theory only two comments are required here. The first is that it postulates freedom, enlightenment, and equality of opportunity, which, if obtainable, are so only by a complete system of restraint on the oppressive use of personal or class ascendancy—i.e., it postulates after all organized action for the common good. The second is that this theory simulates a harmonic view of society, but is really different in principle. For in the harmonic view the interest of one is in the welfare of others. In this view the interest of each one is merely served by the others as instruments, and the correspondence assumes a kind of 'pre-established harmony' which is little short of miraculous. We must distinguish sharply between a harmony growing out of social impulses and expressed in a common purpose and a harmony resting on a mechanical coincidence of self-centred desires from which the social interest is eliminated. But, though these two forms of harmony are distinct in idea, they have something more than the name in common. It is a very important truth that even as self-centred individuals men have a certain community of interest—e.g., that in the long run the trader gains by the prosperity of his customer, that high wages may mean cheap production, and so forth. These relations testify to underlying conditions of harmony in human life, whether men are aware of them or not, and the old economic theory had at least a glimpse of the truth. On the other hand, to bring these conditions to light and make them the basis of social organization a very different psychology is required.

(f) *The blending of distinct principles.*—Thus we find different and even opposed principles operating in the life of the community. But we must not imagine those principles either as lying side by side or as in continual conflict with one another. Men adapt themselves to their conditions, and under a system of constraint some tendencies atrophy and others develop and take a firmer hold, and one may become in time a loyal and willing slave, while another takes it as a natural right that he should be master. The actual system of society may be far from harmonious, but may be very deeply rooted in the minds of the members as they have come to be under the pressure of generations of historic development and may be strongly resistant to changes which would in fact liberate many of its suppressed potentialities and yield a fuller and more harmonious life. Such a community is highly organic in the sense that its members are deeply penetrated by its spirit,

though it may be of low grade from the point of view of the harmony which it secures.

It would seem then that to define a community as an organism would be to simplify our problem too much. A community has more or less of organic character as the case may be, or sometimes more of one organic character and less of another, and is accordingly less or more subject to internal (or external) constraints. If, then, the community is not as such an organism, may we call it an organization? The term has been proposed to avoid the analogy of the animal organism, but it carries with it converse suggestions which are hardly less objectionable. All communities are no doubt more or less organized, in that they are structures in which people stand in fairly definite and durable relations in virtue of which they so act as on the whole to keep the structure in being. But the term 'organization' is apt to suggest that this structure is intelligently planned for a purpose and imposed for that purpose on an otherwise unordered people. Such organization of course plays its part within most communities at one point or another, but in the main the community grows out of the needs, and indeed the purposes, of individuals, but not out of a common purpose, while, if it achieves a common purpose, that is rather the flower of its high development than the originating cause of its being. We may speak of 'the organization of a community' in a neutral sense, leaving its base and character, whether organic or mechanical, purposive or impurposive, to be further determined. But we had better avoid defining the community as an organization. Generically a community—we fall back on our first account—is a self-maintaining structure, composed of individuals with lives and purposes of their own, but in perpetual interaction with one another. This interaction modifies the individual so far that the normal community settles down to an accepted order. How far in such order the development of individuals is subject to restraint, distorted, and suppressed, how far it is full, harmonious, and free, are questions to which the answer must differ from case to case, and in each case it tells us how far that community is in the full sense a completely developed organism.

Whatever the relative importance of the co-operative or the repressive principle in its life, the communal structure is a whole, constituted by those elements of character which its constituent individuals contribute, while it modifies those individuals to the extent to which it draws forth from them or represses the characteristics which in a different social milieu would have had a different history. So understood, the common life is precisely the sum-total of the individual lives as actually lived in the community.

4. *The development of the community.*—Structures which maintain themselves in continual process, through the interaction of their parts and by dealings with their physical or social environment, may be said to differ from one another in one or more of three principal points, and it is by such differences that we measure their development. These points are (a) the efficiency of their operation, (b) their scale or scope, (c) the basis or principle of their organization.

(a) *Efficiency.*—The term suggests an end or purpose. How far purpose can be attributed to communities as such is, as has been hinted, a doubtful question, and it cannot be discussed here. But, whether of clear purpose or otherwise, the community somehow maintains itself, and that not like a stock or stone by dull inertia, but like an organism (it does not matter for the moment whether the likeness is superficial or fundamental) by unceasing metabolism. It protects itself against

enemies and against internal disorder. Its members supply themselves, largely if not principally by mutual service, with the necessities, comforts, and luxuries of life. All this, though it may not be planned by any common will or by any single will on behalf of the community, may obviously be in fact performed with greater or with less efficiency. It is the requirement of efficiency that gives rise to the division and combination of effort, the articulation of social functions, all that we are accustomed to call organization in the narrower sense of the term. The farther differentiation proceeds, the greater is the need of some supreme regulation based on recognized principles. But without assuming a common purpose to be universal, we may say that every community in maintaining its being exhibits a degree of efficiency, high or low.

(b) *Scale or scope.*—Communities differ in scope. This has two principal meanings. In the first place, they differ in mere size. A living organism may consist of a single cell or of millions of cells, a community of three or four families or of a hundred million men; and it may be remarked that unity and size are not, generally speaking, easy to reconcile. Great organizations generally contain small organizations within them, and sometimes the smaller organization is the more effective unity of the two. Thus the cell is more efficiently organized than the life of some of the metazoa which are aggregations of cells acting normally as one being but capable of independent life. Many of the larger human communities have been loosely compacted, and the smaller units composing them have in history shown more vitality, more power of keeping together and maintaining themselves, than the whole to which they belonged. In the simpler societies the tribe is often a feeble and ill-organized community, as compared with the clan which is its immediate component.

But there is a less obvious sense in which communities differ in scope. They cover a larger or smaller sphere of life and activity. The total output of human energy may be relatively great or small, poor and narrow or rich and many-sided in its development. As the scientific, the religious, the imaginative interests develop, as callings are differentiated and wealth and industry grow, the scope of life extends. The metabolism that sustains the social structure is more intense, the outlook is wider, the pace faster. There always arises the question whether the old bottles will hold the new wine, or, to drop metaphor, whether the sum of the activities, at once extended and intensified, will still maintain itself as a unity or suffer disruption. The success of the community in absorbing manifold and divergent developments into the unity of its life is the measure of its scope.

(c) *The base or principle of organization.*—Communities differ in spontaneity. As we have seen, organization may be imposed upon elements which are indifferent to its purposes from without. The elements are then subdued, for their energies are directed by the superincumbent force into channels into which they would not naturally flow. With time their original impulse may be crushed, or it may be simply held in check to re-assert itself when the pressure is removed, while, so long as the organization remains mechanical and in proportion as it is mechanical, it is alien to the elements which are made to serve it, and herein there must be necessarily a net loss of efficiency, because by hypothesis some portion greater or less of the inherent energy of the parts is indifferent or even hostile to the purpose for which it is being used. On the other hand, the structure may spring from and express the inherent energies of the parts themselves, which spontaneously respond to one another, each eliciting from the other the output

of its inherent energy for the fulfilment of its capacity. Such a structure differs from every other in that it has the root of self-maintenance and development in itself, diffused through all its parts. It is in accordance with our definition organic. As applied to society, it is easy to recognize in this description the ideal life of a community, and it is as easy to see that it is an ideal which is very imperfectly realized in any existing community, and one that is not readily reconcilable with the imperfections of human nature. It results, however, that communities are organic in proportion as their life is based upon spontaneous co-operation, and that a free co-operative commonwealth, however difficult to realize, has within it the foundations of a more complete and stable unity and of a higher efficiency than the most complete mechanical organization. It is also clear that it has within it the power of attaining a very much wider scope than the mechanical organization which is by hypothesis repressive, and which, while it may be exceedingly efficient for one purpose, must cramp human nature on other sides. Could there be co-operation in freedom, on the other hand, it would be a co-operation on all sides of life which are capable of social or harmonious expression.

But, though co-operation may be based on freedom, it would be a mistake to suppose that the most completely organic society could dispense with positive institutions, or that there could be harmony of manifold impulses without limitations and restraints. The best impulses require direction and co-operation, and even a community of saints would need a definite order in which the special functions of each person on each occasion should be indicated. The problem of freedom is not that of dispensing with all guidance and all restraint, but that of finding the lines upon which the manifold social qualities of man can develop in harmony, with the result that the restraints involved are voluntarily accepted and self-imposed. Nor is the problem of organic construction that of engendering the social impulses, which are born and not made, but that of so adjusting the framework of institutions that such impulses have free play and scope for development. This is the truth expressed by T. H. Green when he says that the direct object of legislation is to create not the common good—conceived as the free operation of a spiritual principle—but rather the conditions under which the common good may develop. Legislation cannot make men honest on principle, but commercial law may be such that honesty is the road to ruin, while it may be so reformed that the honest man becomes capable of holding his own. Industrial law may enable the harsh employer to beat down prices by sweating, and so render it impossible for any one who refuses to employ others except on a living wage to remain in the trade. When such a law is amended, it does not force anybody to be truly and spontaneously considerate in his dealings—in this sense no one can be made good by Act of Parliament—but it does enable the considerate man to play his part as an employer in industry. Thus it is no more possible to create an organic spirit than it is to make a living thing, but it is possible to open the channels along which the vitalizing fluid may run and thereby gather energy and volume. What we call free institutions are institutions which on the whole rest for their stability on this vital principle, and provide the lines upon which it can move without obstruction.

Communities, then, differ in the three essential respects of efficiency, scope, and spontaneity, nor do they tend to vary concomitantly in the three relations; e.g., a community may be organically one—its common life a 'spontaneous' expression

of character—but very small and very limited in the scope of its activity. Thus a little clan may stand together as one man to protect every one of its members, its unity based on spontaneous and deep-seated feeling. On the other hand, it contains only a few score of individuals, and its notions of life may be exceedingly narrow. Again, a large community may be efficiently organized upon the basis of military despotism. It is then an exceedingly formidable force in the world, and may defeat and destroy rivals who have cared more for the development of individuality and less for discipline and order. This is the victory of mechanism over the spirit which is the recurrent tragedy of human history.

Again, the life of a community may be many-sided and so rich in scope, but the greater amplitude conditioned by freedom may be purchased at the expense of organic unity. There may be an order like that of the Roman empire superimposed on heterogeneous peoples allowing great latitude for internal movements such as are illustrated in the rich religious growth of the imperial period. Such states do a service for civilization, though not quite the highest service, and their weaknesses are easy to see.

Lastly, the organic principle may be strong and penetrating, but not pure or harmonious, resting, *e.g.*, on the strong mutual development of certain qualities and a certain attitude of mind which represses other qualities of personality. Such organic character will often be found in small communities of very simple mode of life, and sometimes even, through the strange adaptability of mankind, in larger communities supporting essentially repressive systems of authority.

Thus these three features of social organization vary independently, and development may be measured by the advance in any one of them. But, considered in its fullness, it is measured by the advance in all three taken together. That is to say, the most developed community would be that which effectively achieves the most complete synthesis of the widest range of human activity, including within its membership the largest number of human beings, but in such wise as to rest most completely upon their free co-operation, thus expressing the whole of their vital energies as far as these are capable of working together in harmony. Judging by this standard, we may speak of one society as more highly developed than another, and we have in this conception a general criterion of advance in organization.

5. Complete development and the ethical ideal.

—Now, the final term of development in these three respects accords with the ideal of a rationalistic system of social ethics. For, whatever the view taken in detail by the ethical rationalist, his general principle is that right conduct must form a rational system. A rational system is one applicable to all humanity in all the varied relations of its life, and its demand is for a practical consistency in character and conduct. By practical consistency, again, is meant a system of purposes which in their operation do not conflict with but support and require one another, forming a whole within which they are distinct but interdependent parts.¹ Thus such a system constitutes an organic whole, as it has been here defined, and one that embraces the whole of human life and activity. Thus for a rational ethics the good life,

¹ It may be objected that the requirements of a rational system would be satisfied by the subordination of all purposes to one supreme end, so that in place of a system of ends distinct but interdependent rational conduct would be of the nature of a mechanism in which every detail is a mere means to a single end. This conception can be shown to rest on an imperfect view of rationality, but in relation to ethics it is sufficient to remark that it involves a denial of all intrinsic value to personality—*i.e.* at once of conscience, of love, and of justice.

if actually realized in society, would form a perfectly organic unity of the widest possible scope. It follows that at bottom the ethical and the organic principle are the same thing. Thus, when we speak of 'higher' and 'lower' development in the senses here set out, the ethical implication of these terms is fully justified from the point of view of a rational ethics. But it is important to remark that the terms 'higher' and 'lower' may be used of organization without an ethical reference, implying merely the greater or less completeness, efficiency, or extent of the organization itself. From this point of view, the three characteristics here taken are the essentials. For organization, to be complete, must rest on an internal principle, and will be more or less complete in proportion as it is saturated with that principle. The principle must be efficient in governing the parts and in controlling their activities, and, completeness being thus assured, extent is measured by size and what we have called scope. Thus we arrive at the result that in fundamental principle development in social organization, considered in its fullness, coincides with ethical development as conceived by a rationalistic system. This is the fundamental proposition in the relation between sociology conceived as a science of facts and sociology as a philosophy of values. Partial developments may diverge from ethical requirements in any degree.

From this point the further treatment of the subject, which cannot be pursued here, divides into two branches. The first is philosophical and consists (a) in the justification of the ethical theory here laid down, and (b) in its expansion and application to social institutions. This is the task of social philosophy proper. The second is scientific and consists in ascertaining the condition of development, the correlation of its different branches, the causes making for its furtherance, arrest, or decay, and the principal phases of its partial achievement in the course of historic civilization.

LITERATURE.—The term 'sociology' is due to Comte (see art. **POSITIVISM**), and the modern treatment of the subject has been greatly influenced by his work and that of Herbert Spencer. To Comte his *General View of Positivism*, Eng. tr. by J. H. Bridges, new ed., with introd. by F. Harrison, London, 1903, is the best introduction. Spencer's *Principles of Sociology*, London, 1900, is now mainly of historical interest, but his *Study of Sociology*, do. 1880, is a brilliant introduction which retains a value.

Sociological literature since Spencer's time has been exceedingly voluminous, but the subject has been pursued more successfully in its special aspects than as a whole. For this reason any adequate bibliography would be of unmanageable dimensions. Perhaps the best recent treatise, professedly sociological in aim, is R. C. McIver, *Community: a Sociological Study*, London, 1917, to which the present writer must express his obligations. Numerous text-books and introductory volumes have appeared in America, among which F. H. Giddings, *Principles of Sociology*, New York, 1898; L. F. Ward, *Outlines of Sociology*, do. 1898; J. Q. Dealey and L. F. Ward, *Text-book of Sociology*, do. 1905; F. W. Blackmar and J. L. Gillin, *Outlines of Sociology*, do. 1915; Albion W. Small, *General Sociology*, Chicago, 1905; E. A. Ross, *Foundations of Sociology*, New York, 1905; and C. A. Ellwood, *Sociology in its Psychological Aspects*, do. 1913, illustrate various methods of treatment. L. T. Hobhouse, *Social Evolution and Political Theory*, was also published in America (New York, 1911). The *American Journal of Sociology*, *Sociological Papers*, and the *Sociological Review* published by the (London) Sociological Society are the principal serial publications in English. The first volume of the *Sociological Papers* contains a valuable art. on 'The Origin and Use of the Word Sociology' by V. V. Branford. In French E. Durkheim's works, especially *Les Règles de la méthode sociologique*, Paris, 1912, and the volumes of *L'Année sociologique* are important, and the volumes of *La Science sociale* incorporate the principal work of the school of Le Play. In German G. Simmel, *Soziologie*, Leipzig, 1903, is a voluminous treatise, and P. Barth, *Die Philosophie der Geschichte als Soziologie*, do. 1897, a very valuable résumé. Müller Lyer, *Phasen der Kultur*, is of interest to the student of comparative sociology. The *Vierteljahrsschrift für wissenschaftliche Philosophie und Soziologie* may be consulted. In England the general subject has been approached mainly from the philosophical point of view. E. J. Urrwick, *A Philosophy of Social Progress*, London, 1912, and J. A. Hobson, *The Social Problem*, do. 1901, are of value to the general student. J. H. Muirhead and H. J. W. Hetherington, *Social Purpose*,

London, 1918, and J. S. Mackenzie, *Outlines of Social Philosophy*, do. 1918, are representative volumes (Mackenzie's *Intro. to Social Philosophy*, Glasgow, 1890, retains its value). Westermarck, *MI*, 2 vols., London, 1903, L. T. Hobhouse, *Morals in Evolution*, rev. ed., London, 1915, and A. Sutherland, *Origin and Growth of the Moral Instinct*, 2 vols., do. 1893, are in the main works on comparative sociology on the side of custom and ethics. Graham Wallas, *The Great Society*, London, 1914, is indispensable to the student of social psychology, to which the works of Ross (New York, 1908) and W. McDougall (London, 1915) under that title are suggestive contributions.

L. T. HOBHOUSE.

SOCRATES.—I. Chronology.—Socrates was put to death in the archonship of Laches (Ol. xcv. 1=400-399 B.C.). The date was given by Demetrius Phalerens in his *Register of Archons* (ἀρχόντων ἀναγραφὴ), which was based on official records, and is the only fact about Socrates that may be regarded as beyond the reach of controversy. The year of his birth was obtained by calculation. Plato made Socrates say that he was seventy¹ or over seventy² at the time of his trial, and the ancient chronologists counted back seventy archons from Laches inclusive, which brought them to the year of Apsephion (469-468 B.C.). As, however, Socrates was condemned at the beginning of the Delian festival, which appears to have fallen in March, it is safer to go back at least to 470 B.C. In any case, that year cannot be far wrong.³ The dates show that Socrates was essentially a man of the Periclean age, and that he grew up in that wonderful time when Athens, conscious of having saved Greek liberty, became the centre of a free artistic and intellectual development that has never been surpassed. He must have seen the first performances of the *Antigone* and the *Hippolytus* and watched the building of the new Parthenon from start to finish. On the other hand, Plato and Xenophon, the writers who have most to say about him, were not born till after the high hopes of the Periclean age had been bitterly disappointed, and their youth was spent in years of disaster which ended, by the time Plato was twenty-three, in the fall of Athens and the loss of her leading place among the states of Greece. It is obvious that, if we are to understand Socrates, we must try to replace him among the surroundings of his own generation, and to do that we must carefully weigh all contemporary references to his youth and early manhood. It is only when we have done this that we shall be in possession of a test which we can apply to the evidence of men who knew him only in his old age.

Plato was born in 428-427 B.C., when Socrates was already over forty. It used to be supposed that Xenophon was older, and this is the real explanation of the general disposition to regard his evidence as particularly valuable. The early date given in older books for the birth of Xenophon is solely due, however, to an uncritical acceptance of the calculations of ancient chronologists. They fixed his ἀκμή, or *floruit*, in 401-400 B.C., the date of the *Anabasis*, and equated the *floruit*, as usual, with the fortieth year of his life. From the *Anabasis* itself, however, we learn that Xenophon must have been well under thirty in 399 B.C.⁴ He insists a great deal on his youth as compared with the other generals,⁵ and Proxenus was only thirty. We may confidently infer that Xenophon was younger than Plato. It is also to be remembered that he left Athens before the death of Socrates, so that he was only a lad when he knew him. His Socratic writings belong to a later date, when those of Plato, Antisthenes, and Æschines were already well known. None of the most recent writers on Socrates regard Xenophon as a first-hand authority, though they differ considerably as to his sources.

2. Early references to Socrates.—The earliest reference to Socrates now extant probably comes from a time before the birth of Plato, and certainly from a time before he was ten years old. In a book of memoirs entitled *Visits* (ἐπισήμματα) the

¹ *Crito*, §2 E.

² *Apol.* 17 D (according to the reading of T): πλείω ἰβδόμη ἑξήκοντα.

³ For the chronological questions involved see F. Jacoby, *Apollodorus Chronik* (*Philol. Unters.* xvi.), Berlin, 1904, p. 254 ff.

⁴ O. G. Cobet, *Nova Lectiones*, Leyden, 1858, p. 634 ff.

⁵ *ibid.* l. 14, 25. For the age of Proxenus see *ibid.* O. 20.

tragic poet Ion of Chios said¹ that Socrates in his youth visited Samos in the company of Archelaus. If we had the context, we might be able to fix the date of this; but, even as it is, we may be fairly sure. We know² that Ion met the poet Sophocles (who was one of the generals) at a dinner-party at Chios during the Samian War (441 B.C.), and it is natural to suppose that his meeting with Archelaus and Socrates was about the same time. At any rate, Plato makes Socrates say in the *Crito*³ that he had never left Athens but on military service, with the single exception of a visit to the Isthmus, and there does not seem to be any other occasion than this on which he could have been at Samos on military service during the life-time of Ion, who is referred to as already dead in the *Peace*⁴ of Aristophanes, which was produced in 421 B.C.

Now this reference of Ion's is very important for what it implies. Archelaus was, in the first place, an elegiac poet, who belonged to the circle of Cimon, son of Miltiades, and the *Consolation* on the death of Cimon's wife, which survived to a later date, was attributed to him.⁵ Ion of Chios belonged to the same circle, to which he was introduced when quite a lad, and certainly before the ostracism of Themistocles.⁶ It may be taken for granted, then, that Archelaus was an old acquaintance of his; and so, when he mentions Socrates as being in his company, he must mean that there was a close relation of some kind between them. There is independent testimony to this, though from a later and less trustworthy source. Aristoxenus of Tarentum wrote a scandalous account of Socrates, based on the recollections of his father Spintharos, and he said that Socrates attached himself to Archelaus at the age of seventeen and followed him for many years.⁷ The tittle-tattle which accompanied this may be disregarded, but it could hardly have arisen unless the relations of Socrates with Archelaus had been notorious. Now Archelaus was not only an elegiac poet, but the disciple and successor of Anaxagoras, who had introduced Ionian science into Athens immediately after the Persian Wars, but had been forced to take refuge at Lampsacus about the middle of the century.

For the date of the trial and flight of Anaxagoras see A. E. Taylor's article in the *Classical Quarterly*, xl. [1917] 81. The idea that it took place just before the Peloponnesian War is due solely to Ephorus, whose chronology is well known to be arbitrary. All the data we have point to the residence of Anaxagoras at Athens having lasted from about 480 to about 450 B.C. It is quite distinctly implied in Plato's *Phædo*⁸ that Anaxagoras had left Athens before Socrates was old enough to take an interest in science, and that Socrates never had any personal relations with him. It is also clear that the earlier date is alone consistent with the statement of Plato and Isocrates that Anaxagoras was the teacher of Pericles,⁹ and the fact that he was succeeded by Archelaus, who had written a poem for Cimon. Plutarch's statement about this comes from Didymus.¹⁰

If, then, Socrates became a disciple of Archelaus about 450 B.C., or a little earlier, it means that he was then interested in Ionian science. It would have been strange if he had not been so; for, according to all accounts, he was a man of boundless curiosity, and Ionian science flourished exceedingly at Athens in those days. We need not, however, suppose that Anaxagoras had already

¹ *Frag.* 9 (*PHG* ii. 49). This is quoted in the *Life of Socrates* by Diogenes Laertius. The suggestion of Wilamowitz that it refers to another Socrates has now been withdrawn (*Platon*, Berlin, 1919, p. 90).

developed the subtle theory of substance by which we know him best. That was more probably the work of his old age at Lampsacus, and we can see from Euripides, who was also influenced by him, that it was rather what Theophrastus calls 'the philosophy of Anaximenes'¹ that Anaxagoras had brought to Athens in his youth. According to this doctrine, the primary form of matter is 'air' (i.e. vapour), which becomes 'æther' and fire when rarefied, and which becomes visible in clouds when condensed, passing ultimately into water and earth. The earth was regarded as flat and as supported by the air, and the formation of the world and everything in it was explained as due to an eddy or vortex (*δὺν*) in the original 'air.'

3. The comic poets.—We have no further contemporary reference to Socrates till 423 B.C., when, for some reason we can only guess at present, he was burlesqued in two of the three comedies produced that year, the *Connus* of Amipsias and the *Clouds* of Aristophanes. We do not know much about the *Connus*, which takes its name from the musician Connus, the son of Metrobius, whom Socrates speaks of as his music-master in Plato's *Euthydemus*² and in the *Menæxenus*.³ The *Clouds* is named from its chorus, and that is composed of clouds just because of their importance as a visible form of 'air' in Ionian science. There is one very striking coincidence between the two plays. The chorus of the *Connus* consisted of 'thinkers' (*φροντιστάι*), while in the *Clouds* Socrates is represented as inhabiting a 'thought-factory' (*φροντιστήριον*) with his disciples. It seems to follow that Socrates and his associates used *φροντίς* and its cognates in a way of their own, and that this amused the Athenians. Now in Attic the words *φρονεῖν*, *φροντίς*, and *φροντίζω* are employed in certain special connexions, and cannot be used in the general sense of 'think' or 'thought,' but in Ionic it was different. A glance at the Index to Diels' *Vorsokratiker* will show that *φρονεῖν* and *φρόνησις* were used by the early philosophers for *thought* as opposed to *sense* (*αἰσθάνεσθαι*, *αἰσθησις*), and we may reasonably infer that Socrates was already occupied with the distinction between sensation and intelligence at this date. From the *Clouds*⁴ we learn a little more about *φροντίδες*. A 'thought' has to be born like a child, and any disturbance may cause a miscarriage. This implies that the *μαειντική* of Socrates was already well known to the Athenians when Plato was four years old.

Plato uses the word *φροντιστής* only once, and that in a direct allusion to the comic poets.⁵ Xenophon⁶ makes one of his characters address Socrates as ὁ φροντιστὴς ἐπικαλούμενος, which is doubtless a literary reminiscence too. We may infer that Socrates had dropped the Ionic word in later life when he had given up Ionian science. In that case the *φροντίζων τι ἔστηκεν* of Plato, *Symp.* 220 C, which refers to 431 B.C., is a fine historical touch.

The *Clouds* is in no sense an attack on the 'sophists' in the sense in which that word is now commonly used. What is really attacked in the play is Ionian natural science, and Socrates is taken as the representative of that because, as every one knew, he had been the disciple of Archelaus, who was the successor of Anaxagoras. That was quite legitimate, and every one who has studied the science of those days must admit that Aristophanes was quite well informed about it, and that his caricature is based on a perfectly accurate view of its general character.

It is usual to say with Diels that the system caricatured in the *Clouds* is that of Diogenes of Apollonia.⁷ He too was an adherent of 'the philosophy of Anaximenes,' and it is quite natural that there should be coincidences between him and

Archelaus. The main things were common to the whole school. Specially noteworthy are the oath of Socrates by Respiration, Chaos, and Air,¹ and the references to the vortex.² If Socrates had been a disciple of Archelaus, these are perfectly correct allusions to the system in which he had been brought up.

There is, however, another strain in the Socrates of the *Clouds*, which has nothing to do with Archelaus or Ionian cosmology. Socrates is represented not only as a votary of science but also, and even more, as an ascetic and a teacher of strange doctrine about the soul. His disciples are pallid 'semi-corpses,' and the initiation of Strepsiades is an obvious parody of some Orphic or Corymbantic ceremony. The grotesque picture of the *φροντιστήριον* is intelligible only on the supposition that Socrates was popularly regarded as the director at once of a scientific school and of a religious conventicle, and that combination inevitably suggests a Pythagorean *συνέδριον*. There can be no doubt that Pythagorean influences had reached Athens by this time. About the middle of the century the Pythagoreans had been expelled from the cities of Magna Græcia; they had tried to continue their society at Rhegion, and, when they left Rhegion, they established themselves at Thebes (Philolaus, Lysis) and Phlius (Echecrates). There were many Pythagoreans at Athens in the 4th cent. B.C., as we know from the fragments of the comic poets, who burlesqued them very much in the same way as Aristophanes had burlesqued Socrates and his associates; but our knowledge of the Periclean age is so fragmentary that it is difficult to find contemporary evidence of their presence at Athens then. It is certain, however, that Athens had concluded an alliance with Rhegion in 433 B.C., ten years before the *Clouds*, and that Rhegion was then, or had lately been, the chief seat of the Pythagorean society. It is also certain that in 423 B.C. Euripides, in his *Hippolytus*, put on the stage a study of an Orphic saint. What is still more significant is that, even before the *Clouds*, Cratinus in his *Panoptæ* had burlesqued the science of the time in the person of Hippo, who was certainly a Pythagorean. His doctrine, so far as we know it, was not indeed very orthodox, but Pythagoreanism produced many heretics, and he is called a Crotoniate, a Metapontine, and a Rhegine as well as a Samian, and that can hardly mean anything else than that he was a Pythagorean. Nor is there any real reason to doubt the genuineness of his epitaph, which is quoted by Alexander of Aphrodisias and Clement of Alexandria,³ in which we are told that Fate had made Hippo 'equal to the gods in death.' Of course the Athenians called him an 'atheist' for that, but it is sound Pythagorean doctrine all the same. It is also credible that the quotation from him made by the learned Claudianus Mamertus of Vienne (5th cent. A.D.) is genuine; for it distinguishes soul and body in terms which strongly suggest the 5th cent. B.C.⁴

In view of this, it is noticeable that the word *ψυχή* is used very curiously in the *Clouds*. The 'thought-factory' is inhabited by 'wise souls,'⁵ which would only suggest to the average Athenian the meaning 'clever ghosts.' In the *Birds*⁶ Socrates is spoken of as one who practises necromancy (*ψυχαγωγεί*), and his disciple Chærepho plays the part of the ghost. It was clearly well known before Plato was ten years old that Socrates taught strange doctrine about the soul.

Now we are told by the scholiast on the *Clouds*:⁷

¹ 627: *μὰ τὴν Ἀναπνοήν, μὰ τὸ Χάος, μὰ τὸν Ἄερα.*

² 379: *not Zeus, ἀλλ' αἰθέριος δῖνος, 1471: δῖνος βασιλεύει τὸν Δι' ἐξῆλλακός.*

that the allusion to men who teach that the heavens are an oven (*πυριεύς*) was taken from the *Panoptæ*, where it was expressly referred to Hippo, so it appears that Aristophanes thought it plausible to attribute Italian as well as Ionian scientific ideas to Socrates. We must always remember that these two divergent views of the world met on common ground at Athens, where they set up an intellectual ferment which was of far more importance than the excitement produced by the occasional visits of the distinguished teachers to whom the name of 'sophists' is commonly applied. They were here to-day and gone to-morrow, but the scientific schools and the religious associations were firmly established.

Of course the whole plot of the *Clouds* turns on the belief of Strepsiades that the Socratics keep on the premises two *λόγοι*, a weaker and a stronger, and that they can make the weaker prevail over the stronger, though its case is a dishonest one. That is a perversion of Protagoras, but it does not follow that Aristophanes attributed it to Socrates. On the contrary, much of the fun of the play depends on the fact that, when Strepsiades has been initiated, he finds himself let in for something quite different from what he had expected. The idea is that the ordinary Athenian knew there was some talk of *λόγοι* in the school of Socrates and took for granted that it was just what Protagoras had made familiar some years earlier. Aristophanes knew at least that it was something different, though he may not have troubled to find out exactly what it was.

It appears also from the comic poets that Socrates had somehow become impoverished about this time. They allude to his want of a new cloak and the shifts he was put to to get one. Amipsias said he 'was born to spite the shoemakers,'¹ but that only refers to his practice of going barefoot, which Aristophanes attributes to the whole school.² Amipsias, in the same fragment, calls him 'a stout-hearted fellow that, for all his hunger, never stooped to be a parasite.' Two years later Eupolis spoke of him³ as 'a garrulous beggar, who has "thoughts" about everything (*τάλλα μὲν πεφρόντικεν*) except where to get a meal'—another reference to the *φροντιστής*.

4. Antisthenes and Æschines.—So far we have made no use of any evidence later than Plato's childhood; we must now look at certain writers of Socratic dialogues who were his contemporaries. There is not much to be learnt from the remains of Antisthenes, who seems to have been considerably older than Plato and to have been attracted to Socrates mainly by the strength of his character. The most important contribution he makes to our knowledge of him is that he spoke of foreigners being attracted to Athens by the renown of Socrates (*κατὰ κλέος Σωκράτους*). It is important to observe that this cannot have happened at any time after the outbreak of the war. Socrates must therefore have had a Hellenic reputation before Plato was born. Antisthenes told the story about Socrates saving the life of Alcibiades, which we know from Plato's *Symposium*, and he also mentioned the fact that Socrates yielded the *ἀριστεία* to Alcibiades, but he referred the incident to the battle at Delium instead of to that at Potidea.⁴

If we could be quite sure that Æschines of Sphettus was independent of Plato, his testimony would be of the greatest importance. Plato makes Socrates mention him as one of his followers in the *Apology*,⁵ and in the *Phædo*⁶ we are told that he was among the company present at his death. Whether he was older or younger than Plato we

have no means of knowing. In any case it seems in the highest degree improbable that Æschines and Plato should have conspired to misrepresent what must have been notorious facts in their day, and Æschines had no philosophy of his own to commend by representing it as that of Socrates. We may therefore regard his evidence as trustworthy, so far as it goes. For our purpose the most important of his dialogues are the *Aspasia*, the *Alcibiades*, and the *Telauges*, and we fortunately know a good deal about them. In the first of these dialogues Socrates was represented as taking lessons in the art of love from Aspasia, and as recommending Callias to send his son Hipponicus to learn politics from her. Moreover, he was made to maintain that the goodness (*ἀρετή*) of a woman is the same as that of a man—a point which he illustrated, not only by the case of Aspasia herself, but also by that of the Persian warrior maiden Rhodogune. Plato has little or nothing to say about Aspasia, though she is represented in the *Menezæmus*¹ as the instructress of Socrates in the art of rhetoric. It will, however, be observed that Æschines confirms the account given by Plato in the *Republic* of the views held by Socrates with regard to women. The *Alcibiades* is even more instructive, and, thanks to a recent discovery of Grenfell and Hunt, we now possess a considerable continuous fragment of it. In this dialogue Socrates made Alcibiades feel that he was insufficiently prepared for the ambitious projects that he entertained, and made him weep in despair 'with his head on his knees' by proving to him that he was foolish (*ἀμαθής*) and therefore wretched (*ἐθλίος*), and, still worse, ugly (*αἰσχρὸς*). What he had neglected was 'care for himself' (*ἐπιμέλεια ἑαυτοῦ*). Socrates himself has no *ἐπιστήμη* and cannot therefore impart any to others, and certain characteristic expressions, such as *θελαμολογία*, *ἐνθουσιᾶν*, *ἔρω*, occurred. The main purpose of the dialogue appears to have been to show that Alcibiades was not, properly speaking, a disciple (*μαθητής*) of Socrates, as had been alleged—a point made also by Plato,² Isocrates,³ and Xenophon.⁴ There is, of course, a striking resemblance between the dialogue and what Plato makes Alcibiades himself confess in the *Symposium*.⁵ In the *Telauges* Socrates was represented in conversation with a Pythagorean of that name who seems to belong to the circle of Philolaus. He is an associate (*ἐταίρος*) of Hermogenes, and Cratylus also appears to have been introduced. So far as can be made out, Socrates expostulated with Telauges for his exaggerated asceticism. Here, then, we have further confirmation of the existence of Pythagorism at Athens at this date and of the relations of Socrates with it. Æschines also confirms Plato in representing the attitude of Socrates to the extreme asceticism of the doctrine as one of comparative detachment, while Aristophanes, for his own purposes, chose to ignore the distinction between him and such persons as Telauges. Perhaps Chærepho was more thoroughgoing than his master in this respect.

5. Plato.—Up to this point we have endeavoured to picture Socrates without making use of Plato except for a few hints. We have seen that in his youth he was a follower of 'the philosophy of Anaximenes,' then represented at Athens by Archelaus, and that he was also influenced by contemporary Pythagorism. We have seen that he was believed to have belonged to the circle of Aspasia and that he did his best to influence Alcibiades. We have also seen that he had become a comparatively poor man some time shortly before 423 B.C. At that date he was known chiefly as one who taught some new doctrine about the soul and

¹ Frag. 9.² *Clouds*, 103.³ Frag. 352.⁴ This is far less probable; for Socrates would be more likely to have deserved the *ἀριστεία* when he was under forty than some years later, when he was nearly fifty.⁵ 83 E.⁶ 69 B.¹ 235 E, 249 C.² *Apol.* 33 A.³ *Isocrit.*, § 5.⁴ *Mem.* i. 2. 12 ff.⁵ 215 A ff.

about the birth of thoughts (*φροντίδες*) from it. Plato was still only a child, but we can hardly doubt his statement that his uncle Charmides had already made the acquaintance of Socrates. Apart altogether from what he may have learnt by personal intercourse with Socrates himself, Plato had every opportunity of hearing about him from the older members of his own family.

We learn, then, from Plato that Sophroniscus, the father of Socrates, had been a close friend of Lysimachus, the son of the great Aristides, who belonged to the same deme of Alopece, about a mile and a half from Athens.¹ Socrates himself had a lifelong friend in his contemporary, the wealthy Crito, who belonged to the same deme.² The name of his mother, Phænarete, has an aristocratic sound, and so has Patrocles, the name of her son by another husband, Chæredemus.³ This is not in the least inconsistent with the fact that she exercised the profession of a *μαῖα*.⁴ Such offices were performed by women of good family, and the translation 'midwife' is quite misleading. There is no good evidence that either Socrates or his father was a statuary or a sculptor. Xenophon, at least, had never heard of such a thing, or he could hardly have avoided mentioning it when he related the advice given by Socrates to the sculptor Clito.⁵ The impression left by all our best authorities is that Socrates came of a well-to-do family, that he had no definite trade or occupation, and that he associated on terms of perfect equality with all the 'best people' at Athens, and especially with the Periclean circle. His poverty belonged only to his later years; for he served as a hoplite at Potidæa (431), Delium (424), and Amphipolis (422), and must therefore have had some property of his own.

The close relations of Socrates with the family of Aristides are presupposed in the curious story of 'the bigamy of Socrates.' He is said to have been married to Myrto, the daughter or grand-daughter of Aristides, as well as to Xanthippe. This story is given on the authority of Aristotle in his *Ἠθικὰ εὐγενεῖας*. We know that Socrates married Xanthippe late in life; for his three sons were all young when he died, and one of them was a baby; and A. E. Taylor has shown it to be quite possible that he was then a widower, having married and lost Myrto in his youth. We must remember, however, that the age of tittle-tattle had begun by Aristotle's time, and the story in the form quoted from him by Diogenes Laërtius is plainly impossible. Surely too, if Plato had known the story, and if Lysimachus had been the brother-in-law or the uncle by marriage of Socrates, he would not have made him call him simply *πατρικός φίλος*. The first appearance of the statement that Socrates was a statuary or stone-cutter (*ἀιδοῦτος* or *λαῖος*) is in Timon of Phlius,⁶ who belongs to the 3rd cent. B.C. and is a very unsafe authority for anything. It appears to have arisen from an almost certainly false interpretation of his references to Dædalus as the ancestor of his family.⁷ The Attic hero Dædalus had nothing to do with stone-cutting or marble sculpture, but was primarily a worker in metals, and secondarily the reputed artist of wooden *εἰσάνα*. He was sprung from the line of Erechtheus, and the Dædalids were not, as sometimes asserted, a trade guild, but an Athenian *γένος*, which had given its name to a deme not far from Alopece. The whole chapter of Xenophon referred to⁸ contrasts Socrates with *οἱ τὰς τέχνας ἐξορτές καὶ ἐργασίας ἐνεκα χρώμενοι*, and the point of it is clearly that he himself was not a professional man. In the *Apology* Plato makes Socrates address himself to the *δημουργοί* as to a hitherto unexplored class. Plato's repeated allusions to the intimacy of Socrates with Damon confirm the tradition that he was intimate with the uncle of Pericles.

Plato has very little to tell us of the early interest of Socrates in Ionian science, which is natural enough, seeing that it had ceased to be of much interest in his time, and that he knew Socrates only after he had given it up as hopeless. It is all the more remarkable that, in the autobiographical sketch which he puts into the mouth of Socrates on the last day of his life, his youthful enthusiasm for science is made quite prominent.⁹ It seems unthinkable that Plato should have invented a purely fictitious account of his revered

master's intellectual development, and inserted it in an account of his last hours on earth. We are told that Plato himself was not present on this occasion,¹ and we have no means of knowing whether Socrates did, as a matter of fact, say these things, but we are surely bound to believe that Plato thought they were substantially true. Such arguments do not, however, appeal to every one, and there are fortunately others of a more objective character. The whole passage has obviously been written with the greatest care. After saying how eager he had been in his youth for the kind of knowledge called natural science (*περὶ φύσεως ἰστορία*), Socrates enumerates the problems that had interested him. They were such as whether the earth is flat or round, and whether 'what we think with' is air or blood, and the like. There were also problems about the nature of the unit and what is really meant by addition and subtraction. Now it can be proved in detail that all the questions raised in this passage were eagerly discussed in the middle of the 5th cent. B.C. at Athens, and that they could hardly have excited so much interest at any other time or place. There is not an anachronism in the whole passage, and a very slight knowledge of the state of science in those days is enough to show that what is represented as puzzling Socrates is just the opposition between the Ionian theories, 'the philosophy of Anaximenes,' and the Italiote doctrines, that is to say, the Pythagorean and Eleatic systems. It was just in the Athens of Pericles and nowhere else that these came into contact. Plato does not mention Archelaus by name, though a doctrine which we know to have been his is clearly described. Socrates felt (or professed to feel) quite helpless in face of this diversity of opinion, and he came to the conclusion that he had no gifts that way. That, of course, is his 'accustomed irony.' At last he heard 'some one [Archelaus?] reading a book, as he said of Anaxagoras,' in which mind was said to be the cause of all things, but the expectations this raised in him were disappointed when he got the book for himself and found that it really assigned no causality to mind at all, but only to 'airs' and 'æthers' and the like. He determined accordingly to strike out a line of his own. All this is confirmed by the burlesque of it in the *Clouds*.²

In another dialogue, the *Parmenides*, Plato supplements this account of the intellectual struggles of the youthful Socrates. It is a report of a discussion between him and Parmenides of Elea, who was visiting Athens along with Zeno, and the discussion turns on the difficulties which attend the conception of sensible things as 'participating' in the forms (*εἶδη*). There is no chronological difficulty whatever,³ and the actual occurrence of the discussion is referred to as a fact in two other passages of Plato.⁴ We know that Zeno was at Athens for a considerable time, and that Pericles 'heard' him there. We also know that Pythodorus, son of Isolochus, studied under him and that other Athenians paid him large sums of money. If we remember the growing interest of Athens in the West at this date, it will not appear surprising that Parmenides, who was not only a philosopher but also a statesman and legislator in the Ionic colony of Elea, should have visited Athens along with his favourite disciple. Now it is, of course, obvious that Plato was not in a position to give an accurate report of a conversation which took

¹ *Phædo*, 59 B.

² For the details see the notes on *Phædo*, 96 A ff., in the present writer's edition of the dialogue (Oxford, 1911). The view that Plato is describing his own intellectual development in this passage is ludicrous. These questions were no longer of any interest even in his youth.

place more than twenty years before he was born, but it should also be obvious that he was not likely to represent a theory of his own as the subject of a rather damaging criticism in that conversation. It is, therefore, important to notice that the criticism of Parmenides is not specially directed against the so-called 'theory of ideas,' but rather against the view that these 'intelligible forms' can somehow be 'present' in the things of sense, or that the things of sense can 'partake of' them—a view which Plato expressly ascribes to Socrates in the autobiographical sketch of the *Phædo*,¹ though he indicates at the same time that Socrates was not clear that 'presence' or 'participation' was the right name for the relation between the sensible and the intelligible which he postulated. It is, fortunately, unnecessary to pursue this subject farther here. We are not bound to discuss whether Plato himself proceeded to 'separate' (*χωρίζειν*) universals from particulars or not, or whether Aristotle thought he did so or not. What is quite certain is that he never represents Socrates as 'separating' the forms from the things of sense, and that the difficulties he gets into in the *Parmenides* are due solely to his insistence on the participation of sensible things in the forms, and his refusal to take the easiest way out of these difficulties by adopting the theory of 'separation' (*χωρισμός*).²

Now in the *Phædo* it is just this coming into being and passing away (*γένεσις καὶ φθορά*) of particular things that interests Socrates. It never occurs to him or any of his associates from first to last to question the reality of the world of being (*οὐσία*); that is the postulate (*ὑπόθεσις*) which they all accept. The only question is the cause of becoming, and the new method by which Socrates proposed to attack it was what he called 'examination in arguments' (*σκέψις ἐν λόγοις*). That was, in fact, the method which had proved so successful in geometry already, and which Zeno had turned into such a deadly weapon against the Pythagorean geometry itself. What was new was its application to the consideration of other than arithmetical and geometrical problems, and in particular to the good and the beautiful. The importance of *λόγοι* in the work of the 'thought-factory' was well known to Aristophanes, as we have seen, though he carelessly or deliberately mixed it up with the teaching of Protagoras about making the weaker argument the stronger—a point which he still further developed when he introduced the righteous and the wicked argument in the second edition of the play. The Athenian public would certainly not distinguish the two things, and, as a matter of fact, there was something in common between them. Protagoras said that on every subject there were two *λόγοι* opposed to each other, and that was exactly what Zeno had shown in another sphere. The method of Socrates was to follow out the consequences (*τὰ συμβαλόντα*) of these *λόγοι*, to 'follow wherever the argument led him,' and he transferred this method to matters of right and wrong, fair and foul. There still exists a curious document written in the Doric dialect, in which this application of the method is plainly exhibited, and which must have been composed under Socratic influence.³

¹ 100 D.

² It is worth noting that Proclus, who was familiar with both the Academic and the Peripatetic tradition, has no hesitation in saying that Aristotle ascribed the 'theory of ideas' to Socrates. He says (*in Platonis Rempublicam*, i. 250, ed. G. Kroll, Leipzig, 1890-1901): *περὶ γὰρ τοῖς ταῦτα καὶ διέτριβεν ὁ Σωκράτης τὰ ὁρίσασθαι εἶδη, καὶ ὅ γε Ἀριστοτέλης φησὶν αὐτὸν ἀπὸ τῆς περὶ τοῦ ὁρισμοῦ διατριβῆς εἰς ἐννοιαν τῶν εἰδῶν ἀναστρέφειν.*

³ For the so-called *διαλέξεις* see Diels, 63, and A. E. Taylor's chapter on the *διοσοὶ λόγοι* in *Paria Socratica*, 1st ser., Oxford, 1911, p. 91 ff. The Peloponnesian War is referred to as the most recent, which dates the dialogue within fairly narrow limits. The Doric dialect at once suggests Megara, where Euclides was developing the Eleatic doctrine under Socratic influence.

6. Early reputation of Socrates.—In the *Clouds*, as we have seen, Socrates is represented as the head of a regular school. The picture of the *φροντιστήριον* would be quite pointless on any other supposition, and the most natural thing is to assume that he succeeded Archelaus. His work must have been much interrupted, however, by the war. Plato makes a great point of his bravery in the field. We know that Socrates served at Potidæa, Delium, Amphipolis, and probably elsewhere, and we may take it for granted that these experiences made a deep impression on him. It is clear that he was already a celebrated man. We saw that Antisthenes spoke of foreigners being attracted to Athens 'by the renown of Socrates,' and we know who some at least of these were. There were the Eleatics Euclides and Terpsion from Megara, the Pythagorean Echecrates from Phlius, Aristippus from Cyrene, and doubtless many others (Cebes and Simmias, the disciples of Philolaus, from Thebes, and Phædo of Elis belong to a later time; for they are quite young in 399 B.C.). No one has ever disputed these facts, and they imply a great deal which is not yet generally recognized. In particular, we must remember that the attachment of the scattered Pythagoreans to Socrates must have begun in those early days before Plato was born. He had also devoted disciples among his fellow-citizens, of whom the best known to the Athenian public was the enthusiastic and eccentric Chærepho. It was he who, somewhere about this time, actually asked the oracle at Delphi whether there was any one wiser than Socrates. The oracle of course replied that there was not, and, according to Plato, Socrates at his trial attributed his mission to the Athenians to his desire to refute or confirm the truth of this oracle. He was conscious of knowing nothing except that he knew nothing, and he found at last that he was wiser than others only in this, that he knew he knew nothing, while they knew nothing either but thought they did know something. That, of course, is Socratic 'irony'; his mission was a much more serious thing, as we shall see. What is important for our present purpose is to observe that his reputation for 'wisdom' was well established before he entered on his mission at all.

To this period we must also assign the rivalry of Antiphon the sophist with Socrates, of which Xenophon has preserved some notices from an unknown literary source. He tells us¹ that Antiphon endeavoured to rob Socrates of his associates (*τοὺς συνοῦσας αὐτοῦ παρελθεῖν*). He pointed out to him that he lived a life no slave would put up with, that he wore a cloak which was not only shabby, but the same in summer and winter, that he went barefoot and shirtless, and he argued that he was really a teacher of unhappiness. That was why he charged no fee. Here Socrates is clearly depicted as the head of a voluntary association of ascetics, much as he is in the *Clouds*. Socrates answered him as was to be expected, and he goes on to describe the way he spent his time with his associates.²

'I unroll in common with my friends the treasures of the wise men of old, which they have left behind written in papyrus volumes, and if we see anything good in them, we extract it, and think it great gain if we become friends to one another.'

This is not like anything else in Xenophon, or even in Plato, and must refer to the date of the institution which Aristophanes burlesqued as the *φροντιστήριον*.

It is impossible that Xenophon can be speaking here from his own personal recollections. We have no means of dating Antiphon the sophist, but the style and matter of the fragments which we possess³ make it clear that he belongs to a time before Xenophon was born.

7. The mission of Socrates.—It is evident that

¹ *Mem.* i. 6. 1 ff.

² *Ib.* 14.

³ *Diels*, 80 B.

the early years of the Peloponnesian War marked a crisis in the life of Socrates, though we can determine its nature only from stray indications and inferences drawn from his later life. As we have seen, his military record was exceptional, and Plato has been careful to make Alcibiades and Laches (no mean judge) bear witness to his coolness in the face of danger and his admirable qualities as a soldier. As we have seen, Antisthenes confirms Plato's account of his saving the life of Alcibiades and declining the distinction of the *ἀριστεία* to which he was fairly entitled, though he transfers the incident (probably wrongly) from Potidæa to Delium. The discrepancy suggests that we are dealing with independent testimony, and it would have been difficult for Plato to put into the mouth of Laches such a handsome tribute as he does¹ to the conduct of Socrates at Delium,² unless his military reputation had been firmly established. That is an aspect of Socrates which should never be overlooked. We saw also from the fragments of the comic poets that Socrates had been impoverished by the war, like so many other Athenians. He cannot, however, have been reduced to real poverty before the battle of Amphipolis (422 B.C.); for he was serving as a hoplite there, which proves that he still possessed, or was deemed to possess, the property-qualification required for this service.

In the *Apology*³ there is a much more illuminating account of the nature of the mission undertaken by Socrates than the half-serious story of the oracle already referred to. Socrates is made to say that God (not specially the god of Delphi) had assigned a certain duty to him—that of living in 'philosophy' and exhorting every one, and especially his fellow-citizens, young and old, not to care for their bodies or for money so much as for their souls, and how to make them as good as possible. To disobey that order would be to desert his post in the face of the enemy. It seems impossible to doubt that this was his real conviction. Socrates believed in his divine vocation, and the military language in which he describes it is probably due to the fact that he was on active service when the call came to him.

Now Alcibiades in the *Symposium*⁴ is made to give a very circumstantial account of how Socrates at Potidæa remained in a 'rapt' for twenty-four hours, from one sunrise to the next, and we can hardly be wrong in connecting this with the mission to which he devoted himself from about this time. He was now nearly forty years old, and, though it is not to be supposed that he gave up his school at once, it is probable that the 'writings of the wise men of old' did not occupy so much of his attention as formerly. He believed himself to have received illumination from above and to be under the orders of God, and his whole life was now to be consecrated to their fulfilment. There are other indications that Socrates possessed the temperament which renders men receptive to such influence. From childhood⁵ he had a 'sign' or 'voice' which seemed to be more than human. It came to him on quite trivial occasions (*πᾶν ἐπὶ μικροῖς*) and opposed his doing something that he was about to do, but it never told him to do anything. It had to do, so far as we can see, only with the disadvantageous consequences of acts in themselves indifferent, and it is never appealed to on questions of right and wrong. Socrates naturally spoke of it as something superhuman (*δαιμόνιον*), and it must be remembered that the Pythagoreans held the doctrine of guardian spirits. On the other hand, the attitude of Socrates to it, as to

most things of the kind, is one of humorous half-belief (*εἰσώφελος*). He is made to say that the 'voice' was always right, and it is possible that he had a genuine belief in revelations of this kind. That only illustrates his temperament, however. The command which he now believed to have been laid upon him by God had nothing to do with the *δαίμωνιον*. That only warned him off undesirable actions; this issued a positive order. That might be treated lightly; this was something that he must obey even if it cost him his life, as in fact it did.

It is only from Plato that we get any intelligible account of the 'divine sign.' Xenophon¹ maintains that it gave positive directions as well as negative, and we may well believe that many followers of Socrates made much more of it than he did himself. The *Theages*, a dialogue included in the Platonic corpus, is evidence of that. The most important thing to notice is that he had the 'voice' from childhood, while the divine command came to him only in middle life.

We know in a general way what the mission of Socrates was. It was to convict his fellow-men of their ignorance and sinfulness (which for Socrates was the same thing), and his method was that of searching questions. Æschines and Plato agree that Alcibiades was one of those on whom he exercised his powers, and this is confirmed by the charge made later that he had 'educated' Alcibiades or that Alcibiades was his 'disciple.' Plato makes it clear that Socrates had known Alcibiades intimately when he himself was quite young and when Alcibiades was a small boy. At the time of the incident at Potidæa Alcibiades must have been twenty at least, as he was on military service, so there cannot have been more than eighteen years' difference of age between him and Socrates, and there may have been less. Charmides, Plato's uncle, was also one of the first of the lads whom Socrates sought to convert. Plato himself was not yet born.

8. The soul.—In the *Apology*² the burden of Socrates' preaching is that every man must 'care for his soul.'³ The startling novelty of this requirement can be made clear only by an examination of the history of Greek ideas about the soul.⁴ Here it will be enough to point out that the soul had never yet been recognized as 'the thing in us which has knowledge and ignorance, goodness or badness'; it had never been identified with the normal consciousness or character of a man. This, then, was the great discovery of Socrates, the thing which entitles him to be regarded as the true founder of the 'spiritual' view of knowledge and conduct. It is hardly necessary to insist on the importance of this for all subsequent religion and ethics.

In the *First Alcibiades*, attributed to Plato, the idea is fully developed. The first stage is 'care of oneself' (*ἐπιμέλεια ἑαυτοῦ*), and then the question arises, 'What is oneself?', the answer being that it is 'soul.' There are some reasons for believing that the *First Alcibiades* (which can hardly be Plato's) was based to a considerable extent on the *Alcibiades* of Æschines.

9. Goodness is knowledge.—The best-known Socratic doctrine, that goodness is knowledge, becomes at once intelligible in the light of this new view of the soul as the seat of both. Of course Socrates did not mean to deny the patent fact that a man may do what he knows, in the popular sense of the word, to be wrong. The question is what we mean by knowledge (*ἐπιστήμη*), and Socrates has no difficulty in showing that what commonly passes for knowledge is only belief (*δόξα*). Of course it may be a right belief (*ὀρθὴ δόξα*), and in that case it will be sufficient in

ordinary circumstances to keep a man on the right road; but it cannot be trusted to do so in every case and in all circumstances, because it is not secured by a 'reasoned account of the cause' (*αἰτίας λογισμῷ*), as all scientific knowledge must be.¹ The man who really *knows* knows that everything worth doing is only so 'for the sake of the good,' which is the only thing it is really possible to wish for.² Now the only man who knows the good is the philosopher, and he is the man whose soul is in complete union with it, so that it is impossible for him to do wrong. It seems impossible to doubt that Socrates spoke in the language of passion of the love of the soul for the good and of its mystical union with it, and that the speech he is made to attribute to Diotima in the *Symposium* represents his real teaching on the subject. Such things were, of course, beyond the range of Xenophon, who had read Plato's *Symposium* without discovering what it was about, if we may judge from his own composition of the same name. We would give much for a glimpse of Plato's relations with Socrates, but he has kept himself out of the Socratic dialogues completely.

The present writer believes that we are bound to regard all the dialogues in which Socrates is the leading speaker as primarily intended to expound his teaching. This by no means excludes the possibility that Plato may have idealized his hero more or less, or that he may have given a turn of his own to a good many things. That would only be human nature, but it would not seriously affect the general impression. The principal ground for holding this view is that, at a certain period of his life, Plato began to feel that it was inappropriate to make Socrates the chief speaker in his dialogues. He is present in all of them except the *Law*, which makes the secondary position assigned to him in the later dialogues all the more remarkable. If Plato had made Socrates the mere mouthpiece of his own speculations in the *Symposium*, it is difficult to see why he should not also have credited him with the logic of the *Sophist* and *Statesman* and the cosmology of the *Timæus*. The *Philebus*, one of Plato's latest works, is just the exception that proves the rule. Its theme is the application of Pythagorean principles to questions of morals; and, if we believe Plato, that was just the chief occupation of Socrates.

10. Trial and death of Socrates.—Though he performed all his duties as a citizen, and especially as a soldier, Socrates took no part in public life till the year 406 B.C., when the very existence of Athens was at stake. In that year he allowed himself to be nominated for the Council of Five Hundred; the lot fell upon him, and he took office. It was in the prytany of his tribe, the Antiochis, that the illegal proposal was made to condemn the generals who were accused of failing to recover the dead after Arginusæ collectively, instead of deciding each case by itself. Socrates stood alone in opposing the proposal and would not even take any responsibility for putting the question to the vote. There is no reason for supposing that he was in any way disloyal to the democracy, but he had seen it become more and more anarchical and tyrannous, and, if we may trust Plato's *Gorgias*, he now saw that Pericles himself had started it on this course. To him it was quite as repugnant that the people should act contrary to the laws as that a despot should do so, and he was bound by his deepest convictions to resist anything arbitrary. It is not therefore surprising that, when the democracy fell, Socrates did not feel obliged in any way to identify himself with its cause by leaving Athens. It may have seemed quite possible at first that the Thirty, several of whom had been among his associates, would restore the legal State. We know now that there was no chance of that, but it was not so clear then. Xenophon, who may have been in Athens at the time, has a story³ of how Critias and Charicles called Socrates before them and told him that he must obey the law which had been ordained for bidding any one to teach 'the art of arguments' (*τῆς τῶν λόγων τέχνης*). Socrates replied by arguing

in his customary manner with them. That was not very serious, but the affair of Leon of Salamis, twice repeated by Plato,¹ was more so. The Thirty were anxious to implicate as many people as possible in their crimes, and they sent for Socrates with four others and ordered them to bring Leon over from Salamis to be put to death. The others obeyed, but Socrates simply went home, for which he would have been put to death, if the Thirty had not been overthrown in time. That may have made him popular with the restored democracy for a little and so delayed the inevitable end, but of course Socrates remained faithful to his principles, and, when the democracy began to fall away from its original moderation, we may be sure that he did not spare his criticisms. To the men now at the head of the State he must have seemed dangerous, as a cause of disaffection among the younger men. The amnesty made it impossible for them to accuse him for his acquiescence in the rule of the Thirty, so something else had to be found to try him for. The actual accusation contained two counts: (1) irreligion (*ἀσέβεια*), which was explained to consist in his failure to recognize the gods recognized by the State and introducing new ones; and (2) corruption of the young. The first charge was based on the old story of his unorthodoxy contained in the *Clouds* of Aristophanes. That may seem to be going a long way back, but it must be remembered that the men who had flocked to him from all parts of Greece in the days of the *ῥοριστηρίων* were now free to visit him once more; and Plato indicates that at least Euclides of Megara, Theodorus of Cyrene, and Cebes and Simmias from Thebes actually did so. Most of these men had just recently been 'enemy aliens,' and their views were doubtless shocking to the orthodox. It was not, therefore, strange that the old scandal should be revived at this time. As to 'corrupting the youth,' that really meant encouraging them to criticize the new régime. It is not to be supposed that Anytus really wished Socrates to be put to death; he only wished him to leave Athens. Socrates, however, refused any compromise of this kind. He was not found guilty by a large majority, and it is clear that, if he had cared to propose banishment as an alternative penalty to death, as it was open to him to do, that would have been accepted. As it was, he proposed free entertainment in the Prytaneum for life, with the natural result that the majority for the sentence of death was greater than that for the verdict of guilty. Owing to the Delian festival, a month passed before he could drink the hemlock, and he spent it in conversation with his friends. Some of them were eager to get him out of prison and away from Athens, but he would not stultify himself by breaking the law. He had been legally condemned, however unjustly, and he must abide by the sentence, and so, he added, must his accusers. It is particularly noteworthy that most of the Athenians who were present at the last were men whom we know to have been associates of Socrates in earlier days. The rich young men, whom he was supposed to have corrupted, were not there. On the other hand, there was a remarkable company of foreigners—Eleatics from Megara and Pythagoreans from Thebes. It was very natural in these circumstances that Socrates should revert to the topics which had occupied him in earlier days. His mission was over, and there was no need to talk of that any more. He spoke, therefore, of the soul and its destiny, and Plato makes us feel how far he had gone beyond his former associates in his view of it. The older men say nothing at all, and Cebes and Simmias, the young Pythagoreans, though ready to be convinced, are frankly critical and inclined to

¹ *Meno*, 97 A ff.

² *Meno*, l. 2, 33 ff.

³ *Gorg.* 466 D ff.

¹ *Apol.* 32 D, *Epp.* vii. 324 E.

scepticism. When the talk was over, Xanthippe, who had been resting after sitting up with her husband the night before, was sent for to say farewell to him, and to receive his last instructions in the presence of Crito. The last scene of all is one of the great things of European literature, and must be read to be felt. Plato had ample opportunities of hearing the death of Socrates described in detail by men who were present, and it is impossible to doubt that he tried to record it as accurately as he could. The world has never quite forgotten the message that was left to it on that spring day of 399 B.C.

LITERATURE.—The Socratic problem was correctly formulated by F. D. E. Schleiermacher, *Ueber den Werth des Sokrates als Philosophen* (Werke, Berlin, 1834-64, sect. III, vol. II, p. 287 ff.). His canon was: 'What may Socrates have been, besides what Xenophon tells us of him, without, however, contradicting the traits of character and principles of life which Xenophon definitely sets up as Socratic; and what must he have been to give Plato the occasion and the right to represent him as he does in his dialogues?' Unfortunately, this canon was overshadowed by the dictum of G. W. F. Hegel (*Vorlesungen über die Gesch. der Philosophie*, Berlin, 1832, II, 69) that 'we must hold chiefly to Xenophon in regard to the content of his knowledge, and the degree in which his thought was developed.' This became untenable as soon as the date of Xenophon was settled, and the slight character of his acquaintance with Socrates was realized. K. Joel, *Der echte und der Xenophontische Sokrates*, 2 vols., Berlin, 1901, tried to find a test by which to judge between Plato and Xenophon in the statements of Aristotle, but this has not been generally accepted, since Aristotle did not come to Athens till a whole generation had passed away since the death of Socrates, and he could have had no firsthand knowledge about him. The literary problem was well discussed by Ivo Bruns, *Das literarische Porträt der Griechen*, Berlin, 1896. A. E. Taylor has discussed a number of points in *Varia Socratica*, 1st ser. (*St. Andrews University Publications*, no. ix.), Oxford, 1911, and a similar standpoint is adopted in the Introduction to J. Burnet, *Plato's Phædo*, Oxford, 1911. The most recent discussions are those of H. Maler, *Sokrates, sein Werk und seine geschichtliche Stellung*, Tübingen, 1914, and A. Busse, *Sokrates*, Berlin, 1914, which agree in rejecting the testimony of Xenophon and Aristotle in favour of Plato's. Their other results are criticized in the present writer's article on 'Ancient Philosophy' in *The Year's Work in Classical Studies*, 1915, ed. Cyril Bailey, London, 1916.

JOHN BURNET.

SODOMY.—Sodomy is sometimes defined as 'unnatural sexual relations, as between persons of the same sex, or with beasts.'¹ The word 'sodomy' meant originally the kind of wickedness practised by the inhabitants of the city of Sodom. That this was sexual intercourse between persons of the same sex is an inference based on the words of the men of Sodom to Lot (Gn 19⁹): 'Bring them [the men] out unto us that we may know them.' If 'know' (יָדָע) be given here a sexual meaning, as in Gn 4¹, the reference would be to unnatural intercourse. There is no actual necessity, however, for so interpreting the word 'know.' It may mean no more than 'get acquainted with,' and the wickedness which Lot is said to have anticipated that the men of Sodom contemplated may have been no more than to give the strangers a beating.

The translators of AV understood the word to cover any immoral sexual intercourse, for they rendered Dt 23¹⁷: 'There shall be no whore of the daughters of Israel, nor a sodomite of the sons of Israel.' The 'whore' of this passage was a *hierodoulos* (קדשה), or sacred prostitute,² and the sodomite was her male counterpart (קדש). The Bishops' Bible translated: 'There shall be no whore of the daughters of Israel, neither shall there be a whore keeper of the sonnes of Israel.' It is clear, therefore, that in Elizabethan English sodomy was not restricted to sexual intercourse with the same sex and with beasts, but was applied to intercourse between unmarried human beings also. In this article we shall assume that the term has the breadth of meaning that it had when AV was made.

1. Hebrews.—Among the Hebrews sodomy of

both types existed. A law in Ex 22¹⁹ reads: 'Whosoever lieth with a beast shall surely be put to death.' Just as a prohibition law implies that traffic in liquor has been known, and has even been customary, so the prohibition recorded in this law testifies to the existence of the thing prohibited. Similarly Lv 18²², 'Thou shalt not lie with mankind, as with womankind: it is abomination,' is evidence that the second form of sodomy included in the *Century Dictionary's* definition at one time existed among the Hebrews. To what extent such unnatural indulgence was practised we do not know. Fortunately the veil of oblivion has fallen over the details. Sodomy of the second kind (immorality practised by men consecrated to a deity, and practised in the precincts of a temple in the service of religion) also existed in Israel down to the reform of Josiah. The term קדש, by which a sodomite is designated, means 'holy' or 'consecrated,' and indicates that he was especially devoted to a deity for that purpose. In 1 K 14²⁴ it is said that these sodomites 'did according to all the abominations of the nations which Jahweh drove out before the children of Israel.' This implies that men consecrated to similar service were connected with the sacred places of other western Semites. This is what we should expect, and is doubtless true. Asa, king of Judah, endeavoured to expel sodomites from the temple in Jerusalem (1 K 15¹²)—a work which Josiah accomplished (2 K 23⁷). According to the most probable reading, in Job 36¹⁴ it is said of the wicked: 'They die in their youth and perish like sodomites.' This parallelism implies that the life of sodomites was proverbially short, possibly from the fact that they contracted venereal disease. It may, however, simply refer to the destruction of sodomites by Josiah, though the first interpretation seems more probable.

The purpose of these officials is somewhat obscure. It seems probable, however, that they represented the life-giving power of the deity interpreted in a physical sense. If this were the case, barren women and perhaps also brides would resort to them.

2. Babylonia.—That behind the Babylonian civilization there lay a condition in which the type of sodomy defined by the *Century Dictionary* existed is proved by the Gilgamesh Epic, one of the heroes of which, Enkidu, is said to have eaten grass with the gazelles, with the cattle to have quaffed drink, and with the creatures of the water to have delighted his heart.¹ As the Epic goes on to tell how by intercourse with a *hierodoulos* he was enticed away from his animal companions, the narrative means, apparently, that before the coming of the woman he had satisfied his sexual appetite with the animals.

Of the existence of the equivalent of the Hebrew consecrated sodomite (קדש) there is no certain trace known to the present writer, though there is mentioned in the Code of Hammurabi an official who was probably a sodomite. This official is designated by a Sumerian term usually read *NER-SE-GA*, which a syllabary defines by the Semitic *manzaz pani*. The *NER-SE-GA* is first mentioned in § 187 of the Code, where it is said:

'One may not bring claim for the son of a *NER-SE-GA*, a temple guard (*manzaz ekallim*), or a sacred harlot (*SAL-nikru*).'²

Again, in § 192 it is said:

'If the son of a *NER-SE-GA* or the son of a sacred harlot says to the father that brought him up or to the mother that brought him up, "Thou art not my father" or "Thou art not my mother," they shall cut out his tongue.'

The point of importance to our subject in these laws is that the children of the *NER-SE-GA* are treated exactly like the children of the sacred

¹ Cf. P. Haupt, *Die babylon. Nimrodepot*, Leipzig, 1834, p. 2, line 23 ff.

¹ *Century Dictionary*, s.v.

² See art. *HIERODOULOI* (Semitic and Egyptian), § 5.

harlot, or *hierodoulos*.¹ If the *NER-SE-GA* claimed his child, no one—not even the legal husband of the child's mother—could lay claim to the child. If the *hierodoulos* chose to bring up her child, no one—not even its real father—could deprive her of it. If, on the other hand, one adopted the son of a *NER-SE-GA* or the son of a *hierodoulos*, and the child repudiated the adopted father or mother, his tongue was to be cut out. The parallelism makes it probable that the *NER-SE-GA* was the male counterpart of the *hierodoulos* (*SAL-zikru*).

In the first of the two laws quoted the son of a *manzaz ekallim* is placed on a par with the sons of the other two. *Manzaz ekallim* has been sometimes translated 'palace guard,' but *ekallim* means 'temple' as well as 'palace,' so that the term may refer to another class of sodomites.

What is the meaning of *NER-SE-GA* and its equivalent *manzaz pani*? Muss-Arnolt defines *manzaz pani* as 'foremost place, dignitary, magnate';² Delitzsch as 'Frontplatz, dann als Titel: Ranghöchster, der die erste Stellung bekleidet, höchster Würdenträger.'³ This interpretation seems to be confirmed for the later time by the phrase *manzaz pani karri*, 'place before the king.'⁴ It is, however, doubtful whether this was the original meaning either of the Sumerian expression or of its Semitic equivalent. Scholars have transliterated the Sumerian, *NER-SE-GA*; in the writer's judgment it should be read *GIR-SIG-GA*. *GA* is simply a phonetic complement. *GIR* is the sign for 'foot';⁵ *SIG*, the word for 'pour out.'⁶ When we remember the way in which 'feet' is employed in Hebrew as a euphemism for *pudenda*, as in Ru 3:7 and Is 7:20, the possibility presents itself that this phrase may originally have had a meaning quite consonant with the office of a sodomite. In that case *manzaz pani* would not be a literal translation of it, but a paraphrase. It is by no means certain, however, that *manzaz pani* always means 'foremost place.' The uses of *pani* in Akkadian and Assyrian are closely parallel with the uses of *panim* in Hebrew, and in Ex 33:14 *panim* is employed in the sense of 'presence, or, as we should say, 'person.' The meaning is that Jahweh said to Moses: 'I will go with thee in person.' If we might apply this analogy to our phrase, *manzaz panim* would mean 'in place of the person,' and would appropriately designate a priest who impersonated a god, or who represented to the worshipper the functions supposed to be performed by a deity. If sodomites represented the life-giving functions or the fertility of a deity, as we have supposed, this would be a fitting designation of them. Herodotus tells how in the temple of Marduk in Babylon there was a couch on which the wife of the god slept at certain times, and that the oracle came only when she occupied the couch.⁷ This appears to be confirmed by a text in the British Museum,⁸ which speaks of the presentation of a couch for the *zigurat*.⁹ From what we know of ancient oracles, it is hardly conceivable that at such times the god was not represented by a priest or *manzaz panim*, one who took the place of his person.

This view of the religious character of the *manzaz pani* of a god or a temple seems to be warranted by the fact that the *manzaz pani* of a king seems to have been the representative of the monarch in overseeing public work, and the *manzaz pani* of a temple was the representative of the god in looking after the affairs of the temple. Thus a pay-roll of the time of the Ur dynasty was certified to by the *GIR-SIG-GA* of the *patesi*, or ruler;¹⁰ quantities of wool presented to the temple of Enanna at Erech were certified to by the *GIR-SIG-GA* of the temple.¹¹ In the year that Ibi-Sin, the last king of the dynasty of Ur, became king quantities of grain were paid as wages in behalf of the *patesi* of Girsu by a certain *GIR-SIG-GA* who acted as overseer.¹² There is no reason, however, why, just because a man was a representative of the king, there should be any irregularity in the birth of his children so that the Code would need to provide that no claim should be brought against them. It seems probable, therefore, that it is necessary to distinguish between two classes of *GIR-SIG-GA*, one of which impersonated the god in functions parallel to those of the sacred harlot, while the other impersonated or acted as the representatives of earthly rulers. It is probable that the *GIR* which occurs so often on the business documents of the dynasty of Ur as the official who *visited* or authenticated the documents represents an abbreviation of *GIR-SIG-GA*.¹³

These etymologies represent possibilities only. While it seems probable that the *NER-SE-GA* (*GIR-SIG-GA*) was a sodomite, full proof is lacking.

3. India.—In India there seems to have been among the native races a wide-spread belief that the greatest manifestation of divine power was in the generation of life. The organs of generation consequently became to them the most revered symbols of deity. In course of time this view made its way into some forms of the religion of the Aryans. In present-day Hinduism it is most generally found among the Saivite sects, though some of the Vaisnavite sects also have adopted it. In Saivite temples the deity is usually represented by the *lingam*, or phallus; the *yoni*, or vulva, is also a common religious symbol. Wherever such ideas prevail, sodomy is, or was at some time, a feature of religious services.

It is reported that in India there is a class of *fagirs* who go entirely nude, and live apart from the people, but are held in the highest reverence. When they approach a village, the people flock about them, and the women lay aside all modesty in their intercourse with them. Especially those who desire to rid themselves of the reproach of barrenness kneel before the *fagir*, take his private member in their hands, and kiss it.¹

Another manifestation of sodomy is found among the Saivite secret societies called *Saktas*. To one another the members of these societies call themselves 'the perfect' and speak of outsiders as 'beasts.' Such is the ill repute of these societies at present that no respectable person will admit connexion with them. Their rites are set forth in texts called *Tantras*, in which the initiated are instructed. In one of these texts *Siva* says to his wife *Durgā*: 'All men have my form and all women thy form; any one who recognises any distinction in caste in the mystic circle has a foolish soul.' At their secret meetings a naked woman, the wife of the chief priest, sits in the middle of the 'holy circle'—a circle composed of men and women sitting promiscuously without regard to caste or kinship. After partaking of meats, fish, parched grain, and various kinds of wines and liquors, each man is for the time *Siva* and each woman *Durgā*. They freely copulate without regard to caste or the risk of incest. To give in detail the ceremonies of different societies would be but to repeat such indecencies.² The theory which underlies these societies is that man is a creature of passion, that passion is poison, but a poison that can be cured only by poison. On the principle '*Similia similibus curantur*' they indulge in these orgies in order to cross the region of darkness to union with *Siva*.

4. Australia.—In Australia, among a number of tribes, the conceptions out of which sodomy grew still prevail, though the customs in which they are embodied are different; e.g., when a girl reaches the marriageable age (fourteen or fifteen), an initiation ceremony is performed upon her, which consists in cutting open the vagina.

Among the northern Arunta and Ipirra the man to whom a girl has been assigned takes her, along with his father's sister's sons, and, accompanied by other men of the tribe who might have been her lawful husbands, and by a mother's mother's brother, they go out into the bush. The mother's mother's brother (who, of course, is an old man) then 'performs the operation with a stone knife, after having touched the lips of the vulva with *Churinga*, so as to prevent excessive bleeding.' Afterwards the old man who performed the operation, the father's sister's sons, and the other men have intercourse with the girl in the order named. The girl is then decorated and

simply *GIR* written alone; cf. *Babylonian Expedition of the University of Pennsylvania, Series A: Cuneiform Texts*, ed. H. V. Hilprecht, iii., Philadelphia, 1910, p. 82.

¹¹ This is evidently the view of Myhrmann, who in discussing the phrase *GIR-SIG-GA* (which he reads correctly) has accumulated a number of references, many of which turn out to be

taken to the camp of her allotted husband. At least once afterwards he is very likely to send her back to the same men.¹ Similar customs are found with varying details among other tribes.

In the Illiaura, after the operation is performed by the mother's mother's brother, first he, then the elder brothers of the husband, then his younger brothers have access to the girl in the order named. 'In the Kaitish tribe the operation is performed by an elder sister of the girl,' after which mother's mother's brothers, elder and younger brothers (but not in blood), mother's brothers, and those who might have been lawful husbands have access to her.²

In the Warramunga tribe the husband lies down with a brother on each side of him; the girl is laid across them by an elder sister; the operation is performed by a father's sister's son in the presence of all the men and women of the camp. She then goes to the camp of the man to whom she is allotted, but he has no intercourse with her for two or three days. After this she is lent for two nights to mother's mother's brother, father's sister's sons, paternal grandfather, elder and younger brothers (but not in blood), and to those who might lawfully have been her husbands. 'After this she becomes the property of the man to whom she was assigned.'³

The customs of the Worgaia, Bingongina, Wulmalla, Tjin-gilli, Umbaia, and Walpari tribes are in substantial agreement with the Warramunga customs, except that, as a general rule, the husband's father performs the operation.⁴

If the husband dies and the woman is handed over to one of his younger brothers, he lends her for a day or two to other men.⁵

In addition to the practices connected with puberty and marriage, there are in Australia other occasions on which intercourse with women other than those allotted to them is permitted to men. While certain of their ceremonies are being performed, large numbers of natives are gathered together and marital rules appear to be set aside for the time being.⁶ The native name for such gatherings is *corroboree*. In some tribes a woman is told off each day or each night to attend at the *corroboree* ground, and all the men, except fathers, elder and younger brothers, and sons, have access to her.

Among the Arunta, when an ordinary *corroboree* is in progress, an elder man will send his son-in-law into the bush with the elder man's wife to collect material for decoration. Ordinarily it would be unlawful for the younger man to speak to the woman or to come near her. Now he is expected to have intercourse with her, in order to cause the ceremonies to go more smoothly and to prevent the decorations from falling off. Towards night, when all is ready, the women who have spent the day at the men's camp are painted with red ochre and go to summon the other women and children for the festal night.⁷

In some tribes such sexual intercourse is much more common than in others. Among the Warramunga, *e.g.*, it is carried on night after night during the performance of sacred ceremonies. The lending of women follows certain rules which vary according to tribal conditions. Under certain circumstances women are lent only to men belonging to another division of a tribe; on other occasions only to men belonging to a man's own division of it.

An instance is recorded where, because the men of one moiety of a tribe had built a mound for another moiety, the head man of the moiety for whom the mound had been built brought his wife up near to the other group, secreted her in the bush, and escorted the head man of the other group out to have intercourse with her.⁸

On other occasions women in the Warramunga tribe are lent to men who ordinarily would not be permitted to approach them—*e.g.*, men who are sent out to bring in the bones of a dead person before the ceremony connected with the rites of burial. On this occasion the father of the dead person, or in his absence some tribal father, lends the woman. Often messengers are sent out with dead men's bones to summon other groups to the performance of some ceremony; on such occasions not only are women lent to the messengers, but a general interchange takes place. In some tribes the messengers will take women with them. When they have delivered their message, they leave them

a little way out in the bush, where they are visited by men of the other group, who, irrespective of class, have intercourse with them. It is, however, a prerequisite to such intercourse that they should have accepted the invitation of the messengers or should have agreed to the request that they bring. When men of one group go to exact vengeance of another group by killing a man, it is customary to offer to the messengers the use of women. If the offer is accepted, it is a sign of reconciliation; if it is rejected, it is a sign that full vengeance will be exacted.¹

Except in the Urabunna tribe, where group-marriage prevails, the men have individual wives. Under ordinary circumstances for a man to have intercourse with a woman who does not belong to his group of lawful wives would be a very grave offence, liable to be punished by death. It is only in connexion with ceremonies and the sending out of messengers that irregular intercourse is allowed. In a few special cases the lending of women may be explained as a return for some service rendered, but in most cases it is clearly due to another motive. It is supposed to have some supernatural potency.²

GEORGE A. BARTON.

SOLEMN LEAGUE AND COVENANT.—The Solemn League and Covenant was the formal undertaking entered into in the late autumn of 1643 by the Scottish General Assembly and Estates on the one part, and the English House of Commons and House of Lords on the other, with a view to making common cause against Charles I. in his civil and ecclesiastical policy. The agreement took the form of a religious covenant by the strong desire and insistence of the Scots,¹ who had become familiar with this more serious form of agreement in their recent ecclesiastical history. Bands had not been unknown in Scottish civil matters, the most noted being the Douglas Band and the band for the murder of Darnley in 1567. But from the era of the Reformation onwards covenants had been common and stringent. The first Covenant² was signed on 3rd Dec. 1557 by Argyll, Glencairn, Morton, Lorne, and Erskine of Dun. Between this date and 1643 almost twenty bands were signed or planned,³ the most famous, perhaps, being the band of 27th April 1560 and the National Covenant of 1638. They were kindred in several respects. They were all purely Scottish in bearing and reference, and they were definite and emphatic in repudiation of Roman Catholic doctrine and practice. But the Solemn League and Covenant, while it had great similarity to those earlier bands in its strong anti-Romanism, differed in a marked way from them in its international character and in its international purpose. It was 'a Solemn League and Covenant for Reformation and defence of Religion, the Honour and Happiness of the King, and the Peace and Safety of the three Kingdoms of Scotland, England, and Ireland.'⁴

The special form of it was not of English devis-

ing; the substantial agreement was of English seeking. It took form comparatively late in 1643, but various steps towards it had been taken as early as the beginning of 1642. The earliest movements towards common action between the English and Scottish Puritan leaders are not known. But in the beginning of 1642, after the outbreak of rebellion in Ireland, 'the English Parliament agreed to pay both English and Scottish troops' to serve there.¹ The promise to the Scots was not kept, owing to the outbreak of the Civil War. The Scottish sympathizers with the Parliament had to find means in Scotland to defray the cost of food, clothing, and pay of the Scottish army. In Feb. 1643 voluntary contributions were asked for, and the response was general, Argyll giving £1000 sterling, and Alexander Henderson, the Covenanting leader, 1000 merks. That there were negotiations for closer relations between the English Puritans and the Scottish Covenanting party appears from emphatic protests made by Charles I. himself to the Scottish Privy Council. In these protests is to be found a strange mixture of self-deception and clear reading of the aims of the English Independents in their little sympathy with fundamental Scottish religious ideas. Thus, on 21st April 1643, the king reminds his Scottish subjects:

'Wee require our good subjects there to consider that the persons who have contrived, fomented, and doe still maintaine these bloodie distractions and this unnaturall civil warre, what pretence soever they make of the true reformed Protestant religion, are in truth Brownists, Anabaptists, and other independent sectaries, and, tho they seeme to desire a uniformitie of church government with our Kingdom of Scotland, doe no more intend, and ar als farre from allowing the church government by law established there, or indeed anie church government quhatsoever, as they ar from consenting to the episcopall.'²

Various proposals were made to the Scottish States and General Assembly from time to time. At length, in Aug. 1643, a decisive step was taken when the English Parliament formally dispatched commissioners to Edinburgh to ask for an alliance with the Scots. The commissioners landed at Leith on 7th August. Even then the situation was singularly indefinite. 'One night all were bent to go as Redders (mediators) and friends to both, without syding altogether with Parliament.' Baillie was of the number who favoured this proposal. 'But Waristoun, his allone, did show the vanitie of that motion, and the impossibilitie of it.'³ Alexander Henderson is usually credited with the authorship of the Solemn League and Covenant, but this assertion requires to be qualified, if not altogether put aside. The English commissioners yielded to the Scottish pressure for a religious covenant—a concession the more easily made because of the English Parliament's necessity, and because of the serious sentiments of the early Reformers both in England and in Scotland when leading statesmen saw the need not only of an alliance between the Protestants of the two countries but also of their giving this alliance a religious basis.⁴ But difficulties arose after this preliminary agreement.

'When they were brought to us in this, and Mr. Henderson had given them a draught of the covenant, *we were not like to agree on the frame*; they were more nor we could assent to, for keeping a door open in England to Independencie. At last some two or three in private accorded to that draught, which all our three Committees from our States, our Assemblies and the Parliament of England did unanimously assent to.'⁵

Henderson, indeed, was spokesman for the League and Covenant in the Assembly. It 'was well prefaced with his most grave oration.'⁶ But a leading spirit in the composition, if not the

author of the whole document, was Archibald Johnston of Waristoun, whose *Diary* has this entry under Sunday, 22nd June 1651:

'My soule blesseth Him for making use of me in the draughte of the National Covenant, Solemn League and Solemn Acknowledgement, whereof the first scroll was from Him to me.'¹

Hay Fleming goes so far as to suggest that the Solemn League and Covenant 'may have been entirely from Waristoun's pen.'² Waristoun was supremely loyal to it; and 'he looked on the Covenant as the setting Christ on his throne.'³

While the English commissioners were in Edinburgh, no serious changes were made in the agreement, although it was seen, as Baillie has noted, what the main drift of Vane and his associates was. On their return to England with the Scottish proposals Parliament on 28th Aug. 1643 remitted the League and Covenant to the Westminster Assembly of Divines 'to take into consideration the lawfulness of it.' Certain alterations were made.

Thus for 'according to the Word of God' was substituted the more guarded expression 'as far as in my conscience, I shall conceive it to be according to the Word of God.' There was discussion upon the undertaking 'to extirpate Popery,' 'it being a very nice business to know what Popery is, and what is meant by extirpation,' but no change was made in the clause.⁴ Prelacy had an explanation added 'that is church-government by Archbishops, Bishops, their Chancellors, and Commissioners, Deans, Deans and Chapters, Archdeacons, and all other ecclesiastical Officers depending on that hierarchy.'⁵

On the main contention in the Solemn League and Covenant the contracting parties were agreed.

They condemn 'the treacherous and bloody plots, conspiracies, attempts and practices of the enemies of God . . . ever since the reformation of religion.' They discriminate the condition of the three countries. They see a remedy for the several degrees of mischief in the different countries. 'They are to endeavour to bring the Churches of God in the three Kingdoms to the nearest conjunction in religion, confession of faith, form of Church government, directory for worship and catechising.'⁶

After conjoining in milder condemnation prelacy, as above defined, with popery, the Covenanting representatives in both countries pass to a different and civil subject of treaty.

They are not only 'to endeavour mutually to preserve the rights and privileges of the Parliaments, and the liberties of the kingdomes,' but, strangely enough, considering the proximate end of the Solemn League, 'to preserve and defend the Kings Majesties person and authority, in the preservation and defence of the true religion and liberties of the Kingdomes; that the world may bear witness with our consciences of our loyalty, and that wee have no thoughts or intentions to diminish his Majesties just power and greatnesse.'⁷

The matter of the Covenant was so far adjusted that by 22nd Sept. it was sworn by both Houses of Parliament, and by 25th Sept. 1643 it was solemnly sworn to, in St. Margaret's, Westminster, by the Assembly of Divines and 112 members of the House of Commons. Plainly, in spite of the grave seriousness of the language and solemnity of all the procedure, there was room for conflict over the bond of union itself. The Scottish signatories did not see the irreconcilable character of particular provisions, nor the loop-holes in the portion which appeared to provide for one great international Presbyterian Church. The English representatives forgot that they were consenting to the realization of this Presbyterian ideal in spite of what they regarded as verbal safeguards. There was a certain lack of sincerity on both sides. Baillie tells us that he counselled eschewing 'a public rupture with the Independents till we were more able for them'—an advice 'which even Henderson

applauded.¹ There was on the part of many of the English dislike of the Scots and antagonism to their persistence in clinging to the letter of the Covenant. 'The Independents laughed at the Solemn League and Covenant as an old almanack.'² Cromwell spoke 'contumeliously against the Scots intention of coming to England to establish their Church government on which Cromwell said he would draw the sword against them.'³ The English were so clear-sighted and the Scots so idealistic, in spite of recent experience of unfulfilled promises, that the signing of the League and Covenant was followed by an undertaking to send an army into England for which the English Parliament was to pay. This led to difficulties altogether different from the theological or ecclesiastical. Early in 1644 the Scottish army crossed the Border and materially assisted the cause of the Parliament in the north of England, especially in the battle of Marston Moor on 2nd July 1644. In less than a year came the further defeat of the Royalists at Naseby, and the English Parliamentary leaders ceased to regard the Scots as necessary for the purpose of beating Charles I. and his following. Their doctrinal impatience was intensified by their growing sense of practical freedom, and their comparative political liberty led to a neglect of their pledged word in the treaty which followed upon the League and Covenant. The Puritan leaders had accepted the Covenant and the ideal of an enlarged Presbyterianism as the condition of receiving military aid, but, as the need for the latter grew less, the price to be paid seemed indifferent, not imperative. How genuine this grievance was, and how cruel, appears from complaints made to the House of Lords and from the *Records of the Commission of the General Assembly*, where the neglect of the Scottish forces was emphasized by the serious fact that the same indifference was not shown to their English fellow-soldiers. A. F. Mitchell, who, with J. Christie, edited *The Records of the Commissions of the General Assemblies (1646-1649)*,⁴ dwells upon the discouraging effects of this calculated niggardliness, and quotes from S. R. Gardiner⁵ to the same purpose:

'Though the hard work thus devolved upon the Scots, nothing had been done to pay or to supply them. An assessment, indeed, had been made upon certain English counties for the support of their army, but not a penny had been raised, whilst Fairfax's troops received their pay fortnightly with the utmost regularity.'

The deliberate withholding of pay and supplies from the Scottish army was doubtless connected also with the Scottish attitude to Charles I. For not only was this exasperating in its marked divergence from the English Puritan antagonism; it could not be reconciled with the treatment which the Scottish leaders meted out to Charles himself. To satisfy them he was to become a covenanted king. Yet the feeling that he was a specially Scottish sovereign, who had a right to homage and reverent national sentiment, did not fail, although Scottish 'dourness' would make no concession which might imply failure to honour the Solemn League and Covenant. A striking illustration of this somewhat illogical but very real feeling about the king, which prevailed from the negotiations about this agreement until the death of Charles and afterwards, is found at the close of a declaration of the Scottish Parliament on 21st April 1648:

¹ Baillie, ii. 117.

² John Aiton, *The Life and Times of Alexander Henderson*, Edinburgh, 1836, p. 534.

³ Baillie, ii. 245.

⁴ 3 vols., Edinburgh, 1892-1909 (Scot. Hist. Soc., xi., xxv., lviii.).

⁵ *Hist. of the Great Civil War, 1642-49*, new ed., London, 1904-05, ii. 228.

'And in particular this Kingdom of Scotland will now make it evident as they often declared, That their quietness, stability and happiness doth depend upon the safety of the kings Majesties Person and maintenance of his greatnesse and Royal Authority, who is Gods Vice-Gerent set over us for maintenance of Religion and ministration of justice; Having so many bands and ties of duty and subjection to his Majestie and his government, who is our native King, from a longer series and descent of his Royall Progenitors than can be paralleled in Europe, That we resolve constantly and closely to adhere thereunto, as also to all the ends of the Covenant.'¹

The beginning of the end of Scottish Covenanted idealism in its first stage may be said to have appeared with special significance when the English Parliament, on 19th May 1646, voted that the Scottish army was no longer needed. This led the way to that most mischievous cleavage which separated Scottish and English Puritanism. But this was augmented by the other severances which accompanied it. The Roman Catholics could not possibly have any feeling but hostility to the champions of a Covenant which bound its defenders to extirpate the whole system of popery, which looked only to the least worthy of its representatives in the 16th cent., having no regard (to speak of Scotland alone) to men like Wardlaw, Kennedy, Elphinstone, Turnbull, and Robert Reid, bishop of Orkney, and which lived in constant suspicion of something that would rival the massacre of the Eve of St. Bartholomew. Adherents of the Church of England and of Episcopacy in Scotland were considered to be little better than papists because they tended to the same doctrines and practices, and offended Covenanters by their worldliness and political subservience. The worst blow but one came when the meditated unity and approximate uniformity disappeared before Cromwell's Independent triumph, when the chosen home of Presbyterianism and the Covenant was tyrannically governed by the arch-Independent himself. Absolutely the worst calamity emerged, although it was not seen to be such, save by clear-sighted saints like James Fraser of Brea, when Charles II. was compelled to sign the Solemn League and Covenant—which his father never would do—and when the leaders of the Covenanters accepted the signature, well knowing that it was false in fact and in spirit.

The Restoration gave victory to the men and the forces most hostile to the principles which were embodied in the Solemn League and Covenant, and, as these open and determined opponents were joined by weak and sometimes worthless and worldly-minded men who had themselves been Covenanters, the ruin of the scheme of the Solemn League and Covenant was for the time assured. Baillie pathetically records the closing disaster in May 1661:

'But when the House of Commons did not only vote the Bishops into the House of Lords, but the Solemn League and Covenant to be burnt with the hand of the hangman, all our hopes were turned in despaire.'²

This was the burning of the body of the Covenant. The spirit was not destructible. For a quarter of a century and more there were brave Scottish men and women who laid down their lives for the ideal which it embodied, and those who had marked only the errors and exaggerations of its defenders saw in the Revolution of 1688 a modified triumph of what had been contended for.

The Revolution Settlement was a modified triumph, but it was a triumph. Yet the glory of the Covenant, in the cloud of witnesses from 'the Killing Time,' long haunted the Scottish mind, and the influence of the age of the National Covenant and of the Solemn League and Covenant, consciously associated with that slightly later time of martyrdom, did much for the preparation of the

Disruption of 1843, which, with some admixture of frailty and fallibility, did more for Scottish religion than any other event since the Reformation.

ALEXANDER LAWSON.

SOLIDARITY.—Solidarity is a bond which welds together living, especially human, beings, when they belong to the same whole or are mutually dependent upon each other. It is first of all a fact. (a) It is a *physiological fact*. As we advance in the scale of beings, we observe an ever more perfect co-ordination of all the parts of living organisms: primitive organisms are aggregates of relatively independent parts, while more perfect organisms are made up of parts which mutually condition each other. (b) It is a *social fact*. There is a bond between the child and its parents (at least between the child and its mother, since among some peoples paternity does not count), between the members of a family, a tribe, or a nation. As civilization advances, individuals, as Herbert Spencer shows, specialize and become dissimilar, but society becomes more coherent, because those specialized individuals require each other. Attempts have even been made to prove that society is an organism, similar to physical organisms, with a brain, digestive system, etc. But that is ingenious comparison rather than scientifically demonstrable truth. Not only do men of the same generation depend upon each other, but each generation depends upon those which preceded it, inherits their possessions, and profits from their labours, discoveries, struggles, and sufferings; it also suffers for their vices, mistakes, and ignorance. We owe to our ancestors the language which we speak, our customs, our religious ideas, and our artistic and scientific heritage. Besides general social solidarity, which is based on the family, nation, state, and sometimes even on larger groups, there are special solidarities—*e.g.*, that based on community of religion or profession. As a general rule, the smaller the group of men, the stronger is the bond of solidarity; but the opposite is also sometimes the case; *e.g.*, the religious bond uniting men of several nations may be stronger than the bond of national solidarity.

As is clear from what has just been said, the fact of solidarity arises both from causes which are independent of human will (this is the case especially in the natural groups) and from the voluntary action of man (*e.g.*, we create or extend a bond of solidarity by creating or extending a political or a religious organization, although the idea of establishing a new solidarity is not necessarily the predominating *motif* of these creations or extensions). In proportion as exchanges of all kinds and means of communication multiply, a bond of solidarity tends to unite the whole of humanity.

The fact of solidarity has become the starting-point of various metaphysical, theological, and moral theories.

1. **Metaphysics.**—One of the chief tasks of philosophy has always been to show the bond which exists between all beings, even beyond the confines of humanity. Pantheistic systems all end in a universal solidarity, since all beings are merely the manifestation of a single being, the deity. The Brāhmanic philosophy of the *Upaniṣads*, in particular, is summed up in the famous *Tat tvam asi*, 'That art thou,' which forms the foundation, adopted by Schopenhauer, of an altruistic ethic, *i.e.* in the fundamental identity of all beings.

2. **Theology.**—(a) The idea of original sin, and more particularly that of original guilt, rests on that of the solidarity of humanity with its first father. As the result of his fall, humanity has become sinful and guilty. The sin is transmitted

from generation to generation as a fatal heritage. These doctrines and their history are discussed in special articles.¹ Here we shall merely observe (1) that the conception of original sin is sometimes metaphysico-physiological, as in St. Augustine, and sometimes rather juridical and moral; (2) that the way is prepared for these doctrines in the OT, where the idea of punishment inflicted on children for the faults of parents, on a people for those of its chiefs, is so prevalent that on certain occasions the prophets, especially Ezekiel, expressly attack it; this idea is also met with among a great many races; (3) that the idea of hereditary guilt is self-contradictory, but that, on the other hand, it is certain that sin is not only an individual fact, but also a collective fact, and that the sins of some are often the cause of the sins of others. The degree of guilt is to be reckoned from that of the sin, but it very often happens that habitual or present sin is imputable not so much to the one who is affected by it or who committed it as to others who, consciously or unconsciously, have determined his moral condition.

(b) The work of Jesus Christ has also been considered from the point of view of solidarity, not so much when it is regarded as a vicarious satisfaction (*i.e.* when emphasis is laid on the punishment of the Man-God accepted by God as the equivalent of that of all sinners) as when the idea of expiation is emphasized (*i.e.* the fact that Jesus is a member and the chief of humanity, and that, as such, He, the innocent one who had no penalty to fear, freely accepts that which sinful humanity deserved). The idea of expiation rests completely on that of the solidarity between the guilty and the innocent which makes possible the substitution of the latter for the former; and, when we say that a man is expiating his own sins, we are, in our imagination, somehow making two persons of him—a guilty man and a man who, after having admitted and regretted his sin, frees himself from it by consenting to his punishment, who freely takes upon himself the condemnation deserved by the former and blots out his mistake by sanctioning the moral law which he has violated. It is in this sense that Kant, *e.g.*, tried to rationalize the doctrine of the expiation accomplished by Jesus Christ. According to this theory, Christ became, as it were, the personification of the idea of the repentant sinner who accepts his penalty. The idea of an expiation accomplished by an innocent person for guilty ones, with whom he is connected by some kind of bond, is not specifically Christian, but Christianity has in a manner transferred it from the objective to the subjective mode, by showing that it is not the exterior fact of the suffering of an innocent one that saves the guilty, but the moral revolution that this fact produces in the heart of the latter.

3. **Ethics.**—The fact of solidarity has been very frequently, especially in recent times, taken as the *point d'appui* for ethical theories. Léon Bourgeois especially, in a book entitled *Solidarité*, has shown the interdependence of men in society, and the difference that exists between the distribution of the advantages which it ensures to its members and the real services rendered by one class or another to the common good. These services form between those who render them and those who receive them what in juridical language is called a quasi-contract, *i.e.* a state similar to that which results from certain contracts. The moral duty of society and its members therefore would consist, above all, in observing this quasi-contract and in paying to each the debt contracted with it. Morality, thus understood, would realize true justice and would also have the advantage of possessing a scientific character and of thus resting

¹ See ART. ORIGINAL SIN, SIN (Christian).

on a solid foundation. It may be objected to this theory that the fact alone does not create the law, and that the idea of a quasi-contract is not sufficient to produce the latter from the former. The relations between men are far too complex and unstable, their value far too much subject to discussion, to apply the idea of quasi-contract to them and to disentangle the consequences which they involve. It is impossible to triumph over all the iniquities which are included in numerous explicit contracts. Moreover, this idea of a social debt resting on a quasi-contract is much too external to become the principle of an ethic. It argues from a fact, simply as a fact, but, considered thus, it is incapable of transforming the conscience or stirring the heart. Of itself it will not prevent any one from trying to reduce his debt as much as possible, and, then, once he believes that he has paid it, allowing himself to be ruled by egoism; it at least limits as much as extends altruistic activity. Similar remarks apply to the theory of reparative justice developed by A. Fouillée in his *Science sociale contemporaine*. This philosopher insists mainly on the solidarity between the different generations of men and on the fact that this holds of the poor classes especially, because in the past they did not receive the property to which they were entitled or get the remuneration for their services which was their due. He asks, therefore, that these injustices should be redressed, but he himself recognizes the great difficulty that there is in determining the subjects of the rights which he proclaims and in determining what is due to such or such a person on account of past injustices. Thus in practice he reduces reparative justice almost to conferring the benefit of education on all, in order to put within their hands the means of rising in the social scale.

In presence of these theories we may affirm that solidarity can supply a principle of morality only if it is accompanied by a sentiment, as in the case of family or national solidarity, and to a certain extent of other solidarities also (e.g., that of the members of a religious society), or if it is considered in the light of a principle of justice, it being previously understood that this principle is purely rational (e.g., that of the equality of all men, from which it follows that there must be equality in their exchanges of services), or that it is a religious principle (e.g., that of the love of one's neighbour for the love of God).

According to the principle which we adopt, we shall take more or less account of the fact of solidarity, and we shall consider ourselves more or less obliged to extend existing solidarities, to tighten their bonds, to obtain from them only results that are beneficial to other men, and to avoid the unfavourable consequences that might also be deduced from them in certain cases. It is only under these conditions that solidarity can pass from the state of a simple fact to that of a moral principle.

In Christian social circles the idea of solidarity is greatly insisted on as helping to persuade men to perform their duty towards the disinherited of this world. The name 'solidarities' has even been given to certain schemes which are concerned with grouping either members of a parish or all kinds of persons, rich and poor, for the purpose of mutual aid, both spiritual and material. But in these circles solidarity is regarded not as a simple social fact, but as a divine law which is specially shown forth in Jesus Christ, and that is why we are able to obtain the practical results that we do from it.

In the economic world the idea of solidarity is shown in the creation of all kinds of associations, co-operating in production, distribution, credit,

etc. Some of these associations, it is true, are concerned only with the interest of the participants, and as a result they endeavour merely to create a new fact of solidarity, profitable to their members alone, not to transfer solidarity in the name of justice and love from the condition of a fact to that of a moral principle; but others endeavour to accomplish the education of their members in the sense of developing the spirit of solidarity even outside the bounds of any given association. If the principle of justice and love summons us to extend and increase the benefits of solidarity, it also summons us to suppress all its unpleasant results—e.g., to wage war upon hereditary vices and diseases and get rid of all unjustified responsibilities in our laws and customs, especially in the penal law which formerly (and, in our own time, among savage races) often punished the innocent along with or for the guilty.

Solidarity is frequently contrasted with fraternity (a word which denotes merely a vague sentiment) and with charity (which implies the humiliating idea of dependence of the weak and the poor on the powerful and the rich). It is certain that the feeling of sympathy which accompanies certain facts of solidarity, and the feeling of obligation which arises from the connexion of the fact of solidarity with the principle of equal justice for all, is stronger than the general sentiment of human fraternity. As regards charity, it always retains its place alongside of solidarity, for it alone takes an interest in the unfortunates who have not the right, in certain cases at least, to invoke any solidarity, and especially the guilty ones who have disregarded it.

Perhaps, in order to avoid confusion, it would be better to keep the word 'solidarity' for the simple fact of the various bonds which unite men, and to designate the feeling which accompanies it or the principle which applies to it by the terms 'sympathy' and 'obligation,' founded on solidarity, or other equivalents.

SOCIOLOGY and ORIGINAL SIN.

E. EHRLHARDT.

SOLIPSISM.—I. History of the term.—It is not known who invented the term 'solipsism' and introduced it into philosophical terminology. In 1652 an apostate Jesuit, Giulio Clemente Scotti, published under the title of *La Monarchie des Solipses* what purports to be a translation of a tract called *Monarchia Solipsorum* by one Melchior Inchofer. Crétineau-Joly¹ attributes the authorship to Scotti himself. The tract is a satire on the self-seeking policy pursued by the Jesuit order. The 'Kingdom of Self-Aloners,' i.e. self-seekers or egoists, is, on the model of Sir Thomas More's Utopia, described as a distant island, and an account is given of the constitution, manners, and customs of its inhabitants. The name 'solipses' is alleged to mean 'dans le langage des Magogues' the people living under the providence of many gods, the allusion being to the skill with which the Jesuits secure everywhere the favour of the powers that be. It is also punningly connected with *solent*. Subsequently the term *solipsiste* seems to have been a current label in France for the Jesuits, with

¹ *Hist. religieuse, politique et littéraire de la Compagnie de Jésus*, 6 vols., Paris, 1844-46.

reference to their selfishness. *Solipsismus* is found for the first time in Kant's *Critique of Practical Reason* as the Latin *terminus technicus* for the German *Selbstsucht*. The passage runs:

'All the inclinations together (which can be reduced to a tolerable system, in which case their satisfaction is called happiness) constitute *self-regard* (*solipsismus*). This is either the *self-love* that consists in an excessive fondness for oneself (*philautia*), or satisfaction with oneself (*arrogantia*). The former is called particularly *selfishness*; the latter *self-conceit*.'¹

W. T. Krug² follows Kant's usage in identifying solipsism with moral egoism ('making one's own self the end of all one's actions'), but gives no references. This identification is still repeated as late as 1890 by F. Kirchner.³ Meanwhile, some time during the 19th cent., solipsism was transferred from moral or practical egoism to theoretical (either epistemological or metaphysical) egoism, i.e. to the theory that I can know nothing but my own ideas and that I and my ideas are all that exists. This view was called simply 'egoism' by Wolf (who treats it, rightly, as an extreme species of idealism), Mendelssohn, Tetens, and other 18th cent. writers. The distinction between practical and theoretical egoism is clearly made by Schopenhauer.⁴ Reid, Hamilton, and other English writers use the terms 'egoism,' 'pan-egoism,' 'egoistical idealism' like Wolf, as did Überweg in Germany, most of them representing metaphysical egoism as the logical consequence of Berkeley's views. Who was the first to substitute 'solipsism' for 'egoism' in this metaphysical sense cannot be determined. Campbell Fraser is said to have used the term in his lectures as early as 1874-75. It certainly became current in philosophical lecture-rooms and books in the seventies and eighties in England, Germany, and France. Its first appearance in English print is in A. Barratt's *Physical Metempiric*⁵ (1883), where it is used as a familiar term. In 1892 the metaphysical sense is given exclusively in Alexis Bertrand's *Lexique de philosophie*.⁶ In 1893 F. H. Bradley devotes a chapter to its refutation in *Appearance and Reality*.⁷ In Italian *semetipsismo* and *psiconomismo* appear as synonyms. Nowadays it is in the theoretical sense alone that the term is used among philosophers.⁸

2. *Metaphysical solipsism.*—To follow in detail the development of the metaphysical theory which is now called solipsism is unnecessary. Its origins have been traced to Descartes's 'Cogito ergo sum,' to Malebranche's remark, 'Les sensations pourraient subsister sans qu'il y eût aucun objet hors de nous,'⁹ to Berkeley's 'Esse est percipi.' One of the earliest and most complete formulations of it may be found in Fénelon:¹⁰

'Non seulement tous ces corps qu'il me semble apercevoir, mais encore tous les esprits, qui me paraissent en société avec moi . . . tous ces êtres, dis-je, peuvent avoir rien de réel et n'être qu'une pure illusion qui se passe toute entière au dedans de moi seul: peut-être suis-je moi seul toute la nature.'

Modern discussions of solipsism have been needlessly embarrassed by the paradoxical habit which many philosophers have of expressing the theory in the first person plural. 'Have we any reason to

believe in the existence of anything beyond our private selves?', asks Bradley, and he goes on to use such phrases as 'our private self' (*sic*). That each of us believes in the existence of other selves, and generally of a world beyond his private self, is of course a fact. But, when the *right* to that belief is challenged, as it is by the solipsist, the scales are unfairly loaded against the challenger, if the examination of his thesis is conducted in terms which assume the truth of the belief. Solipsism appeals to the individual, and the individual must argue the pros and cons out with himself, addressing no audience until he has gained the right to believe that there is an audience to address. The thesis, then, to be examined is this: I alone exist, and all I experience and know is my own self. What, on this view, becomes of the distinction between mine and thine? Will it be possible for me to distinguish, e.g., between my own body and the bodies of others? Must I claim that all things are mine? that the manifold sounds I hear are all my own voice? that I am the owner of all there is? In so far as solipsism denies the reality of others, consequences such as these might be held to follow, and a quick, if somewhat painful, refutation of it might be secured by putting the theory into practice. But the point of the questions is not to secure a cheap *reductio ad absurdum*, but to bring out, for clearness' sake, the fact that the solipsistic argument is not conducted with reference to the legal and social relations between individuals. It does not move at all in the context of 'inter-subjective intercourse.' Hence the meaning which solipsism gives to the terms 'I' and 'myself' must be quite different from the sense which these terms bear in social experience. This point is most important. There are, we may say, at least two senses of the terms 'I' and 'myself.' There is, first, the sense appropriate to the experience of living as a self among other selves, of being a member of a world of selves mutually recognizing each other. This sense, and the experience on which it rests, the solipsist in effect denies by his thesis. Hence it is not in this sense that he can use the terms in stating his thesis. What, then, is this second, solipsistic, sense of 'I'?

The answer is that 'I,' 'myself,' and all similar terms, in the solipsist's mouth, can denote only what 'this,' 'here,' 'now,' and such terms denote, viz. immediate experience in its present 'that' and 'what.' They are mere demonstratives, pointing to or expressing the feelings, perceptions, thoughts, etc., which are present in me. 'In me' here does not have the force of distinguishing my feelings from yours or another's. It is only another way of saying, 'These feelings here and now.' In short, the whole and sole point of solipsism is to declare the exclusive reality of immediate experience and to deny the possibility of transcending that experience. It is nothing but an argument for immediacy and against transcendence. To affirm that 'I alone exist' thus means that 'my,' i.e. 'these,' present feelings, sensations, thoughts, as bare psychical facts, are all there is. To affirm that 'I can experience or know only myself' means that these present feelings do not imply, point to, mean anything other than themselves, are not a fragment of a vaster world transcending them in existence and character. It cuts down the universe to the 'this—here—now' of immediate experience. Of modern writers no one has seen this more clearly than Bradley:

'The "this" and the "mine" are names which stand for the immediacy of feeling. . . . There is no "mine" which is not "this," nor any "this" which fails, in a sense, to be "mine."'

¹ Ch. xix., p. 223 of 5th ed. (1903); his chapter on 'The This and the Mine' (ch. xix.) is essential to his argument against solipsism (ch. xxi.).

To deny transcendence is to deny any reality beyond the momentary thrill of experience. It is to deny past and future except as present felt acts of remembering or anticipating. It is to deny the existence of material things, of the physical world or nature, except for this moment's colours, sounds, touches, and other sense-data. These fleeting presences are all there is of 'nature'; they are not signs or glimpses of a stable, enduring, orderly world of which they are parts. It is to deny the existence of other minds or selves, i.e. of centres or complexes of immediate experience other than this present one which calls itself 'I.' In short, the denial of transcendence is a denial of all inference and interpretation, nay of all judgment. For every judgment, as involving a universal, transcends the 'this' in its bare givenness or immediacy.

These sweeping denials might of themselves be regarded as sufficient to discredit solipsism. Yet many writers have been content to say that solipsism, though it carries no conviction, is theoretically irrefutable, and to justify the fact that neither in theory nor in conduct does any one proceed as if solipsism were true, by appeal to an ultimate act of faith or to a venture of the will—whether rational or irrational remaining a moot point. The pragmatist certainly has an opening here to say that the venture 'works' and is 'made true' by its success.¹ Others, like Bradley, have marshalled elaborate dialectics for refutation. Bradley certainly scores a point when he argues that the solipsist has no right to say, 'Only I and my ideas exist,' or, 'The world as I know it consists only of states of my own mind,' for immediate experience contains no such division into subject and object, into an 'I' and its ideas, into a mind and its states. These formulæ already transcend the given—the one thing which the solipsist is committed not to do, if he can avoid it. The rest of Bradley's refutation boils down to variations on the theme, 'He cannot avoid it.' He cannot, because immediate experience does not stay immediate. It transcends itself. 'I' have no choice in the matter. The right to transcendence, which the solipsist challenges, is thus ultimately justified by appeal to the fact of transcendence. But, if it comes to that, had we not better at once say with Hegel: 'The "I" is thought and the universal. When I say "I," I let fall all particularity . . . ?'² In other words, immediate experience, the solipsist's 'I' and 'self,' is always both 'that' and 'what,' both 'this' and 'such,' both particular and universal, and it is the universal in it that ever carries it beyond itself—the life in it of the whole of which it is a part.

3. Methodological solipsism.—A few present-day philosophers advocate solipsism, not as a metaphysical thesis, but as a principle of method. Bertrand Russell, arguing that physics, if it is to be a genuinely empirical science, must begin and end with sense-data, puts forward the ideal of constructing physics on a solipsistic basis. The main point, in practice, would be the exclusion of the testimony of 'others.' The only evidence admitted would be, for each physicist, his own sense-data. A similar methodological solipsism, the point of which, however, is directed, not towards the distinction between my own experience and that of others, but towards the distinction between actual phenomena and hypothetical entities assumed as causes or grounds for phenomena ('metaphysics'), has been developed by Hans Driesch. Defining logic as 'the theory of order,' he claims that it may be 'founded solipsistically,' being concerned with the ordering of what I am immediately conscious of :

'Solipsism is the only basis of philosophy that is not dogmatic; for, let it be well understood, solipsism does not say that I "exist" as a "substance" or something else, but it only analyses the fundamental pre-phenomenon: *I have something consciously*. And this is the only fact—though not a "fact" in the usual sense—that is beyond any doubt.

Solipsism, then, is not dogmatic, not even in a negative manner. It does not say: What I consciously have is *nothing* but my phenomenon. It merely says: What I consciously have is *certainly* my phenomenon—whether it "be" anything else or not.

But now, for reasons that cannot be explained here in full, the ordering Ego tries to go beyond the limits of a pure theory of order and to establish the concept of a something that "is" not merely in so far as it is consciously possessed or possibly possessed in some way. Thus, for reasons of order, the theory of order gives itself up and asks for metaphysics.¹

The methodological solipsism of Russell and Driesch concerns, thus, only the starting-point of knowledge. Both admit the necessity for transcendence, Russell in the form of 'logical constructions,' Driesch in the form of metaphysical hypotheses.

R. F. A. HOERNLÉ.

SOLOMON ISLANDS. — This large archipelago lies in the western Pacific and consists of a long chain of islands extending from 150° 40' in a south-easterly direction to 162° 30' E. The larger islands are mountainous, the highest point of Guadalcanar reaching to 10,000 feet. All have a volcanic basis; the island of Bougainville in the north-west has an active volcano, and the small island of Savo was also actively volcanic when the islands were visited by the Spaniards in the 16th century. This discovery was made after crossing the Pacific in the search for the source of gold and other precious objects in early times, and the islands were named after King Solomon in the idea that they may have contributed to his wealth. Many of the individual islands, such as San Cristoval, Florida, and Ysabel, still bear the names given to them by the Spanish voyagers in the 16th century. After the discovery the islands passed out of sight until last century. In 1914 the archipelago formed a British protectorate with the exception of the islands of Bougainville and Buka, which fell within the German sphere of influence. The interior of several of the larger islands is still unexplored, but the smaller islands and most of the coastal districts are now under European influence and are the seat of large plantations, chiefly for the production of copra.

1. Somatology.—In physical character the inhabitants fall into two groups sharply divided by a line passing through Manning Strait and the Russell Islands. To the north-west of this line the people are very dark, and on the whole negroid characters are more pronounced here than to the south-east, though many natives of this region combine with excessive blackness wavy hair and noses almost of European dimensions. The difference in colour and general appearance is so pronounced that natives of the two regions can be distinguished at a glance even by the most casual observer. These physical differences on the two sides of the dividing line are accompanied by definite differences in dress, especially of the women. To the east of the line the women, if they are not completely nude, wear grass petticoats, while in Kuviana, Eddystone Island, and

¹ *Problem of Individuality*, London, 1914, p. 75 f.

¹ See art. PRAGMATISM.

² *Philosophy of Right*, Introd., § 4, Add. (see tr. by S. W. Dyde, London, 1896).

Vella Lavella to the west they wear a remarkable garment resembling a knapsack both in appearance and in function, but covering the buttocks instead of the shoulders. These differences in physique and dress mark out the Solomons into two distinct regions which will be spoken of in this article as the Eastern and Western Solomons respectively.

Surrounding the main islands there are a number of small outliers, such as Bellona, Rennell Island, Sikaiana, and Lord Howe's Island (or Ongtong Java), in which the people are Polynesians in physical characters, but in some cases with evident indications of Melanesian mixture.

2. Language.—In most of the islands the languages are characteristic examples of the Melanesian family with few such aberrant forms as are frequent in the Santa Cruz Islands and the New Hebrides. In a few islands, such as Savo, Vella Lavella, and some parts of Bougainville, the languages belong to a wholly different family. They differ widely not only from those of the Melanesian stock, but also from one another. In certain respects, such as the position of the genitive, they resemble the non-Melanesian languages of New Guinea and have in consequence been assigned to the Papuan family. The people who speak these Papuan languages do not differ appreciably in physical character or general culture from their neighbours who speak languages of the Melanesian family. These exceptional languages are generally regarded as survivals of such an early linguistic diversity as is still present in New Guinea. It is supposed that these early languages have in all but a few islands been replaced by languages belonging to the general Austronesian stock and that the languages so introduced have taken on the form characteristic of the Melanesian family.

In the small outliers in which the people resemble the Polynesians in physique the language is also Polynesian in character.

3. Social organization.—The special form of social system in which the community is divided into two exogamous moieties with matrilineal descent occurs at each end of the group, in San Cristoval and at the northern end of Bougainville. In San Cristoval the dual organization occurs in the central part of the island. It is believed that the people of the moieties differ in physical and mental characters, and there is a definite tradition of hostility between the two. One of the moieties is held to be superior to the other; its members may not be enslaved or beaten, or subjected to other indignities, and its name is Atawa, which means 'seafarer' or 'foreigner.' These differences provide definite confirmation of the view that the dual system has arisen out of the fusion between two peoples. There is evidence that the dual system was once universal over the whole of the Eastern Solomons, but there is no sign of its presence in the Western Solomons until one comes to the northern end of Bougainville, where it occurs again in its characteristic form and closely related to the similar organizations of New Britain and New Ireland.¹

The totemic form of social organization is more widely distributed. In San Cristoval it occurs in Santa Anna and Santa Catalina at the eastern end of the island and again at the western end, but with the striking difference that the totems of the eastern islands are mainly aquatic, while the western totems are almost exclusively birds. In each case descent within the clan is matrilineal. There are similar matrilineal clans in Ulawa, though with one or two exceptions they have no names and no totems. In Florida, Ysabel, and the western end of Guadalcanar the totemism is less definite. There are matrilineal clans each of which is connected with certain animals, often birds, but these animals are grouped with other sacred objects under the term *tindalo*, *tindadho*, or *tinde'o*, which is also the term for the ghost of a dead ancestor. In Ruviana, Eddystone Island, and Vella Lavella there is no trace of totemic organization, but this is found again in the Shortland Islands and Bougainville, where the totems

are universally birds, and here again descent is matrilineal.

A third form of social organization occurs in Ruviana, Eddystone Island, and Vella Lavella, and probably in parts at least of Choiseul. Here there is no form of clan organization, but the social organization is founded on kinship or genealogical relationship.¹ In Eddystone Island a man calls all those with whom he can trace relationship his *taviti*, and it is this relationship by which marriage is regulated, a man not being allowed to marry any woman to whom he is related through either father or mother. The *taviti* of different persons form groups which overlap, and there is nothing which corresponds accurately to the descent of the dual and clan organizations.

In San Cristoval there is a remarkable form of adoption in which a boy is adopted, not as a son, but as a father, a mother's brother, or a grandfather, while a girl may be adopted as a mother or a grandmother. A child so adopted assumes the name and status of the person whose place he takes, the motive assigned for the practice being to 'keep green' the memory of a deceased person. By this process of adoption a child comes to be called father or grandfather, and it is possible that this practice accounts for certain peculiarities of the nomenclature of relationship, such as the use of a common term for the elder brother and the son's son, which elsewhere have been explained by peculiar forms of marriage.² These anomalous marriages, such as that with the wife of the father's father, however, occur in San Cristoval, and probably form, as in other parts of Melanesia, the starting-point of the peculiarities of relationship.

Definite hereditary chieftainship is general in the Solomons, with patrilineal succession, even where descent is matrilineal.³ The concept of 'chief' has been much modified by European influence owing to officials expecting chiefs to take an important part in government. In their original state this seems to have been largely foreign to the ideas of the people, the main functions of chiefs being to see that ceremonies were properly carried out and that duly abundant feasts were provided on these occasions. In recent times certain chiefs, especially in Ruviana, have acquired great authority and have extended this beyond the confines of their own island or district, and it may be that these were examples of a native tendency to extend the functions of a chief to other spheres than the religious, but in most cases these functions have almost certainly been due, directly or indirectly, to external influence. In Eddystone Island chiefs and men who had taken ten heads in warfare were allowed to have a second wife.

An organization called *Matambala*, similar to the *Sukwe* and *Mangge* of the New Hebrides,⁴ is known to have been present in Florida in the Eastern Solomons fifty years ago, but it appears to have been in process of degeneration and soon disappeared under European influence. There is no trace of the presence of such organizations in New Georgia, the Shortland Islands, or southern Bougainville, but they reappear as the *Rukruk*, allied to the *Dukduk* of New Britain,⁵ in the northern part of Bougainville, and occur here in conjunction with the dual form of social organization. In Santa Anna the members of different totemic clans may not eat food cooked at one fire—a rule which in other parts of Melanesia holds good of the grades of the *Sukwe* and *Mangge*.

4. Religion.—This has an elaborate character in

¹ ERE vii. 700.

³ Ib. ix. 336c.

⁴ Ib. viii. 420.

⁵ Ib. ix. 353b.

¹ ERE ix. 336.

which rites take place in connexion with sacred beings of many different kinds. These beings fall into two main classes: (1) the ghosts of the dead and (2) spirits which are not known to have had human form. These two classes are definitely distinguished in nomenclature, though the native classification so formed does not always correspond with the distinction between ghosts and spirits.

(1) Of the two cults that of ghosts lies more on the surface and takes the more important place in the lives of the people. In general the ghosts who form the object of the religious rites are those of near relatives of the person by whom or on whose behalf the rites are performed, but occasionally certain ghosts have become the object of a general cult. Thus in San Cristoval a ghost named *Harumae* is propitiated by the slaughter of a pig when the people are going to war. In Eddystone Island many of the *tomate*, or ghosts, are those of men long dead whose names are uttered in the prayers and other formulas, and these are probably the men who originally introduced the rite and those who succeeded them in the knowledge of the ritual. In this island offerings to ghosts take place in connexion with most of the events of life—the firstfruits of both gardens and nutting, the first catch of bonito, the building of canoes and houses, the healing of disease—at various stages of war, and in connexion with many other ordinary events. The more important rites are known only to a few men, and this knowledge forms a kind of property which is communicated to another only on the payment of money. In the Shortland Islands offerings with formulas expressing appeal are made to the ghosts of the dead on several occasions, including a feast of firstfruits at the beginning of the nut season, the making of a new meeting-house, and the occurrence of sickness. When the offerings are made to dead kinsfolk, any person may officiate, but on important occasions the chief should carry out the ceremony.

The religious rites usually take place at special shrines. In the Western Solomons offerings of firstfruits, etc., are made at shrines containing the skulls of dead relatives. In Eddystone Island these are usually in the form of half a miniature house, divided longitudinally along the roof-ridge, and are made sometimes of stone, sometimes of the usual materials of the house. In Ruviana they often have human or animal forms, and receptacles of skulls made in the form of animals occur in other parts of the Solomons. The offerings at these shrines usually consist of puddings made of yam, taro, nuts, etc. In some cases these puddings are hung up at the shrine, while in others they are burnt. In Eddystone Island there are also shrines of a different kind consisting of heaps of stones including one which stands upright like a miniature monolith. It is especially at these shrines that prayers are uttered which contain the names of men long dead, and it is possible that these shrines are the burial-places of some of the men whose names are thus preserved in the ritual.

(2) Concerning the cult of the spirits which are distinguished from ghosts we have information only from two localities, San Cristoval and Eddystone Island. In the former the non-human spirits are called *figona*, *higona*, or *hi'ona*. Pools, rocks, waterfalls, large trees, or any places which excite awe are thought to be the abode of *figona*, but these are not seen and are not the object of any special cult, though it is believed that the *figona* can take captive human souls and thus produce illness. The *figona* which take an important place in the religion have the form of snakes. C. E. Fox has recently discovered that the being who forms the object of a special esoteric cult in

Ulawa, Hatoibwai, is a winged serpent. These *figona* can become stones, and sacred stones are especially associated with them. Prayers are offered to the *figona* to restore health to a sick man, to give rain in a drought, and to increase the crops. One of the serpent *figona*, *Agunua*, is more important than the rest. *Agunua* is believed to have created all things. An annual ceremony occurs when nuts are first gathered and yams dug in which offerings of firstfruits are made to *Agunua* at a sacred grove, various symbolic rites being performed in order that such arts as house-building, mat-making, and wood-felling may be blessed by the *figona*. The most frequent offerings are puddings made of yam or nuts, which are partly burnt, partly eaten by the participants in the rites. Pigs are also offered and occasionally a human sacrifice.

The people of Eddystone Island believe in the existence of several kinds of sacred beings which are distinguished from the *tomate*, or ghosts. The most important of these are the *tamasa*, of whom there are two main kinds—the *tamasa vuvua*, who have to do especially with crops, and the *tamasa vambule*, who are concerned with the weather. These beings made man and the land, brought in new rites and inventions, and are still believed to make the crops grow and to control the weather. They are generally associated with special localities, and at each of these there is an ancient tree-stump, called *rengge*, with worn-away branches on which arm-rings and other offerings hang. The most important of these *tamasa* is *Vanavana*, or the *tamasa* of Momara. He created man without any organs and with legs which would not bend, and called in a being styled *tuturu* to make hands, feet, eyes, mouth, nose, and genital organs with a stone implement. At present this *tamasa* is believed to live underground and cause earthquakes. The next *tamasa* in order of importance, a female, has her seat at Nyatuloki. The crocodile, shark, and centipede are sacred to her. She is a *tamasa vambule* and produces the north-west wind. Several of the *tamasa* are connected with animals, and a number of animals such as the shark, crocodile, sting-ray, sea-snake, and various species of ant are sometimes spoken of as 'little *tamasa*' or 'children of *tamasa*'.

The *tamasa* of Eddystone are especially connected with the district of Narovo, the home of the bush-people of the island, and most, if not all, of them are reputed to have come originally from Ruviana. They exert less influence on the lives of the people than the *tomate*, but they are much revered and their rites are elaborate.

The chief of these is the *vodu tamasa*, which is performed at irregular intervals, especially when the crops fail. The people go to Momara with offerings of arm-rings and food, among which a special kind of banana is essential; they sing and wail, and, as they approach the spot, call out the names of all the plants which are used as food. Rings are hung on the *rengge* and the people feast. The *tamasa* is asked by means of the ring method of divination 'what has made him angry and led him to interfere with the food-supply. The ritual has several special features. Whenever food or other objects pass from one person to another they must be thrown; nuts must be wrung off the bunch and not pulled, and the coco-nuts used must be carefully lowered from the tree and not allowed to fall. The officiants, called *tama*, are men specially consecrated by being rubbed with certain leaves and nuts.

The association of the *tamasa* with definite localities suggests that, though they are not in general known by the people to have been human, they are the representatives of men who introduced certain arts, such as agriculture and the knowledge of rites to control the weather. One *tamasa*, Magoana, was certainly a man, his thigh-bones being still preserved, and the human nature of the *tamasa* is supported by evidence from Vella Lavella, where beings evidently equivalent to the

¹ See below, § 7.

tamasa are called *mbangara*, the Eddystone word for 'chief.'

Most of the *tamasa vambule* are sharks; it is their function to make calm weather and also to protect men from being drowned or eaten by sharks. The rites are of various kinds; in one the officiant ties the stem of a plant round a leaf taken from the shrine of the *tamasa*, walks into the sea with arms extended, and bales water as if in a canoe, uttering a prayer that the sea shall be still.

In many of the formulas the names of beings are mentioned who are known as *tomate-tamasa*. They are said to stop at the skull-shrines and were certainly once living men. There is little doubt that they are the ghosts either of the men who introduced the *tamasa*-cult or of men of a later time who were especially skilled in the knowledge of its rites.

It may be noted that there are several points of resemblance between the *tamasa* of Eddystone and the *figona* of San Cristoval. Both care for agriculture and the weather, but, while the *figona* are chiefly snakes, the snake is only one of many animals associated with the *tamasa*. There is some evidence of the association of the *tamasa*, and especially of the weather-*tamasa*, with morality. The *tamasa* of Monara twists the limbs of an adulterer. All the weather-*tamasa* are angered by adultery and, by raising a storm, break the canoes of the offenders, whom they eat.

In Vella Lavella, where the beings corresponding with the *tamasa* are called *mbangara*, those connected with the weather seem to be the more important, and offerings are regularly made to them when the people go on the sea. The *tamasa vivua* of Eddystone are also represented and seem to be especially connected with the cultivation of taro. Sharks are *mbangara*, or are connected with *mbangara*, but there is no evidence that other animals are so regarded.

Another sacred being of Eddystone Island whose cult is also found in Vella Lavella is Mateana. This being is associated with the meteor, shooting-star, and rainbow, and is believed to carry a spear by means of which disease or death is indicted on any who come in its way. Mateana has come to be associated, probably by a secondary process, with the institution of tabu.¹ In some cases the injury it inflicts follows the infraction of this tabu, but disease or death is also ascribed to chance encounters with the spirit. In Vella Lavella Mateana is propitiated by offerings on the top of the house.

A somewhat similar being of Eddystone is called Sea, which is much feared and seems to be a personification of some form of wandering light which is regarded as dangerous. Sea is believed to carry a club, the old weapon of the island, in place of the spear of Mateana, and probably represents an indigenous belief, while the cult of Mateana is of more recent introduction.

Another disease-producing agency, distinguished from both the *tamasa* and *tomate*, is Ave, to whose activity epidemic colds, and possibly influenza, are ascribed. Ave is associated to some extent with shooting-stars and the rainbow, but is quite distinct from Mateana. When an epidemic ascribed to Ave visits the island, the natives attempt to ban it by sending out to sea an imitation canoe which is believed to carry away the evil influence. There was some doubt whether Mateana and Ave are individual spirits or names for classes of spirits. The *kita*-spirits, which are believed to produce a wasting disease accompanied by sores, are certainly a class. Certain men are believed to have the power of inciting the *kita* to action. After ascertaining by means of the arm-ring method of divination whether the *kita* are willing to act, they perform rites with prayer that the victim shall exhibit the wasting, sores, or other symptoms of the disease.

¹ See below, § 5.

Two other classes of spirits are associated with the bush: (1) the *tuturu*, or mad spirits, supposed to inhabit the bush, where they live upon fruits and nuts, are believed to drive insane any person who falls into their power; they seem to be to a large extent the ghosts of men or women who, having become insane, have fled into the bush and died there; the original nature of the *tuturu* belief is doubtful, but that these beings are believed to have formerly taken an important place in the spiritual world of the island is suggested by the part assigned to a *tuturu* in the legend of the creation of man;¹ (2) the *tomate munggomunggo*, or ghosts of the bush, of which one called *Tambukoma* is especially malignant, include the ghosts of people who have suffered violent death in certain ways, as by falling from trees, and of women who have died in child-birth; it is possible that they also include the ghosts of the indigenous bush-people of the island, though it is more probable that these are represented by the *tuturu*.

Similar beings of the bush are found in San Cristoval, where they are classed with the ghosts as *ataro hasimou*. The people of this island believe in similar malevolent ghosts called *adaro ni matawa*, beings of the sea, half-human and half-fish, who shoot men with flying fish. It is possible that these are the ghosts of men who have been drowned at sea or whose bodies have been cast into the sea after death.

Throughout the Solomons there is a belief in another class of malevolent being which assumes the guise of a person of the sex opposite to that of the human being it encounters. If the latter succumbs to temptation, his or her fall is followed in a few days by death. These beings are called *ataro here* in San Cristoval, *anggemate* in Eddystone Island, and *sanggemate* in Vella Lavella.

5. Tabu and medicine.—In Eddystone Island, and probably in other parts of the Solomons, the relation between religion and medicine is very close. In Eddystone nearly all forms of disease are ascribed to the intervention of ghosts or other spiritual beings such as Mateana, Ave, or *Tambukoma*. In some cases it is believed that disease comes because the victim has accidentally intruded into the haunts of the disease-bearing spirit, but the cause to which illness is most often ascribed is the breaking of a tabu placed upon the fruit of certain trees, and especially upon the coco-nut, the areca-nut, and the betel-vine. A large number of diseases are recognized, each of which is connected with a special kind of tabu, and there is a more or less definite relation between the rites by which the tabu is imposed or removed and those by which the leech cures the illness which results from its infraction. The ritual connected with each tabu is known only to a small group of men, or it may be to only a single man; and, if this knowledge is imparted to another, the rites will be efficacious only if money is given at the time, the novice acquiring his new powers only through the payment of money. As a rule knowledge of the rites by which the tabu is imposed or removed is acquired at the same time as that of the rites designed to cure the disease associated with the tabu. When trees are tabued, a sign distinctive of the tabu in question is placed on or by the trees. This usually consists of certain leaves and creepers, but it may also include stones, shells, fungi, a branch of a tree made in the form of a bow, etc., the leaves or other objects being usually in sets of four. When the sign is set up, a prayer, often of considerable length, is uttered which in many cases includes the names of men, sharks, or other beings through whose agency the tabu is thus made effective. The tabu is removed by a

¹ See above, p. 682b.

rite of a simpler kind in which the tabu-sign is usually stroked with certain leaves, these movements with the accompanying formula being designed to remove from the sign the spiritual influence to which the efficacy of the tabu is due. Another kind of rite is carried out when it is desired to use the fruit of a tree protected by a tabu.

When a person falls ill, it is necessary first to discover the nature of the disease, and, if the symptoms do not make this obvious, the cause may be ascertained by the ring method of divination. Usually a number of diagnoses are made, each followed by the appropriate remedies. If it is diagnosed that a tabu of a certain kind has been broken, a man who knows the tabu carries out the appropriate treatment. This is of various kinds, the most frequent measures being to stroke or rub the body or limbs with certain leaves, usually four in number, and to spit chewed roots or tubers over the patient. The leaves used in the treatment are afterwards worn by the patient, usually suspended from a creeper round the neck. Creepers are often placed over one or other shoulder of the patient and of other people present, and similar creepers may be worn as armlets or anklets. In all cases prayers are uttered desiring that the sick man may be made well, the words used often indicating a belief in the presence of some influence within the sufferer which it is the object of the rites to expel. Usually the rites extend over four days, on the third of which nothing is done by the leech, this day being left in order to give the *tomate* or other spiritual beings an opportunity for action. Some forms of treatment should be carried out only during the waning of the moon, and in these cases the treatment is usually carried out in four successive months. When a cure has been effected, an offering is made of puddings, usually four in number. These may be burnt or put in the thatch of the house, and pieces of another pudding may be eaten by both patient and leech.

In some cases the tabu and associated treatment are connected with a shrine, but it does not appear that any ceremony connected with the tabu is performed at the shrine, though rites of other kinds may take place there.

When disease is ascribed to the agency of other spiritual beings the curative rites are much like those which follow the breaking of a tabu, the motive in most cases being the expulsion from the body of some spiritual agent by which the sufferer is possessed.

The breaking of a tabu corresponds with what we should ordinarily call theft, and there is little doubt that the institution of tabu came into being in Eddystone as a means of protecting property. There is thus in this case a definite relation between religion and morality.

6. Head-hunting.—The practice of head-hunting, which exists in Ruviana, Eddystone Island, Vella Lavella, Choiseul, and the Shortland Islands, is closely connected with the skull-cult and with the cult of ghosts. A head-hunting expedition is accompanied throughout by rites of a religious kind which begin a year or more before a proposed expedition in connexion with the new canoes which are made for the occasion. Various talismans and amulets are placed in the canoes during the expedition, and formulas are uttered and other rites performed which have definite reference to the cult of ghosts. Similar rites accompany the return of an expedition. This is followed at intervals by ceremonial dances which seem to have a definite religious character. The heads which are taken in the expedition are placed in a house constructed in a special manner, but, after they are so disposed, they are not the object of any special rites. Captives are also taken in the head-hunting expeditions. When brought to the island, these captives are adopted into families, of which they are treated as members. They may marry native women and have children. In Vella Lavella they may even become chiefs, but they are always liable to be killed to supply heads when these are needed. These *pinasus*, as they are called, are also chosen to take the leading part in certain ceremonies which are believed to be accompanied by danger, as when it is necessary in the construction of a new skull-house that the skulls shall

be touched by human hands in being transferred to their new resting-place. The heads are needed at the building of a new house or a new canoe, and their use is almost certainly the survival of a former practice of human sacrifice.

7. Divination.—Divination for various purposes is practised by two chief methods. (1) In one the diviner holds an arm-ring in his hand and puts questions to the ghosts, who give an affirmative answer by movements of the arm which carry the ring round and round in a circle. This method of divination is especially frequent in religious rites, and it is by this means that those with special knowledge of disease discover what tabu has been broken or the nature of any other act by which a ghost or spirit has been offended. Before performing a rite designed either to produce or to cure an illness, the officiant will ascertain by means of the arm-ring whether the being by whose power the disease has been produced is willing to cause or cure the sickness. (2) The other method is by swaying movements of a canoe. Thus, if anything goes wrong on a head-hunting expedition, the canoe stops and its crew put questions to it, taking the swaying of the vessel to indicate an affirmative answer. It is believed that these movements are produced by a shark, crocodile, or octopus, and in Eddystone Island by a special octopus called *Nggangai*. In this island these animals are *tamasa*, and there is some reason to connect this form of divination with the *tamasa vambule*, the beings by which the weather is controlled. These two kinds of divination almost certainly depend on the occurrence of movements produced without any witting intention on the part of the holder of the ring or the occupants of the canoe. They are of the same order as the automatic movements of the table-turner or the dowser.

8. Disposal of the dead.—There are many different methods of treating the bodies of the dead, over twenty varieties having been noted by C. E. Fox in San Cristoval alone. At the western end of this island, in the district of bird-totemism, the leading practice is cremation, the other chief method being to preserve the body in the house, the bones being collected when the flesh has disappeared. In other cases the body is exposed on a platform or on a rock. In San Cristoval and other islands at this end of the Solomons the body of a chief is placed in a canoe or food-bowl and buried in a square or oblong mound, called *heo*, 50 ft. or more in length. The dead body is placed in a cavity on the top of the mound, and sometimes this cavity is closed except for a shaft leading from the exterior of the mound. Sometimes there is a dolmen on the top of the mound, under which at a later stage the bones are placed. On the mound there is often a small statue of coral or stone, into which the 'soul' of the dead man is believed to go. Behind the head of these images there is an object like a pig-tail going down to the seat on which the image is represented as sitting.

Cremation and preservation of the body occur also at the eastern end of Malaita, where the body of an important man may be kept in the house enclosed either in a canoe or in a model of the sword-fish. In Florida inhumation with later disinterment of the skull is general, while in Savo this method is used only for chiefs, the bodies of the common people being thrown into the sea. In Eddystone, Ruviana, and Vella Lavella the usual method is to expose the body on a rock or small island till the skull can be removed and placed in one of the shrines already described. If a man so desires, his body can be thrown into the sea. In the Shortland Islands the bodies

of ordinary people are either interred or thrown into the sea, while those of chiefs are cremated, and this is the habitual practice in the district of Buin in Bougainville. In both places the bones are collected from the ashes. In the Shortland Islands they are thrown into water, each totemic clan having its own site for the purpose, and it is believed that they are swallowed by fishes or other animals. In other cases the bones are interred, and this is the habitual practice in Buin. In Choiseul the body is either burnt or treated as in Eddystone, the practice of this island being said to have come from Choiseul.

The beliefs concerning the nature of the soul and of the existence after death vary much in different islands. The people of San Cristoval believe in two kinds of soul which in one part of the island are called *aunga* and *adaro*, the former being compared with the shadow from the sun and the latter with the reflexion from water. When a man dies the *aunga* leaves the body either at the fontanelle or by the mouth and goes to a distant place called Rodomana, of which the people have but a vague idea. The *adaro*, on the other hand, remains for some time with the body and then goes either into the jaw-bone or into a sacred stone, or, in the case of the chiefly clan, into the stone statue which is put upon the funeral mound (*heo*). In Florida the soul, called *tarunga* in life, leaves the body at death and becomes a *tindalo*, or ghost. In Eddystone Island the soul is called *ghalaghala*. It leaves the body at death, soon after which a ceremony is performed in which it is caught and put under the ridge-pole of the house. Soon after this another ceremony is performed in connexion with which the ghost is believed to go to a cave near the highest point of the island. On the eighteenth day after death the *ghalaghala* is transferred by means of another ceremony to the shrine in which the skull is kept, and still later the *ghalaghala*, now called a *tomate*, or ghost, goes to the home of the dead called Sonto, which is located in the island of Bougainville. In Vella Lavella it is believed that the ghost, here called *njiola*, goes to the cave in Eddystone Island which furnishes a temporary resort for the *ghalaghala* of that island. In the Shortland Islands the soul, called *numu*, is identified with both the shadow and the reflexion. When a man dies, the *numu* becomes a *nitu*, or ghost, and goes to a place in Bougainville which is the site of a volcano. There it recovers from the effect of cremation, and with restored body returns to its own island, where it dwells in a special district. In some cases this is a place where the bones are buried after cremation. The soul in Buin is called *ura*, a word which also denotes the shadow, the reflexion, and a dream. The *ura* leaves a man when he is ill and flies in the form of a bird to the under world, where there is a tree the leaves of which represent human lives. If the soul-bird plucks the leaf representing the man whose body it has left, this man dies and the soul-bird stays in the under world. This home of the dead of Buin is the same volcano which is the temporary home of the dead of the Shortland Islands.

In all cases the life in the world of the dead differs little from that of the living. The ghosts eat, drink, dance, marry, and have children, and in some cases it is believed that they die. The nature of the life after death seems to be in no way influenced by the kind of life the man has lived, though it may be influenced by ceremonial omissions. Thus, if a man of the Shortlands had nothing burnt with him at his cremation, he would have no present to give to a being who meets him on the way to the home of the dead in Bougainville, and either he would fail to reach the place or his arrival would be delayed.

In several parts of the Solomons it is believed that pigs and inanimate objects have souls. When an object is burnt or broken at the funeral rites it is believed that the soul of the object goes with the deceased to the home of the dead.

9. Magic.—Malignant magic is less prominent than in the more southerly parts of Melanesia. In Eddystone Island, where it is called *mba*, the power of bringing disease or death by this means is ascribed to a few men and women who are also known as *mba*. They act by obtaining a portion of the food of their victim, which is then enveloped in a covering and called *penupenu*. This is kept in the clothing of the sorcerer or placed in the hot air of one of the fumaroles of the island, the motive in each case being to keep the *penupenu* warm and thus assist the occurrence of fever. When a person falls ill and it

is suspected that he is suffering from the action of *mba*, the worker of the magic is discovered by divination with an arm-ring, and formerly the person indicated was slung by one arm in a tree till he confessed and revealed where the *penupenu* was to be found. Now the magic parcel is discovered by certain men who are believed to act through friendly spirits known as *tomate kuri*. These spirits know how to find the object by which the disease is being maintained in activity. It is believed that the malignant influence of the object once connected with the victim is due to the action of a spirit, which is almost certainly the ghost of a former *mba*. This variety of magic, which in many other parts of the world is supposed to depend on some virtue inherent in the magical ritual, is here ascribed to a spiritual agency, and this kind of agency is even more definitely involved in the process by which the illness so produced is cured. In the same island the injurious power of the evil eye is also ascribed to certain men and women called *njiama*, who have the power of flying from place to place and produce by means of their look a disease accompanied by bleeding from the throat which is nearly always fatal. Here again the power of the *njiama* is ascribed to the agency of a *tomate njiama*, or ghost of a dead possessor of the evil eye.

SOMA.—*Soma*, an intoxicating plant of N.W. India which was pressed (Skr. *su*, 'press', *soma*, 'the pressing') and allowed to ferment, is supposed to be the *Asclepias acida* or *Sarcostemma viminale*, 'the expressed juice of which produces a peculiarly astringent, narcotic, and intoxicating effect.' As such it was regarded as a divine power, and, as in Mexico and Peru the *octli* and similar intoxicating plants were deified, so in India and in Persia the *soma*, identical with the Zoroastrian *haoma*, was regarded as a god. Whether in later times the plant called *soma* was really the same as the Vedic *soma*, and whether this in turn was actually one with the *haoma* of the Avesta and the *δωπευ* mentioned by Plutarch,¹ is questionable. It may be that the names (indubitably identical) were retained when substitutes for the plant were used. We know that in the later period a 'substitute plant' was used in the Hindu *soma*-ritual, and the plant called *haoma* by the Zoroastrians was not the *soma* of the later cult. But originally both names and plants were the same. As early as the *Sāmaveda* it was recognized that there was a white as well as a yellow *soma*, and the latter is said in the *Rigveda*² to grow upon Mt. Mūjavat, where it is fostered by the storm-god. The eagle, on the other hand, is said to have brought it 'from the sky.'³ It was mixed with water, milk, butter (*ghī*), and barley, and offered to the gods. It was at first drunk not only by the gods and the priests but also by other Aryans, and perhaps by all. Later, as the cult became more regulated, only the three upper castes were permitted to drink

¹ *De Is. et Osir.* 46.

² *Rigveda*, ix. 86. 24.

³ x. 34. 1.

soma, withal only as a religious ceremony, while *surā*, a rice-brandy, became the popular intoxicant. So important was the *soma*-cult that one whole book (bk. ix.) of the *Rigveda* is devoted to hymns in its honour. It is called the soul of the sacrifice and the delight of gods and men. It strengthens the weak, inspires the poet, prolongs life, and gives divine power to the gods. Especially is Indra (the god of strength and battle) the enjoyer of *soma*, which (or who) is regarded as his inspirer and friend. As god, Soma, like Indra, frees from danger and conquers foes, and brings wealth to the Aryan from sky and earth and air.¹

'Soma is addressed in the highest strains of adulation and veneration; all powers belong to him; all blessings are besought of him.'²

Even the juice, as it filters through the sieve for purification, is addressed in terms of divine worship. Besides the ninth book of the *Rigveda* and hymns found also in other books, the *Sāmaveda* is devoted to its praise. From the descriptions it is evident that it was the yellow *soma*-plant that was used by the Vedic priests; this also is the colour of the Persian *haoma*. In the (much later) medical treatises no fewer than 24 varieties of the plant (then called) *soma* are mentioned.

Before the end of the *Rigveda* period this yellow plant (which was plucked by moonlight and bathed in water and milk, and which also had the property of 'swelling' as it was thus 'purified') became esoterically identified with the yellow, swelling, and water-cleansed moon, and in some of the latest hymns of the *Rigveda* there is no question that *soma* means the moon. From this time onward *soma* was thus used in two senses, either of the divine plant or of the moon-god, until, as in the epics, unless expressly the plant, the word *soma* means the moon. It is the moon-god as Soma who is portrayed in the *Mahābhārata* as a great warrior-god, ancestor of a race of heroes, etc. There is, however, even in this later period, the consciousness that *soma* is both plant and moon; it is no longer an esoteric doctrine, but one generally recognized; and in some mysterious way the 'moon-plant' is both moon and plant. The divine power of the Vedic Soma, who also is a war-god, made this identification easy. It has even been urged that, in the earliest period, Soma was already the moon. This is the contention of Alfred Hillebrandt, who, in the first volume of his *Vedische Mythologie*, has presented the thesis with great ingenuity. In this volume will be found the most complete analysis of the position and character of the Vedic *soma*, both as a plant (the different ways of fermentation are here described) and as the moon-god. Yet it does not seem to be proved by this treatise that Soma was at first the moon. The Iranian conception is distinctly that of a plant alone, and in most of the Vedic passages the conception is also that of a plant, albeit a divine power. The wild hyperbole of Vedic utterance permits many expressions which appear to be impossible when used of a plant, but some even of these are not applicable to the moon. Thus it is said that Soma gives the sun his light,³ and it is not necessary to infer from this or other extravagant phrases that Soma is the moon. Soma is also said to create all things, which applies to neither plant nor moon, but is only one of innumerable lauds given to sundry gods, any one of whom at any time may be called creator, preserver, light-giver, etc., as the henotheistic poet is inspired to wilder flights of praise. Hillebrandt's main thesis, that 'everywhere in the Rig-Veda Soma means the moon,'⁴ is itself an exaggeration, which he has not hesitated to carry to its logical conclusion and

so predicates a lunar Haoma in the Avesta. In the *Rigveda* the prevailing thought is that the plant *soma* as an intoxicant stimulates Indra, the war-god, to slay enemies, human and divine, and, as stimulator, Soma himself may be said to be the 'foe-killer.' In one hymn Indra explains that he has drunk *soma* and is thereby nerved to do great deeds in a semi-intoxicated condition. This *soma* is the 'sharp-horned bull' (which Hillebrandt interprets as 'horned' moon), as it is said: 'Like a bull with sharp horns is thy brewed drink, O Indra,'¹ and the reason for the simile is given as 'because it bellows,' alluding to the roaring flood of juice pouring noisily into the vat. A further argument against Hillebrandt's interpretation is that the ancient name for moon (*mās*, identical with *μῆς*, *μῆς*) is never applied to Soma. The allusion in *Rigveda*, x. 85. 3, to 'the Soma known to the priests, whereof no one eats' implies that the esoteric interpretation, to which allusion has been made, has finally in this late hymn identified plant and moon. The late *Atharvaveda* also speaks of 'the god Soma who, they say, is the moon.'² This is in line with the gradual mystical tendency which appears fully developed in the *Brahmaṇas*. It is also analogous to the mystic character of the vine-worship or Dionysiac cult of Greece. Euripides says of Dionysos: 'Born a god he is poured out in libations to gods; through him men receive good.'³ So Soma is poured out to god, being himself a god, and he gives goods and cures woes, as Dionysos in the same passage is said to be the 'cure (*φάρμακον*) for all woes.' 'We have drunk Soma, we have become immortal,'⁴ says the Vedic worshipper, who 'knows the gods'—much like a Greek mystic.

The later moon-Soma is fabled to have married 33 (later 27) daughters of the creator-god Prajāpati (later Dakṣa) and to have roused the jealousy of the others by excessive devotion to one of them called Rohiṇī. The others went back to their father, who permitted Soma to take them again only on condition that he associated equally with them all. He agreed, but broke his promise, and hence was punished with a waning sickness or consumption, which causes the moon to diminish every month. This fable of the *Taittirīya Saṃhitā*⁵ is popular in all later literature. The 'wives' are the signs of the lunar zodiac. As moon, Soma in the epics and *Purāṇas* is 'lord of stars and planets, of priests and plants, of sacrifices and of devotions.'⁶ In this later mythology Soma is son of Atri or of Dharmā, or is produced from the ocean-churning. His great exploit was the rape of Tārā, wife of Brhaspati, which caused the war of the gods described at length in the epics and *Purāṇas* and constantly alluded to in classical literature. According to these later legends, it was the son born of this intrigue who as Budha, i.e. the planet Mercury, became the ancestor of the lunar race and so, eventually, of Kṛṣṇa. The later moon-mythology gives Soma several new names or titles, the best known of which are 'crest of Śiva' (Śiva carries on his brow the crescent moon), 'hare-marked' (the Hindus see a hare in the moon), and 'lord of the lotuses.' The moon-Soma is represented as drawn in a three-wheeled chariot by ten white horses.

SOMALIS.—See ABYSSINIA, HAMITES AND E. AFRICA.

SOMNĀTH, PATAN SOMNĀTH.—Somnāth (Skr. *Somanātha*, 'lord of soma' [q.v.], the famous sacred plant¹), an ancient town in the State of Junāgarh, Kāthiāwār, Bombay (lat. 20° 53' N., long. 70° 28' E.), is noted as the site of the famous temple of Somnāth, the scene of the destruction of the Yādava tribe in an internecine struggle, and of the death of Kṛṣṇa, who seems to have been in this place the object of a cult independent of that of the hero of Mathurā.² Little is known of the famous temple before its destruction by Maḥmūd of Ghaznī (A.D. 1024-26).

According to Khondamir in the *Habibu-s-siyār*, 'Somnāt was placed in an idol-temple upon the shore of the sea. The ignorant Hindus, when smitten with fear, assemble in his temple, and on those nights more than 100,000 men come into it. From the extremities of kingdoms, they bring offerings to that temple, and 10,000 cultivated villages are set apart for the expenses of the keepers thereof. So many exquisite jewels were found there, that a tenth part thereof could not be contained entirely in the treasury of any king. Two thousand Brahmans were always occupied in prayer round about the temple. A gold chain weighing 200 *mans*, on which bells were fixed, hung from a corner of that temple, and they rang them at appointed hours, so that by the noise thereof the Brahmans might know the time for prayer. Three hundred musicians and 500 dancing slave-girls were the servants of that temple, and all the necessities of life were provided for them from the offerings and bequests for pious usages.'³

'Sultān Maḥmūd, having entered into the idol-temple, beheld an excessively long and broad room, inasmuch that fifty-six pillars had been made to support the roof. Somnāt was an idol cut out of stone, whose height was five yards, of which three yards were visible and two yards were concealed in the ground. Yamīn-ud-daula, having broken the idol with his own hand, ordered that they should pack up pieces of the stone, take them to Ghaznī, and throw them in the threshold of the Jāmi' Masjid [cathedral mosque].'⁴

The common tale that the 'idol,' when broken, was found to be hollow and stuffed with diamonds and other precious stones is obviously a fable; it was really a *linga*, or symbol of Śiva, and such stones are never hollowed in this way.⁵ The present ruined temple was built by Komārāpāla in A.D. 1169, and was the second reconstruction of the temple destroyed by Maḥmūd.⁶

Another legend told that Maḥmūd carried off to Ghaznī the carved gates of the temple. At the close of the Afghān war of 1842 Lord Ellenborough, the governor-general, directed that these gates should be brought to India, and he addressed a pompous proclamation to the chiefs announcing that 'the insult of eight hundred years had been avenged.' The gates are now deposited in a room in the Zanāna court-yard of the Agra Fort. They clearly have no connexion with Somnāth, being made of Ghaznī *deodār* pinewood, bearing no resemblance to Hindu work, and being decorated with an Arabic inscription relating to the family of Subuktigin, ruler of Ghaznī (A.D. 977-997).⁷

SOOTHSAYING.—See DIVINATION, PRO-PHECY.

SOPHISTS.—The sophists with whom this article deals are the paid teachers who undertook to prepare young men, by lectures or private tuition, for a public career in the city-states of Greece. Such were Protagoras and Isocrates (q.v.).

1. Lives and writings.—It should always be borne in mind that the writings, save a few fragments, are lost and the sophists themselves for the most part known by the testimony of their opponents. Prodicus of Ceos, a countryman of the poets Simonides and Bacchylides,¹ frequently visited Athens. We read of one occasion when his speech before the Athenian senate (presumably as the envoy of Iulis, the township in Ceos to which he belonged) won great admiration, while his public lectures attracted the young and brought him large sums in fees.² There are allusions to the scale of payment, which ranged from half a drachma to fifty drachmas.³ In order probably that his pupil might acquire a good prose style, Prodicus laid great stress on the accurate use of terms⁴ and the careful discrimination of synonyms.⁵ That his distinctions were not always logical is clear from the criticisms of Aristotle⁶ and of Alexander of Aphrodisias.⁷ But, besides grammar and rhetoric, he also gave instruction in ethics. One of his works, the *Horæ*, as we know from the scholiast on Aristophanes' *Clouds*, 361, contained a famous apologue, which is referred to by Plato⁸ and happily preserved to us in substance by Xenophon.⁹ Pleasure and virtue personified appear to the young Hercules, urging their conflicting claims on his allegiance until he decides to forgo the allurements of ease and follow the toilsome path of duty. From this it appears that Prodicus upheld the orthodox Greek morality of his day, as enforced by the poets.¹⁰ Remarks of Prodicus on the right use of wealth are quoted in the dialogue *Eryxias*.¹¹ But the author of the *Axiochus* is probably mistaken when he puts into the mouth of Prodicus the well-known Epicurean maxim that 'death is nothing to us, since it does not concern the living and the dead no longer exist.'¹² From Aristophanes' *Birds*, 692, and the scholiast *ad loc.*, it may be inferred that Prodicus had somewhere sketched a cosmogony, though of its contents we are ignorant. In *Clouds*, 360, he is called a *μετεωροσοφιστής*, a term which there seems the counterpart of *φυσιολόγος* as used by Aristotle of the Ionians and other early physicists. Like them, he certainly wrote a work *περὶ φύσεως*,¹³ of which Galen has preserved a single fragment dealing with human physiology.¹⁴ Of his views on religion we know a little more. and Themistius,¹ names Prodicus as the first to base an explanation of religious rites and belief in the gods on a definite rationalistic theory. It would seem, Prodicus thought, that those natural objects which benefit us and sustain life were conceived as deities—sun and moon, rivers and springs, fields and fruits of the earth, fire and water, corn and wine. Most religious rites would then be closely connected with agriculture. This theory was more than once restated, notably by the Stoic Persæus.

Gorgias of Leontini in Sicily, a pupil of the Sicilian Empedocles, holds a very important place in the development of Greek prose style and forensic rhetoric.² He wrote a treatise on *Nature or the Non-Existent*, which in the manner of the Eleatic Zeno proved up to the hilt (1) that nothing exists; (2) that, if anything existed, it could not be known or conceived by man; (3) that, if anything existed and were known, it could not be divulged to another. Of this *tour de force* we have a detailed account in the treatise *De Xenophane, de Zenone, de Gorgia* (as it is wrongly entitled) in the Aristotelian Corpus³ besides an abstract in Sextus Empiricus.⁴ Despite this scepticism, Gorgias seems to have adopted and extended his master's hypothesis of perception by means of 'pores' or channels.⁵ In ethics he upheld a plurality of virtues, which are differently developed under different conditions of age and sex.⁶ However, unlike other sophists, Gorgias did not undertake to teach virtue,⁷ but rhetoric, which he declared to be the first and most indispensable of all arts.⁸ Yet his admission⁹ that the art of persuasion deals with right and wrong, the just and the unjust, shows that some recognition of moral judgments, some outline, at least, of ethical theory, is required from the orator.¹⁰ In the famous discussion with Socrates on the question whether it is better to suffer than to do wrong Gorgias stands aside: it is his pupil, the light-minded Polus of Agrigentum—'colt by name and colt by nature'—who is the opponent of Socrates. To Polus the prosperous career of the usurper Archelaus seems enviable, for have not his crimes brought him power, with its attendant wealth and fame?¹¹

Thrasymachus of Chalcedon is another sophist who devoted himself to teaching rhetoric. His writings were confined, so far as we know, to speeches and an important treatise on the Art (*ἡ μεγάλης τέχνης*). In this direction his services were conspicuous. Critics were disposed to attribute to him rather than to Isocrates the introduction of the intermediate or mixed style, which eventually superseded both the high-flown and the bald.¹² We are told that he was rash and combative in argument, as his name suggests,¹³ and this may be the reason why Plato chose him in the first book of the *Republic* to play an arrogant and offensive part in support of the definition of justice as the interest of the stronger.¹⁴ A literary artist like Plato was not likely to miss the opening afforded by such a definition, with which we may well credit the historical Thrasymachus. But, as the dialogue proceeds, Thrasymachus becomes tamed, and at last we hear with no great surprise that Socrates

and Thrasymachus have never been enemies and are now very good friends.¹ In this connexion it should not be forgotten that we have a very different sentiment cited from a speech of Thrasymachus:

'The gods take no notice of human affairs; otherwise they would not have overlooked justice, which we see every day violated.'²

The spirit of this utterance is that of the book of Job. A specimen of his style is preserved by Dionysius of Halicarnassus.³

Hippias of Elis, like Prodicus and Gorgias, travelled about Greece, acquiring wealth and celebrity by giving lectures and taking pupils.⁴ As Prodicus represented Iulis at Athens, so Hippias seems to have been the political agent of Elis at Sparta.⁵ His accomplishments were varied; besides arithmetic, geometry, and astronomy, he was versed in poetry, music, mythology, philology, and history. To historians of mathematics he is known as the discoverer of a curve, called after him 'the *quadratrix* of Hippias.'⁶ Further, he acquired no mean skill in manual arts, if, as we are told, he appeared at Olympia with every article that he wore made by his own hands,⁷ even to the signet-ring, which he had himself engraved, and the curry-comb and oil-flask of his own manufacture. He is also said to have invented a mnemonic system. That he was a learned antiquary is attested by his writings, of which the register of Olympic victors (*Ὀλυμπιονικῶν ἀναγραφὴ*) was perhaps the most important. His mode of instructing his pupils is criticized as too nearly akin to the curriculum of schoolboys.⁸ As he claimed to be at home in all the learning of the age, he sought to popularize different branches of it, but the instruction so given must often have been superficial. By Xenophon⁹ and by Plato (or whoever wrote the two dialogues *Hippias Major* and *Hippias Minor*) he is represented as discussing with Socrates such subjects as justice, beauty, and the peculiar Socratic thesis that injustice when voluntary is better than when involuntary. Hippias is made to appear conceited and ridiculous, but the opinions he defends—sometimes against quibbling or downright fallacy—in no way diverge from those approved by popular Greek morality.

There is little ground for supposing Critias the sophist to be any other than the Athenian politician who took part in the revolution of the Four Hundred and was chief of the Thirty Tyrants—that extreme oligarchical faction which, after the fall of Athens in 404 B.C., attempted to extirpate democracy by a reign of terror. It is not easy to imagine this ruthless doctrinaire giving lessons, but he certainly was a prolific writer both of verse and of prose. In the play entitled *Sisyphus*, probably by him, though some authors refer it to Euripides,¹⁰ one of the characters sets forth speculations on the origin of the belief in the gods. The lines quoted by Sextus Empiricus¹¹ describe how in the beginning men lived a mere animal life without law and order; how, to prevent violence and oppression, severe penalties were enforced; but, as these could only check open crime, secret wrong-doing went unpunished until some man, shrewder than his fellows, thought to discourage

it by proclaiming the existence of mighty and immortal beings, who see all that is hidden and hear all that is said in secret. In order to heighten the dread of them, he placed their abode in the sky, whence came the terrible thunderbolt and the beneficent rain.

These are the more eminent among the older sophists, whom we know from our chief authority, Plato. There were, however, some whom he does not mention by name, as Xenias of Corinth, who, according to Sextus,¹ taught thorough-going scepticism. On the other hand, Antiphon the sophist, who was not the same person as Antiphon the orator,² was constructive, even dogmatic, and his claim to rank as a philosopher is not disputed by Philodemus the Epicurean, *ἐν τῷ ῥητορικῷ εἶρε καὶ φιλόσοφος ἤβουλετ' εἶναι*.³ He was obviously interested in and familiar with the physical inquiries of his predecessors. He wrote a work *On Truth* in two books, the one dealing with first principles, the other with physics and anthropology. This work, if we may judge by citations of single words in Harpocration and Pollux, must have been widely read and studied. From the first book a few fragmentary utterances are cited:

'For the Word or Logos all is one. Once understand this, and you will know that for the Word nothing exists singly either of the things seen by the farthest reach of the eye or of thoughts conceived by the farthest stretch of the mind.'

'Hence it needs nothing and accepts not anything of any, but is infinite and self-sufficient.'

'The mind leads the body in the direction of health and disease, or whatever else it may be.'

Time he held to be 'a conception or measure, not a real substance.'⁴ His proposal for the quadrature of the circle is criticized by Aristotle,⁵ by Simplicius, *ad loc.*,⁶ and by Themistius.⁷ In the second book he dealt with the sun, moon, eclipses, the saltiness of the sea, and other physical phenomena.

The sun he described as 'fire traversing the moist air which encircles the earth, setting when it leaves the air enkindled, rising to renew the attack when the air has again grown damp.'⁸

In spite of Anaxagoras, he adhered to the old view that the moon shone by her own light, being put out by the approach of the sun, because a stronger fire tends to put out a weaker one, and in like manner the other stars are obscured by the sun.⁹ Samples of his style are furnished by Stobæus.¹⁰ Of his ethics we can only judge by fragments of a treatise *On Concord*, which emphasize the importance of education and marriage, or point a moral against injustice and cowardice.

The anonymous sophist whom we know from Iamblichus¹¹ resembles Antiphon (with whom some would identify him) in his treatment of ethical and social questions. He, too, insists on the need of training to supplement natural endowment. Only by practice, begun early and long continued, can men become virtuous or successful, or acquire fair fame. The same advantages become good or evil according as they are used well or ill. Every man should practise especially two forms of self-control: (1) his honesty should be proof against bribes; (2) his courage should not shrink even from the sacrifice of life for his country. A truly good man seeks reputation, not by external distinctions, but by his own goodness. We must not think obedience to the laws cowardly or the use of might for aggression something valiant and noble. Men cannot live in isolation; they must come together in society if they are to get even a bare living; nor

will this suffice if there be lawlessness, which entails worse evils than life in isolation. Hence it follows of necessity that law and right are the bonds of civil society. Imagine a superman, invulnerable in body, exempt from disease and suffering, of iron will, who might be supposed competent to use his strength for aggression and defy the laws with impunity; still, even he, if there were such an one, which is impossible, would be safe only so long as he upheld the laws; for the rest of mankind, given discipline in their superior numbers, could by force or fraud overcome him. The writer sets forth at length the contrast between the blessings of an orderly government—the confidence and security which it affords when men have leisure to attend to their private concerns and are free from alarm of civil strife or foreign war—and the opposite evils which come in the train of lawlessness. It is in such a state of anarchy and disorder that the tyrant or usurper springs up.

The fragmentary treatise entitled *Twofold Arguments* (*διπλὸν λόγος*) has been called a specimen of early eristic, but is rather a storehouse of special topics, Aristotle's *εἶδη*,¹ suitable for controversy, whichever side the orator or disputant may take. It cannot have been the show-piece (*ἐπίδειξις*) of a wandering sophist, but, as Diels says, a formal school-lecture to his pupils by one settled in a town where the dialect spoken was Doric; and it follows from i. 8 that its date is about 400 B.C.²

The method is to take certain pairs, good and bad, fair and foul, right and wrong, true and false, and argue in the case of each pair: first, that there is not any absolute distinction between its two members; and then, again, that there is, the conclusion in the latter case being generally reached by *reductio ad absurdum*. Thus the famous antithesis of nature and convention is presented in several distinct forms. The next theme so treated is that there is no difference in the conduct of the sane and the insane, the wise and the foolish; the next, that wisdom and virtue cannot be taught, because (a) one cannot impart a thing to another and keep it himself; (b) if they were teachable, there would be a recognized class of teachers of wisdom and virtue, as of music; (c) again, the sages of old would have made their sons wise, which is not the case; (d) many pupils of professed sophists have got no good by their instruction; (e) many have become eminent who never studied under sophists. Against (a) we can appeal to experience; schoolmasters and teachers of the lyre do both impart their special knowledge and retain it; (b) we answer that there is a special class of teachers, the so-called sophists; as to (c), there is the case of Polycritus, who taught his own son to be a statuary; as to (d) and (e), the instances are admitted, but the inference is irrelevant. There is such a thing as natural endowment, *φύσις*, and, if one has enough of this, he can dispense with education. I do not say, adds the author, that virtue and wisdom can be taught, but the proofs alleged to the contrary do not satisfy me. Other arguments follow against the institution of the lot (arguments in its favour are wanting) and in support of the position that the best theorist is also the best practitioner of any art. Here negative arguments are wanting.

Of sophists eminent as dialecticians Euthydemus and Dionysodorus are familiar figures through Plato's dialogue named after the former. There were also Bryson of the Pontic Heraclea, a circle-squarer like Antiphon, whose pupil Polyxenus was asserted by Phanias to have been the author of the 'third man' argument against the theory of ideas,³ and Lycophron, who held that law, so far from directly promoting civic virtue, was merely a guarantee to citizens of their mutual rights, *ἐγγυητὴς ἀλλήλοις τῶν δικαίων*,⁴ and denied the reality of the distinction between the noble and the low-born.⁵ Of rhetoricians besides Theodorus of Byzantium, Evenus of Paros, and Licymnius of Sicily, all three mentioned in Plato's *Phaedrus*,⁶ there was the Athenian Polycrates, whose pamphlet *The Indictment of Socrates* was written at least six years after the death of the latter, since it referred

to events of 393 B.C.¹ Alcidas of Elæa in Æolis in his Messenian oration advanced the thesis that God and nature have left all men free, whence it would follow that slavery is unnatural and indefensible.²

2. Doctrine; general estimate.—In the history of popular education the sophists themselves mark an epoch. Before their time the schools taught music and gymnastics, reading and writing, but, except for the severe military training at Sparta or the peculiar discipline of Pythagorean brotherhoods in S. Italy, there was nothing beyond—no means of acquiring general culture. The recognition of the need for liberal studies and the effort, however unsystematic, to supply that need were the first-fruits of the age of aspiration and enlightenment which followed the Persian wars, when, under the leadership of Athens, literature and art blossomed anew. Among the diverse methods adopted by individual initiative the chief was the oral lecture (for which a fee was charged) on some topic of importance or interest, the theme being sometimes chosen by the audience. Under such conditions the lecturer was not only bound to be a good speaker, in order to attract hearers; he also needed much skill and practice in replying to questions and taking part in any discussion at the close. The lectures were often on language or diction or the interpretation of the poets or other matters closely connected with literature. The pupils of a Protagoras or a Prodicus were thus taught by precept and example to admire literary excellence and form a prose style of their own. In other words, they received an elementary, but indispensable, grounding in the humanities. When we reflect that the period from Gorgias to Isocrates saw the gradual fashioning and perfecting of prose, whether written or spoken, and that the names of Tisias, Thrasymachus, and Theodorus³ mark definite stages in this process of evolution, we may fairly estimate the services of the sophists to literature as second only to their services to education. For the rest, there was a continuous change of programme, owing to the necessity of arousing interest by novelties. At different times four varieties of instruction may be distinguished. The literary and political essays of Protagoras made way for forensic rhetoric, which Gorgias brought from Sicily in 427 B.C. on his first visit to Athens, where its theory and practice became firmly established. Eristic, again, or the art of controversy, though it dates back to the Eleatic Zeno, came into prominence later than rhetoric, largely under the influence of Socrates and his disciples. Lastly in 392 B.C. arose the school of Isocrates, who, while he specially taught political rhetoric and the principles of politics, imparted to a wider circle a more comprehensive culture, not limited to any single professional routine, avoiding barren subtleties and technicalities. Some such reaction was advisable after the over-specialization which had gone on in forensic rhetoric and eristic, if the sophists were to free themselves from the charge that their whole stock-in-trade consisted of oratorical tricks and logical fallacies, with which their pupils might impose upon a jury or entrap an unwary disputant. It is not strange that great influence was exerted at the outset by teachers who awakened intellectual interests and worked upon the native Greek passion for excelling (*ἀλὲν ἀριστερεῖν καὶ ὑπερποχὸν ἐμμεναὶ ἔλλων*). In the 'art of words' they could offer their pupils an incomparable weapon for use in public debate or private discussion. But grammar and rhetoric were the sole studies which owed much of permanent value to the sophists. Else-

where, as will be seen, preoccupation with the popular and the practical unfitted them for the work of original thinkers.

(a) *Ethics and politics*.—Quite apart from the absurdity of postulating for the sophists in common a distinctive ethical doctrine, as if the members of a whole profession ever agreed on controversial questions, or as if the rest shared the views of Lycophron on nobility or those of Alcidas on slavery, there is little evidence that the sophists, as such, specially interested themselves in scientific ethics. For one thing, their ignorance of psychology was profound and is adduced as the cause of their errors in the theory and practice of rhetoric.⁴ The opinions on morality cited as coming from them cannot always be credited to individual sophists as thinkers; they may be put forward by them as litigants or disputants. Then, again, other views have been ascribed to the sophists upon inference only; e.g., their conception of the end of human action (it might be maintained) was success (*οὐ τις ἐρᾷ τὸ τυχεῖν*), but this is vague, unless we know what use is to be made of success. The undertaking to teach virtue implies, it may be said, a definite view of education, as the process by which information is imparted, just as liquid is poured into an empty jar, and not, in Plato's words, as 'the turning round of the soul's eye to the light.' It also implies the conception of virtue as something teachable, which may be thought to resolve it into a sort of knowledge. Here, again, no general conclusions are warranted, for Gorgias did not teach virtue, and Isocrates decided that it could not be taught. The apologue of Prodicus recommends the virtues or, rather, courage and temperance as means to an end, and on utilitarian grounds. Neither Prodicus nor Protagoras could define virtue itself, or any of the virtues, in a way to satisfy dialecticians like Socrates and Plato, who for that reason pronounced both to be ignorant of virtue; this was the cardinal defect of their ethical opinions. What havoc it worked can best be seen if we consider justice. How could the common good be reconciled with individual interest? The myth of Protagoras⁵ rightly makes this virtue (*αἰδώς καὶ δίκη*) to be insensibly imparted in a civilized state by the interaction of individuals living in society, growing up to obey the laws and gradually recognizing in them the voice of the State. Such views are quite in harmony with Greek tradition, which derived morality from law and law from nature or God or the divine legislator. This harmony is rudely broken by the maxim 'Man the measure,' by the divergence between the code of one state and that of its neighbours, and by the conflict of human and divine law which Sophocles had emphasized.⁶ Protagoras, however, still adheres to his position 'that the State is the ultimate authority from which the citizen derives his views of morality, holding that to be just which the law at a given time and place ordains to be just; but there is this reservation introduced, that it is no longer absolute justice, but merely relative justice, which different states from time to time lay down in shifting ordinances. Although this is a lame defence, such inquiries, whether of a Protagoras or of a Machiavelli, deal with real problems, which must be faced. If the source of law, and therefore of morality, is not divine, it follows that it is merely human; then ought men to follow the example of Hippias and refuse obedience to all but the unwritten laws of nature?'⁷ Polus, Thrasymachus, and Callicles—the last not a sophist, but a politician and a pupil of sophists—like the author of the *δισσοὶ λόγοι*, made great play with the antithesis of

the natural and the conventional (or the legal, νόμος). It shocked the Greek mind to be told that institutions hallowed by old associations had merely a conventional value, and that the immutable alone was natural. If the rules of existing society are merely conventional, it may fairly be argued that obedience to them is a slave's part; the able and intelligent, the masterful and vigorous, will rise in revolt and disregard them. Therefore Polus admires the tyrant Archelaus; Critias and others plotted the overthrow of the demos at Athens; for, the constitution being part of the laws, if might makes right, a claim to rightful rule rests upon force. Or the same result can be reached in another way, by considering the effects of a revolution which has put an oligarchy or a tyrant in power. The laws will no longer be fetters imposed by the multitude on the powerful individual, nature's born ruler; they will be laid down by such a ruler for a community where he has gained the upper hand, and thus again we arrive at the definition, 'Justice is the interest of the stronger.'¹ Between these two lies the opinion formulated by Glaucon² of a social compact based on the recognition that all men desire to do injustice, which is good, but fear to suffer injustice, which is evil: hence the compromise of positive laws which forbid both the doing and the suffering of wrong. Lycophron, as mentioned above, also restricted the province of law to the same narrow function of guaranteeing mutual rights. When a similar problem is presented by Anonymus Iamblichus,³ he, unlike Polus or Thrasymachus, decides that the unprincipled adventurer will be thwarted in the long run, provided the State be well-ordered and the citizens loyal. Before we condemn the sophists for corrupting youth, it will be well to remember that the doctrine that might makes right was publicly advocated by Athenian politicians and orators in the Peloponnesian War, whether the tyrant city⁴ was punishing revolt at Mytilene,⁵ threatening neutral Melos,⁶ or justifying an aggressive policy in Sicily.⁷ In short, Plato is right when in a famous passage⁸ he declares that it is not individual sophists, but that arch-sophist, the public at large, that corrupts youth. For the sentiments engendered as men sit side by side in the assembly, the law-courts, or the theatre—forces against which reason is powerless—may not be, as Protagoras supposed, relatively true and right, but absolutely erroneous and dangerous. Now the discourse of Protagoras, as reported by Plato, and the fragments of Antiphon and of Anonymus Iamblichus rather suggest that these sophists in handling commonplaces presented popular morals, wherever possible, as modified by the progressive spirit of the age; e.g., the deterrent purpose of legal penalties is recognized by Diodotus,⁹ as well as by Protagoras,¹⁰ and the panegyric on orderly government (*eivoula*) of Anonymus Iamblichus partly covers the same ground as the Funeral Oration of Pericles.¹¹ In such moral harangues it was the lecturer's or writer's interest to keep an eye on his clientèle, the parents and guardians, relatives and friends, of his scholars, and not wantonly to offend their susceptibilities.

(b) *Philosophy and religion*.—If sophists were not scientific moralists, far less were they logicians or metaphysicians. Preceding philosophers—Ionians, Pythagoreans, Eleatics, or pluralists—had their crude theories of physics and ontology, with which the older sophists appear to have been acquainted. At any rate, the treatises of Prodicus

and Gorgias on nature (*περὶ φύσεως*), and the explanations of celestial and physical phenomena—motions of sun and moon, eclipses, hail, the saltiness of the sea (which are cited from Antiphon's treatise *περὶ ἀληθείας*)—as well as the more famous incursion of Protagoras into the domain of epistemology, prove that these authors were not disinclined to pursue such studies, or, at least, as receptive rather than original thinkers, to advertise the discoveries of others. Possibly, if such a demand had been made by their pupils, they would have taught physics. This impression is strengthened by the prominent place which burlesque of physical investigations takes in the *Clouds* of Aristophanes, where the typical sophist, Socrates, swings in a basket for the better observation of things celestial (*ἀεροβατῶ καὶ περιφρονῶ τὸν ἥλιον*) and directs experiments to measure exactly the length of a flea's jump. From the time when this play appeared (423 B.C.), or even earlier, the study of physics declined. The Socrates of the *Phaedo* says that in his youth he was acquainted with speculations, some of which we recognize as those of Alcmaeon, Anaxagoras, Empedocles, Diogenes of Apollonia, but that he had long since ceased to be interested in them. Presumably contemporary sophists would have made much the same admission. If anything can be predicated of the sophists as a whole, it is that their bent was not theoretical but practical. The name they bore, when we examine its history, confirms this. Before it became specialized to designate the class of paid teachers, it had been used (by Pindar, the tragedians, and Herodotus) in a wider sense, but exclusively applied to practical men, whose wisdom had been tested by experience. To the wise bards Homer and Hesiod, to artists or experts in any department, from cooks and diviners to musicians and generals, not only to Pythagoras, Thales, and Solon, but to those shrewd men of affairs, statesmen or rulers, who were known in Greece as the Seven Sages, such as Pittacus or Periander, the name *σοφιστής* was thus given. There is one point, however, where the practical teacher and the original thinker were thoroughly at one, viz. their attitude to religion. From the time of Heraclitus and Xenophanes all philosophical systems had broken with the popular creeds and the legends which offended the moral standard of the time. In the ancient quarrel between philosophy and poetry, as Plato calls it, the sophists were on the side of the philosophers. Protagoras was an agnostic, unable to decide whether there are gods or no, and, if there are, what is their nature. Yet Hippias, according to Xenophon's report, believed the gods to be the authors of the unwritten laws, one of which enjoined worship of the gods.¹ The rationalistic speculations of Prodicus and Critias, noticed above, clearly assume that the popular creed has been set aside, for they deal with the further problem, how it originally arose. Nor must it be forgotten that in his burlesque Aristophanes presses the charge of atheism again and again, as when he makes Socrates, his type of the sophist, say, 'Vortex is king; Zeus has been dethroned.'² Similarly the aged Plato traces crimes of violence and insolence to the impiety of certain wise men (*σοφῶν*) who maintain that religion and morality are mere convention, and that the highest right is might.³ Other indications of the gradual change in public opinion are afforded by a comparison of Herodotus with Thucydides. Where the former is credulous, as regards divination and oracles, the latter is sceptical, for he had witnessed fruitless appeals to

divine justice by victims of oppression, the undeserved success of perjury and treachery, the influence of fortune in thwarting the wisest calculations.¹

3. Charges against the sophists.—In a matter of much controversy notice must be taken of divergent views, particularly the attacks and aspersions from which Grote endeavoured to vindicate the sophists. Whatever the cause, the fortunes of the sophists declined; the second generation was not equal to the first, the pupils were less brilliant and eminent than their teachers, or, like Alcibiades, Theramenes, and Critias, attained to a bad eminence; in the 4th cent. B.C. a liberal education was sought elsewhere, in the Lyceum or the Academy; soon the very name became a term of abuse. Isocrates so applied it to the Eristics and to Plato; Lysias to Æschines (the Socratic) and to Plato; Androtion and Æschines (the orator) to Socrates, who took no fees. For one thing, the practice of charging fees touched a strong Greek prejudice, as if it meant prostitution of the mental powers.² This prejudice we moderns, who regard the intellectual as well as the manual labourer as worthy of his hire, can barely understand, much less share. Again, not only Aristophanes, but many worthy citizens like Anytus, a leader of the restored democracy in Athens, mistrusted what seemed to them the revolutionary tendencies of such teaching.³ Public opinion, too, shifted, and the sophist, once hailed as a prodigy of wisdom and knowledge, an invaluable aid to the political aspirant, came to be despised as a needy adventurer, often a foreigner; if a citizen, doing little, if any, service to the State.⁴ Isocrates, ensconced in his own flourishing school near the Lyceum, while claiming that what he himself taught was philosophy and culture, could afford to sneer alike at the Eristics as vendors of fallacies, who denied the possibility of falsehood or contradiction, and at those Socratics who said that courage, wisdom, and justice were identical, that none of these virtues was innate, but that there was a single science of them all.⁵ With these facts before us it is impossible to agree with Grote that the name 'sophist' was brought into bad repute mainly by the persistent and acrimonious attacks of Plato and Aristotle on a deserving profession. Plato was born in 427 B.C., and in the *Clouds* (423 B.C.) the term 'sophist,' originally neutral, was well on its way to be stereotyped in *malam partem*. Very rarely has prejudice been so completely successful in changing the connotation of a word: the paid teacher became the needy adventurer, the incompetent pretender, the charlatan, or trickster, the last implication being firmly embedded in our modern words 'sophism,' 'sophistical,' 'sophistry.' In the main, however, Grote is justified in his contention⁶ that the sophists were not a sect or school of conscious impostors, flattering rich youths for personal gain and corrupting general morality. Nor, on the other hand, were they, as others have imagined, systematic philosophers who based upon reasoned scepticism an anti-social ethics, sanctioning lawless aggression in politics and freeing the individual from all conventional restraints. The latter hypothesis takes something for granted at every stage, its chief error being the assumption of a school with common doctrines, an assumption no more valid for Greek sophists than for modern journalists. Nor, again, is the charge of indiffer-

ence to truth justified, except in so far as it corresponds to the old count of making the weaker side the stronger (τὸν ἥττω λόγον κρείττω ποιεῖν). This, it should be remembered, is the aim of every advocate; he appears in court, not to judge his client, but to defend him. If in so doing he does violence to his conscience, if his act is immoral, it is the fault of a system, which neither he nor the sophists devised. The supposed pernicious effect of dialectic and eristic in accustoming the disputant to take either side indifferently admits of a similar answer; and, if the objection be to the use of fallacies, surely they ought not to pass unexposed and unrefuted.¹ Plato's opposition is grounded on his metaphysics. He calls sophistry at one time the sham counterpart of legislation, which is one branch of politics,² while in the dialogue devoted to the dissection of the sophist the latter is ultimately defined as the counterfeit of the philosopher, the pretender who, juggling with words in private, dissembles his own ignorance and entangles his hearer in self-contradiction.³ This amounts to saying that the sophist was, like Isocrates, content with appearance and opinion (δόξα) and had not gone farther in quest of reality and science (ἐπιστήμη). There were these two educational theories, and the champion of the one was bound to condemn the other. Yet we note that six at least of Plato's provisional definitions⁴ imply no discredit. If the sophist purged away false opinions, if he imparted information wholesale, retail, or pedlar-fashion, if he was a brilliant athlete in controversy, and ever on the hunt for fresh scholars to teach, he was doing the State some service; for these are traits not unworthy of the world's great educators, from Socrates to Pestalozzi.

SOPHOCLES.—In studying the religious content of dramatic poetry, it is well to distinguish between (1) what is traditional or contemporary; (2) what is adapted to the dramatic situation; and (3) the poet's own contribution in thought and feeling.

1. In Sophoclean drama the gods of the national worship are still living powers, to whom contemporary piety accords an implicit belief. But special stress is laid on the universal supremacy of Zeus and the oracular truth of Apollo. Athene also holds a conspicuous place. Ares and Aphrodite are regarded chiefly as authors of destruction and misery. The Eleusinian mysteries are by this time fully recognized as belonging to the religion of the State; and Dionysus, the immediate patron of the drama, is an object of affectionate reverence. The religion of the family, coming down from patriarchal times, is prized as of the first import-

ance. Not only blood-guiltiness between kinsmen, but all breaches of domestic harmony are looked on with abhorrence, and to vindicate the honour of one's kindred is an imperious duty. It is this which gives inviolable sanctity to the laws of burial, and it is in connexion with family religion that reference is made to those unwritten laws which are of immemorial antiquity. In upholding these, Greek tragedy seems to enforce the religion of Eleusis; for, in language very similar to that of Sophocles' *Antigone* (lines 453-457), Pericles is reported to have spoken of 'those unwritten laws on which the Eumolpidae based their instructions, laws which never may be abrogated, and of which no man can tell the origin' ([Lysias] 6. § 10; cf. Thuc. ii. 37. § 4; also *Æsch. Suppl.* 707 f.). The scene is still haunted with fears of divine jealousy or envy (*Νέμεσις*, *Φθόρος*; see art. GOD [Greek]), and God is still imagined as causing infatuation, and thus occasioning the crimes which He punishes. The sovereignty of Zeus spares none whose folly, inspired by hope and desire, misleads them (*Ant.* 604 ff.). Hence life sometimes appears a tissue of miseries from which death is the release (*Æd. Col.* 1225 ff.; cf. Herod. vii. 46). That rule is inexorable, but piety never loses its reward (*Phil.* 1444, 1445). Fate, more distinctly than in *Æschylus*, is identified with an inscrutable Divine Providence of which the oracles are the exponents, above all the oracle at Delphi (*Æd. Tyr.* 1329, 1330).

2. Such are the main features of traditional and contemporary religion as represented in Sophoclean drama, and to the poet's unquestioning acceptance of them he owes that high repute for piety which was awarded to him by the unanimous voice of antiquity. But the exact phase of polytheism that is reflected in each drama depends largely on the situation; and if the later epics on which the plays are founded had been preserved to us, it would be possible to account more fully for certain variations. Thus, while in the two *Œdipi* and in the *Electra* the Delphian Apollo is all-important, in the *Trachiniae* the prime mover is the Dodonæan Zeus, whereas, in the *Ajax*, Athens is the chief agent, and in the *Philoctetes* the knot is solved by Heracles. And in the last-named play it is observable that the sacred place of Chrysa, the allusion to Hephæstus of the volcano, and to the Lemnian Zeus, the invocation of the earth-goddess as the great mother, and the prayer to the nymphs of stream and meadow help to complete the local colouring, while the thought of Heracles on Oeta, of the river-god Spercheius, and the Melian nymphs adds reality and verisimilitude to the person of the hero. Athens, too, while retaining her Athenian attributes (*Νίκη πολιάς*, l. 134), is in a special sense the guardian of Odysseus, as she is in the *Ajax*, where the Salaminian mariners by their invocation of Pan recall the islet which he made his peculiar haunt (*Æsch. Persæ*, 418). Ajax himself, on the other hand, combines with the longing for his father's hearth a deep sense of the sacredness of the rivers and other divine presences of the Troad.

In the *Œdipus Tyrannus* there is a remarkable blending of Athenian and epic with local Theban worship. Athens, more Homeric, is the daughter of Zeus; but it is not forgotten that she has two ancient shrines in the Cadmean city. Artemis at once presides over the Theban Agora and with her brother Phœbus roves the Lycian hills. Apollo is the Pythian prophet of Zeus, and he is also the epic far-darter. His local worship as Lyceus, the protector of the home, and as the prophet by the Ismenus, are separately mentioned. Dionysus is *par excellence* the Theban god; but Ares, to whom the Theban women in *Æschylus* appeal as

the founder of their race, is here identified with the viewless enemy who has visited the city in the form of the plague. In the *Œdipus Coloneus*, Polynices speaks of his father's Erinyes, apparently without identifying her with the dread goddesses of Colonus.

3. Behind all such associations, and shining through them, is *the religious thought of the poet*, less original and far-reaching than that of *Æschylus*, but in some ways more sober and mature. The 'unwritten ordinances' of the Eumolpidae are developed in the central ode of the first *Œdipus* into the vision of an eternal law of integrity in thought and action whose violation, conscious or unconscious, leads the way to ruin. 'God sees and visits soon or late when one leaves hold of divine principles and turns to madness' (*Æd. Col.* 536 f.). Yet—it is added in a later strain of reflection—when the error has been involuntary, though it inevitably results in suffering, the very power that punishes holds forth a better hope. The life that is crushed in this world finds acceptance in the end, is itself blessed, and becomes a source of blessing. Even destiny has a human aspect, for it is the outcome of a divine purpose, which, however incalculable, is not, as a previous generation had thought, wholly malignant. Athens, to protect her favourites and to rebuke the pride of Ajax, brings down on him a fatal blight. But her anger, had he but known it, was only for a day, and she prepares the mind of Odysseus, his rival and supposed enemy, to vindicate his honour after death. The clear and steady vision of the poet, holding firmly by the facts of experience (he lived through the Peloponnesian War), forbade him to extenuate the sadness of life, yet he saw a light beyond. The loyal heart of Antigone, the love of Deianira, the brotherhood of Teucer, the essential purity and public spirit of *Œdipus*, the faithful endurance of Electra, the incorruptible truth of Neoptolemus—these belong to the eternal things, however, on this 'narrow isthmus' of mortality,¹ they may be frustrated or obscured. Even the dark end of the *Trachiniae* and the agonized reclamation of Hyllus could not hide from the Athenian audience the certainty of the glory that should follow.

The poet's sympathies are enlisted for 'the noble living and the noble dead.' Great souls by their own or others' fault may be overclouded or broken, but in the end they shall be purified and justified. Ajax is provoked into a fatal outburst, but his valour shall be held in everlasting remembrance. The innocent but rash spirit of *Œdipus* is unwittingly involved in a tangle of guilt from which there is no recovery in this world. But, though rejected by his kindred and nation, his end is peace, and he bestows a blessing on the after time. The same motive, the divine acceptance of inherent greatness that is rejected by men, appears once more in the *Philoctetes*.

Yet this exalted view of the divine purpose in humanity is subject to a certain limitation. The greatness admired is not that of outward position; it is essential greatness and nobility of nature. But noble qualities are still more or less associated with the accident of birth. Sophocles has not the *Æschylean* breadth and universality of sympathy. The inherent nobleness of Ajax, notwithstanding his offence, is vindicated by his captive bride, his illegitimate brother, and his opponent and rival, whom he suspects of being base-born. But Tecmessa was originally a princess, Teucer's mother likewise was the daughter of a king, and Odysseus was the true son of Laertes by his lawful queen. Antigone scorns Creon for his violation of eternal law, but she also despises him because he is not of the Cadmean race.

¹ Soph. frag. 146: βίον βραχὺν ἰσθμὸν.

Closely akin to this limitation is the frank, untempered presentation of vindictiveness. Love and hatred in ancient life were equal powers. When Achilles drags Hector round the body of Patroclus, and kills twelve Trojan prisoners at his friend's funeral, the comment of the Greek mind would be, 'Behold, how he loved him!' So Electra's love for her father and her brother is measured by the exhortation to 'give a second stroke,' and to expose the dead Ægisthus to the dogs and birds. Ajax does not feel, as the heroic maiden in Æschylus' *Choephoroi* felt, that the curse he utters 'mars his perfect prayer.' Odysseus has been taught only that hatred is not to be carried beyond the grave. The peaceful end of Ædipus is not prevented, but only delayed for a moment, by the renewal of his curse against his sons.
